**Index**

---

Purchasing is a purchase order entry, tracking, and history system. Reports and inquiries are available for requisitions, open purchase orders, and purchase order history. File maintenance is also provided for required purchasing files.

---

## Purchasing Interfaces

Purchasing interfaces with the following modules:

- Order Entry
- Inventory Accounting
- Accounts Payable
- Warehouse Management
- EDI
- FAX
- Mail Server
- Customer Consignment

An explanation of these interfaces follows.

### Order Entry Interface

Purchasing interfaces with Order Entry (O/E) to allow special orders to be created within O/E and to provide a means for tracking items that are returned to the vendor. Special orders are any orders with drop-ship items, non-stock items, or orders of unusually high quantities. You may also copy comments from a customer order to the purchase order.

### Global Trade Item Number (GTIN) Usage

Purchasing also interfaces with O/E to use Global Trade Item Numbers (GTINs). GTINs are available to help you manage your products better, and to provide for improved and effective communication

---

between distributors and their vendors, and distributors and their customers. As defined in the “An Introduction to the Global Trade Item Number” document, a GTIN is a unique identifier for trade items developed by the GS1 (a non-profit standards association) which include both products and services that are sold, delivered, and invoiced at any point in the supply chain. Such identifiers are used to look up product information in a database (often by inputting the number through a bar code scanner pointed at an actual product) which may belong to a retailer, manufacturer, collector, researcher, or other entity. The uniqueness and universality of the identifier is useful in establishing which product in one database corresponds to which product in another database, especially across organizational boundaries.

Through UPC Item/UOM Cross Reference Maintenance (MENU IAFILE), you have the option to set up cross references in Inventory Accounting that can later be used in Order Entry and Purchasing. In Enter, Change, & Ship Orders (MENU OEMAIN) you will be able to enter GTINs for customers placing orders. The GTIN will be replaced by the Distribution A+ Item Number, and the GTIN will be stored as the Original Item Number for the line item. In Enter or Change Requisition (MENU POMAIN), you will be able to enter GTINs when placing an order with a vendor. The GTIN will be replaced by the Distribution A+ Item Number.

Throughout all applications, where the search item **Find** field is available, you will also be able to search for a GTIN by keying **G/** preceding your partial or full GTIN number.

---

NOTE: If a GTIN is entered and it is the same as a customer/item number that has been previously set up, no edit will occur and you will not be notified. Therefore, be sure to check your customer/item number references for any conflicts.

---

## Inventory Accounting Interface

Purchasing interfaces with Inventory Accounting (I/A) enabling you to immediately check inventory availability when creating a purchase order. Most items used in Purchasing must be defined through I/A (exceptions exist, however, for unusual non-stock items such as substitute items).

If you have EDI installed and you are using the outgoing Product Activity Data (852) (PAD) document for one or more vendors, you must also select to send PAD documents for at least one warehouse through Warehouse Number Maintenance (MENU IAFILE). Additionally, the item quantities in the Item Balance File are used to determine whether to create and send the PAD document for a vendor.

## Global Trade Item Number (GTIN) Usage

For details on how the Purchasing module interfaces with I/A regarding GTINs, refer to Global Trade Item Number (GTIN) Usage (p. 1-2).

## Accounts Payable Interface

Once a purchase order is created, the information contained on that order may be transferred to Accounts Payable (A/P). This information is kept in detail, but may be summarized through A/P reports. This interface will allow you to access A/P information automatically when creating a

voucher. In addition, if the purchase order is for a drop shipment, the receipt of the purchase order can be processed completely through Accounts Payable by using the drop ship receipt validation function available through the Voucher Entry Selection Screen (MENU APMMAIN).

Note that landing cost validation is not included in this A/P drop ship receipt validation process.

In Purchasing Options Maintenance (MENU XAFILE) you can specify a **Cost Variance Warning Percent** and a **Cost Variance Warning Value**. During receipt validation, if the invoice amount and the receipt amount differ in excess of either the **Cost Variance Warning Percent** or the **Cost Variance Warning Value**, you will receive a warning. Also, in Purchasing Options Maintenance (MENU XAFILE), you can specify a **PO-AP Voucher Hold Code**. If a voucher hold code has been set up, and the variance exceeds either the **Cost Variance Warning Percent** or the **Cost Variance Warning Value**, the voucher will automatically be put on hold so that the variance can be verified. Only users authorized for the **Allow the Release of Vouchers on Variance Hold** action in Application Action Authority Maintenance (MENU XASCTY) may release this **PO-AP Voucher Hold Code**.

## Warehouse Management Interface

When receiving items into inventory, this interface allows you to indicate where items will be stored in your warehouse. You will also be able to record serial and lot numbers, if needed. Additionally, as portions of larger orders are received and put-away, you may select those portions to post. This eliminates the need to wait until an entire order is put away before being able to access inventory.

## EDI and FAX Interfaces

Purchase Orders can be sent and received via EDI and FAX. When creating vendors, the default method of sending and receiving Purchase Orders for that vendor must be identified: printed output, EDI, and FAX are all available options. Overrides are available on the End Requisition Screen for individual Purchase Orders.

You can also send Product Activity Data (852) (PAD) documents to vendors via EDI. PAD documents include:

- information about changes in quantity for items of which the vendor is the primary vendor
- the **IA Vendor No.** and **Department** fields from the vendor's record in the Vendor Master File

PAD documents can also include pre-assigned requisition numbers for the vendor to use when responding, if you select this option.

## Mail Server Interface

Purchase Orders can be automatically e-mailed to a vendor, if the vendor is set up with an e-mail address and Purchase Orders are selected to be e-mailed through Vendor Master Maintenance (MENU POFIE). If Purchase Orders are not set up to e-mail automatically, they can still be e-mailed on an individual basis from the following options:

- Enter or Change Requisitions (MENU POMAIN)
- Purchase Orders (MENU POMAIN)

In addition, any report or listing that can be printed from the Report Options Screen and documents that can be faxed can be e-mailed.

## Customer Consignment Interface

If Customer Consignment is installed, in Purchasing you will perform several setup and processing functions related to the handling of consignment inventory. Refer to the Overview and Introduction chapters in the Customer Consignment User Guide for details.

---

## Selecting Items to Order

In addition to providing the capability to enter, print, and receive items for purchase orders, Purchasing provides several tools that will help you determine which items should be ordered.

These tools include:

- Item Search/Browse
- Special Order Processing
- Suggested Orders
- Multi-Warehouse Purchase Orders
- Centralized Purchase Orders
- Product Activity Data (852)

## Item Search/Browse

Searching for items is available during Enter or Change Requisitions (MENU POMAIN) to help you locate items to be purchased. You may search by our item description, our item number, browse by vendor (reviewing those items that meet the selection criteria that are available from a vendor), and include or exclude suspended items.

## Below Minimum Feature

In addition, Purchasing provides for the ability to limit the number of items that display by requesting only those items that fall below their minimum balance. You may also request to display items with a current stocking level within a specified percentage of their minimum balance.

---

## Special Order Processing

Special Orders are those that consist of drop-ship items, non-stock items, or orders of such a large quantity that you do not want to remove the items from stock.

A drop-ship item is one that is shipped directly from your vendor to your customer. Drop ships can originate from a customer's order or from within requisition entry. If PO-AP Transfer = Y for a vendor in Vendors Maintenance (MENU APFILE), receipt processing of a drop shipment for that vendor can be performed through Accounts Payable Voucher Entry's drop ship receipt validation processing (MENU APMAIN).

A non-stock item is defined through Item Master Maintenance (MENU IAFILE) with an N in the *Update Inventory* field indicating that the quantities are not stocked in your warehouse. You must, however, use Item Balance Maintenance (MENU IAFILE) to define a non-stock item for each warehouse from which it will be sold.

Special orders are first created in Order Entry as normal customer orders, but are designated as "special orders". Thereafter, special orders are maintained, reviewed, or assigned to different vendors through Work With Special Orders (MENU POMAIN). When creating requisitions in Purchasing, you can then select one or more special ordered items for inclusion in the requisition for a specific vendor.

For any of these special order types that originate from a customer's order, when the related purchase order is finally received, the customer order quantities are updated so that the order may be released and invoiced.

Special order processing can be tailored for each of your companies through Special Order Options Maintenance (MENU XAFILE). You can choose to have requisitions/purchase orders automatically created/updated for special order or drop-ship items at end order time and choose to use several other useful functions. Refer to Special Order Options Maintenance (MENU XAFILE) in the Cross Application User Guide for details. For additional details about the extended features of special order processing, refer to Special Order Processing Extended Features in the Appendix section of this user guide.

Special Orders can be added to Suggested Orders when the Suggested Order Report is generated from Buyers Workbench using F6=CRT NEW RUN. The Linked and Unlinked special orders can then be maintained through Buyers Workbench by using the 'L' option.

## Suggested Orders

Suggested Orders are created for items that fall below their minimum stocking level in a warehouse (or all warehouses). Suggested order quantities are generated for the quantity that should be ordered to replenish that item in inventory [that is, bring that item to the maximum stocking level as defined through Item Balance Maintenance (MENU IAFILE)], as explained in the Inventory Accounting User Guide.

The suggested order quantities for regular purchase orders and multi-warehouse purchase orders reflect the vendor minimum order quantities defined in Vendor Master Maintenance (MENU POFILE). Suggested order quantities for centralized purchase orders do not reflect vendor minimums.

A suggested order can also include special order items that are added (linked) to this suggested order in one the following ways through Buyers Workbench:

- Through the Suggested Order Report by setting the **Add Special Order Items** field to **Y** to automatically add (link) all qualified special order items when a suggested order is created.
- Through Buyers Workbench by entering 'L' in the **Option** field on the Workbench Suggested Orders List Screen (p. 38-5).

Through Purchasing, you can convert suggested orders to requisitions for any items that fall below their minimum stocking level (or fall within a specified percentage of their minimum stocking level).

## Purchasing Line Item Classification

Selection criteria is available to limit the orders that are suggested. One selection criteria available is the Purchasing Line (or PLine). PLine is a code that allows you to group like items together for purchasing purposes. It is similar in nature to an item class/sub-class which allows grouping like items for purchasing. For example, Vendor Troybilt (100) may have different groupings of items like "Equipment" for a PLine that would be Snow Blowers, Lawn Mowers, etc., and then have different groupings of "Parts" that would be Bags, Accessories, Replacement Parts, etc. These groupings could be broken out to allow discounts at these levels by the vendor.

A PLine is defined through Purchasing Line Maintenance (MENU POFIL2), and assigned at the Item Balance level through Item Balance Maintenance (MENU IAFILE).

## Creating Suggested Orders

The process of creating suggested orders is initiated through Suggested Orders Report (MENU POREPT) or Buyers Workbench (MENU POREPT). A file is created of suggested orders, which you can then review and use to create purchase requisitions. You may choose to print the Suggested Orders Report, or to generate and review suggested orders online with no printed copy. Additionally, you can choose to print alternate vendor information (if items are purchased from more than one vendor) and save information needed to create requisitions to the Suggested Orders Quantity File.

Prior to creating requisitions from suggested orders and prior to creating a new Suggested Orders Quantity File [through Suggested Orders Report (MENU POREPT) or Buyers Workbench (MENU POREPT)], you can delete one or more suggested orders from a specific run. These deletions occur through Delete Suggested Orders (MENU POREPT) or Buyers Workbench (MENU POREPT). Run this option if you do not want to add to an existing Suggested Orders Quantity File, or the information in an existing file is not what you desire.

If the Suggested Orders Report is run with the **Add Special Order Items** field defined as **Y**, all qualified special order items are added (linked) to suggested orders. Special order items can be linked to suggested orders in the following ways:

- Through the Suggested Order Report when F6=CRT NEW RUN is used in Buyers Workbench by setting the **Add Special Order Items** field to **Y** to automatically add (link) all qualified special order items when a suggested order is created.
- Through Buyers Workbench by entering 'L' in the **Option** field on the Workbench Suggested Orders List Screen (p. 38-5).

## Reviewing Suggested Orders

You may review suggested orders on the Suggested Orders Report interactively through either Suggested Order Maintenance (MENU POREPT) or Buyers Workbench (MENU POREPT). Through Suggested Order Maintenance or Buyers Workbench, you can do the following:

- Determine whether you can create a Multi-Warehouse PO or a Centralized PO for each order. (These types of orders are explained in the following pages.) For any single vendor, all orders must be the same type (Regular, Multi-Warehouse, or Centralized)
- Change the suggested vendor to one of the alternate vendors shown on the report.
- Delete line items.
- Determine if the suggested order(s) qualify for volume discounts.
- Change the order quantity for Regular and Multi Ship-To purchase orders.
- Override the unit cost.
- Round-out (i.e., auto-round), create, and approve the requisition.

---

NOTE: You cannot auto-round Multi-Warehouse or Centralized POs.

---

Suggested orders will also include special order items if they have been added (linked) to a suggested order. Once a special order item is linked to a suggested order, the **Requisition Number** field (SORQNO) in the Special Order Detail File (SPORD) record for the item will be filled with the suggested order run number preceded by a # character. This will indicate that the Special Order Detail record is linked to a suggested order run. Also, suggested order totals will be recalculated, and in addition to suggested order items, suggested order totals will include the totals of all linked special order items, except drop-ship items (since these are directly shipped to the customer).

---

NOTE: Special order items that are added (linked) to suggested orders via this process in Buyers Workbench can be viewed, maintained or deleted in Buyers Workbench within Distribution A+.

---

## Minimum Order Amounts Required by Vendor

If vendors require minimum order amounts or offer volume discounts, you may want to order more than you currently need. In this situation, you can easily distribute the excess order quantity to your other warehouses by creating one of the following types of purchase orders through Suggested Order Maintenance (MENU POREPT):

- Multi-Warehouse purchase order (if allowed by the vendor)
- Centralized purchase order

Multi-Warehouse POs and Centralized POs are described on the following pages. For information on warehouse transfers, refer to CHAPTER 3: *Warehouse Transfers Overview*.

## Creating Requisitions from Suggested Orders

As you review each vendor, you have the option to create the requisition for that vendor on the Suggested Order Maintenance End Order Screen, through the use of a function key.

If you do not create the individual requisitions through Suggested Order Maintenance, you can also create them for the entire run through Create Requisitions from Suggested Orders (MENU POREPT). One requisition is created for each primary vendor that has selected items. The orders will be automatically placed on Suggested Order (SO) hold if the vendor minimums specified through Vendors Maintenance (MENU POFILE) are not met.

In Buyers Workbench, enter a 'C' in the **Option** field on the Workbench Suggested Orders List Screen (p. 38-5) to create requisitions and purchase orders on a suggested order run; valid only if you are authorized to the Create Req From Suggested Orders menu option (MENU POREPT).

If suggested orders include special order items that have been added (linked) to the suggested orders, these special order items will also be added to the requisition/purchase order created from the suggested order.

## Multi-Warehouse Purchase Orders

A Multi-Warehouse purchase order (also referred to as Multi-WH PO) is a single purchase order that is created from a suggested order and shipped from the vendor to two or more warehouses. Multi-Warehouse POs allow you to combine demand from multiple warehouses to meet vendor minimums and take advantage of vendor volume discounts and vendor contract pricing.

To create Multi-Warehouse POs, the following must be true:

- In Vendor Master Maintenance (MENU POFILE), the **Allow Multi Ship-To POs** field must be **Y**
- In Warehouse Numbers Maintenance (MENU IAFILE), the **Multi Ship-To POs** field must be **Y**
- When creating the suggested orders report through Suggested Orders Report (MENU POREPT) or Buyers Workbench (MENU POREPT), the **Create Multi Ship-To P/Os** field must be **Y**

To turn off the Multi-Warehouse PO feature for vendors who do not allow it, key **N** in the **Allow Multi Ship-To POs** field in Vendor Master Maintenance (MENU POFILE).

Centralized purchase orders offer benefits similar to Multi-Warehouse purchase orders. If vendors will not ship to separate warehouses on a single PO, you may want to consider using Centralized POs instead.

## Printing Multi-Warehouse Purchase Orders

When you print a multi-warehouse purchase order, a separate PO with a unique PO number is printed for each warehouse. Additionally, an item summary page is printed that combines item quantity, pricing, and discount information from all individual POs.

The PO number for each warehouse PO consists of two numbers: the Multi-Warehouse PO number and the individual PO number. The Multi-Warehouse PO number, which is the same for all of the individual POs in this run for the vendor, links the POs together. It is sequentially assigned (beginning with 000001) to each Multi-Warehouse purchase order and cannot be changed.

---

## Centralized Purchase Orders

---

NOTE: To create Centralized purchase orders, you must have first setup the warehouse transfer feature of Purchasing. For more information about warehouse transfers, refer to refer to CHAPTER 3: *Warehouse Transfers Overview*.

---

A centralized purchase order is created from a suggested order and includes items that are received at one warehouse and then distributed to other warehouses through a warehouse transfer. Like Multi-Warehouse POs, Centralized POs allow you to combine demand from multiple warehouses onto one PO to meet vendor minimums and take advantage of vendor volume discounts and vendor contract pricing.

You can turn off this feature for individual warehouses to prevent goods from being received there and then shipped to another warehouse, or received there from another warehouse. To do so, key N in the *Allow Central Ship-to POs w/WH Trans* field on the Warehouse Number File Maintenance Screen (MENU IAFILE).

### Creating a Centralized PO

To create a Centralized PO, follow these steps:

1. When creating the suggested orders report through Suggested Orders Report (MENU POREPT) or Buyers Workbench (MENU POREPT), key Y in the **Allow Centralized P/Os** field.
2. Use Suggested Order Maintenance (MENU POREPT) or Buyers Workbench (MENU POREPT) to centralize the items that do not meet the minimums.
3. Use Suggested Order Maintenance (MENU POREPT), Buyers Workbench (MENU POREPT), or Create Requisitions from Suggested Orders (MENU POREPT) to create the requisition.

When you create a requisition for a centralized PO, the following orders are created:

- Vendor PO, which includes all items.
  - One warehouse transfer requisition for each warehouse that will receive items. On each requisition, the warehouse transfer vendor is the warehouse that received the entire order from the vendor.
4. Using Purchase Orders (MENU POMAIN), print the PO twice. Once for the vendor PO, and the second time for the warehouse transfer PO, which creates a warehouse transfer sales order for the Centralized PO.

### Product Activity Data (852)

If you have a large number of items, your buyers may not have the time to review the status of all of them on a daily or weekly basis. If you have EDI installed, you can use the outgoing Product Activity Data (852) (PAD) document to notify vendors of changes in item quantities automatically. PAD documents notify a vendor of changes in quantity for items of which the vendor is the primary vendor. The vendor can then respond by submitting a suggested purchase order, creating an order in their own system and shipping the items, or taking some other mutually agreed-upon action.

For a more detailed description of the PAD documents, refer to the *CHAPTER 5: Tools to Assist the Buyer*.

---

## Purchase Order Processing

Through Purchasing, purchase orders are first created as requisitions. Requisitions may be entered manually, or automatically created in the following ways:

- From suggested orders and added (linked) special order items, if any.
- For special orders through Special Order Automatic Req Creation (MENU POMAST).  
Note that special order items that have been added (linked) to suggested orders will be omitted from this process.
- For special orders at end-order time based on company-level special order options defined through Special Order Options Maintenance (MENU XAFILE) or vendor-level special order options defined through Vendors Maintenance (MENU POFILE).
- From existing open or history purchase orders via Req/PO Inquiry, Vendor Order/Shipment Inquiry, Open PO's by Item, and PO History by Item (all on MENU POMAIN).

A requisition must be approved before a Purchase Order can be printed. Once printed, you may still change the content of a purchase order; order and line information can be changed, and items can be added.

After receiving items from a purchase order, you must record the receipt of these items. Receipts may be recorded in receipt groups manually (referred to as the Purchasing processing method of receipt entry), or automatically (referred to as the Receiver processing method of receipt entry). After entering purchase order receipts, you must post the receipts to update inventory. This will update your inventory counts, as well as the status of the purchase order. Note that related General Ledger updates are posted at a later time: either during Day-End Processing, or on an as needed basis via an option on the Inventory Accounting Master Menu (MENU IAMAST).

---

NOTE: Receipts can also be recorded manually through the drop-ship receipt validation process, which is accessible through Voucher Entry (MENU APMAN). This process posts receipts and validates them at the same time.

---

After all items are received and posted for a purchase order, the purchase order is closed and the data will go to purchase order history (at Day-End.)

## Vendor/Item and Vendor/Item/Price Information

Vendor/Item and Vendor/Item/Price information describes standard purchasing information for inventory items normally ordered through Purchasing. Unique ordering information is established for each vendor from whom an item can be purchased, and optionally, for the warehouse to receive the item. This information is then used when creating a requisition to allow you to order a specific item

from a specific vendor, and optional receiving warehouse. Vendor/Item/Price data even may include date sensitive (expiration date) prices.

Vendor/Item and Vendor/Item/Price information is entered through Vendor/Item Information Maintenance (MENU POFILE).

---

NOTE: Purchasing provides for the automation of Vendor/Item information. Vendor/Item information may automatically be created through Create Default Vendor/Item Information from Item Master/Item Balance (MENU POFILE).

---

## Quantity Discounting

Vendors often encourage larger purchases by offering better prices for large order quantities. Purchasing allows you to store your vendor's quantity discounting schedule for a specific item and will display an item's cost (when creating a requisition) based on the order quantity. When ordering an item on a requisition, if a larger order quantity offers a better cost, the next available cost break and quantity will display.

Each vendor/item can have up to 5 quantity breaks with associated costs. The costs can be expressed as fixed dollar amounts or as discount percentages from the item's regular cost. Using discount percentages can save time when implementing vendors price changes.

## Vendor Volume Discounts

For vendors who offer discounts based on PO totals (i.e., a combination of all items on the PO), you can define vendor volume discounts which are automatically applied when you create requisitions through Suggested Order Maintenance (MENU POREPT).

Vendor volume discounts can be based on one or more of the following PO totals:

- Cubic size
- Number of units
- Purchase order amount
- Weight

When defining vendor volume discounts, you must specify one of the following types of discounts that the vendor offers through Vendor Master Maintenance (MENU POFILE):

- Highest qualifying discount
- Sum of all qualifying discounts
- Chain discount, where all qualifying discounts are applied, but each is based on the previously discounted value rather than the original cost.

Then, use Vendor Volume Discounts Maintenance (MENU POFIL2) to specify the minimum requirements (i.e., cubes, units, amount, and weight) and the discount percent to be applied when those four minimums are met.

## Vendor Volume Discounts Example

Assume the vendor offers the following discounts:

- 2% discount when you purchase 50 units and the total PO amount is \$2000.00
- 3% discount when you purchase 250 units

In Vendor Volume Discounts Maintenance (MENU POFIL2), define the discounts as follows:

| Minimum Units | Minimum Amount | Disc % |
|---------------|----------------|--------|
| 50            | 2000.00        | 2      |
| 250           | 0.00           | 3      |

Also assume, you order a total of 350 units (they can be different items) and the PO amount is \$3000.00. Since the discount amount differs depending on the type of discount specified in Vendor Master Maintenance, an example of each is shown here.

### HIGHEST QUALIFYING DISCOUNT - #1

The requirements for both discounts have been met, but 3% is applied since it is higher than 2%.

Calculation:

$$\text{PO amt} \times [1 - (\text{highest qualifying disc \%} / 100)] = \text{disc PO amt}$$
$$3000.00 \times (1 - .03) = 2910.00$$

### SUM OF QUALIFYING DISCOUNTS - #2

Since the requirements for both discounts have been met, the discount percentages are added together and the total is applied.

Calculation:

$$\text{PO amt} \times [1 - (\text{sum of qualifying disc \%} / 100)] = \text{disc PO amt}$$
$$3000.00 \times (1 - .05) = 2850.00$$

### CHAIN DISCOUNT - #3

Since the requirements for both discounts have been met, the highest discount is applied first, and the second discount is applied to the discounted amount.

Calculation:

$$\text{PO amount} \times [1 - (\text{highest disc \%} / 100)] = \text{Disc 1 PO amt}$$
$$\text{Disc 1 PO amt} \times [1 - (\text{next highest disc \%} / 100)] = \text{Disc 2 PO amt}$$
$$\text{Disc 2 PO amt} \times [1 - (\text{next highest disc \%} / 100)] = \text{Disc 3 PO amt}$$

These steps continue until the last qualifying discount has been applied.

$$3000.00 \times (1 - .03) = 2910.00$$

$$2910.00 \times (1 - .02) = 2851.80$$

During suggested order maintenance, Distribution A+ indicates whether or not the minimums have been met for both the item and the vendor. You can then change order quantities and create a Multi-Warehouse PO or Centralized PO to take advantage of the vendor volume discounts.

## Vendor Contracts

You can set up vendor contracts for an item or item/warehouse, and enter purchase requisitions and suggested orders based on those contracts. When you enter a requisition, Distribution A+ searches for a vendor contract that matches the vendor and item specified on the requisition. If a valid contract is found and all contract requirements are met, the discounted cost is retrieved.

With a vendor contract, you can specify one of the following types of discounts:

- Up to 5 quantity breaks that offer a discounted cost when you purchase the minimum quantity specified.
- You can express the discount as a discounted unit cost or a percent discount that is applied to the current vendor/item cost or to an override contract price.
- A buy/get special that offers an additional amount of the item at no charge or at a discounted cost when you purchase a minimum quantity.

Vendor contracts also allow you to define the following optional specifications:

- Start and End dates, which allow you to set up discounts for a specified time period
- Contract Number, which can be used to track multiple contracted items and requires users to key the contract number when entering a requisition

For information on defining vendor contracts, refer to Vendor Contracts Maintenance (MENU POFIL2).

## Cost Retrieval Process

When you enter an item on the requisition, Distribution A+ searches for a matching vendor/item record. If it finds a match, it retrieves the item cost.

The records that are searched differ depending on whether or not you key a contract number when entering the requisition. Each scenario is explained below.

### **Without Contract Number**

If you do not key a contract number, the following files are searched in the order specified:

1. Non-numbered contracts defined through Vendor Contracts Maintenance (MENU POFIL2)
2. Vendor/item records defined through Vendor/Item Information Maintenance (MENU POFILE)

If a matching vendor/item record is not found, 0 is displayed in the Cost field.

### With Contract Number

If you key a contract number, all numbered contracts are searched. If a matching vendor/item record is found in a contract, the cost is retrieved from the contract.

If a matching record is not found, a message appears. You must either enter a different contract number or leave the field blank to initiate the non-numbered contract search.

## Cost Calculation Process

The cost is calculated differently depending on the type of discount defined in the vendor contract. A few examples are shown here.

### Calculating Quantity Break Discounts Using Costs

If a vendor contract is defined using quantity break discounts with corresponding discounted unit costs, there is no calculation required. The cost is specified in the *Qty Break Cst* field.

### Calculating Quantity Break Discounts Using Percentages

If the vendor contract is defined using quantity break discounts with corresponding discount percents, the cost is calculated as follows:

Calculation: Vendor Item Cost \* (1.00 - Qty Break Pct %)

#### Example:

If Vendor/Item Cost is \$20.00 and Qty Break Pct is 10, the cost is calculated as:

$$20.00 * (1.00 - 0.10) = 18.00$$

### Calculating Buy/Get Discounts Using Costs

Unit costs for buy/get specials are calculated in two steps. In the first step, referred to in these examples as “Work Quantity Calculations”, several values are calculated for use in the second step. In the second step, referred to as “Cost Calculations”, the values from “Work Quantity Calculations” are plugged into a formula to calculate the unit cost.

For examples 1 and 2, assume the following:

- Vendor/Item Cost: 12.50
  - Buy 10 at \$10.00
  - Get 2 at \$5.00
  - Get Quantity Limit: 50
  - Buy Quantity Limit: 250
- Buy Qty Limit = (Get Qty Limit/Get Qty) \* Buy Qty  
 $250 = (50/2) * 10$

|             | Qty    | Sct/Pct (%) | Code (%,\$) |
|-------------|--------|-------------|-------------|
| <b>Buy:</b> | 10.000 | 10.00000    | \$          |
| <b>Get:</b> | 2.000  | 5.00000     | \$          |

**Example: 1:**

Order quantity is 25, which is less than the Buy Quantity Limit

**Work Quantity Calculations**

Step 1: Calculate the multiplier

Ord Qty / (Buy Qty from contract + Get Qty from contract) = multiplier

$25 / (10 + 2) = 2$  (decimals are truncated)

Step 2: Compare the multiplier to the Get Quantity Limit

$2$  (multiplier) <  $50$  (Get Quantity Limit)

Step 3:

Calculate the buy work quantity and get work quantity

If the multiplier is greater than the Get Quantity Limit, the calculations for determining the buy work quantity and get work quantity are ignored and the values are determined as follows:

- Buy Quantity Limit becomes buy work quantity
- Get Quantity Limit becomes get work quantity

In this example the multiplier (2) is less than the Get Quantity Limit (50). Therefore, the following calculations are used to determine the buy work quantity and get work quantity:

Buy Qty from contract \* multiplier = buy work quantity

$10 * 2 = 20$

Get Qty from contract \* multiplier = get work quantity

$2 * 2 = 4$

Step 4:

Calculate the remainder

Ord Qty - (buy work quantity + get work quantity) = remainder

$25 - (20 + 4) = 1$

**Cost Calculations**

Use the following formula to calculate the unit cost:

$$[(\text{buy work quantity} + \text{remainder}) * \text{Buy Cost}] + (\text{get work quantity} * \text{Get Cost}) / \text{Order Qty} = \text{Unit Cost}$$

$$\{(20 + 1) * \$10.00\} + \{4 * \$5.00\}$$

$$/ 25 = \$9.2000 \text{ Unit Cost}$$

---

**Example: 2:**

Order quantity is 2500, which is more than the Buy Quantity Limit

---

**Work Quantity Calculations**

Step 1: Calculate the multiplier

$$\text{Ord Qty} / (\text{Buy Qty from contract} + \text{Get Qty from contract}) = \text{multiplier}$$

$$2500 / (10 + 2) = 208 \text{ (decimals are truncated)}$$

Step 2: Compare the multiplier to the Get Quantity Limit

$$208 \text{ (multiplier)} > 50 \text{ (Get Quantity Limit)}$$

Step 3: Calculate the buy work quantity and get work quantity

If the multiplier is greater than the Get Quantity Limit, the calculations for determining the buy work quantity and get work quantity are ignored and the values are determined as follows:

- Buy Quantity Limit becomes buy work quantity
- Get Quantity Limit becomes get work quantity

In this example the multiplier (208) is greater than the Get Quantity Limit (50). Therefore, the following values are used:

$$\text{buy work quantity} = 250$$

$$\text{get work quantity} = 50$$

Step 4:

Calculate the remainder

$$\text{Ord Qty} - (\text{buy work quantity} + \text{get work quantity}) = \text{remainder}$$

$$2500 - (250 + 50) = 2200$$

**Cost Calculations**

Use the following formula to calculate the unit cost:

$$[(\text{buy work quantity} + \text{remainder}) * \text{Buy Cost}] + (\text{get work quantity} * \text{Get Cost}) / \text{Order Qty} = \text{Unit Cost}$$

$$\{(250 + 2200) * \$10.00\} + \{50 * \$5.00\}$$

/ 2500 = \$9.9000 Unit Cost

### Calculating Buy/Get Discounts Using Percentages

Unit costs for buy/get specials are calculated in two steps. In the first step, referred to in these examples as “Work Quantity Calculations”, several values are calculated for use in the second step. In the second step, referred to as “Cost Calculations”, the values from “Work Quantity Calculations” are plugged into a formula to calculate the unit cost.

For examples 1 and 2, assume the following:

- Vendor/Item Cost: 100.00
  - Buy 5 at 75% off
  - Get 3 at 98% off
  - Get Quantity Limit: 24
  - Buy Quantity Limit: 40
- Buy Qty Limit = (Get Qty Limit/Get Qty) \* Buy Qty  
 $40 = (24/3) * 5$

|             | Qty   | Cst/Pct (%) | Code (%,\$) |
|-------------|-------|-------------|-------------|
| <b>Buy:</b> | 5.000 | 75.00000    | %           |
| <b>Get:</b> | 3.000 | 98.00000    | %           |

#### Example: 1:

Order quantity is 25, which is less than the Buy Quantity Limit

#### Work Quantity Calculations

Step 1: Calculate the multiplier

$\text{Ord Qty} / (\text{Buy Qty from contract} + \text{Get Qty from contract}) = \text{multiplier}$

$25 / (5 + 3) = 3$  (decimals are truncated)

Step 2: Compare the multiplier to the Get Quantity Limit

$3 (\text{multiplier}) < 24 (\text{Get Quantity Limit})$

Step 3: Calculate the buy work quantity and get work quantity

If the multiplier is greater than the Get Quantity Limit, the calculations for determining the buy work quantity and get work quantity are ignored and the values are determined as follows:

- Buy Quantity Limit becomes buy work quantity

- Get Quantity Limit becomes get work quantity

In this example the multiplier (3) is less than the Get Quantity Limit (24). Therefore, the following calculations are used to determine the buy work quantity and get work quantity:

Buy Qty from contract \* multiplier = buy work quantity

$$5 * 3 = 15$$

Get Qty from contract \* multiplier = get work quantity

$$3 * 3 = 9$$

Step 4: Calculate the remainder

Ord Qty - (buy work quantity + get work quantity) = remainder

$$25 - (15 + 9) = 1$$

### Cost Calculations

Use the following formula to calculate the unit cost:

{(buy work quantity + remainder) \* [Vendor Item Cost \* (1.00 - Buy Pct)]}

+ {get work quantity \* [Vendor Item Cost \* (1.00 - Get Pct)]}

/ Order Qty = Unit Cost

{(15 + 1) \* [100.00 \* (1.00 - 0.75)]}

+ {9 \* [100.00 \* (1.00 - 0.98)]}

/ 25 = 16.72000 Unit Cost

### Example: 2:

Order quantity is 250, which is more than the Buy Quantity Limit

---

### Work Quantity Calculations

Step 1: Calculate the multiplier

Ord Qty / (Buy Qty from contract + Get Qty from contract) = multiplier

$$250 / (5 + 3) = 31 \text{ (decimals are truncated)}$$

Step 2: Compare the multiplier to the Get Quantity Limit.

$$31 \text{ (multiplier)} > 24 \text{ (Get Quantity Limit)}$$

Step 3: Calculate the buy work quantity and get work quantity

If the multiplier is greater than the Get Quantity Limit, the calculations for determining the get work quantity and buy work quantity are ignored and the values are determined as follows:

- Buy Quantity Limit becomes buy work quantity
- Get Quantity Limit becomes get work quantity

In this example the multiplier (31) is greater than the Get Quantity Limit (24). Therefore, the following values are used:

buy work quantity = 40

get work quantity = 24

Step 4: Calculate the remainder

Ord Qty - (buy work quantity + get work quantity) = remainder

250 - (40 + 24) = 186

### Cost Calculations

Use the following formula to calculate the unit cost:

{(buy work quantity + remainder) \* [Vendor Item Cost \* (1.00 - Buy Pct)]}

+ {get work quantity \* [Vendor Item Cost \* (1.00 - Get Pct)]}

/ Order Qty = Unit Cost

{(40 + 186) \* [100.00 \* (1.00 - 0.75)]}

+ {24 \* [100.00 \* (1.00 - 0.98)]}

/ 250 = 22.792 Unit Cost

### Calculating Buy/Get Discounts Using Cost and Percentage

Unit costs for buy/get specials are calculated in two steps. In the first step, referred to in these examples as “Work Quantity Calculations”, several values are calculated for use in the second step. In the second step, referred to as “Cost Calculations”, the values from “Work Quantity Calculations” are plugged into a formula to calculate the unit cost.

For Example 1 and 2, assume the following:

- Vendor/Item Cost: 12.00
  - Buy 10 at \$10.00
  - Get 2 at 50 % off
  - Get Quantity Limit: 4
  - Buy Quantity Limit: 20
- Buy Qty Limit = (Get Qty Limit/Get Qty) \* Buy Qty
- 20 = (4/20) \* 10

|             | Qty    | Cst/Pct (%) | Code (%,\$) |
|-------------|--------|-------------|-------------|
| <b>Buy:</b> | 10.000 | 10.00000    | \$          |
| <b>Get:</b> | 2.000  | 50.00000    | \$%         |

**Example: 1:**

Order quantity is 20, which is within the Buy Quantity Limit

---

**Work Quantity Calculations**

Step 1: Calculate the multiplier

$\text{Ord Qty} / (\text{Buy Qty from contract} + \text{Get Qty from contract}) = \text{multiplier}$

$20 / (10 + 2) = 1$  (decimals are truncated)

Step 2: Compare the multiplier to the Get Quantity Limit.

$1$  (multiplier)  $<$   $4$  (Get Quantity Limit)

Step 3: Calculate the buy work quantity and get work quantity

If the multiplier is greater than the Get Quantity Limit, the calculations for determining the buy work quantity and get work quantity are ignored and the values are determined as follows:

- Buy Quantity Limit becomes buy work quantity
- Get Quantity Limit becomes get work quantity

In this example the multiplier (1) is less than the Get Quantity Limit (4). Therefore, the following calculations are used to determine the buy work quantity and get work quantity:

$\text{Buy Qty from contract} * \text{multiplier} = \text{buy work quantity}$

$10 * 1 = 10$

$\text{Get Qty from contract} * \text{multiplier} = \text{get work quantity}$

$2 * 1 = 2$

Step 4: Calculate the remainder

$\text{Ord Qty} - (\text{buy work quantity} + \text{get work quantity}) = \text{remainder}$

$20 - (10 + 2) = 8$

**Cost Calculations**

Use the following formula to calculate the unit cost:

$[(\text{buy work quantity} + \text{remainder}) * \text{Buy Cost}]$

$$+ \{ \text{get work quantity} * [\text{Vendor Item Cost} * (1.00 - \text{Get Pct})] \}$$

$$/ \text{Order Qty} = \text{Unit Cost}$$

$$[(10 + 8) * \$10.00]$$

$$+ \{ 2 * [12.00 * (1.00 - 0.50)] \}$$

$$/ 20 = \$9.600 \text{ Unit Cost}$$

### Example: 2:

Order quantity is 200, which is more than the Buy Quantity Limit

### Work Quantity Calculations

Step 1: Calculate the multiplier

$$\text{Ord Qty} / (\text{Buy Qty from contract} + \text{Get Qty from contract}) = \text{multiplier}$$

$$200 / (10 + 2) = 16 \text{ (decimals are truncated)}$$

Step 2: Compare the multiplier to the Get Quantity Limit.

$$16 \text{ (multiplier)} > 4 \text{ (Get Quantity Limit)}$$

Step 3: Calculate the buy work quantity and get work quantity

If the multiplier is greater than the Get Quantity Limit, the calculations for determining the buy work quantity and get work quantity are ignored and the values are determined as follows:

- Buy Quantity Limit becomes buy work quantity
- Get Quantity Limit becomes get work quantity

In this example the multiplier (16) is greater than the Get Quantity Limit (4). Therefore, the following values are used:

$$\text{buy work quantity} = 20$$

$$\text{get work quantity} = 4$$

Step 4: Calculate the remainder

$$\text{Ord Qty} - (\text{buy work quantity} + \text{get work quantity}) = \text{remainder}$$

$$200 - (20 + 4) = 176$$

### Cost Calculations

Since the order quantity is much greater than the Buy Quantity Limit, the formula is different from the formula used in the other examples.

Use the following formula to calculate the unit cost:

(buy work quantity \* Buy Cost)  
+ {get work quantity \* [Vendor Item Cost \* (1.00 - Get Pct)]}  
+ (remainder \* Buy Cost)  
/ Order Qty = Unit Cost  
  
(20 \* \$10.00)  
+ {4 \* [12.00 \* (1.00 - 0.50)]}  
+(176 \*10.00)  
  
/ 200 = \$9.920 Unit Cost

## Sales Analysis/Purchase Order Fiscal Calendar

Purchasing allows you to define sales analysis/purchase order fiscal calendars through SA/PO Fiscal Calendar Maintenance (MENU POFIL2) in order to define buyer budgets for specified buyer budget levels. Fiscal calendars are used in conjunction with buyer item classes/subclasses and buyer budgets that you define in order to capture statistical budget/actual information on the buyer level.

The original Sales Analysis Fiscal Calendar is being shared by Purchasing Buyer Budgets to accurately plan purchasing against inventory demand captured by sales analysis and utilized in Inventory Management & Planning or Advanced Inventory Management.

## Buyer Budgets

Purchasing allows you to define buyer budgets for up to 11 specified buyer budget levels. Different buyer budget levels may be assigned to a selected buyer, 1 level per buyer, through Buyers Maintenance (MENU POFIL2). These variations may be assigned as follows:

- Warehouse
- Warehouse/Vendor
- Warehouse/Vendor/Buyer Item Class
- Warehouse/Vendor/Buyer Item Class/Subclass
- Warehouse/Buyer Item Class
- Warehouse/Buyer Item Class/Subclass
- Vendor
- Vendor/Buyer Item Class
- Vendor/Buyer Item Class/Subclass
- Buyer Item Class

- Buyer Item Class/Subclass

Refer to Buyers Maintenance (MENU POFIL2) for details on assigning buyer budget levels to a buyer.

Actual buyer budgets purchase amounts for buyers are updated with purchase order line values when a Purchase Order is printed and when a purchase order is maintained. The 12 or 13 actual periods will be updated based on where the PO print date falls in the SA/PO Fiscal Calendar. This actual budget information allows you to compare your actual buyer costs with the buyer budgets you defined through Buyer Budgets Maintenance (MENU POFIL2). The Buyer Budgets Analysis Report (MENU POREPT) may be run to compare actual buyer purchase amounts with those buyer budgets defined through Distribution A+.

## Buyer Item Class/ Sub Class

Purchasing allows you to define buyer item classes and optional subclasses for your buyers through Buyer Item Class/SubClass Maintenance (MENU POFIL2). Buyer Item Classes/Subclasses are used for grouping items into categories for buyer budgets and buyer actual purchases.

## Approval Levels

Purchasing allows you to restrict authority to approve requisitions and to change Purchase Orders. If the **Use Approval Code Authorization for Req/PO** field is set to Y through Purchasing Company Options Maintenance (MENU XAFIL2), only approval codes defined through Approval Codes Maintenance (MENU POFIL2) can be used to approve requisitions. Authority to use the approval code is based on the following requirements:

- The user logged onto Distribution A+ must be user ID assigned to the approval code through Approval Codes Maintenance (MENU POFIL2). If the user IDs do not match, the requisition will not be approved.
- The total requisition value cannot be greater than the Maximum Approval Amount assigned to the approval code through Approval Codes Maintenance (MENU POFIL2). If the total requisition value exceeds the **Maximum Approval Amount** defined for the approval code, the requisition will not be approved. To approve the requisition, a user with a greater approval amount must log on and enter an approval code.

If a different user entered an approval code and you want to change a requisition or Purchase Order, you can do one of the following:

- Change the requisition or Purchase Order within the approval amount value for that requisition or Purchase Order. If your **Maximum Approval Amount** defined through Approval Codes Maintenance (MENU POFIL2) is less than or equal to the approval amount for the requisition or Purchase Order, this is your only option.
- Change the approval code to your approval code and then change the requisition or Purchase Order. Use this method if you want to increase the approval amount. You can use this method only if your Maximum Approval Amount defined through Approval Codes Maintenance (MENU POFIL2) is greater than the former Approval Amount value.

You can print a list of defined approval codes through Approval Codes Listing (MENU POFIL2).

If the **Use Approval Code Authorization for Req/PO** field is set to N through Purchasing Company Options Maintenance (MENU XAFILE), no authorization check will be performed.

## Standard Comments

Purchasing allows you to define standard comments that are specific to a vendor, item, or vendor/item (items specific to a vendor). Vendor comments (order comments) are automatically copied into each new requisition created for the vendor. Item comments are automatically copied to a line comment when the specified item is added to any requisition. Vendor/item comments are copied to a line comment when the specified item is added to a requisition created for a specific vendor. Standard comments are defined through Standard Comments Information Maintenance (MENU POFILE).

## Landing Costs

Landing costs allow distributors to include the cost of procuring goods in the cost of their products, landing costs are available.

Up to six different landing costs can be defined and used for each warehouse. Landing costs can be combined in a variety of ways under the cover of a landing code or factor. An unlimited number of landing codes/factors may be defined. Landing codes can then be assigned to a vendor/item record to ensure that when that item is ordered from that vendor, these landing costs will be used.

The formulas for calculating landing costs are defined through Landing Factors Maintenance (MENU POFILE). Landing costs are assigned to an item through Vendor/Item Information Maintenance (MENU POFILE).

The one to six landing costs to be used throughout purchase order processing for a warehouse are determined through Warehouse Numbers Maintenance (MENU IAFILE) in Inventory Accounting. If your company is located in a European Community member country and you are required to submit a monthly Intrastat Report (MENU IAREPT), you can also use this option to specify which landing costs should be included when calculating the value of receipts for the report. Related account information for landing costs is defined through G/L Transfer Definition (MENU GLXFER) in General Ledger.

Note that a line item's landing costs are those costs incurred due to specific situations (overhead, duty, etc.), whereas a line item's landed cost is the total cost of that line item (calculated as the vendor's price plus all individual landing costs).

Since prior to the actual receipt of an invoice for an order, landing costs are estimated, there may be a difference between the value keyed for a landing cost included in a purchase order and the actual value of that landing cost. To account for this, overrides for landing costs are available when processing purchase order receipts through Enter or Change Receivers or PO Receipts (MENU POMAIN) or Warehouse Management (MENU WOMAIN).

## Special Charges

Special Charges are defined in Purchasing through Special Charges Information Maintenance (MENU POFIL) to allow you to record non-product charges (for single lines or entire orders), such as freight and handling charges. Up to nine order charges, and nine line charges may be defined.

## Shipping Locations

Purchasing allows you to define multiple ship-to locations (up to 999 for each company). A ship-to location is the address to which the vendor will ship ordered items. Each shipping location contains a standard address (including country name, if applicable), warehouse, sales tax percentage, and other ordering information.

## Automatic Warehouse Transfer Receipts

Purchasing allows you to specify, at the warehouse level, whether or not receipt of warehouse transfer POs will be automatically posted in the receiving (to) warehouse when the Invoice prints for the sending (from) warehouse. This automates the receiving and posting of PO receipts when goods arrive at the receiving warehouse.

You may use the Automatic Warehouse Transfer Receipts feature regardless if you have Warehouse Management installed on your system. The auto receive will occur as part of the “Create Backorders” job that is submitted to the Transaction Processor when the transfer order is invoiced. Also, if your warehouse uses backorder staging, receipts will be posted to that location (i.e., all 8’s). If Radio Frequency is being used and you are not using backorder staging, the receipts will be posted to the receiving dock location (i.e., all 4’s). Otherwise, regular put-away processing will be followed.

For additional information regarding the Automatic Warehouse Transfer Receipts feature, refer to the following:

- Purchasing Options Maintenance (MENU XAFIL)
  - The **Auto Receive Incoming WH Transfers at Invoice Print** field, which is used to indicate whether or not you want to have transfer POs automatically received in the “to” warehouse when the Invoice is printed for the “from” warehouse.
- Enter, Change & Ship Orders (MENU OEMAIN)
  - If you request an invoice print (F6=INVOICE PRINT) for a transfer order and the receiving warehouse has selected the “auto receive” process, you will be prompted for the G/L posting date of the receipt.
- Print Invoices (MENU OEMAIN)
  - If you are printing Invoices for the transfer company and any receiving warehouse has selected the “auto receive” process, you will be prompted for the G/L posting date of the receipt.

For additional information regarding Warehouse Transfers, refer to the Appendix section.

## Purchase Order Returns and Receipt Validation Processing

When PO returns are processed, the Receipts History File (RCPT) is updated and the PO Returns Account is changed accordingly. In other words, PO returns post to General Ledger at print process time as opposed to when PO Receipts Register (MENU POMAIN - Option 22) is run. This allows you to perform receipt validation against PO returns.

To enable you to distinguish account balances from the original Purchases Clearing and Purchase Price Variance Accounts, the following two G/L accounts exist:

- Purchases Returns Clearing Account
- Purchases Returns Variance Account

---

## Purchase Order History

During Day-End Processing, all purchase orders that have been closed are saved in the Purchase Order History File. This file contains information from those Purchase Orders that have been printed and received in Purchasing. Information in this file will continue to grow until the file is purged. Purging the file will remove old, unwanted history from the file. Purchase orders deleted from the file will depend on the date and vendor information that you provide. Additionally, this information may be saved to a diskette or streaming tape before it is removed.

Purchasing also stores information about each receipt processed against a purchase order in the Receipt History File. This file, unlike the Purchase Order History File, is updated when receipts are posted (even if the purchase order is not closed). Therefore, an open purchase order that has had receipts posted will have information in the Receipt History File. The open purchase order inquiry can display receipt history for a line item. The Receipt History File is purged through Reorganize A+ History Files (MENU XAMAST).

Additionally, if receiver processing was utilized to enter the purchase order receipts, information about the receiver is stored in the Receiver History File. This file is updated when receivers are closed, much like the Purchase Order History File. The information in this file will continue to grow until the file is purged. Purging the file will remove old, unwanted history from the file.

---

## Purchasing Inquiries

Purchasing provides you with many inquiries that allow you to:

- Access detailed item information for item numbers entered: Item Inquiry (MENU POMAIN)
- Access all receivers for a particular company and warehouse on which an indicated item number resides: Item Inquiry (MENU POMAIN; refer to the Appendix section for details)

- Review detailed information for POs and/or requisitions: Req/PO Inquiry (MENU POMAIN)
- Access detailed information regarding requisitions, POs, and purchase order history for a vendor: Vendor Order/Shipment Inquiry (MENU POMAIN)
- View information for open POs/requisitions by item: Open PO's by Item Inquiry (MENU POMAIN)
- Access closed line items from purchase order history by item number and/or manufacturer's item number: PO History By Item Inquiry (MENU POMAIN)
- View vendor shipping performance: Vendor Performance Inquiry (MENU POMAIN)
- View vendor/item ordering information, from the Vendor/Item File: Vendor/Item Information Inquiry (MENU POMAIN)
- Review and maintain special order change requests that have occurred through Order Entry and Purchasing and that have not yet been sent to history (if you are using the change request process and are retaining history based on company-level options defined through Special Order Options Maintenance (MENU XAFILE))
- Create a new requisition from an existing open or history purchase order: Req/PO Inquiry, Vendor Order/Shipment Inquiry, Open PO's by Item, PO History by Item (MENU POMAIN)

---

## Reports

Purchasing has a variety of reports that may be printed for open and closed purchase orders. Reports are printed through the Purchasing Reports Menu (MENU POREPT). The reports available are:

- Open Purchase Order Summary Report (p. 25-2)
- Open Purchase Order Detail Report (p. 26-1)
- Purchase Order History Summary Report (p. 27-1)
- Purchase Order History Detail Report (p. 28-1)
- Purchasing Cash Requirements Report (p. 29-1)
- Vendor Performance Report (p. 30-1)
- Item Receipt Forecast Report (p. 31-1)
- Item In-Transit Report (p. 32-1)
- Open Receivers by Item Report (p. 33-1)
- Suggested Orders Report (p. 34-2)

## Special Types of PO's

---

The following table represents the letters that are reserved for special types of PO's.

| Letter | Special Type of PO  |
|--------|---|
| S      | Suggested Order PO's                                      |
| T      | Special Order Warehouse Transfers                         |
| M      | Work Order PO's   |
| A      | Automatic Special Order Requisitions for Drop Ship Orders |

---

## Overview

Purchase Order processing involves creating purchase orders, receiving ordered items into inventory, and creating return purchase orders for items that are being returned to the vendor. These tasks are accomplished using options on the Purchasing Main Menu (MENU POMAIN).

If Warehouse Management is installed, you can perform some receiving tasks through Warehouse Management (MENU WMMAIN). For more information, refer to the Warehouse Management User Guide.

When returning items to the vendor, you can automatically track the items using a special type of Purchase Order processing called Return to Vendor processing.

This chapter describes both Purchase Order processing and Return to Vendor processing. Purchase Order processing is explained first.

---

## Processing Purchase Orders

The steps of Purchase Order Processing are as follows (those steps indicated with an \* are required):

1. Create requisitions\*
2. Edit and change requisitions, if needed
3. Print Purchase Orders for approved requisitions\*
4. Edit and change purchase orders, if needed
5. Print a Receiving List, if desired
6. Enter items received from a purchase order\*
7. Edit and change purchase order receipts, if needed
8. Update inventory and purchase order status (post) with purchase order receipts\*

---

NOTE: Most of the menu options explained in this section are performed on the Purchasing Main Menu (MENU POMAIN). Assume that menu option references are for MENU POMAIN, unless otherwise noted.

---

## Creating Requisitions

The first step of purchase order processing is creating requisitions. A requisition is used to specify the vendor and item information necessary to issue a purchase order. It contains all of the information that will be printed on a Purchase Order, including items, special charges, landing costs, and comments.

After a requisition is approved, a Purchase Order may be printed. In Purchasing, a requisition exists until a Purchase Order is printed; the requisition becomes a purchase order when the Purchase Order is printed.

Note the following:

- Printing a Purchase Order includes not only hard copy production from a printer, but also EDI and FAX productions.
- A requisition can be created in several ways; for example:
  - through Suggested Orders Maintenance (MENU POREPT), Special Order Automatic Req Creation (MENU POMAST) or at end order time based on company-level special order options defined through Special Order Options Maintenance (MENU XAFILE), or vendor-level special order options defined through Vendors Maintenance (MENU POFILE).
  - through Req/PO Inquiry, Vendor Order/Shipment Inquiry, Open PO's by Item, and PO History by Item (all on MENU POMAIN) via the F17=DUPPO function key which will create a new requisition from an existing open or history purchase order.

This section outlines how a requisition is created through Enter or Change Requisitions (MENU POMAIN).

## Entering a Requisition

Requisitions can be entered into Purchasing through Enter or Change Requisitions (MENU POMAIN). Through this option, you specify header and detail information.

### Requisition Header Information

Requisition header information is general information that applies to the entire requisition. It contains information about the vendor from whom items will be purchased (name, address, payment and shipping terms, etc.), purchase order information (order date, warehouse, buyer, shipping address, etc.), and defaults used for each item on the requisition (these can be overridden or accepted for each item).

### Requisition Detail Information

Requisition detail information is presented on one line of a requisition, and will be printed on one line of the purchase order. This is usually the individual items being ordered, and are also special charges or comments.

Item detail, also called line items, consists of the item number, the item description (yours and/or the manufacturer's, as it will print on the Purchase Order), the quantity ordered in the buying unit of measure, the cost per unit in the costing unit of measure, and other specifics about the item. At least one item detail line must be entered on a requisition on the Requisition/Purchase Order Item Detail Entry Screen (p. 6-38) or Requisition/Purchase Order Item Summary Screen (p. 6-61).

## Items Ordered from Specific Vendors

Items that are ordered from specific vendors should be set up through Vendor/Item Information Maintenance (MENU POFILE). The creation and maintenance of records in both the Vendor/Item File and the Vendor/Item/Price File will ensure that the item's cost, units of measure, and quantity breaks offered by the vendor (if any) are considered when entering an item on a requisition.

Vendor costs, which are maintained at the warehouse level through the Vendor/Item/Price File, may even include expiration dates (i.e., the file has the ability to maintain date-sensitive prices).

You can also define vendor contracts for vendors that offer discounted unit costs or percent discounts. When you enter a requisition, Distribution A+ searches for a vendor contract that matches the vendor and item specified on the requisition. If a valid contract is found and all contract requirements are met by this order, the discounted cost is retrieved. For more information on vendor contracts, refer to Vendor Contracts in the Overview section of this user guide.

Standard packaging, minimum order quantities and lead times are also available by specific vendor. Standard packaging and minimum order quantities may be defined at the global vendor/item level or warehouse vendor/item level.

If the **Calculate PO Due Dates Based on Lead Times** field is set to **Y** for the company through Purchasing Options Maintenance (MENU XAFILE), the due date for an item in a requisition will be calculated as: **System Date + Vendor Lead Time**.

The vendor lead time for the item will be determined using the following hierarchy:

- IM&P Balance Record (if item/warehouse is a planned by IM&P)
- AIM Balance Record (if item/warehouse is a planned by AIM)
- Vendor Item Record
- Vendor Master Record

The **Due Date** is also used to calculate vendor performance for the Vendor Performance Inquiry (MENU POMAINT) and Vendor Performance Report (MENU POREPT).

## Special Charges

Special charge detail lines specify non-product charges for individual items (line charges), or for the entire order (order charges). Such charges include freight and handling charges, and would be entered on the Requisition/Purchase Order Special Charge Screen (p. 6-66). Before entering a special charge on a requisition, you must have defined the special charge through Special Charges Information Maintenance (MENU POFILE).

## Landing Costs

Landing costs are a means for a distributor to include the cost of procuring goods (e.g., broker fees, duty, etc.) into the cost of the products. Up to six landing costs may be defined and used. Since landing costs are vendor specific, a vendor/item record must be present in the Vendor/Item File.

Once landing costs are established, they are assigned to items for vendors, and optionally warehouses. Which and how many landing costs are to be used is determined through Warehouse Numbers Maintenance (MENU IAFILE) in Inventory Accounting. Related account information for landing costs is defined through the Inventory Accounts option of the G/L Transfer Definition (MENU GLXFER) in General Ledger. The formulas for calculating landing costs are defined for all (or one) warehouses through Landing Factors Maintenance (MENU POFILE). Finally, landing costs are assigned to a vendor/item through Vendor/Item Information Maintenance (MENU POFILE), or globally assigned to more than one item through Global Landing Code Update (MENU POMAST) in Purchasing.

Landing cost values are either flat monetary amounts, or are calculated amounts using an initial monetary value and a calculation formula known as a landing factor. The definition of a landing factor includes the determination of the base upon which the landing cost will be generated. This base is either:

- A percentage of the monetary value
- The number of units
- The unit weight
- The unit cubic measurement

The value of a landing cost can be overridden at both the line item level and the purchase order/receiver level. Just as the original landing cost values can be defined as a flat monetary value, or as a calculated amount using an initial monetary value and a landing factor, so too are overrides.

## Comments

Comment detail lines contain comment text that pertain to an individual item (line comments), or to the entire purchase order (order comments). You may key comments for a specific requisition or for a specific item on the Order Comments/Line Item Comments Entry Screen (p. 6-34).

You may optionally create default comments through Standard Comments Information Maintenance (MENU POFILE) for a single vendor, item, or vendor/item. When a requisition is created for the corresponding vendor and/or item, the comment will be automatically copied to the requisition.

## Receipt Comments

In addition to keying comments for a specific item on the Order Comments/Line Item Comments Entry Screen (p. 6-34), you may press a function key, which is only available when entering a PO return, to key receipt comments associated with a line item on the return. These comments are the same comments keyed during Warehouse Management receiving or Inventory Accounting transactions.

The comments you key may be displayed and changed during receipt validation. This is useful for all types of receipts, and particularly for returns as it enables you to review important information about the return as well as enter information pertaining to the status of a credit.

## Tools to Assist the Buyer

To assist you in determining which items should be ordered, Distribution A+ provides several powerful tools. Each of these tools, listed below, are explained in detail in the Tools to Assist the Buyer chapter of this user guide.

- **Item/Search Browse:** In addition to providing an item search and providing access to various inquiries, this tool displays and allows you to select items for one or more vendors that are below, or a specified percentage above, their minimum stocking level. Refer to the “Requisition/PO Entry Item Search/Browse Screen” on page 6-69.
- **Special Order Processing:** Allows you to select items that have been special ordered by a customer (during Order Entry) for a requisition/purchase order. This eliminates the need to re-key the customer’s order information into Purchasing to create a purchase order. Refer to the Special Orders Selection Screen within Work With Special Orders (MENU POMAIN).
- **Suggested Order Processing:** Automatically creates requisitions for items that fall below their minimum stocking levels. These requisitions are assigned a requisition number starting with the letter S, and are put on special order hold. Suggested order processing is performed on the Reports Menu (MENU POREPT).
- **Product Activity Data (852).** If you have EDI installed, you can use the outgoing Product Activity Data (852) (PAD) document to automatically notify a vendor when there is a change in quantity for any items of which that vendor is the primary vendor. You can select to send PAD documents to a vendor through Vendor Master Maintenance (MENU POFILE).

## Additional Tools

Enter or Change Requisitions (MENU POMAIN) provides some other tools to help you create a requisition; these include:

- **Vendor Search:** When creating a requisition, you can select a vendor from the Vendor Search Screen (p. 43-7) using only a portion of the vendor’s name or number.
- **Open Requisition Search:** Displays all current requisitions on the Open Requisition Search Screen (p. 6-10). Select one of these to work with (i.e., add items to, delete items from, approve, hold, delete, or modify.)

## Completing a Requisition

After entering the individual detail lines for a requisition through Enter or Change Requisitions (MENU POMAIN), press F10 to display the End Requisition Screen (p. 6-92). Requisition summary information is displayed, and the total weight and total monetary value of the requisition is compared to the vendor’s minimum weight and monetary values. When completing entry of a requisition, you may approve or hold the requisition.

## Editing a Requisition

After entering a requisition or requisitions, you may optionally print the Requisition Edit List (p. 7-5). This report prints the requisitions in purchase order format, so you may verify the contents of each requisition.

If you are not satisfied with a requisition, you may change any part of the requisition through Enter or Change Requisitions (MENU POMAIN). Repeat the process of editing and changing requisitions until you are satisfied with all requisitions.

## Requisition Status

The requisition status indicates if a Purchase Order may be printed for the requisition. The requisition status may be either of the following:

- **Open:** A Purchase Order cannot be printed for an open requisition.
- **Approved:** A Purchase Order can be printed for an approved requisition.

A requisition will remain open if it is pending, held, or in-use:

- **Pending:** The requisition has been created, but not approved.
- **Held:** The requisition has been held with a hold code, and cannot be approved until it is removed from hold.
- **In-use:** The requisition is being updated or modified by another user at another workstation.

## Approving a Requisition

Before you can print the Purchase Order for any requisition, the requisition must be approved. By approving a requisition, authority is given to purchase the items as specified on the requisition.

A requisition cannot be approved if it is held. A requisition is held when a hold code is specified on the End Requisition Screen (p. 6-92); hold codes must first be defined through Hold Codes Maintenance (MENU POFIL1). To remove a requisition from hold, remove the hold code from the End Requisition Screen. The requisition may then be approved.

To approve a requisition, key an approval code when ending the requisition on the End Requisition Screen.

If the **Use Approval Code Authorization for Req/PO** field is set to **N**, through Purchasing Company Options Maintenance (MENU XAFIL1), an authorization check is not activated and any three-character text can be used to approve a requisition. If the **Use Approval Code Authorization for Req/PO** field is set to **Y**, only approval codes defined through Approval Codes Maintenance (MENU POFIL2) can be used to approve requisitions. These approval codes restrict authority to approve requisitions based on user ID and a maximum approval amount.

Once requisitions have been entered and approved, you may proceed to print Purchase Orders for any or all approved requisitions.

---

## Printing Purchase Orders

After a requisition is approved, it may be converted to a purchase order by selecting Purchase Orders (MENU POMAIN). Through this option, the Purchase Order is printed (printed output, EDI output, FAX output) and posted in Distribution A+.

---

**NOTE:** During requisition processing, through Enter or Change Requisitions (MENU POMAIN), a print PO function key is available for use. This function key will display only if you have allowed Purchase Orders to be printed from this screen. This is determined through Purchasing Options Maintenance (MENU XAFILE). Pressing this key for an approved requisition will submit the Purchase Order for print. The immediate printing of a PO in cases of great urgency is easily accomplished with this function key. However, it is important to know that this key should not be used as the normal means by which POs are printed. Each print job submitted via this function key creates a separate Transaction Processor job. Unlike printing POs through Purchase Orders (MENU POMAIN), which creates a single Transaction Processor batch job for all POs, printing via this function key creates individual jobs for each. The result is that the queue space is under-utilized and valuable processing time is inefficiently used.

Also, a purchase order can be created in other ways for special orders. For example, through Special Order Automatic Req Creation (MENU POMAST) or at end order time based on company-level special order options defined through Special Order Options Maintenance (MENU XAFILE) or vendor-level special order options defined through Vendors Maintenance (MENU POFILE).

---

You may print Purchase Orders for a specific company, warehouse, buyer, or range of requisition numbers, vendors, and/or entry dates. Refer to the Cross Application User Guide for details about rules for using ranges in Distribution A+.

---

**NOTE:** If there are purchase orders for warehouse transfers, you must print the purchase orders for the receiving warehouses before printing the purchase orders for the warehouse transfers.

---

After selecting the purchase order criteria, Purchase Orders will print using form type 1 or form type 2, depending on your selection in System Options Maintenance (MENU XAFILE). In addition, Purchase Orders are printed on a special forms type, designated by Distribution A+ as POxx where xx is the number of the company for which purchase orders were selected. If you select to print Purchase Orders for all companies, the company number used is 00. Be sure that you have loaded the purchase order forms in your printer before allowing Purchase Orders to print.

---

**NOTE:** Refer to the EDI User Guide and the FAX User Guide for unique EDI and FAX PO requirements. If Mail Server is installed, you can e-mail Purchase Orders in addition to printing, faxing, and sending them via EDI. Refer to Vendor Master Maintenance (MENU POFILE) for information about e-mailing Purchase Orders.

---

## Posting Purchase Orders

When you print Purchase Orders (hard copy, EDI or FAX), the print process job is submitted to the Transaction Processor because POs are also posted to update the on-order quantity of inventory counts in Distribution A+. This posting process occurs to keep inventory status up-to-date, and therefore causes the following inventory update reports to print:

- Inventory Transaction Update Process Edit,
- Inventory Transaction Update Edit Recap
- Inventory Transaction Register

You also have the option to reprint Purchase Orders. However, when you reprint Purchase Orders, the above inventory update reports do not print since inventory is not updated when Purchase Orders are reprinted. For details about these reports, refer to Process Transactions (MENU IAMAIN) in the Inventory Accounting User Guide where these reports are also printed.

Additionally, if PO returns are detected when printing Purchase Orders, the print process that occurs when running the option updates the Receipts History File (RCPT), and the PO Returns Account changes accordingly. In other words, PO returns post to General Ledger at print process time as opposed to when PO Receipts Register (MENU POMAIN) is run. This allows you to perform receipt validation against the PO return.

---

NOTE: The term “printing” a Purchase Order includes not only hard copy production from a printer, but also EDI and FAX productions.

---

## Changing Purchase Orders

Purchasing provides you with the ability to change a Purchase Order after it has been printed, and before its items are received in full. Once modified, you may reprint the original Purchase Order. The following steps explain how to perform changes to purchase orders in Purchasing:

1. Select the open purchase order through the Open Req/PO's Inquiry (MENU POMAIN) or the Vendor Order/Shipment Inquiry (MENU POMAIN).
2. After selecting the purchase order, press **F5=CHANGE** to request maintenance.
3. Make the necessary changes. The purchase order is presented in the same manner as its requisition was entered through Enter or Change Requisitions (MENU POMAIN).
4. If you wish, you may reprint the entire Purchase Order through Purchase Orders (MENU POMAIN). There is no need to send the changes through the Transaction Processor since all applicable purchase order files and inventory accounting files are updated immediately upon keying the modifications.

## Purchase Order Status

Once a Purchase Order is printed, it is assigned a purchase order status. This status indicates if some, all, or none of the items on a purchase order have been received. There are three purchase order status categories:

- Open
- Closed
- History

How the purchase order changes status is briefly described next.

## Open Purchase Orders

An open purchase order is one that has been printed, but has not been received in full. Therefore, if no items have been received, or if some items have been received for a purchase order, the purchase order is open.

An open purchase order that has had at least one unit of one item received and posted is partially received. Partially received purchase orders remain as open purchase orders, until the purchase order is closed.

## Receiving Purchase Order Items

Item receipts must be entered in Distribution A+ against the associated purchase order. This receipt processing may be performed in one of three ways:

- **Receiver Processing:** The creating of “Receivers” which, in turn, will automatically create receipt groups (used to post receipts).
- **Purchase Order Processing:** The manual creation of receipt groups.
- **Drop Ship Receipt Validation Processing:** The means by which drop ship purchase orders may be received and vouchers automatically created through Accounts Payable Voucher Entry (MENU APMAIN) if the **PO-AP Transfer** field is set to **Y** for the purchase order’s vendor in Vendors Maintenance (MENU APFILE).

The first two methods allow selection of line items from a purchase order (although receiver processing allows selection from more than one PO) for which receipts will be posted, and these two methods are processed entirely through Purchasing. The third method, Drop Ship Receipt Validation Processing, is done entirely through Accounts Payable. Further information concerning this method is available in the Overview section of the Accounts Payable User Guide.

Processing for receivers can be completed through Purchasing alone, or through a combination of Purchasing and Warehouse Management. If Warehouse Management is utilized, added features will be available (such as “putting away” while in the midst of receiver processing). When this is the case, mention will be made of the feature and reference will be made to the Warehouse Management User Guide; generally, specifics of the feature will not be provided in this User Guide.

## Closed Purchase Orders

When a purchase order is closed, you are no longer anticipating receipt of any items for that purchase order. A purchase order is closed when all items on the purchase order are closed.

An item on a purchase order will be closed automatically when the quantity of items received is equal to or greater than the quantity of items ordered and no other open receivers exist for the line item. A line item will not be closed as long as open receivers exist for the item. You may also manually close an item on a purchase order by indicating that the item was received complete.

A closed purchase order remains closed until Day End Processing (MENU XAMAST) is performed. This procedure (which should be run daily) will move closed purchase orders to purchase order history.

## Purchase Order History

Purchase order history is a record of the purchase orders and receipts that were processed. This information serves as verification of the purchase order transactions performed through Purchasing, as well as a record of how well vendors performed in shipping their orders. You can inquire on requisitions and purchase orders in history through Req/PO Inquiry (MENU POMAIN). Information is stored in the Purchase Order History File, the Receipt History File, and, if applicable, the Receiver History File.

---

## Receiving Items

After Purchase Orders are printed, the items that were ordered may be received at any time. After one, some, or all items on a purchase order are received, they are recorded in Purchasing as purchase order receipts. This is done by optionally printing a Receiving List, then entering and posting purchase order receipts.

## Printing a Receiving List

Purchasing provides a Receiving List (MENU POMAIN) that will help you manually record items as they are received into your warehouse. This list is also available in Warehouse Management.

The Receiving List (p. 22-18) prints all items on open purchase orders (in purchase order number sequence), and provides blank lines for you to write in the quantity, cost, and total of the items as they are received. You can then use this Receiving List as the source document when keying receipt information at your data entry workstation.

## Entering Purchase Order Receipts

You can enter purchase order receipts at any time for any open purchase order. Receipts can be entered via “receiver processing” or “purchase order processing.” While both methods allow the entering, modification, and posting of receipts, the means by which these functions are accomplished are slightly different.

NOTE: During the drop ship receipt process in both Purchasing and Accounts Payable, you have the ability to enter order entry special charges for a customer. If charges are entered, during the update process, the charge will automatically be added to the customer sales order as an order level special charge and Order Activity will be updated. If International Currency is installed, the International Currency Order Detail Record will also be added/updated.

---

## Receiver Processing

This processing method involves the manual creation and modification of receivers (which in turn will automatically create receipt groups). These activities are performed through Enter or Change Receivers or PO Receipts (POMAIN), or Warehouse Management (MENU WMMAIN).

Before you receive your purchase order items, you can prepare for their receipt by creating a receiver using, for example, an Advance Shipping Notice (ASN). Additionally, if you have EDI installed a receiver can be created from an incoming ASN sent by a vendor via the Electronic Data Interchange. This activity is performed through the Pending Incoming EDI Advance Shipping Notices Screen (MENU EIMAIN).

Line items from one or more purchase orders or warehouse transfer purchase orders can be included in the receiver. A single line item can be included in different receivers. For example, a PO line item identifying quantity 15 of item A100, can be included in Receiver 1 as quantity 5, in Receiver 2 as quantity 5, and in Receiver 3 as quantity 5. When inventory physically arrives, you can simultaneously receive, approve, put-away, and post receipts for the line item. If you are using Warehouse Management, put-away must be completed in the Warehouse Management option (MENU WMMAIN).

After receivers are created, and the items are received, you can edit the receiver, if necessary, and approve the applicable receiver line items. Note that approval indicates that the items have physically arrived. Once approved, the receiver items can be posted. The selected receiver items are automatically included in a system generated receipt group and submitted to the Transaction Processor for immediate posting.

---

NOTE: If you choose to perform receiver processing through Warehouse Management (MENU WMMAIN), you will also be able to assign warehouse locations and print your Put-Away Lists, as well as post the receiver items.

---

The posting method available in receiver processing allows for immediate order entry access to any portion of a received shipment that has been physically warehoused (even if portions of that same shipment are still being processed and have not yet been warehoused).

If the quantity received for a line item equals or exceeds the quantity on the purchase order, that purchase order line item will be closed unless there are other open receivers for the line item. The line will not be closed until all receivers are posted. When the last line item on the purchase order is closed, the purchase order will also be closed. To review a list of open purchase order line items, you can use the Open PO Item Received Complete Report which prints automatically as part of Day-End Processing and can be printed anytime from the Purchasing Master Menu (MEUN POMAST).

Receiver inquiries and the Open Receiver By Item Report are available, indicating information and status for the entire receiver, and for specific line items. Also, if EDI is installed, the Off-Line Receiver Edit Report is printed for each receiver created from an incoming Advance Shipping Notice sent by the vendor via Electronic Data Interchange. Additionally, events associated with a receiver may be entered on the PO Receiver Note Pad through Enter or Change Receivers or PO Receipts (MENU POMAIN), or the Item Inquiry (see the Appendix section for details.) You may then review or maintain events associated with a receiver, or add new events to the note pad.

## Purchase Order Processing

This processing method involves the manual creation and modification of receipt groups. These activities are performed through Enter or Change Receivers or PO Receipts (MENU POMAIN), while the posting of these manually created receipt groups is performed through PO Receipts Register (MEUN POMAIN).

In purchase order processing, receipts are entered in a receipt group for an individual purchase order. Therefore, after selecting Enter or Change Receivers or PO Receipts (MEUN POMAIN) to create a receipt group, you must key the number of the company and purchase order for which receipts will be entered, as well as provide a unique receipt group identification code (Group ID) that will be utilized throughout the life of the receipt group (once a group is complete and posted, its ID may be reused for another group).

Once the receipt group is created, you select open purchase order line items for inclusion into the group, much the same as for receiver groups.

If Warehouse Management is installed, it is required that received items be assigned warehouse locations prior to receipt posting. This may be accomplished directly through Enter or Change Receivers or PO Receipts (MENU POMAIN), if the items have not yet been pre-received in Warehouse Management.

After location assignment, completed receipt groups can be posted. Through PO Receipts Register (MENU POMAIN), you identify the completed receipt group, and the group will be posted.

## Receiving Complete

If all items in a receiver or a receipt group were received in full, you do not have to key the individual quantities for each item. This alleviates the need to key individual quantities for selected items.

For receiver processing, first you must include an entire purchase order in the receiver. To do this, key the desired purchase order on the Line Items On PO Select Screen (p. 8-97) to display all applicable line items. Then use the Select All function key to include all line items in the receiver, as ordered (that is, complete). Once received, a similar APPROVE ALL function key is available to approve all receiver items.

For purchase order processing, you receive the purchase order complete by pressing F5 on the PO Header Screen (p. 8-23). When you receive a purchase order complete, the receipt quantities and costs are updated by the order quantities and costs (that is, those originally requested on the PO).

---

NOTE: The received complete code specified for each individual PO line item in the receiver or receipt group is used to indicate that you want to close an item on a

---

purchase order, even if the quantity of items received is not equal to the quantity of items ordered.

---

## Receiving Items Individually

Receiving selected items is also available. For receiver processing, for example, on the Line Items On PO Select Screen (p. 8-97), “Change” a displayed item to include only a certain number of the indicated quantity in your receiver. For purchase order processing, the same is achieved by using the “Enter Qtys” function key to access the PO Enter Receipts Screen. Select an item and key the desired quantities.

For either processing method, changes of this type are not limited to quantity: cost of the items, total weight of the items received, a substitute item number, and a received complete code can also be entered. (A substitute item is one received in place of the item originally ordered; this may be an existing item, or a non-stock item.)

---

NOTE: -While landing costs for purchase order line items are included in both purchase order processing and receiver processing, receiver processing offers greater flexibility in overrides and modifications than does purchase order processing.  
-During the drop ship receipt process in both Purchasing and Accounts Payable, you have the ability to enter order entry special charges for a customer. If charges are entered, during the update process, the charge will automatically be added to the customer sales order as an order level special charge and Order Activity will be updated. If International Currency is installed, the International Currency Order Detail Record will also be added/updated.

---

## Editing Purchase Order Receipts

After entering purchase order receipts, you may review receipt data keyed. For receivers, you can print the Receiver Edit List (p. 8-79). For PO processing, you can print the Purchase Order Receipts Edit List (p. 9-4). Both reports print the receipts keyed and may be used for verification.

If you are not satisfied with the receipts keyed for a purchase order, you may change the receipts, depending on how they were entered:

- Receipts entered using receiver processing may be modified through Enter or Change Receivers or PO Receipts (MENU POMAIN), or Warehouse Management (MENU WMMAIN).
- Receipts entered using PO receipt processing may be modified through Enter or Change Receivers or PO Receipts (MENU POMAIN).

Repeat the process of editing and changing receipts until you are satisfied with all receipts.

## Posting Purchase Order Receipts

Entered purchase order receipts are not reflected in inventory counts until they are posted. Purchase order receipts are entered, optionally edited, and posted in groups that are identified by Receipt Group IDs.

In Receiver Processing, where receipt groups are created automatically and submitted to the Transaction Processor, the Workstation ID is used as the Receipt Group ID. Since this ID is not used until the group is actually submitted for posting, it is not “held” for long. At the completion of the posting activity, the ID is immediately “freed” for re-use.

In Purchase Order Processing where receipt groups are initially created with the Receipt Group ID and maintained for a varying period of time prior to submission for posting, the Receipt Group ID, which defaults to the Workstation ID, can be modified. One to five characters are available to ensure each group you create is uniquely identified. This also allows you to create a variety of receipt groups without regard to a previous receipt group’s posting status.

Posting of receipts keyed via receiver processing is performed through Enter or Change Receivers or PO Receipts (MENU POMAIN), or optionally through Warehouse Management (MENU WMMAIN). Posting of receipts keyed via purchase order processing is performed through PO Receipts Register (MENU POMAIN).

Just as posting the original requisition (which created the PO) updated the on-order inventory quantity, posting of the inventory receipt will also update that on-order quantity. Additionally, receipt posting will update the on-hand inventory quantity. As a result of updating inventory, the Inventory Transaction Update Process Edit,

Inventory Transaction Update Edit Recap, and Inventory Transaction Register are printed. Since these reports are also printed in I/A through Process Transactions (MENU IAMAIN), they are explained in detail in the Inventory Accounting User Guide.

## Closing a Purchase Order

After all items on a purchase order are received in full and the purchase order receipts are entered and posted, the status of the purchase order is changed to closed. When a purchase order is closed, it can no longer be changed, and can no longer have any receipts entered or posted for it.

Purchase orders will remain closed until the next Day-End Processing is run. At this time, closed purchase orders are moved to purchase order history, where they remain as a record of your purchasing transactions.

---

## Purchase Order Processing Lists

The following lists explain the basic steps involved in processing requisitions and purchase orders in Purchasing. Each list is preceded by a brief explanation of the function being performed. These lists are intended to help you understand the typical processing sequences used in Purchasing.

---

**NOTE:** A requisition/purchase order can be created in several ways. For example, a requisition can be created through Suggested Orders Maintenance (MENU POREPT). Requisitions/purchase orders can be created through Special Order Automatic Req Creation (MENU POMAST) or at end order time based on company-level special order options defined through Special Order Options Maintenance (MENU XAFILE) or vendor-level special order options defined through Vendors Maintenance (MENU POFILE). This section outlines how a requisition/purchase order is created through Enter or Change Requisitions (MENU POMAIN).

---

### Creating a Requisition and Printing Purchase Orders

To create a requisition in Purchasing, follow these steps. Requisitions are used to enter all the information to print on a Purchase Order. A Purchase Order cannot be printed, however, if the requisition is held, or if the requisition is not approved.

1. Select Enter or Change Requisitions (MENU POMAIN). Select the company and vendor for which the requisition will be created.
2. Enter requisition header information on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13). You may enter order comments by pressing **F5=COMMENTS**, or create the requisition for a customer's special order by pressing **F6=SPORD**. Press **ENTER** to display the Requisition/Purchase Order Item Detail Review Screen (p. 6-38).
3. On the Requisition Item Detail Entry Screen, add the items to order using this requisition. Press **F2=RVW** to display a summary of the items selected, **F6=SP CHG** to enter special charges, **F9=SEARCH** to search for items to order, or **F11=BUYING** to display buying information for an item. Press **ENTER** after keying an item number and quantity. Default values for the item selected will display on the Requisition/Purchase Order Item Detail Review Screen (p. 6-38). From this screen, you can press **F5=COMNT** to add comments for a specific line item or press **F15=LND CST** to access landing cost information for an item.
4. After entering all of the items to order from this vendor, press **F10=END** to display the End Requisition Screen (p. 6-92). On this screen you may hold the requisition by keying a hold code, or approve the requisition by keying an approval code. A requisition must be approved before a Purchase Order can be printed.
5. To print Purchase Orders for approved requisitions, select Purchase Orders (MENU POMAIN). Select the company, buyer, warehouse, and ranges of requisitions, vendors, or entry dates for which Purchase Orders will print (Leave the **Reprint** field as **N**.)

---

**NOTE:** If you leave these fields blank, all approved requisitions will be selected.

---

Also, through Purchasing Options Maintenance (MENU XAFILE), you may set up your options to print POs from the End Requisition Screen (p. 6-92). Note, however, that each PO print will result in a Transaction Processor job, so this method should not be used for normal PO printing.

6. Load your printer with purchase order forms if printing hard copy output. [If using EDI or FAX, refer to the respective User Guides for details. If using e-mail, refer to Vendor Master Maintenance (MENU POFILE)]. The forms type specified in your printer/output queue is POxx, where xx is the number of the selected company (00 for all companies).

## Changing a Purchase Order

Follow these steps to change a Purchase Order that has been printed through Purchase Orders (MENU POMAIN).

1. Select the open purchase order to change through the Open Req/PO's Inquiry (MENU POMAIN) or the Vendor Order/Shipment Inquiry (MENU POMAIN).
2. After selecting the purchase order, press **F5=MAINTENANCE** to request maintenance.
3. Make the necessary changes. The purchase order is presented in the same manner as the requisition was entered through Enter or Change Requisitions (MENU POMAIN). If the **Use Approval Code Authorization for Req/PO** field is set to **Y** through Purchasing Company Options Maintenance (MENU XAFILE), changes to the total value of the Purchase Order will be checked. If the user ID that changes the Purchase Order is the same as the user ID that approved the Purchase Order, the total value changes are checked against the maximum approval amount defined for that user ID through Approval Codes Maintenance (MENU POFIL2). If the user IDs are different, the total value is compared to the value in the **Approval Amount** field. Refer to Approval Levels in the Overview section for additional information.
4. If desired, you may reprint the changed purchase order(s) by selecting Purchase Orders (MENU POMAIN) and keying **Y** in the **Reprint** field and specifying a range of purchase order numbers or dates on the Print Purchase Order Selection Screen (p. 23-3).

## Entering and Posting PO Receipts - Receiver Processing

To enter and post item receipts in Purchasing using the receiver processing method, follow these steps:

---

NOTE: W/M or RF may also be used to perform receiver processing.

---

Receivers are usually created prior to the actual arrival of the items. The entering of receipts for receivers is, therefore, generally separated into 2 separate tasks:

- Creating the receiver using, for example, an Advanced Shipping Notice (ASN).
- Once the items are received, modifying, if necessary, and approving all or selected portions of the receiver, then submitting it for posting.

The following steps describe the activities required to perform both of these tasks.

1. Select Enter or Change Receivers or PO Receipts (MENU POMAIN) to create a receiver for a company, vendor, and warehouse. Select to process receipts by Receiver.

---

NOTE: You may also create receivers:

---

- in Warehouse Management, using the Add/Maint function key in the Warehouse Management option (MENU WMMAIN)

- in Radio Frequency, through the Receiving task
  - in Electronic Data Interchange (EDI), from incoming Advance Shipping Notices sent by the vendor [(refer to the Pending Incoming EDI Advance Shipping Notices Screen (MENU EIMAIN))]
2. Select open PO line items from the Line Items On PO Select Screen (p. 8-97) (all items on a PO, some items from a PO, some items from different POs). If a selected item must be changed (e.g., the quantity received), utilize the “C” (Change) as opposed to “S” (Select) in the **OPT** field. The Line Items On PO Select Change Screen (p. 8-104) is then accessed to modify data about the line item. Landing costs, substitute items, and transaction comments can also be added or modified from any of the receiver “change” screens.

---

NOTE: During the drop ship receipt process in both Purchasing and Accounts Payable, you have the ability to enter order entry special charges for a customer. If charges are entered, during the update process, the charge will automatically be added to the customer sales order as an order level special charge and Order Activity will be updated. If International Currency is installed, the International Currency Order Detail Record will also be added/updated.

---

3. Review items included in the Receiver Review Selection Screen (p. 8-92) by pressing F9=REVIEW from the Line Items On PO Select Screen (p. 8-97) and change any information, if necessary.
4. Complete the receiver by accessing the End Receiver Information Screen (p. 8-89). Overriding landing costs for the entire receiver may be keyed by selecting F9=LND CST.
5. Approve the items in the receiver. You can do this in 1 of 2 ways:
  - To approve all of the items on the receiver at once, press F15=APPROVE ALL on the End Receiver Information Screen (p. 8-89).
  - To approve individual items, press F11=APPROVE on the End Receiver Information Screen (p. 8-89). The Receiver Approval Selection Screen (p. 8-126) will display. You can then key approval for each item that you have received.

---

NOTE: If Warehouse Management is installed, you must assign location receipts for each item to be received (posted). You can assign locations manually or through the auto put-away process. For more information, refer to the Warehouse Management User Guide.

---

6. Post the received items. To do this, select the receiver to be posted from the Receiver List Selection Screen (p. 8-69) and press the F15=POST function key.

---

NOTE: You can also post receivers through Warehouse Management (MENU WMMAIN).

---

7. If no errors exist, the Post Received Items Screen (p. 8-146) is presented identifying all items in the receiver available (approved) to be posted. Optionally omit any items that you do not want to post and then press ENTER. A receipt group with the items selected for posting is created and automatically submitted to the Transaction Processor.

---

NOTE: If the interface is on between Inventory Accounting and General Ledger, you will have to supply a G/L posting date for the submission to be accepted.

---

## Entering and Posting PO Receipts - Purchase Order Processing

To enter and post item receipts in Purchasing using the purchase order processing method, follow these steps:

1. Select Enter or Change Receivers or PO Receipts (MENU POMAIN). Select to process receipts by Purchase Order.
2. Key the number of the company and purchase order for which items have been received and identify the Group ID of the receipt group to be created. If all items on the purchase order have been received in full, press F5=REC PO COMPLETE to indicate that the purchase order has been received complete; skip to step 5. Otherwise, press ENTER to enter receipts for individual items.
3. Each item that was ordered for the selected purchase order will display on the PO Item Review Screen (p. 8-35). Press F2=ENTER QTYS to key the quantity and cost of the items received on the PO Enter Receipts Screen (p. 8-41), or press F13-F20=ITEM DETAIL to enter receipts for one of the items on the PO Enter Item Detail Screen (p. 8-46).

---

NOTE: During the drop ship receipt process in both Purchasing and Accounts Payable, you have the ability to enter order entry special charges for a customer. If charges are entered, during the update process, the charge will automatically be added to the customer sales order as an order level special charge and Order Activity will be updated. If International Currency is installed, the International Currency Order Detail Record will also be added/updated.

---

4. Press F10=END RECEIPTS when you have finished entering item receipts. The End Receipts Screen (p. 8-28) will display.
5. A summary of item receipts will display on the End Receipts Screen. Press ENTER to confirm the items received for this purchase order.
6. Return to MENU POMAIN and select PO Receipts Register (MENU POMAIN). Select the receipt group you want to post and press ENTER to submit the receipt group to the Transaction Processor for posting.

---

NOTE: If the interface is on between Inventory Accounting and General Ledger, you will have to supply a G/L posting date for the submission to be accepted.

---

## Special Orders

Follow these steps to create a special order and select a special order item on a requisition. Special orders are created in Order Entry, and are selected for a requisition (and/or purchase order, if special order options have been set up for your company through Special Order Options Maintenance (MENU XAFILE)) in Purchasing for drop-ship, non-stock, or unusually high quantity orders.

The steps below vary if special order options have been set up for your company through Special Order Options Maintenance (MENU XAFILE).

1. Select Enter, Change & Ship Orders (MENU OEMAIN). When entering an item, key Y in the **Sp Ord** field on the Item Review Screen for any item that you want to special order. End the order in the typical manner, it will be saved as a backorder. If the special order is to be a drop ship (i.e., sent directly from the vendor to the customer), you must also key Y in the **Drp Shp** field.

If you do not specify a vendor when entering the order, the item is special ordered from the vendor defined through Item Balance Maintenance (MENU IAFILE). If no vendor is specified in the Item Balance File, the vendor specified through Item Master Maintenance (MENU IAFILE) is used. If no vendor is specified in the Item Master File, the special order will not be assigned to a vendor, but you can assign one to it later.

2. Select Work With Special Orders (MENU POMAIN). With this option you can view, change, or assign different vendors to special ordered items. Also, if you are using the change request process, you can use this option to request a change to a special order.

If you are using the auto-creation process, requisitions/purchase orders can be created/updated at end order time. The SO/RQ Edit Report will identify any items that were not successfully added to a requisition/purchase order. If you are using the auto-creation process and items were not successfully added, review the SO/RQ Edit Report, correct any errors it lists, then select Special Order Automatic Req Creation (MENU POMAST). This option allows you to make another attempt to get the items on a requisition/purchase order or you can manually update a requisition (or purchase order, if special order options are set up) to include the special order.

3. If you are not using the auto-creation process, select Enter or Change Requisitions (MENU POMAIN) to create a requisition for a vendor. Press F6=SPORD from the Requisition/Purchase Order Maintenance Header Screen (p. 6-13) to display the Work With Special Orders Screen (p. 10-13) within Work With Special Orders (MENU POMAIN), which lists special ordered items assigned to the selected vendor.
4. To select a special ordered item to include in the requisition, key **O** in the **Option** column on the Work With Special Orders Screen (p. 10-13) and press **ENTER**.
5. When you finish selecting items, press F10=END. Then, press F13=UPDATE REQ from the End Special Order Selection Screen to add the selected items to the requisition.
6. A suggested order can also include special order items that are added (linked) to this suggested order in one the following ways through Buyers Workbench:
  - Through the Suggested Order Report by setting the **Add Special Order Items** field to **Y** to automatically add (link) all qualified special order items when a suggested order is created.
  - Through Buyers Workbench by entering '**L**' in the **Option** field on the Workbench Suggested Orders List Screen (p. 38-5).
7. Process the requisition and purchase order as explained in the previously described steps for Creating a Requisition, and Printing Purchase Orders.

---

NOTE: If a special order has been created in order entry but not placed on a purchase order yet, and the order entry line is deleted in order entry, the special order request is also deleted.

---

8. When the purchase order is received, the order's quantities will be updated so that the order can be released and invoiced.

## Special Order Receipts Posting

The following will occur when a special order receipt is posted and a Pick List has been printed for the order it is updating:

- **If the order is not in use:** All special order line items on the order that are received in the posting will be split into a separate order, retaining the same identifying warehouse. If the original order

was assigned a hold code, the separate order will be put on the same hold; otherwise, the separate order will have a status of “Pick List Ready to Print.”

- **If the order is in use:** The receipt transaction will be restored to the Receipt Entry File and removed from the Receipt Posting File. The user will be notified by a message that not all POs were posted and then referred to the Receipt Post Special Order Exception Report (p. 24-11). This report will identify all special order transactions not posted. Once the listed orders are no longer in use, the user can re-run the PO Receipts Register (MENU POMAIN).
- Based on company-level special order options defined through Special Order Options Maintenance (MENU XAFILE) or customer/ship-to-level special order options defined through Customer/Ship-to Master Maintenance (MENU ARFILE), the order quantity can be automatically increased for special order over/under shipments and drop-ship under shipments.

## Accounts Payable Drop Ship Receipt Validation Processing

If **PO-AP Transfer** is set to **Y** for the purchase order’s vendor in Vendors Maintenance (MENU APFILE), posting of drop ship receipts may occur through the Accounts Payable drop ship receipt validation process (MENU APMAIN). When this occurs, Purchasing warehouse-level options will allow the original customer’s order to be released directly to a status of Ready for Invoice (even if the order was originally on any other type of hold), or to be placed on the default drop ship hold code, defined in Purchasing company-level options, to indicate that a review of this order is necessary. Refer to the Overview section of the Accounts Payable User Guide for further information on the drop ship receipt validation process.

---

NOTE: During the drop ship receipt process in both Purchasing and Accounts Payable, you have the ability to enter order entry special charges for a customer. If charges are entered, during the update process, the charge will automatically be added to the customer sales order as an order level special charge and Order Activity will be updated. If International Currency is installed, the International Currency Order Detail Record will also be added/updated.

---

## Centralized Replenishment

Centralized replenishment enables you to use another warehouse’s inventory as the standard source (vendor) when creating stock orders (replenishing). For simplicity, it is described as a central warehouse acting as a vendor for remote warehouses. Distribution A+ does not limit you to one central warehouse. In fact, any warehouse can act as a stock vendor for any other warehouse because the replenishment relationship is defined at the item/warehouse level.

Remote warehouses can create purchase orders through suggested order processing, or they may be keyed manually. The suggested order report has an option which shows other warehouses as potential sources for items to be ordered. Options are available to determine which warehouses should be shown based on the stock level in each warehouse.

Once the purchase order requisition is complete, the Purchase Order can be printed. The remaining process will be handled identically to warehouse transfers. In order to be sure the shipping warehouse

does not need the inventory, you can choose to hold the replenishment order for review before it is shipped.

---

## Centralized Purchasing

Centralized purchasing is used when one location serves as a buyer for other warehouses. Goods are received at a central warehouse and trans-shipped to other warehouses without affecting the inventory availability at the central warehouse.

Centralized purchasing processes are identical to centralized replenishment with the following exception: the central warehouse is logically divided into two warehouses; one for customer orders and the other for trans-shipping to other warehouses.

All centrally purchased items are sourced from a vendor representing the purchasing (central) warehouse. The purchasing warehouse only buys enough inventory to meet the consolidated purchase order requirements of all remote warehouses. Except for purchases that are waiting to be trans-shipped to other warehouses, the purchasing warehouse will be empty. Therefore, Inventory Management & Planning or Advanced Inventory Management is not used to plan inventory levels in the purchasing warehouse.

Before preparing a suggested order for the purchasing warehouse, purchase orders are created in the remote warehouses against the purchasing warehouse. The system will automatically create a transfer order in the purchasing warehouse for each purchase order. The transfer orders will force the item availability in the purchasing warehouse to be negative. The next step is to print a suggested order for the purchasing warehouse which will order enough inventory to meet the demand established by the transfer orders.

When the inventory arrives at the purchasing warehouse, the automatic backorder release program will identify transfer orders that are ready to be trans-shipped.

---

## Return to Vendor Processing

### Overview

Return to Vendor processing provides an efficient means for tracking items that are returned to the vendor. When Return to Vendor processing is enabled, you can track items from the creation of the return order in Order Entry through the printing of the packing list for shipment back to the vendor.

To activate Return to Vendor Processing, enter **Y** in the **Use Return to Vendor Processing** field in Purchasing Options Maintenance (MENU XAFIELD). You can also tailor RTV processing to your needs by responding to three other questions on that screen.

When you create a return sales order in Order Entry, you specify whether the item will be placed back into inventory, returned to the vendor, or disposed of. If the item is being placed back into inventory or disposed of, the return sales order process ends with the printing of a Credit Memo. For more information about this return process, refer to the OE Order Processing section of the Order Entry User Guide.

If the item is being returned to the vendor, an RTV log number is assigned to the item, and the item is added to the Return to Vendor Log File, which stores data for all items being returned to vendors. You can also manually add items to this file using Return to Vendor Additions (MENU POMAIN or WMMAIN). This option is useful when returning damaged merchandise that was never sold to customers.

Using Return to Vendor Processing (MENU POMAIN), you can perform the following tasks for items in the Return to Vendor Log File:

- Review items
- Change information such as the item cost, quantity, and the vendor to which the item is being returned
- Create return requisition

After creating the requisition, you can print a Return Requisition Pick List. When the items are being picked, if circumstances arise that require changes to the requisition, you can change it before printing the return Purchase Order.

## Processing Returns

When returning an item to the vendor, follow these steps:

1. Create a return sales order through Enter, Change & Ship Orders (MENU OEMAIN) or manually add the item to the Return to Vendor Log File through Return to Vendor Additions (MENU POMAIN or MENU WMMAIN).
2. If a return sales order was created in Order Entry, print an RGA Slip using Print RGA Slips (MENU OEMAIN). The RTV number is printed on the RGA Slip if you chose to track RTV numbers in Purchasing Options Maintenance (MENU XAFIELD).
3. If a return sales order was created in Order Entry, complete that process by printing a Credit Memo using Print Invoices (MENU OEMAIN).
4. Review, and if necessary, change item and vendor information using Return to Vendor Processing (MENU POMAIN).
5. Create a return requisition using Return to Vendor Processing (MENU POMAIN). The item is deleted from the Return to Vendor Log File.  
A return requisition will allocate inventory if the **Update Inv** field is set to **Y** on the Requisition Header Screen and the Requisition Item Detail Entry Screen (MENU POMAIN).
6. If desired, print a Return Requisition Pick List using (MENU POMAIN). The RTV number is printed on the Return Requisition Pick List if you chose to track RTV numbers in Purchasing Options Maintenance (MENU XAFIELD).
7. If necessary, change information on the return requisition using Enter or Change Requisitions (POMAIN).

8. If desired, print the Return Requisition Pack List using (MENU POMAİN).
9. Approve and print the return Purchase Order using (MENU POMAİN). The return is automatically posted to General Ledger when the Purchase Order is printed, and items will be released from inventory if the **Update Inv** field is set to Y.

---

Warehouse Transfers enable you to use current shipping and receiving methods to control the movement of goods from one warehouse to another. Since the warehouses involved in a transfer do not have to belong to the same company, warehouse transfers can occur whether your Distribution A+ environment is established for single-company processing, or multi-company processing.

Based on General Ledger (G/L) transfer definitions, appropriate accounts can be created and maintained. The inter-company account feature of general ledger will be used to properly account for warehouse transfers occurring between different companies. Options determine how transfer orders will be costed. You can choose to mark up the current cost of an item to account for the cost associated with shipping the transfer order, or mark down from a list price. If a cost is used, be aware that warehouse transfer orders will be re-cost just before invoices are generated. This is to assure that the cost is accounted for appropriately in the shipping warehouse. Use the Purchasing Options - Purchasing Warehouse Options (MENU XAFILE) to set up the different costs you may incur when transferring goods from one warehouse to another. You can select the pricing base (one of five list prices, average cost, last cost, standard cost, or user cost) to be used for costing the requisition for other warehouses when they request a transfer from

There are basically two types of warehouse transfers. The first type occurs when you transfer inventory between or among multiple warehouses within the same company. The second type of transfer, available only if your Distribution A+ environment is set up for multi-company processing, occurs when inventory is moved from a warehouse in one company to a warehouse in a different company.

---

## Warehouse Transfer Process Overview

Warehouse transfer processing may be performed totally manually or scheduled to run at a specified time. Warehouse transfer setup can be accomplished with the assistance of an automated option allowing for the creation of some of the documents and files necessary. The details provided in this chapter describe the manual process to provide you with an understanding of all the steps required to perform warehouse transfers. A description of the feature to schedule warehouse transfers is also included in this Appendix. For a description of the available automated option, refer to CHAPTER 74: *Automatic WH Transfer Order Creation* (MENU POMAST).

The basic flow of the transfer process is described as follows:

---

1. A requisition is created in the warehouse transfer company with a special vendor designated as the “transfer-from” warehouse and the receiving warehouse encoded as the “transfer-to” location. Following the entry, purchase orders should be printed for all warehouse transfer company requisitions. The purchase order print process will automatically generate off-line order entry records to create a sales order in the warehouse transfer company. The customer for this order will be a special customer set up for the receiving warehouse, and the shipping warehouse will be the transfer-from warehouse from the original purchase order.
- 

### Important

Be sure to review the Offline Entry Edit Report to ensure that Distribution A+ did not encounter problems in the automatic creation of customer orders.

---

2. After the orders have been created, it is necessary to print Pick Lists for the warehouse transfer orders. This is accomplished by printing the Pick List for the warehouse transfer company and appropriate warehouses.
  3. The next step in the warehouse transfer process is to perform shipping confirmation of all orders which are being transferred.
  4. Following shipping confirmation, all invoices for the warehouse transfer company should be generated. At invoice print time, the in-transit quantity will be updated in the receiving warehouse based on the option to **Auto Receive Incoming WH Transfers at Invoice Print Y/N** found in Purchasing Warehouse Options Maintenance (MENU XAFIELD).
- 

NOTE: If a cost is used, be aware that warehouse transfer orders will be re-cost just before invoices are generated. This is to assure that the cost is accounted for appropriately in the shipping transfer-from warehouse.

---

5. Day-End Processing will then reduce inventory in the shipping warehouse. Day-End will also generate appropriate G/L transactions.
  6. When the goods are received at the transfer-to warehouse, normal purchase order receiving should be performed against the original purchase order which began the process if it wasn't done automatically. In other words, the requesting warehouse performs its receiving function just as it would for a regular purchase order. To reduce keying and chance of errors, the receipt entry program will bring the receipt quantities and costs in from the shipment history of the shipping warehouse transfer order. The result of the posting of purchase order receipts will be the update of inventory in the receiving warehouse. G/L transactions will be generated to close out the transfer process.
- 

NOTE: When performing a warehouse transfer of lot item(s), the aging date from the transfer-from warehouse is transferred into the transfer-to warehouse location. If the transfer-to warehouse location already contains the same item and lot, the earliest age date will be used.

---

## Scheduled Warehouse Transfer Order Processing

The creation of the warehouse transfer purchase order process can be scheduled to run through Automatic WH Transfer Options (MENU POMAST). The following steps can be included in the scheduled job:

1. Select specific job templates, companies and warehouses.
2. Create and approve requisitions.
3. Include or bypass held customer sales orders

This job can be scheduled to run once, daily, weekly or monthly. For further information, refer to Automatic WH Transfer Options (MENU POMAST).

---

## Warehouse Transfer Components

To perform warehouse transfers, certain transfer components must be established. These components, and the order in which they must be created, are as follows:

1. Create a warehouse transfer company through which all transfers will occur.
2. Create a warehouse transfer customer in the warehouse transfer company for each warehouse into which you will be transferring inventory.
3. Create a warehouse transfer vendor for each warehouse from which you will be transferring inventory.
4. Assign the created warehouse transfer customers and vendors to their respective warehouses.
5. Set up Purchasing ship-to address locations in the warehouse transfer company for each warehouse.
6. Set up the Purchasing warehouse options for each applicable warehouse in your system. This option will prompt for the customer and vendor numbers you have assigned each warehouse. If you wish transfer orders to go on hold automatically in Order Entry, indicate the hold code. Price, discount/markup, and cost options for transfer orders are also addressed. There are several options to identify processing tasks at the receiving warehouse and a different list of processing tasks at the shipping warehouse. Refer to Purchasing Options - Warehouse Options Maintenance (MENU XAFILE) in the Cross Application User Guide for more information.
7. Establish G/L accounts to allow for accurate warehouse transfer accounting.

## Instituting Warehouse Transfers

Regardless of the environment in which you are to perform warehouse transfers (single or multi-company), you must set up the environment to handle those transfers. The first step in preparing for the use of transfers is to create a special pseudo-company in which all transfer processing will occur. To alleviate any confusion in transfer or sales analysis data between the warehouses/companies involved

in a transfer, all warehouse transfers occur within this pseudo-company, established specifically as a warehouse transfer company.

---

**NOTE:** If your System Options (MENU XAFILE) are set up with the **Multi-Company** field set to **N**, you must change this option to **Multi-Company** set to **Y**. Although this warehouse transfer company is a pseudo-company, you still must be able to access it. Individual company access is provided only when your system options define your Distribution A+ environment as multi-company.

---

This warehouse transfer company is created through Setup Warehouse Transfer Options (MENU POMAST). You may want to give this company a number quite different than those normally used (e.g., company 99). Utilizing Setup Warehouse Transfer Options (MENU POMAST) will not only create the warehouse transfer company, but it will also set up needed control and option records for this company. These control/option records will be created automatically, using the data contained in your default company (usually company number 01), with appropriate modifications.

---

### **Important**

Since the control/option records for your warehouse transfer company will be copied from your default company, ensure all records (with all options answered appropriately) for that default company exist. Also, when creating a warehouse transfer company through this option, note that the warehouse transfer miscellaneous code must be keyed at the top of the screen.

---

The warehouse transfer company control/option records automatically created are as follows:

1. The Company Option records for the new warehouse transfer company will be created. Maintenance of these records is performed through Company Options Maintenance (MENU XAFILE).  
If you complete this step manually, for the warehouse transfer company, we recommend that the **Interface Order Entry to A/R** field be set to **N** because normally there are no receivable collections that occur within the inter-company transfer of merchandise. The value of the moved inventory is handled through general ledger transactions. See Warehouse Transfer G/L Requirements (p. 3-7) for detailed information.
2. The warehouse transfer company will be added to the Default Company Control record.
3. The Accounts Receivable Option records will be created. Maintenance of these records is performed through Accounts Receivable Options Maintenance (MENU XAFILE).
4. The Order Entry Option records will be created. Maintenance of these records is performed through Order Entry Options Maintenance (MENU XAFILE).
5. The Inventory Accounting Option records will be created. Maintenance of these records is performed through Inventory Accounting Options Maintenance (MENU XAFILE).
6. The Sales Analysis Option records will be created. Maintenance of these records is performed through Sales Analysis Options Maintenance (MENU XAFILE).
7. The Purchasing Company Option records will be created. Maintenance of these records is performed through Purchasing Options Maintenance (MENU XAFILE).

## Important

Even though these records are created automatically for you, some specific selections may still be needed to ensure all processing is performed as desired. Review the following for sample situations which may need attention:

Situation 1: Although Account Receivable records are created for you, you must use the Accounts Receivable Options Maintenance (MENU XAFILE) to key a **Y** or **N** in the **Validate Adj No** field. Since data from the default company is not carried forward for all fields (such as the Validate Adj No field), you must be sure to access each of the above created records to ensure all selections are made.

Situation 2: The Order Entry Option record may not reflect the desired cost. When a warehouse transfer requisition is entered, the system will get the price/cost which will appear on that purchase order from the Purchase Warehouse Options record. When the system automatically creates a customer order in the warehouse transfer company, it will fix the cost selected in that company's Order Entry Options record. If the same cost was not chosen to be used in Purchasing/Warehouse Options and in **Display GL Cost and Profit (OE, SA, AR, some PO)** in Order Entry Options (i.e., Standard), you could actually have a situation where a company could lose money on a warehouse transfer. For example, if a purchase order is placed at standard cost of \$1.00, but the average cost is \$1.05, a \$.05 loss on the transfer would result.

---

## Assigning a Default Warehouse Transfer Company

After the warehouse transfer company and its control/option records are created, you will assign it to all other companies as the default warehouse transfer company. This way, when you create a warehouse transfer requisition as company 1, for example, the system can automatically find the warehouse transfer company in which the processing is to occur, and change the company number appropriately (e.g., from 01 to 99). The default warehouse transfer company is assigned to a company through Inventory Accounting Options Maintenance (MENU XAFILE).

Once the warehouse transfer company has been established, a calendar must be created through S/A Fiscal Calendar Maintenance (MENU SAFILE). This will most likely be the same as the calendar for the default company.

## Creating Warehouse Transfer Vendors and Customers

After the warehouse transfer company is assigned as the default for all other applicable companies, you must create the following for each warehouse that will be involved in transfers:

- warehouse transfer vendor - to be used to indicate the warehouse (instead of a true vendor) from which inventory is requested
- warehouse transfer customer - to be used to indicate the warehouse (instead of a true customer) which requested and is to receive the inventory.

For example, if you have warehouses 1, 3, and 5, all of which belong to company 1, and all of which will transfer inventory among themselves, you must establish three warehouse transfer vendors and three warehouse transfer customers. These vendors and customers will indicate the transfer-from and transfer-to warehouses involved in transferring inventory. To establish these warehouse transfer vendors and warehouse transfer customers:

1. Create a warehouse transfer vendor for warehouse 1 through Vendor Master Maintenance (MENU POFIE). This will be the vendor number used when another warehouse is requesting shipment from warehouse 1. You may wish to identify the vendor number as one which is indicative of its function. For example, since this is the warehouse transfer vendor for warehouse 1, you may wish to create the vendor with a number such as WTV01.

We recommend that the **Allow Vouchers** field be set to **N** because normally there are no accounts payable payments that occur within the inter-company transfer of merchandise. The value of the moved inventory is handled through general ledger transactions. See “Warehouse Transfer G/L Requirements” on page A-7 for detailed information.

2. Repeat step 1 as needed to create warehouse transfer vendors for each warehouse. Using the previous examples, you might create warehouse transfer vendor WTV03 (to be used when requesting an inventory transfer from warehouse 3) and WTV05 (to be used when requesting an inventory transfer from warehouse 5), in addition to the WTV01 vendor created in step 1.
3. Create a warehouse transfer customer through Customer/Ship to Master Maintenance (MENU ARFILE) in your warehouse transfer company (e.g., 99) to indicate warehouse 1 as a customer.

---

NOTE: Be sure to indicate your warehouse transfer company number (e.g., 99) when adding the record.

---

This will be the customer number used when another warehouse is transferring inventory to warehouse 1. You may wish to identify the customer number as one which is indicative of its function. For example, since this is the warehouse transfer customer in company 99 representing warehouse 1, you may wish to create the customer with a number such as 9901.

When creating the record, in order to uniquely track warehouse transfers, it is recommended that the warehouse transfer miscellaneous code set up on the Warehouse Transfer Company Setup Screen (p. 71-3) be used for the following fields:

- Age code
  - Customer class
  - Customer user codes
  - Payment type
  - Sales Rep (00001)
  - Terms code
  - Territory
  - Tax body
4. Repeat step 3 as needed to create warehouse transfer customers to account for each warehouse to be involved in warehouse transfers. Using the naming conventions shown in the previous examples, you might create warehouse transfer customer 9903 (to be used when identifying warehouse 3 will receive the transfer inventory) and 9905 (to be used when identifying warehouse 5 will receive the transfer inventory), in addition to the 9901 customer created in step 3.
  5. Create a default receiving warehouse ship-to address through Enter or Change Requisitions (MENU POMAIN) for each warehouse that will be used in the transfer process.

If this is the first time the warehouse transfer company (e.g., 99) is being used, you must create a default shipping information requisition for that company using the **Requisition Number** of **DFT000**. The shipping location information keyed for this default requisition will be used whenever another requisition is added without the Receiving WH or Ship-To No being identified. For details about this default requisition record, refer to the Shipping Location Screen (p. 6-13) found in Enter or Change Requisitions (MENU POMAIN).

6. Assign the created warehouse transfer vendors and warehouse transfer customers to each applicable warehouse. These assignments are performed through the warehouse options of Purchasing Options Maintenance (MENU XAFIL). For example, for warehouse 1, assign customer 9901 and vendor WTV01.

It is through these same warehouse options that you determine if Inventory Management & Planning or Advanced Inventory Management will, as a default, consider warehouse transfers as part of an item's demand when setting inventory levels in the indicated shipping warehouse. Additional selections for the price, discount and cost to be used between specific warehouses, auto-receiving options, drop-ship order processing choices, and controls for additions/changes to the warehouse transfer orders that are in-process must also be completed. Refer to the Cross Application User Guide for further information on Purchasing Options Maintenance (MENU XAFIL).

---

## Warehouse Transfer G/L Requirements

To ensure accurate General Ledger accounting for warehouse transfers, you must:

1. Setup the G/L Option Records for the warehouse transfer company via G/L Options Maintenance (MENU GLFIL2).
2. Setup the Fiscal Calendar for the warehouse transfer company via Fiscal Calendar Maintenance (MENU GLFIL2); this will most likely be the same as the calendar for your default company.
3. Create all necessary G/L accounts to support the warehouse transfer process in the normal companies through G/L Accounts Maintenance (MENU GLFILE). This includes transfer accounts and accounts to be used as inter-company accounts.

---

NOTE: No G/L accounts will actually be created for the warehouse transfer company itself. All accounts referring to the warehouse transfer company will be created within the bounds of other existing, valid companies.

---

If multi-company transfers are to occur, inter-company clearing accounts and transfer accounts are required. Both work together to handle the complicated accounting situations resulting when warehouse transfers occur between companies.

Inter-company clearing accounts represent the "Due To" and "Due From" relationships between your default company 01 and all other companies. Transfer accounts are pseudo-accounts created within one company to represent real accounts in another. Refer to Inter-company and Transfer Accounts (p. 3-11) for more details about inter-company and transfer accounts.

4. Establish the G/L inventory accounts for all company/warehouse transfer combinations through option 5 of the G/L Transfer Definition (MENU GLXFER).

## Single-Company Environment G/L Setup

In a single-company environment, you must set up the following accounts:

### 1. Inventory Account

A separate Inventory account must be set up for each warehouse to be involved in transfers.

### 2. Transfer Revenue Account

At least one Transfer Revenue account must be set up for your company.

### 3. Transfer Cost of Goods Sold (COGS)

At least one Transfer Cost of Goods Sold (COGS) account must be set up for your company.

---

NOTE: In a single-company environment, the Transfer Revenue account and the Transfer COGS account may be the same number.

---

### 4. In-transit Inventory Account

At least one In-transit Inventory account must be set up for your company. An In-transit Inventory account must be established for your company to represent inventory in-transit between warehouses within that company.

## Single-Company Account Setup Example

This section provides details about establishing all appropriate accounts.

Assume that you have a single default company, 01 and three warehouses, 1,3, and 5. Your warehouse transfer company is 99. You will need to set up the following accounts.

| G/L Accounts                              | Type | Bal |
|---|------|-----|
| 01/ 001.0001100.001 Inventory Warehouse 1 | A    | D   |
| 01/ 001.0001100.003 Inventory Warehouse 3 | A    | D   |
| 01/ 001.0001100.005 Inventory Warehouse 5 | A    | D   |
| 01/ 001.0004100.000 Transfer Revenue      | I    | C   |
| 01/ 001.0004100.000 Transfer COGS         | E    | D   |
| 01/ 001.0001400.000 In-Transit Inventory  | A    | D   |

To complete the setup in the G/L Transfer Definition Inventory Account Option Setup using the following example as a guide. From MENU GLXFER, select option 20, GL Transfer Definition. Then, select option 5 from the G/L Transfer Definition Sub-menu to access Inventory account data.

If each warehouse in this company (Company 1) is its own profit center, the G/L Accounts may look like this:

| G/L Accounts                              | Type | Bal |
|---|------|-----|
| <b>Warehouse 1</b>                        |      |     |
| 01/ 001.0001100.000 Inventory Warehouse 1 | A    | D   |
| 01/ 001.0004100.000 Transfer Revenue      | I    | C   |
| 01/ 001.0004100.000 Transfer COGS         | E    | D   |
| 01/ 001.0001400.000 In-Transit Inventory  | A    | D   |
| <b>Warehouse 3</b>                        |      |     |
| 01/ 002.0001100.000 Inventory Warehouse 3 | A    | D   |
| 01/ 002.0004100.000 Transfer Revenue      | I    | C   |
| 01/ 002.0004100.000 Transfer COGS         | E    | D   |
| 01/ 002.0001400.000 In-Transit Inventory  | A    | D   |
| <b>Warehouse 5</b>                        |      |     |
| 01/ 003.0001100.000 Inventory Warehouse 5 | A    | D   |
| 01/ 003.0004100.000 Transfer Revenue      | I    | C   |
| 01/ 003.0004100.000 Transfer COGS         | E    | D   |
| 01/ 003.0001400.000 In-Transit Inventory  | A    | D   |

In this example, the first segment of the G/L Account Number is being used as the control segment for all transactions in the warehouse business unit or profit center.

## Multi-Company Environment G/L Setup

In a multi-company environment, you must set up the following General Ledger accounts.

### 1. Inventory Accounts

A separate Inventory account must be set up, under each company, for each warehouse, regardless of company ownership. For example, if company 1 owns warehouse 1 and wants to transfer inventory to and from warehouse 2 (owned by company 2), for company 1, you must set up

- a. an Inventory account for warehouse 1
- b. a pseudo Inventory account for warehouse 2 (owned by company 2)

For company 2, you must set up

- a. an Inventory account for warehouse 2

- b. a pseudo Inventory account warehouse 1 (owned by company 1).

Pseudo inventory accounts created for another company's warehouse must be tagged as "Transfer" accounts through G/L Accounts Maintenance (MENU GLFILE). When creating a pseudo account to represent another company's inventory, you must key that company's real inventory account number in the **Transfer Account** field so that Distribution A+ will generate journal entries for the pseudo account and the real inventory account.

---

NOTE: You must also define inter-company accounts through Option B of the G/L Transfer Definition (MENU GLXFER).

---

## 2. Transfer Revenue Accounts

A Transfer Revenue account must be set up for each company.

## 3. Transfer Cost of Goods Sold Accounts

A Transfer Cost of Goods Sold account must be set up for each company.

## 4. In-transit Inventory Accounts

An In-transit Inventory account must be set up for each company transfer possibility. Just as in the single-company environment, an In-transit Inventory account must be established for each company to represent inventory in-transit between warehouses within that company. However, additional In-transit Inventory accounts are required in a multi-company environment to represent inventory leaving that company which is in-transit to another company. In-transit Inventory accounts should be set up to handle the possible combinations of inventory in-transit within the company and from all other companies. Pseudo In-transit Inventory accounts are created for one company, but representing another, and must have the other company's real In-transit Inventory account number reflected as the transfer account. Therefore, each company may have:

- One real In-transit Inventory account representing inventory in-transit within that company.
- Real In-transit Inventory accounts representing inventory in-transit to other applicable companies (a unique for each company).
- Pseudo In-transit Inventory accounts representing inventory in-transit from other applicable companies and linked to real transfer accounts in the other company.

For example, if you had two companies, you might set up

- a. an In-transit Inventory account for transfers within company 1.
- b. an In-transit Inventory account for transfers within company 2.
- c. an In-transit Inventory account for company 1, for inventory in transit from company 1 to company 2.
- d. a pseudo In-transit Inventory account for company 1, representing inventory in transit from company 2 to company 1. When this account is created, the real In-transit Inventory account number for company 2 will be designated as the transfer account.
- e. an In-transit Inventory account for company 2, for inventory in transit from company 2 to company 1.
- f. a pseudo In-transit Inventory account for company 2, representing inventory in transit from company 1 to company 2. When this account is created, the real In-transit Inventory account number for company 1 will be designated as the transfer account.

You may create one In-transit Inventory account for inventory moving from or to another company, rather than separate accounts. For example, if you have two companies, you might create

- a. an In-transit Inventory account for transfers within company 1.

- b. a pseudo In-transit Inventory account representing inventory in-transit to and from company 2. When this account is created, the real In-transit Inventory account number for company 2 will be designated as the transfer account.
- c. an In-transit Inventory account for transfers within company 2.
- d. pseudo In-transit Inventory account representing inventory in-transit to and from company 1. When this account is created, the real In-transit Inventory account number for company 1 will be designated as the transfer account.

## Inter-company and Transfer Accounts

Inter-company and transfer accounts work together to allow for the General Ledger accounting of warehouse transfers occurring in a multi-company environment. For a brief description of transfer accounts, refer to the previous section of this Appendix. For detailed information, refer to *G/L Accounts Maintenance (MENU GLFILE)*, as described in the *General Ledger User Guide*.

---

NOTE: Inter-company accounts may be used within General Ledger without using warehouse transfers.

---

This section briefly describes inter-company accounts. For detailed information, refer to the setup checklist for General Ledger in the *Cross Applications User Guide* and the description for option B of the *G/L Transfer Definition (MENU GLXFER)* as described in the *General Ledger Interface User Guide*.

---

NOTE: Unlike transfer accounts, inter-company accounts need be defined in only one direction (i.e., if you define inter-company accounts for “company 1 to company 2,” you do not have to define “company 2 to company 1” accounts).

---

The use of transfer and inter-company accounts forces Applications Plus to create the journal entries required in a multi-company environment. When a pseudo account is updated in General Ledger, the system will automatically generate entries for the associated transfer account in another company and update corresponding accounts between the two companies. To do this accurately, inter-company clearing accounts must be established.

Inter-company account transactions affecting the defined inter-company clearing accounts are created automatically when a transfer occurs between two companies. All inter-company account transactions are posted in a Transfer Journal (TJ). After a multi-company warehouse transfer has been initiated, inter-company transfer entries are made for the initiating and the transfer companies.

**Example:**

Assume that the following inter-company accounts have been established:

- 01/ 001.0009802.001 - Co #01 Due To Co #02
- 02/ 001.0009901.001 - Co #02 Due From Co #01

The following inventory accounts have been established:

- 01/ 001.0001100.002 - Pseudo Inventory for WH 2 (with transfer account 02/ 001.0001100.002 associated)
- 02/ 001.0001100.002 - Inventory for WH 2
- 01/ 001.0005099.001 - Transfer Cost of Goods Sold (COGS)

Then, company 1 sells Item A worth \$100.00 from company 2, warehouse 2.

Initial General Ledger entries for company 1 would be:

- 01/ 001.0005099.001 - Transfer COGS - \$ 100 (DR)
- 01/ 001.0001100.002 - Pseudo Inventory for WH 2 - \$ 100 (CR)

The transfer journal entries for company 1 would be:

- 01/ 001.0001100.002 - Pseudo Inventory for WH 2 - \$ 100 (DR)
- 01/ 001.0009802.001 - Co 1 Due To Co 2 - \$ 100 (CR)

The transfer journal entries for company 2 would be:

- 02/ 001.0009901.001 - Co 2 Due From 01 - \$ 100 (DR)
- 02/ 001.0001100.002 - Inventory for WH 2 -\$ 100 (CR)

For details about establishing all appropriate accounts, refer to examples below.

---

## Multi-Company Account Setup Example

This section provides details about establishing all appropriate accounts.

Assume that you have two companies, 01 and 02. Company 01 has two warehouses, 1 and 5. Company 02 owns warehouse 2. Your warehouse transfer company is 99. You will need to set up the following accounts:

| Co/Account          | Description        | Type | Bal | Transfer To |
|---------------------|--------------------|------|-----|-------------|
| 01/ 001.0009802.001 | Co 01 Due To Co 02 | L    | C   |             |

---

| Co/Account          | Description               | Type | Bal | Transfer To         |
|---------------------|---------------------------|------|-----|---------------------|
| 01/ 001.0009902.001 | Co 01 Due From Co 02      | A    | D   |                     |
| 02/ 001.0009801.001 | Co 02 Due To Co 01        | L    | C   |                     |
| 02/ 001.0009901.001 | Co 02 Due From Co 01      | A    | D   |                     |
| 01/ 001.0001100.001 | Inventory WH 1            | A    | D   |                     |
| 01/ 001.0001100.005 | Inventory WH 5            | A    | D   |                     |
| 01/ 001.0001100.002 | Pseudo Inventory WH 2     | A    | D   | 02/ 001.0001100.002 |
| 02/ 001.0001100.002 | Inventory WH 2            | A    | D   |                     |
| 02/ 001.0001100.001 | Pseudo Inventory WH 1     | A    | D   | 01/ 001.0001100.001 |
| 02/ 001.0001100.005 | Pseudo Inventory WH 5     | A    | D   | 01/ 001.0001100.005 |
| 01/ 001.0004099.001 | Transfer Revenue          | I    | C   |                     |
| 02/ 001.0004099.001 | Transfer Revenue          | I    | C   |                     |
| 01/ 001.0005099.001 | Transfer COGS             | E    | D   |                     |
| 02/ 001.0005099.001 | Transfer COGS             | E    | D   |                     |
| 01/ 001.0001100.910 | In-Transit w/in Co 01     | A    | D   |                     |
| 01/ 001.0001100.912 | In-Transit Co 01 to Co 02 | A    | D   | 02/ 001.0001100.920 |
| 02/ 001.0001100.920 | In-Transit w/in Co 02     | A    | D   |                     |
| 02/ 001.0001100.921 | In-Transit Co 02 to Co 01 | A    | D   | 01/ 001.0001100.910 |

To complete the setup in the G/L Transfer Definition Inventory Account Option Setup using the following example as a guide. From MENU GLXFER, select option 20, GL Transfer Definition.

### G/L Transfer Inter-Company Transfer Definition Setup

To begin the inter-company setup, select option B from the G/L Transfer Definition Sub-menu to access inter-company account data.

On the G/L Transfer Inter-Company Transfer Definition Prompt Screen, select the 2 companies relationship to be defined, for example 01 to 02.

Then, on the G/L Transfer Inter-Company Transfer Definition Account Screen, enter the Due To and Due From accounts to be used between these companies. Using the sample accounts above, the data would be:

| Prompt                    | Accounts            | Description         |
|---------------------------|---------------------|---------------------|
| Co 01 Due To Co 02 Acct   | 01/ 001.0009802.001 | 01/ 001.0009802.001 |
| Co 01 Due From Co 02 Acct | 01/ 001.0009902.001 | 01/ 001.0009902.001 |
| Co 02 Due To Co 01 Acct   | 02/ 001.0009801.001 | 02/ 001.0009801.001 |
| Co 02 Due From Co 01 Acct | 02/ 001.0009901.001 | 02/ 001.0009901.001 |

### G/L Transfer Inventory Account Transfer Definition Setup

The warehouse level inventory account setup should be completed for the company-owned warehouses first. Using the sample accounts above, those accounts will look like this:

| Prompt                         | Accounts            | Description           |
|--------------------------------|---------------------|-----------------------|
| <b>Company 01, Warehouse 1</b> |                     |                       |
| Inventory                      | 01/ 001.0001100.001 | Inventory WH 1        |
| In-Transit Inventory           | 01/ 001.0001100.910 | In-Transit w/in Co 01 |
| <b>Company 01, Warehouse 5</b> |                     |                       |
| Inventory                      | 01/ 001.0001100.005 | Inventory WH 5        |
| In-Transit Inventory           | 01/ 001.0001100.910 | In-Transit w/in Co 01 |
| <b>Company 02, Warehouse 2</b> |                     |                       |
| Inventory                      | 02/ 001.0001100.001 | Inventory WH 2        |
| In-Transit Inventory           | 02/ 001.0001100.920 | In-Transit w/in Co 02 |

To create the links between the companies and the pseudo accounts for company 01, select option 5 from the G/L Transfer Definition Sub-menu to access Inventory accounts.

On the GL-IA Inventory Accounts Distribution Prompt Screen, select warehouse 2 (owned by company 02). Use the F5=FILL DEFAULTS function key to fill the account number fields with the company 01 default values. Using the sample accounts above, the following changes would be completed:

| Prompt                         | Accounts | Description |
|--------------------------------|----------|-------------|
| <b>Company 01, Warehouse 2</b> |          |             |

| Prompt               | Accounts            | Description               |
|----------------------|---------------------|---------------------------|
| Inventory            | 01/ 001.0001100.002 | Pseudo Inventory WH 2     |
| In-Transit Inventory | 01/ 001.0001100.912 | In-Transit Co 01 to Co 02 |

To create the links between the companies and the pseudo accounts for company 02, select option 5 from the G/L Transfer Definition Sub-menu to access Inventory accounts.

On the GL-IA Inventory Accounts Distribution Prompt Screen, select warehouse 1 (owned by company 01). Use the F5=FILL DEFAULTS function key to fill the account number fields with the company 02 default values. Using the sample accounts above, the following changes would be completed:

| Prompt                         | Accounts            | Description               |
|--------------------------------|---------------------|---------------------------|
| <b>Company 02, Warehouse 1</b> |                     |                           |
| Inventory                      | 02/ 001.0001100.001 | Pseudo Inventory WH 1     |
| In-Transit Inventory           | 02/ 001.0001100.921 | In-Transit Co 02 to Co 01 |

On the GL-IA Inventory Accounts Distribution Prompt Screen, select warehouse 5 (owned by company 01). Use the F5=FILL DEFAULTS function key to fill the account number fields with the company 02 default values. Using the sample accounts above, the following changes would be completed:

| Prompt                         | Accounts            | Description               |
|--------------------------------|---------------------|---------------------------|
| <b>Company 02, Warehouse 5</b> |                     |                           |
| Inventory                      | 02/ 001.0001100.005 | Pseudo Inventory WH 5     |
| In-Transit Inventory           | 02/ 001.0001100.921 | In-Transit Co 02 to Co 01 |

## Reconciling Warehouse Transfer In-Transit Accounts

During the processing and transit of warehouse transfer purchase orders, there can be a loss of goods due to shipping mistakes, theft, loss, damage, etc. When this loss occurs, the amount received and the amount invoiced will not match. As a result, the Warehouse Transfer In-Transit general ledger account (which tracks the value of goods when processing warehouse transfers) may have transactions that cannot be balanced. You can use the General Ledger Reconciliation Report - Warehouse Transfer option (MENU GLREPT) to determine which transactions are resulting in an unbalanced Warehouse Transfer In-Transit account and then manually reconcile the account. This report is designed to help you investigate and pinpoint the cause of unbalanced transactions due to loss/damage of inventory

during transit based on company, receiving warehouse, and general ledger posting date. Invoice and receipt information is shown for transactions that do not clear each other.

---

## Processing Warehouse Transfers

### Creating a Warehouse Transfer Requisition

Once all required components for warehouse transfers have been established, you can implement a transfer by creating a requisition. Open Enter or Change Requisitions (MENU POMAIN).

To create a warehouse transfer requisition, you must:

- Indicate that the purchase order type is an **O** (order), since an **R** (return) is not allowed for warehouse transfers.
- Indicate, for the required **Vendor No** field, the desired warehouse transfer-from vendor previously created.

For example, if you wish to request an item be transferred from warehouse 1 to warehouse 2, create a requisition indicating vendor WTV01 (the defined warehouse transfer vendor indicating warehouse 1).

- For the **Receiving WH**, indicate the transfer-to warehouse which is to receive the inventory being transferred (e.g., warehouse 2).

After pressing **ENTER**, you will notice that a message will appear on the screen indicating the fact that the vendor keyed is a warehouse transfer vendor. Therefore, the company number under which the requisition processing is to occur has been changed to the default warehouse transfer company number (e.g., 99).

- Complete the requisition as a normal request and print the purchase order.

When the purchase order is printed, the warehouse transfer sales order may be automatically created in company 99 for the customer number that was defined to represent warehouse 1 based on set up options in Purchasing Warehouse Options (MENU XAFILE).

### Pertinent Notes To Remember

#### Warehouse Transfer PO and Customer Order Maintenance

After a warehouse transfer requisition is entered into Distribution A+, a purchase order is created and a customer sales order may be automatically generated in the warehouse transfer company. Therefore, careful attention should be made to the Purchasing Warehouse Options (MENU XAFILE) to determine if any maintenance to the purchase order will or will not automatically be reflected in the customer sales order and if any maintenance to the customer order will or will not automatically be reflected in the purchase order.

## Transfer Order Invoicing/Receiving Timing

Normally a transfer customer sales order is ship confirmed and then invoiced. The invoiced quantities are stored in the Purchasing Receipt Work File so when receiving is done, the invoiced quantities will automatically become the default received quantities in the purchase order receipt process. The system allows you to under-receive but not over-receive in this situation. If you attempt to receive against a transfer purchase order prior to the time the associated transfer customer order has been invoiced, you will receive a warning message on the header screen informing you that the order has not yet been invoiced. If the warning message is by-passed, you will still be allowed to enter any quantities in the received field. This could cause confusion later on if for some reason the invoiced quantities do not match the received quantities.

When the option to automatically receive warehouse transfer purchase orders is turned on, some of these steps are completed automatically and with different timing.

## Automatic Warehouse Transfer Receipts

Purchasing will allow you to specify, at the warehouse level, whether or not receipt of warehouse transfer POs will be automatically posted in the transfer-to warehouse when the invoice prints for the sending transfer-from warehouse. This automates the receiving and posting of PO receipts when goods arrive at the receiving warehouse. The auto receive will occur as part of the Create Backorders job that is submitted to the Transaction Processor when the transfer sales order is invoiced. The system will not allow you to maintain the purchase order while the inventory is in-transit.

You may use the Automatic Warehouse Transfer Receipts feature regardless if you have Warehouse Management installed on your system. If Warehouse Management is installed and your warehouse uses backorder staging, receipts will be posted to that location (i.e., all 8s). If Radio Frequency is being used and you are not using backorder staging, the receipts will be posted to the receiving dock location (i.e., all 4s). Otherwise, regular put-away processing will be followed.

For additional information regarding the Automatic Warehouse Transfer Receipts feature, refer to the following:

- Purchasing Options - Purchasing Warehouse Options (MENU XAFILE)
  - Auto Receive Incoming WH Transfers at Invoice Print
  - Mark Item for Cycle Count when Closing PO for both the receiving and shipping warehouse
  - Auto Close PO Line if Under Receive Order Line

- Enter, Change & Ship Orders (MENU OEMAIN)

If you request an invoice print (F6=INVOICE PRINT) for a transfer order and the receiving warehouse has selected the auto receive process, you will be prompted for the G/L posting date of the receipt.

- Print Invoices (MENU OEMAIN)

If you are printing Invoices for the transfer company and any receiving warehouse has selected the auto receive process, you will be prompted for the G/L posting date of the receipt.

## Receipt Costs/In-transit Accounts for General Ledger

When Transfer Purchase Orders/Customer Sales Orders are created and invoiced, the following will occur:

- The inventory account in the transfer-from warehouse will be reduced by the cost amount on the customer sales order.
- The in-transit account in the transfer-to company will be increased by that same cost amount.

When the receipt against the transfer purchase order is finally performed in the receiving company/warehouse, the following will occur:

- The inventory account in the receiving warehouse will be increased, based on the selected cost from the receiving warehouses item balance record.
- The in-transit account in the transfer-to company will be reduced by the same amount.

Note that this could result in a balance in the in-transit account even though there are no in-transit orders in the system. A variance will always occur if costs in different warehouses are not identical. In fact, if average cost is being used, they will probably never be the same.

## Sales Data

Warehouse transfer information is kept separate in Sales Analysis. Whether or not IM&P demand is updated for the sending warehouse is determined by the value in the **Update Demand** field in Purchasing Options - Purchasing Warehouse Options (MENU XAFILE). For example, If company 01 has a customer sales order for ten A100, and decides to special order this item from warehouse 3, the sales data will appear as follows:

- Item A100 company 99 warehouse 3 a sale for ten (10)
- Item A100 company 01 warehouse 1 a sale for ten (10)

Setting the **Update Demand** field in Purchasing Options - Purchasing Warehouse Options (MENU XAFILE) to update demand determines whether or not the sale of the warehouse transfer is reflected for each warehouse. If the **Update Demand** field for warehouse 3 is set to **Y**, you would see a demand for ten (10) in warehouse 3 (based on the company 99 sale), and a demand for ten (10) in warehouse 1 (based on the company 01 sale). If the **Update Demand** field for warehouse 3 is set to **N**, you would see only a demand for ten (10) in warehouse 1. In inventory history, transfers show as a Sale/issue or **T** in the transfer-from warehouse, and as a receipt in the transfer-to warehouse.

## Warehouse Transfer - BackOrders

Warehouse transfer information is kept separate in Sales Analysis. Inventory Management and Planning is updated for the sending warehouse if the **Update Demand** field is set to **Y** through Purchasing Options - Purchasing Warehouse Options (MENU XAFILE).

## Canadian Warehouse Transfers - GST Registration Numbers

Canadian warehouses with different GST Registration Numbers are subject to the applicable goods and services tax for warehouse transfers. No GST tax is applied for warehouse transfers for Canadian customers whose warehouses have the same GST Registration Numbers.

---

Special Order Processing (SOP) features provide streamlined special order processing. These features allow you to automate the handling of special order changes and ordering processes, eliminate discrepancies between the customer order and the purchase order, and, by reducing the amount of time you would normally spend on tasks to keep special order components in sync, increase your productivity.

This overview provides a description of the main functions that comprise Special Order Processing including:

- Processes and how they work
- Company, vendor, customer/ship-to level options as they pertain to the main processing functions
- Modules and how they are impacted to work with the extended features
- Using the change request process

---

## Special Order Processing Benefits

Using Special Order Processing streamlines your special order process and provides you with many benefits. When a special order needs to be changed, rules are provided that drive automation, communication, change control, and improve the visibility of the special order elements.

Special Order Processing includes not only the change request process, which updates all special order components to keep values in sync, but other features from which you can benefit. These features are based on company-level options and in some cases, vendor or customer/ship-to level options, and are summarized in this overview.

### The Extraction Process

The extraction in Order Entry (run from various places, such as Enter, Change, & Ship Orders and Release Blanket Orders, if any special order line items on the order are detected) will extract special order line items for the order you are working with, not all orders, and place them in the Special Order File (SPORD). Having the extraction process run for the particular order only and not all orders will decrease processing time and increase your productivity.

---

During the extraction process, line comments (and other information that can be included as a line or order comment, such as the customer purchase order number, FOB code, carrier code and/or ship via) will be added to the Special Order Comments File (SPCMT). These comments can be included based on company-level options, and you will have the option to override this default option during Order Entry or Purchasing. Comments included in the file can later be used as line comments, based on company-level options, on a requisition or purchase order when created either manually or automatically for special order or drop-ship items.

---

NOTE: If the line comment information is the same for all drop shipment lines on a requisition in any of these areas mentioned above, then that comment information is removed at the line level and converted into an order level comment.

---

## The Auto-Creation Process

The auto-creation process can occur in Purchasing and in Order Entry. The Purchasing process [run through Special Order Automatic Req Creation (MENU POMAST)] allows for the automatic creation of a requisition or purchase order, allowing you to determine, based on company-level and vendor-level options, where the special order items will be placed (on a new requisition, unapproved or approved requisition, or purchase order).

The auto-creation process can also run when you complete an order in Order Entry. You will receive immediate notification of the requisition or purchase order number, if special order items were added to an existing requisition or purchase order or placed on a new, unapproved or approved requisition or new purchase order.

## The Change Request Process

The change request process is responsible for the automation of special order changes, keeping the customer order, purchase order, and special order values in sync. This process provides:

- increased communication between the Customer Service and Purchasing departments (change requests can be initiated by either department)
- one central location where change requests for a special order are entered
- security that allows only user groups comprised of Order Entry and Purchasing users to access and use the change request process
- approval of changes before they take effect, based on company-level options (changes can be approved immediately or require review and approval from the opposite group before the changes take effect; once approval is received, if it is required, the customer order, purchase order and special order are automatically updated, eliminating the need for you to manually update them)
- tracking of special order changes through the Special Order Change Request Inquiry
- follow up of marked change requests that were previously closed and require review

The special order change request process provides you with the ability to enter any changes that need to be made to a special order, whether it pertains to Order Entry or Purchasing, as a change request.

You have the option of not using the change request process and still benefit from the other features available.

For steps on how to use the change request process, see *Using the Change Request Process* (p. 4-13).

## The Receipt Post Process

The receipt post process allows you to determine, at both the company and customer/ship-to level, whether or not the order quantity should be increased for special order over-shipments or for complete shipment if the special order or drop-ship item is under-received. During the receipt post process, special order history can also be retained. If order history is retained, you will have a complete picture of your special order records.

## Work With Special Orders

Work With Special Orders (MENU POMAIN) includes selection criteria to assist you in the selection of special order records by limiting your selections to include orders:

- with a particular status (ordered, unordered, or both, and in history, if being retained)
- of a particular order type (special ordered, drop-ship, non-stock, or all)
- with a particular customer number, order number, or item number
- with a particular hold status (either held or not held)

---

## Understanding Special Order Processing

Once you have tailored company-level options and, if available, vendor and customer/ship-to options (explained later in this overview) to determine the results of the special order processing functionality, the following topics summarize how the extraction, auto-creation, change request, and receipt post processes work.

### How the Extraction Process Works

Upon completing an order in Order Entry (whether the order is created online through Order Entry or offline through Storefront, EDI, etc.), the extraction process runs if line items have been flagged as special orders. Any line items flagged as special orders, for the order that is being processed at that time, are extracted and added to the Special Order File (SPORD) and the Special Order Summary File (SPSUM) is updated. Once the Special Order File is created, line and order comments associated with the special orders can also be written, based on company-level options, to the Special Order Comments File (SPCMT). Based on company-level options, these comments can later be used on a requisition or purchase order. The customer purchase order number, freight on board code (including description), carrier code (including description), and/or ship via code can be included as line comments on a requisition or purchase order for special order or drop-ship items. Additionally, company-level options

allow you to increase the on purchase order quantity of the special order or drop-ship item to the size of the vendor's standard pack requirement, if the vendor requires it. You can also determine whether or not you want to require approval of any order or purchase order quantity differences.

The auto-creation process can also run after the extraction process, depending on vendor-level or company-level options.

## How the Auto-Creation Process Works

The auto-creation process may run, based on company or vendor-level options, following the extraction process when completing an order in Order Entry. During the auto-creation process, based on company or vendor-level options, the special order or drop-ship items may be added to a new or existing requisition, unapproved requisition, approved requisition, or purchase order. The system determines what values (company or vendor-level) to use based on the auto-creation company-level options defined and what values exist. If the auto-creation options indicate to use vendor level options first, Distribution A+ checks to see if values exist for the vendor. If values are defined at the vendor-level, those values will be used during the auto-creation process. By having special order options available at the vendor-level, you can tailor how the auto-creation process will work for specific vendors and turn the process off for other vendors. If values do not exist at the vendor-level, Distribution A+ will use the values defined at the company-level. If the auto-creation options indicate to not use vendor level options first, even if values are defined at the vendor-level, Distribution A+ will use the values defined at the company-level.

When completing an order in Order Entry, if any special order items were added to requisitions or purchase orders, the *Special Order Items Req/PO Information Screen* automatically displays to identify the requisitions or purchase orders that were created or updated. In addition, the Special Order Requisition Edit Report prints. This report includes additional information, such as any errors that occurred preventing the special order items from being added to the requisitions or purchase orders or warning messages that indicate a particular function has occurred (for example, it might indicate that a requisition has become unapproved since a new special order record was added to it). Output Queue Overrides Maintenance (MENU XAFILE) has been enhanced to allow you to specify an override output queue for this report.

During the auto-creation process, you can also choose to have:

- a purchase order reprint if the special order item was added to an existing purchase order.
- the line items added to an approved requisition or purchase order even if the line items being added cause the order total to exceed the defined approval limits (if using approval limits as defined through Purchasing Options Maintenance, MENU XAFILE).
- the requisition becomes unapproved when line items are added to an approved requisition (based on company-level options; this can be at all times or only if the order total exceeds the defined approval limits, if using approval limits).
- the special order or drop-ship items added to a requisition or purchase order, even if the order is on hold.

---

NOTE: The Special Order Automatic Req Creation (MENU POMAST) option, which you can run on demand to manually create requisitions or purchase orders, considers the auto-creation options, if the auto-creation process is being used.

---

When this option is run, any special order line items that cannot be added to existing requisitions or purchase orders will be added to a new requisition, even if the auto-creation company-level options are set to deny the creation of the requisition (this is assuming that selection criteria is met, company-level options are set accordingly, and the special order line items pass the edit process.)

---

## How the Change Request Process Works

The special order change request process is a flexible feature that can be tailored to adapt to your business needs and functions. It is activated and tailored by defining company-level options. If you choose to use this feature, the change request process provides for a central location where you enter changes pertaining to a special order, eliminating the need for you to manually perform multiple tasks to maintain the separate components of a special order.

The special order process, without using the change request process, requires that verbal communication take place when a special order change has occurred in Order Entry or Purchasing to notify other people/departments of the change. With the change request process, to ensure that the process does not lead to a breakdown in communication between you (the distributor) and your customers and vendors, an Order Entry or Purchasing user enters any changes that need to be made to a special order as a change request through either Order Entry or Purchasing. When a change request is created, the request can then be reviewed and, based on company-level options, will or will not require approval from the opposite group before the change is accepted and the special order components are updated. Upon acceptance of a change request, all areas of the special order, including the customer order, purchase order, and special order can be updated simultaneously. In some cases, the approval or rejection of a change request could require that a change be included before the update can occur. To facilitate this, the change request can be updated, modified, have notes added, and continue to pass between people/departments until all parties are satisfied. Once the request has been approved, the actual update can be directed by either the change requester or the approver, or in some business environments, the same person. Additionally, when a change request is closed, it can be marked for follow up to ensure that it will be reviewed.

The change request process assumes that there is a division between the Customer Service and Purchasing departments. This means that one person (or a group of people) can perform functions associated with Order Entry and one person (or a group of people) can perform functions associated with Purchasing. Having this division between groups would usually require the opposite group to review the change. If an Order Entry person creates a special order change request, the Purchasing person reviews the change and decides if they want to approve it or reject it, and vice versa. This is referred to as a two-step process. There may be other distributors, however, that have the same people performing both of these functions and a two-step process will not be required. When the same person performs both functions, approval is not required by the other group (Order Entry or Purchasing), since that person exists in both groups. This is referred to as a one-step process. When working in a two-step process environment, the separate components of a special order are not updated until approval is received and the change request is closed. When working in a one-step process environment, you can assume that all changes to the special order will immediately update both the customer order and the purchase order by having the ability to approve and close the request immediately. A change request that has been marked as requiring review, will be indicated with an asterisk (\*). Once a change request has been updated and closed, you will have the option to review change requests through the Special Order Change Request Inquiry.

To use the change request process, you must create Order Entry and Purchasing user groups through User Groups Maintenance (MENU XASCTY) and add users to each group. Using the Authorized to Special Order Change Requests - OE and PO actions in Application Action Authority Maintenance (MENU XASCTY), you must then identify the customer service (Order Entry) and buyer (Purchasing) approval authority user groups for each company. These groups are comprised of the Order Entry and Purchasing users that will be allowed to access the change request process, and to enter a change request.

Although the change request process greatly automates the changing of special orders, the process must be followed in order to ensure that the customer order and purchase order stay synchronized. All changes to the values that are shared by the customer order and the purchase order [values in the Special Order Detail file (SPORD) must be changed using the change request process. Any changes to these values that are made directly to the customer order will not get automatically changed in the purchase order and special order, and vice versa. It is the change request process that ensures all values stay in sync.

## The Special Order Change Request Inquiry

Once a change request has been created, you can access the Special Order Change Request Inquiry from either Order Entry or Purchasing to review and work with change requests that have occurred and that have not yet been sent to history (if you are retaining history based on company-level options). You can limit the requests you want to work with as well as view all change requests that have been made against a particular special order line item, the number of change requests requested by a particular user or all users, and the change requests that have been marked for review. You can also view the group the user belongs to (Order Entry, Purchasing, or both) and statistics about the group (new change, pending change, approved change, rejected change, and canceled change).

The change request process will not consider orders and purchase orders in history when called from the Special Order Change Request Inquiry. However, if history is retained in the Special Order History file (SPOHS), all activity is tracked and all change requests for the special order can be reviewed through the inquiry when it is accessed from Work with Special Orders (MENU POMAIN) only.

## How the Receipt Post Process Works

After you have posted receipts for your special orders, Distribution A+ updates the order so the order can be ship confirmed. The purchase order is also updated to reflect the amount of inventory that is received.

When receipts are processed for your special orders, if over-shipments or under-shipments are noted, options can be set up (at both the customer/ship-to and company-level) to determine whether the customer/ship-to will accept the over-shipment or consider the order complete even with an under-shipment.

When a special order line item is received complete, the receipt post process deletes the special order from the Special Order File, reduces quantities in the Special Order Summary File, and, based on company-level options, adds the records to the Special Order History File (SPOHS). If company-level options are set to retain special order history, when receipts are posted, whether partial or complete

receipts, the Special Order History File is updated before the special order line item is deleted. If partial receipts are posted, the Special Order History File is updated with the amount received. The special order record will also be deleted if the purchase order line is closed for a drop-ship item or the receipt quantity exceeds the back order quantity. If special order history is not being retained and the change request process is being used, based on company-level options, when a special order line item is received complete, any change requests for those line items will be deleted.

When receipts are posted for special order line items, any existing change requests will be rejected. When working with a requisition for which any existing change requests were rejected, you will receive a message that receipts have been posted and your only option will be to close the change request.

---

## Special Order Processing Setup Options

To use Special Order Processing, you must define company-level special order options through Special Order Options (MENU XAFILE). These options are described in detail in the Cross Application User Guide. The following sections provide an overview of the available choices for consideration to tailor Distribution A+ to meet your company's business needs.

Before defining special order company-level change-request process options, it is recommended that you run the Special Order Edit Report from Purchasing to identify all existing problems. This report is used to keep special order information in sync with the customer order and requisition/purchase order information. This report will print the values that differ and where each value is contained so that you can make the necessary corrections.

### Special Order Options (MENU XAFILE)

#### Special Order Options - Control Settings Screen

**1. Retain Special Order History**

This option allows you to retain special order data in the Special Order History File, which will be updated during the receipt post process. If you choose to keep history and are using the change request process, you will be able to review changes that occurred for special order line items. If you choose not to keep history and are using the change request process, change request history will not be available.

**2. Allow manual addition of special order items to an approved requisition or purchase order**

The manual addition of special order items to a requisition or unapproved requisition can optionally be required. In addition to manually adding a special order item to a requisition or approved requisition, you can also manually add (through the use of a special order function key) special order items to a purchase order as well.

**3. Place S/O or D/S Items on a Req/PO immediately**

These options provide the ability for the special order items and the drop-ship special order items to automatically be placed on a requisition or unapproved requisition during end order time. When

these options are set to **Y**, further choices will be made to create a new requisition, add to unapproved requisition, add to approved requisition, add to purchase order.

**4. Include Order or Line Comments on the Req/PO**

These options will automatically include the sales order order-level comments and/or the sales order item-level comments with the special order item into the requisition. When these options are set to **Y**, further choices will be made to establish the type of comments to include and the print codes to use.

**5. Use change request process to update special order elements.**

This process streamlines special order processing and automatically updates all special order components to keep the customer order, purchase order, and special order values in sync. If you choose not to use the change request process with option, you can use the special order process and still benefit from other features available as summarized in the Special Order Processing Benefits (p. 4-1) topic.

For each company, define the requirements for the special order extraction process, the auto-creation process, the change request process, the receipt post process, as well as other processes related to special orders. Some tailoring options also have vendor-level and customer/ship-to level overrides available.

## Special Order Options - Additional Settings Screen

### Special Order Creation

**1. Increase the purchase order quantity to a multiple of the standard pack on a special order or drop-ship.**

During the extraction process, you can determine whether or not you want to increase the on purchase order quantity of the special order or drop-ship item to the next highest increment to meet the vendor's standard pack requirement.

---

**Example:**

If the standard pack of soda cans is 24 and the customer orders 12 cans, the purchase order can be automatically increased to 24 and the order would be for 12.

---

### Special Order Receipts

**2. Increase the order quantity for special order over-shipments.**

During the receipt post process, if the value of the over-shipment is less than a specified percentage of the line value and optionally less than a specified currency amount, the order quantity for special order over-shipments can be increased. This determination can be made at both the customer/ship-to and company-level.

**3. Assume complete shipment when the special order or drop-ship item is under-received.**

During the receipt post process, if the value of the under-shipment is less than a specified percentage of the line value and optionally less than a specified currency amount, complete shipment of the special order or drop-ship items can be assumed.

**4. Force Update of OE Cost**

This field determines if an update to the Order Entry (OE) cost will be imposed during the PO receiving process for a special order item, regardless of any other setting.

5. Force Update of Commission Cost

This field determines if an update to the commission cost will be imposed during the PO receiving process for a special order item, regardless of any other setting.

## Special Order Options - Automatic Creation Screen

1. Place special order items on a requisition or purchase order immediately or place drop-ship items on a requisition or purchase order immediately.

Special order items or drop-ship items can be added to a requisition or purchase order. If you choose **Y** for either of these options, you can select to:

- create a new requisition for the special order or drop-ship items
- add the special order or drop-ship items to an unapproved or approved requisition
- add the special order or drop-ship items to a purchase order

If selecting to add to an existing document, the **Add to Req/PO Based On** field in Special Order Options Maintenance (MENU XAFILE), allows you to select how the items will be added. You will be able to select to add the special order line items or drop ship line items to:

- the last or most recent requisition/purchase order with the latest order date
- a requisition/purchase order based on the sales order number
- a requisition or purchase order based on the requested ship date from the order detail record

---

NOTE: Lead times may affect which requisition/purchase order is selected to add special order or drop ship line items to.

---

Based on company-level options, the sequence (assuming all sequence options are selected) in which the application attempts to place special order or drop-ship items on a requisition or purchase order is:

- a. add the special order or drop-ship items to the selected (see **Add to Req/PO Based On** field above) open purchase order; if it fails this attempt,
- b. add the special order or drop-ship items to the selected (see **Add to Req/PO Based On** field above) open approved requisition; if it fails this attempt,
- c. add the special order or drop-ship items to the selected (see **Add to Req/PO Based On** field above) open unapproved requisition; if it fails this attempt,
- d. create a new requisition for the special order or drop-ship items; if it fails this attempt,
- e. the Special Order Edit Report will print identifying why the process failed (this report will always run; if no errors were detected, “successful” prints on the report).

---

NOTE: If during this hierarchy a document is available but an item cannot be added to it, the Special Order Edit Report will print identifying the error that occurred and the hierarchy cycle stops.

---

Vendor-level options can also be defined and you can tailor the process to run differently for individual vendors or choose not to have the auto-creation process run at all for certain vendors.

---

NOTE: The auto-creation process may run following the extraction process when you complete an order, based on if either of these options is Y and if vendor-level options are being used and are tailored to run the auto-creation process.

---

2. Reprint purchase order when items are added.  
You can choose to reprint a purchase order after a special order line item has automatically been added to the purchase order.
3. Create requisition or purchase order for held orders.  
If the special order or drop-ship items reside on an order on hold, you can choose to allow those line items to be added to a requisition or purchase order.
4. Allow approval limits to be exceeded.  
During the auto-creation process, if it is being used based on company-level options, you can choose whether or not special order line items will be added to an approved requisition or purchase order, even if the line items being added causes the total to exceed the defined approval limits. This field is applicable only if you are using approval limits as defined through Purchasing Options Maintenance (MENU XAFIELD).
5. Unapprove requisition when items are added.  
You can choose to have a requisition become automatically unapproved when a special order line item has been added to an approved requisition. You can also choose to have an approved requisition become automatically unapproved if the approval limit is exceeded (if available, based on options) when line items are added to the requisition.  
Unapproving a requisition that has changed allows you to review the requisition again.
6. You can also determine whether or not you want to require approval of any order or purchase order quantity differences.

## Special Order Options - OE to PO Comments Screen

1. Include Order Entry and Purchasing comments on the requisition or purchase order.  
During the extraction process, the customer purchase order number, freight on board code (including its description), carrier code (including its description), and ship via code can also be written to the Special Order Comments File, and be used later as a line comment, based on options, on a requisition or purchase order for the special order or drop-ship item. You can also select the PO print code for these comments.

## Special Order Options - Order and Line Comments Screens

1. Include order and line comments on the requisition or purchase order.  
During the extraction process, order and line comments can be written to the Special Order Comments File and be included later, based on options, on a requisition or purchase order. For each available type of Order Entry order/line comment (i.e., pick list print only comments, invoice only comments, non-print comments, all-print comments, pack only comments, quote acknowledgment only comments, order acknowledgment only comments, quote/order acknowledgment only comments, and pack/invoice/acknowledgement comments), you can determine the PO print code that will be assigned to the type of comment once it is on a requisition or purchase order, indicating where it will print (i.e., on the purchase order only, on the receiving list only, internal inquiry viewing only, or print on all documents). You can now also have up to 999 comments for each special order item on a requisition or purchase order.

## Special Order Options - Update Special Order Elements Screens

1. Require approval for change requests (only if you chose to use the change request process).  
You can determine if approval of the opposite group (Purchasing or Order Entry) is required to complete a change request when the special order:
  - has not yet been included on a requisition
  - has been included on an unapproved requisition
  - has been included on an approved requisition
  - has been included on a purchase order
2. Reprint purchase order after change requests are closed and updated (only if you chose to use the change request process).  
The purchase order can be reprinted after a change is made to a line item during the change request process and the change request has been closed and updated.

## Security Options for the OE/PO User Groups

When using the change request process, identify which users will be authorized to OE and/or PO user groups:

1. Customer service approval authority user group for Order Entry (only if you chose to use the change request process). The OE user group will be used to identify Order Entry users that are allowed to access and use the change request process.  
The OE reserved group name is defined in User Groups Maintenance (MENU XASCTY). The users that are defined in this group will be able to access change requests for a special order from within Order Entry only. They will not be able to make a change to a special order from within Purchasing unless they are defined in the Purchasing group as well.
2. Buyer/purchasing approval authority user group for Purchasing (only if you chose to use the change request process). The PO user group will be used to identify Purchasing users that are allowed to access and use the change request process.  
The PO reserved group name is defined in User Groups Maintenance (MENU XASCTY). The users that are defined in this group will be able to access change requests for a special order in Purchasing only. They will not be able to make a change to a special order from within Order Entry unless they are defined in the Order Entry user group as well.

---

## Modules Impacted by Special Order Processing

### Accounts Receivable

The Accounts Receivable module allows access to customer/ship-to level special order options, which the system will use during special order processing. You will be able to add or print customer/ship-to

level special order options. During special order processing, if no customer/ship-to level options exist, the system will use the options defined at the company-level. Access the customer special order options through Customer/Ship-to Master Maintenance (MENU ARFILE) by pressing F2=S/O OPTIONS.

## International Currency

The International Currency module shows values in the local and trading currency (when applicable), currency amounts in the company's currency for the company and customer/ship-to options, and special order changes in the change request process in the purchase order's currency.

## Order Entry

Special order processing begins in Enter, Change & Ship Orders (MENU OEMAIN) when a user flags an item to be special ordered. The Order Entry module provides access to the change request process, provides immediate extraction of special order line items, adds special order line items to a new requisition, approved requisition, or purchase order (if using the auto-creation process), and can flag a comment to be included with the special order when incorporated onto a requisition/purchase order. It also allows you to review and work with change requests through the S/O Change Request Inquiry (MENU OEINQY).

## Purchasing

The Purchasing module allows access to the change request process and vendor-level special order options, which the system will use during special order processing. You will be able to add or print vendor-level special order options through Vendors Maintenance/Listing (MENU POFILE). During special order processing, if company-level options indicate to use vendor-level options, vendor-level options will be used. If no vendor-level options exist or company-level options indicate not to use vendor-level options, the system will then use the options defined at the company-level.

When maintaining a requisition or purchase order through Enter or Change Requisitions (MENU POMAIN), the maintenance of an approved requisition can either be allowed or restricted based on company-level options. There are up to 999 comments Order and Line comments for each special order item on a requisition or purchase order.

Special orders can be monitored and maintained through Work with Special Orders (MENU POMAIN) and the S/O Change Request Inquiry (MENU POMAIN). Use the Special Order Automatic Req Creation (MENU POMAST) option to select all available special order requests and place them on approved /unapproved requisitions or purchase orders.

When inventory receipts are completed and posted through the PO Receipts Register (MENU POMAIN), the sales order will be updated to indicate the inventory availability.

# Using the Change Request Process

## Change Request Process Business Overview

The change request process, which is activated at the company-level, is initiated when a change needs to be made to a customer order or requisition/purchase order containing a special order or drop-ship item. A customer may contact a customer service representative and ask to change the quantity of a special order item, to cancel the special order, or to change the ship-to address on a drop-ship order. The customer service representative would use the change request process to communicate with the buyer and see if a change is possible.

On the Purchasing side, a vendor may contact a buyer to inform them that a special order item is no longer available, there will be a delay in delivery of merchandise, or the costs have changed. The buyer would also use the change request process to communicate with the customer service representative and inform them that the customer sales order with the special order must change.

Customer service representatives and buyers are members of user groups, each with approval and security capabilities specific to their business functions. However, if your company does not have a division between the customer service and buying departments, users can be defined as members of both groups, allowing the same user to initiate and approve change requests from either the customer service tasks or buyer tasks.

For customer service reps and buyers that work with special orders, the S/O Change Request Inquiry will be part of their day-to-day routine. Customer service reps can access this inquiry through MENU OEINQY; buyers can access the inquiry through MENU POMAIN. Through this inquiry, you can review and maintain change requests that have occurred through Order Entry and Purchasing and that have not yet been sent to history (if you are retaining history). You can limit the requests you want to maintain as well as view all change requests that have been made against a particular special order line item, the number of change requests requested by a particular user or all users, and the change requests that have been marked for review. You can also view the group the user belongs to (Order Entry, Purchasing, or both) and statistics about the group (how many new changes, pending changes, approved changes, rejected changes, and canceled changes currently exist).

## Change Request Process Summary

Entering a new change request can be initiated by pressing a function key in Enter, Change & Ship Orders (MENU OEMAIN) or Enter or Change Requisitions (MENU POMAIN). The following summary is a simple explanation of the change request process flow. Tailoring options and rules greatly impact the flow of this flexible process. However, the same basic flow explained in this simple scenario is followed.

To summarize the screen flow for entering a new change request by customer service reps:

- A user selects a special order line item for change from the *Item Entry Screen* in Enter, Change & Ship Orders (MENU OEMAIN).

- The *Item Review Screen* appears and the user is prompted to press the F17=CHGRQST function key to use the change request process to make the change.
- The *OE Special Order Change Request Screen* appears. The current special order information displays and the user can key new values and enter notes about the change request.
- The user presses the F10=STORE function key to store the change request. Pressing F10=STORE saves the change request only; it does not update the special order elements.
- The S/O CHANGE REQUEST STATUS SCREEN appears, providing the user with a snapshot of the change request they just entered. The user then presses ENTER to return to the *Item Review Screen*.

The user can now access the S/O Change Request Inquiry (MENU OEINQY) to track the buyers response to the change request.

To summarize the screen flow for entering a new change request by buyers:

- A user selects a special order line item for change from the *Line Item Review Screen* in Enter or Change Requisitions (MENU POMAIN).
- The *Line Item Detail Screen* appears and the user is prompted to press the F17=CHGRQST function key to use the change request process to make the change.
- The *PO Special Order Change Request Screen* appears. The current special order information displays and the user can key new values and enter notes about the change request.
- The user presses the F10=STORE function key to store the change request. Pressing F10=STORE saves the change request only; it does not update the special order elements.
- The *S/O Change Request Status Screen* appears, providing the user with a snapshot of the change request they just entered. The user then presses ENTER to return to the *Line Item Review Screen*.

The user can now access the S/O Change Request Inquiry (MENU POMAIN) to track the buyers response to the change request.

## Approval Requirements

Approval of special order changes is required based on special order company options defined through Special Order Options Maintenance (MENU XAFILE). If approval is required, a special order change request must be approved before it can be closed to automatically update the special order elements. Approval can be required when a special order:

- that is not yet on a requisition is changed
- that is on an approved requisition is changed
- that is on an unapproved requisition is changed
- that is on a purchase order is changed

---

Purchasing provides many tools that make day-to-day purchasing tasks more efficient for the buyer. These tools include:

- The Item Search/Browse which assists in the ordering of items.
- Special Order Processing which helps you handle orders that are drop-shipments, non-stocks, or orders of such a large quantity that you do not want to remove the items from stock.
- Suggested Orders which creates orders for items that fall below minimum stocking level.
- Customer Order Assignment which brings backordered items to your attention when they are received.
- Product Activity Data (852), an EDI document that automatically notifies a vendor of changes in quantity for items of which that vendor is the primary vendor.
- Product Transfer & Resale Report (867), an EDI document that automatically notifies a vendor of item sales (including warehouse transfers) of which that vendor is the primary vendor.

---

## Item Search/Browse

The Requisition/PO Entry Item Search/Browse Screen (p. 6-69) allows the buyer to use search criteria to search for and select items to order on a requisition. You may search by:

- Our Item Description
- Our Item Number
- Browse by Vendor
- Or, Include or Exclude Suspended Items

This allows you to limit the items that display. When searching for items below their minimum stocking level, you may key a percent (of the minimum balance) to increase the number of items displayed. This allows you to select items that are near their minimum stocking levels. For additional information on this feature, refer to the Requisition/PO Entry Item Search/Browse Screen (p. 6-69).

---

## Searching by Our Item Description

You may locate items by keying item description search criteria in the **Find** field to activate the Item Search. Items with descriptions (in the Item Master File or Vendor/Item File) matching the search criteria entered will be displayed.

To search by item description only, key criteria in the **Find** field and leave the item number (**Item No**) field blank. Search criteria can be up to fifteen characters long and do not have to match the sequence of words in the item description. Refer to the Cross Application User Guide for details about using searches in Distribution A+.

## Searching by Our Item Number

Use in addition to or in place of item description search criteria to select the items for display. A partial (or complete) item number may be keyed in the **Item No** field to limit the number of items displayed to those that match the number keyed. The number keyed will be matched against the item number in the Vendor/Item File. This search method will work for a single vendor or for all vendors.

## Browsing by Vendor

You may review all items available from this order's vendor by keying a ? in the **Item No** field. This type of browse is only available for this order's vendor; you cannot key ? if you have used F6 to display all vendors.

The buyer may also access the following inquiries from the Requisition/PO Entry Item Search/Browse Screen (p. 6-69) through the use of the F4=INQUIRIES function key:

- Item Inquiry
- Vendor/Item Information Inquiry (which includes Vendor/Item/Price File data)
- Vendor List Inquiry
- Buying Information Inquiry

Once F4 is pressed, the **Reference Number** field on the Item Search/Browse Screen changes to a **Selection** field where you may key the displayed value related to the inquiry you desire to access.

---

NOTE: You cannot access these inquiries unless item(s) are found based on the search criteria entered

---

## Including or Excluding Suspended Items

After entering criteria in either the **Find** or **Item No** fields, you may use F9 to include or exclude suspended items from the search. Items that meet the search criteria are displayed, including or excluding those items that are suspended, depending on the F9 toggle key.

## Item Inquiry

By keying **I** in the **Selection** field on the Requisition/PO Entry Item Search/Browse Screen (p. 6-69), the buyer is able to access the Inventory Accounting Item Inquiry. This inquiry displays inventory status information. You will view such information as the warehouse, unit of measure, quantity on hand, allocated, net available, quantity on PO, and quantity on backorder. Access to detailed item information will also be available. Refer to the Requisition/PO Entry Item Search/Browse Screen (p. 6-69) for additional information.

## Vendor/Item Information Inquiry

By keying **V** in the **Selection** field on the Requisition/PO Entry Item Search/Browse Screen (p. 6-69), the buyer is able to access Vendor/Item File and Vendor/Item/Price File information. Detailed ordering information for the default warehouse will display. Another warehouse may be selected to determine the minimum and maximum on-hand quantity at the indicated warehouse. Our item number and description will display from the Item Master File (ITMST), and the manufacturer's item number and description from the Vendor/Item Master File (VNITM). Costing data will be extracted from the Vendor/Item/Price File (VIPRC).

## Vendor List Inquiry

By keying **L** in the **Selection** field on the Item Search/Browse Screen, the buyer accesses the vendor list for the item. Ordering information by vendor and item is displayed. When an item is purchased from the same vendor frequently, that item may be assigned to the vendor through Vendor/Item Information Maintenance (MENU POFIL). Any vendor on this screen may be selected to display the line items ordering information from the Vendor/Item and Item Balance Files.

## Buying Information Inquiry

---

NOTE: This inquiry is available only if Inventory Management & Planning or Advanced Inventory Management is installed.

---

The Buying Information Screen will display if you key **B** in the **Selection** field on the Item Search/Browse Screen (or press **F11** after keying an item number in the **Item No** field on the Requisition Item Detail Review Screen). From this screen, you will be able to access detailed buying information extracted from the item sales and demand information used by Inventory Management & Planning or Advanced Inventory Management. Information that will be presented is the item number, forecast of sales for this item, landing cost information, quantity of the item available, quantity of the item on open purchase order, and order statistics.

Function keys allow access to:

- The Order Statistics Screen (displaying up to 12 months of demand history for an item)
- The Buying Information Landing Costs Screen (displaying any pre-defined landing costs for the item)

- The Item Usage Summary Screen (displaying an item's demand and the values that make up that demand)
- The Item Replacement Inquiry Screen (displaying all items for which a selected item has been a replacement)
- The Item Usage By Company Screen (displaying an item's demand, by company, and the values that make up that demand)
- The Manual Demand Adjustments Selection Screen (displaying a list of manual adjustments that have been made for an item - adjustments can be added, changed, or deleted)
- The Manual Adjustment Detail Screen (displaying detailed information about a specific manual adjustment)
- The Warehouse Stock Display Screen (displaying warehouses which stock a specified item)

---

NOTE: The F11 function key used to access this screen will be in reverse image if the item has buying information for other warehouses.

---

Refer to the Inventory Management & Planning User Guide for a description of these screens. They are located in the Interactive Forecasting (MENU IMMAIN) chapter.

---

## Special Order Processing

Special order processing is the means by which you handle orders that are drop-shipments, non-stocks, or of such a large quantity that you do not want to remove the items from stock. They are entered into Order Entry (O/E) just as you would enter a normal order (type "O"), with some minor differences.

In order to utilize special order processing, **Special Order Processing Active** in Order Entry Options Maintenance (MENU XAFILE) must be Y. Also, special order processing can be tailored through Special Order Options Maintenance (MENU XAFILE). Refer to that option in the Cross Application User Guide for details. For additional details about special order processing, refer to CHAPTER 4: *Special Order Processing Overview*.

### Entering a Special Order

A special order begins in O/E. There are four ways in which items on an order (or an entire order) may be processed as a special order; they are as follows:

#### Drop-ship Items

Drop-ship items may be defined through Item Balance Maintenance (MENU IAFILE). When entering an item through Enter, Change & Ship Orders (MENU OEMAIN), if **Drp Shp** [in Item Balance Maintenance (MENU IAFILE)] is Y, the item will always be special ordered. Also, the **Sp Ord** field on the Item Entry Screen [accessed through Enter, Change & Ship Orders (MENU OEMAIN)] will default to Y.

## Drop-ship Order

Alternatively, you may override the **Drp Shp** field on the Order Header Screen [accessed through Enter, Change & Ship Orders (MENU OEMAIN)] to Y during order entry. This will convert the entire order into a special order.

You also have the ability to convert stocked items to special order items on a particular order. To do this, you override the **Sp Ord** field on the Item Review Screen [accessed through Enter, Change & Ship Orders (MENU OEMAIN)] to Y.

## Special Order Item

If a customer orders an unusually high quantity of an item, or an item is out of stock that the customer wants shipped promptly, you may special order the item. This is accomplished by changing the *Sp Ord* field on the Item Review Screen [accessed through Enter, Change & Ship Orders (MENU OEMAIN)] to Y.

## Non-stock Item

A non-stock item may be defined through Item Master Maintenance (MENU IAFILE) with an N in the **Update Inventory** field indicating that the quantities are not stocked in your warehouse. You must, however, use Item Balance Maintenance (MENU IAFILE) to define a non-stock item for each warehouse from which it will be sold.

## Assigning a Vendor

When you leave the **Vendor** field blank on the Work With Special Orders Selection Screen (p. 10-3), the special ordered items which have not been assigned a vendor will be displayed on the Special Orders Screen. From this screen, you may select the C option to display the Work With Special Orders Change Screen (p. 10-30) to change the special order. From there, you can use available function keys to key a vendor, search on a vendor, or access the Vendor/Item Information Inquiry (MENU POMAIN). This will show you all of the vendor/item records for the item in question. You can then select one for detail and assign it to the item.

## Hierarchy for Defaulting a Vendor

The following hierarchy for defaulting a vendor is used during Purchasing:

1. If a vendor is entered during item review, that vendor will be used.
2. If a default is keyed in Item Balance Maintenance (MENU IAFILE), that default will be used.
3. If a default is keyed in Item Master Maintenance (MENU IAFILE), that default will be used.
4. If no match on any of the above exists, then the vendor must be assigned using Work With Special Orders (MENU POMAIN).

## Creating the Special Order File

Upon completing an order in Order Entry (whether the order is created online through Order Entry or offline through Storefront, Mobile Order Entry, etc.), the extraction process runs if line items have been flagged as special orders. Any line items flagged as special orders, for the order that is being processed at that time, are extracted and added to the Special Order File (SPORD).

## Creating Requisitions/Purchase Orders for Special Orders

Once a special order has been entered and the Special Order File has been built or added to, the requisition may be created.

Distribution A+ allows you to create requisitions for special orders in three ways:

- Manually, through Enter or Change Requisitions (MENU POMAIN)
- Manually or automatically, through Buyers Workbench (MENU POREPT)
- Automatically, through Special Order Automatic Req Creation (MENU POMAST)
- Automatically, at end order time, based on special order company options defined through Special Order Options Maintenance (MENU XAFILE) or vendor-level special order options defined through Vendors Maintenance (MENU POFILE).

Additionally, you may create warehouse transfer orders automatically for special orders indicating warehouse transfer vendors through Automatic WH Transfer Order Creation (MENU POMAST).

## Creating a Requisition Manually

To create a requisition manually for a special order, begin the requisition in the same manner that you enter a normal requisition. However, once you access the Requisition/Purchase Order Maintenance Header Screen (p. 6-13), press the function key to display special orders (F6) assigned to the selected vendor that have not yet been included on a requisition/purchase order.

---

NOTE: When processing drop-ship (D/S) special orders, Distribution A+ will warn you to ship to one customer only. Use the F9 toggle key during item selection to view one customer at a time.

---

If you select items to be shipped to multiple customers, it will still create just one requisition using the ship-to of the first item selected.

Through Buyers Workbench, using the 'L' function, Special Orders can be linked to a Suggested Order and in turn the Suggested Order can be turned into a Requisition.

## Creating Requisitions Automatically

The Special Order Automatic Req Creation option allows you to automatically create requisitions and print purchase orders for one or more non-warehouse transfer special orders. Based on selection criteria you enter, Distribution A+ selects special orders from the Special Order File, creates a requisition for each vendor, and optionally prints the necessary purchase order. Edit checking is

performed on all special orders selected, and no requisition is created for a special order in which an error is found. In addition, the special orders selected are checked for a number of conditions that require buyer review. Requisitions are created for those special orders requiring review, but no purchase orders are printed. The SO/RQ Edit Report (p. 75-12) prints a record of all errors detected, and all requisitions and purchase orders created.

Based on special order company options defined through Special Order Options Maintenance (MENU XAFILE) or vendor-level special order options defined through Vendors Maintenance (MENU POFILE), requisitions/purchase orders can be automatically created/updated at end order time. If a requisition/purchase order is not created/updated automatically due to an error, you can use the Special Order Automatic Req Creation option after the error is corrected. For additional details about special order processing, refer to How the Auto-Creation Process Works (p. 4-4).

Requisitions can also be created automatically through Buyers Workbench if the Suggested Order Report was created using the F6=CRT NEW RUN and the option to add special order items was set to 'Y'.

## Creating Warehouse Transfer Orders

The Automatic WH Transfer Order Creation option allows you to automatically create warehouse transfer orders from all the special order warehouse transfers that you have entered through Enter, Change & Ship Orders (MENU OEMAIN). Based on selection criteria you enter, Distribution A+ finds the desired special order warehouse transfers that have been created with a warehouse transfer vendor identified, creates requisitions in the warehouse transfer company for each warehouse transfer vendor specified, and optionally prints Purchase Orders in the warehouse transfer company. When a Purchase Order is printed, the sales order is simultaneously created in the requested from warehouse, beginning the normal warehouse transfer process.

## Maintaining Special Orders

Special orders should be treated differently during the customer order and purchase order change operations. It is possible that while you maintain an order in Distribution A+, paperwork on this order may have already been sent to the vendor for shipment to your customer. Distribution A+ will warn you if you are maintaining a special order and/or special order line item.

In addition, if you are not using the change request process as determined by company-level special order options defined through Special Order Options Maintenance (MENU XAFILE), you can prevent special order line items and entire orders with one or more special order line items from being deleted, except by Master Users and the Authorized User ID, through Order Entry Options Maintenance (MENU XAFILE).

---

NOTE: If you are not using the change request process as determined by company-level special order options defined through Special Order Options Maintenance (MENU XAFILE), changing the contents of a customer order will not change the special order or requisition/purchase order information. Also, changing the special order or requisition/purchase order will not affect the customer order information. Therefore, any changes made in one place must also be made in the other. However, if you are using the change request process, all special order

elements can be automatically updated when a change request is approved (if approval is required) and closed.

---

## Allocations/Availability

When you special order items, item allocations are not adversely affected.

---

**NOTE:** If you are using query to investigate allocations, you should be aware that there is a Special Order Summary (SPSUM) file which is used to figure out availability. Therefore, this file should be taken into account when you use System i Query.

---

**Calculation:** availability = on hand - allocated + special order quantity  
**Calculation:**

---

## Suggested Orders

Purchasing provides for the use of suggested orders. Purchase orders are suggested and may be selectively converted to requisitions for those items that fall below their minimum stocking level. The following steps, available on MENU POREPT, summarize the cycle of suggested orders:

1. Print the Suggested Orders Report.
2. Utilize the Suggested Order Maintenance.
3. Create Requisitions from Suggested Orders.
4. Delete Suggested Orders.
5. Buyers Workbench

## Create the Suggested Orders Report

To begin the cycle of suggested orders, the Suggested Orders Report (MENU POREPT) process is run. The system will prompt you for selection criteria to limit the reporting process, if desired.

The vendor information on the report is retrieved from the Vendor Master File according to the primary vendor in the Item Balance File. To be included on the report, there must be a vendor in the Item Balance File (ITBAL) record for the item. You have the option to print alternate vendor information (when items are purchased from more than one vendor) when running the report. Additional, relevant information may also be included in the report, based on selections, such as other warehouses which stock the items and could be used as sources for ordering, details regarding any existing special orders for the items, sales usage information, etc. and save information needed to create requisitions.

The suggested order information can be saved to the Suggested Orders Quantity File in addition to printing on the report. This file can be assigned by owner or the buyer assigned to the vendor or vendor/item and contains the suggested order quantity information that was printed on the Suggested Orders Report. The suggested order information may be modified and used to automatically create the

suggested order requisitions or purchases orders. The Suggested Orders Quantity File can be created without printing a report.

You will also have the option to **Add Special Order Items** when the Suggested Order Report is created through Buyers Workbench. If this option is **Y**, all qualifying special order items for this run's warehouse and vendor will be added (linked) to the suggested order. Note that qualifying indicates that the special order items have not already been added to a requisition, purchase order or linked to a suggested order run that passed validation used in adding special order items to a requisition or purchase order in Enter or Change Requisitions, Add Special Orders option.

The Suggested Order Report will print by buyer, and the by primary vendor, warehouse and item sequence, and show only those items whose net available quantities are below minimum balance. The intent is to present to the buyer, those items below their minimum stocking levels and to suggest that a quantity of the items be purchased to bring them up to their maximum stocking levels.

While Inventory Management & Planning (IMP) and Advanced Inventory Management (AIM) planned items have minimum balance/order point and maximum balance/line point values calculated in the default UOM only, users can manually specify minimum and maximum quantities in the Item Balance File for each of the stocking units of measure for an item when not using a planning tool. If those values exist, they will be considered by the suggested order process.

Distribution A+ calculates the net available for all 3 units of measure as follows:

**Calculation:** net quantity available = quantity on hand - allocated + unposted Inventory Accounting transaction quantity + quantity on order

When Warehouse Management is installed, the quantity on hand (listed in the above calculation) will take into consideration the **Qty Avail ATS/PO** flag (in Location Master Maintenance (MENU WMFILE)) that is specified on each location defined as unavailable when determining if the quantities in the location should be counted as on hand or not. Users will be able to specify, on a location by location basis, those locations defined as unavailable that should have their inventory included.

The unposted Inventory Accounting transaction quantity (listed in the above calculation) are the transactions affecting the quantity on-hand that were keyed through Enter/Update Transactions (MENU IAMAIN), but are not yet posted through Process Transactions (MENU IAMAIN).

If any calculated quantities in the three available units of measure are below maximum, quantities are extracted from the larger units of measure. This is done to try to increase the numbers to the maximum.

If the buying unit of measure from the Vendor/Item File equals the default unit of measure:

- The larger unit of measure quantities are rolled into the default unit of measure, without reducing the larger unit of measure below its minimum balance.
- The suggested order quantity is determined as the difference between the calculated quantity and the maximum quantity from the Item Balance File in the default unit of measure

**Calculation:** Suggested Order Quantity = (Maximum U/M 1 \* Conversion Factor 1) + (Maximum U/M 2 \* Conversion Factor 2) + (Maximum U/M 3 \* Conversion Factor 3) - Net Quantity

If the buying unit of measure from the Vendor/Item File is not the same as the default unit of measure:

- The larger unit of measure quantities are rolled into the smaller unit of measure, ignoring the minimum balances.

The suggested order quantity is determined as the total of the difference between the calculated quantity and the maximum quantity for the default unit of measure and any larger unit of measure above it.

**Calculation:** Suggested Order Quantity = [Suggested Order Quantity (in the default unit of measure from above) / U/M conversion (default unit of measure)] / purchasing U/M conversion

For AIM planned items, additional factors such as economic order quantity (EOQ) and warehouse transfer rounding may be considered when computing a suggested order quantity. Refer to the Advanced Inventory Management User Guide for more information.

A final consideration checked by Distribution A+ is to make sure the suggested order quantity is in full standard pack quantities, and is in the buying unit of measure, as defined through Vendor/Item Information Maintenance (MENU POFIELD).

## Maintain Suggested Orders

After the Suggested Orders Report has been reviewed, and if information was saved, Suggested Order Maintenance (MENU POREPT) allows you to delete suggested order line items and/or change the primary vendor (that was automatically selected) to one of the alternate vendors shown on the report.

Suggested orders can also include special order items if they have been added (linked) to a suggested order. Once a special order item is linked to a suggested order, the **Requisition Number** field (SORQNO) in the Special Order Detail File (SPORD) record for the item will be filled with the suggested order run number preceded by a # character. This will indicate that the SPORD record is linked to a suggested order run. Also, suggested order totals will be recalculated, and in addition to suggested order items, suggested order totals will include the totals of all linked special order items, except drop-ship items (since these are directly shipped to the customer).

---

**NOTE:** Special order items that are added (linked) to suggested orders via this process in Buyers Workbench can be viewed, maintained or deleted in Buyers Workbench within Distribution A+.

---

## Create Requisitions from Suggested Orders

Suggested orders may be created from the Suggested Orders Quantity File through Create Requisitions from Suggested Orders (MENU POREPT). One requisition is created for each primary vendor that has selected items.

Once a line item is placed in the Requisition Detail File, that information is deleted from the Suggested Orders Quantity File. The new requisition number will begin with an "S" to identify it as being created from a suggested order. The order will be placed on suggested order hold (SO). The requisition may now be reviewed during Enter or Change Requisitions (MENU POMAIN) and approved for purchase order printing.

If suggested orders include special order items that have been added (linked) to the suggested orders, in Buyers Workbench, these special order items will also be added to the requisition/purchase order created from the suggested order.

## Delete Suggested Orders

Once a Suggested Order Quantity File is created, suggested orders contained in that file may be deleted prior to creating requisitions from the suggested orders. One or all suggested orders in the file may be deleted through Delete Suggested Orders (MENU POREPT).

This option should be run when you do not want to add to an existing file, or the information in the existing file is not what you desire. You may then re-run Suggested Orders Report (MENU POREPT) to create a file that meets your needs.

Linked special orders to the run that is deleted will also be unlinked.

## Buyers Workbench

Buyer Workbench combines the following four processes into one process:

- Create the Suggested Orders Report
- Maintain Suggested Orders
- Create Requisitions from Suggested Orders
- Delete Suggested Orders

All the features and functions from these processes are also available within Buyers Workbench, as well as additional features and functions.

---

## Customer Order Assignment

When creating a requisition through Enter or Change Requisitions (MENU POMAIN), you may assign an item on the requisition to a customer's order that has been created in O/E through Enter, Change & Ship Orders (MENU OEMAIN). You would want to do this when a customer's order has been backordered, and the item is to be shipped to that customer as soon as it is received.

When the assigned item is received and posted in Purchasing, the Backorder Release Report (p. 24-9) will print. This report informs you that a customer's backordered item has been received. You may proceed to release the backorder manually through Release Held Orders, Quotes, Backorders & Futures (MENU OEMAIN) or automatically through Automatic Backorder Release (MENU OEMAST), then ship and invoice the customer's order in Order Entry.

To assign an item on a requisition to a customer's order, press F14 from the Requisition/Purchase Order Item Detail Review Screen (p. 6-38). The Assign Customer Order Numbers Screen (p. 6-85) will display. Key the company and order number for the order to which the item is assigned.

---

## Product Activity Data (852)

---

NOTE: To use the Product Activity Data (852) (PAD) document, you must have EDI installed.

---

Buyers may not have time to review item quantities in their warehouses on a daily or weekly basis. If you have EDI installed, you can use the outgoing PAD document to automatically notify specific vendors of inventory changes in specific warehouses. During Day-End Processing (MENU XAMAST), Distribution A+ will review item inventory in the Item Balance File and create PAD documents. The PAD document notifies a vendor of changes in quantity for items of which the vendor is the primary vendor. The vendor can then respond by submitting a suggested purchase order, creating an order in their own system and shipping the items, or taking some other mutually agreed-upon action.

- PAD documents can include inventory changes to the following quantities:
- sold
- returned
- on-hand
- maximum on-hand
- minimum on-hand
- backordered
- PO
- committed
- available

You can choose which quantities each vendor will be notified of through Vendors Maintenance (MENU POFILE).

To use PAD documents, set up specific vendors through Vendors Maintenance (MENU POFILE) and specific warehouses through Warehouse Numbers Maintenance (MENU IAFILE). To notify one vendor of inventory changes in several warehouses, each warehouse must be set up individually.

---

## Product Transfer and Resale Report (867)

---

NOTE: To use the Product Transfer & Resale Report (867) (PTR) document, you must have EDI installed.

---

The Product Transfer & Resale Report (867) can be used by either the distributor creating the report or the vendor receiving the report. This report will show information about sales of product from one or more warehouses to an end customer, warehouse transfer sales orders, and demand requested beyond actual sales (lost orders).

Based on user defined send frequencies, the data for the PTR report will be extracted from the order history files using the **Invoice Date** for the extraction data including items that are sold as kit components if Bill of Material is installed.

---

Use this option to add or change requisitions and shipping locations. In Purchasing, a requisition is used to specify all vendor and item information required to issue a purchase order. Once a requisition is approved [see the End Requisition Screen (p. 6-92)], it can be converted to a purchase order by printing a Purchase Order for the desired requisition through Print Purchase Orders (MENU POMAIN).

Many of the screens in this option will also be accessed for maintaining purchase orders. That process begins by selecting the open purchase order through the Req/PO Inquiry (MENU POMAIN) or the Vendor Order/Shipment Inquiry (MENU POMAIN) and pressing **F5=MAINTENANCE** which will bring you to the Requisition/Purchase Order Maintenance Header Screen (p. 6-13).

---

NOTE: Purchase Orders may also be printed from the **F6=PRT/FAX PO** function key on the End Requisition Screen (p. 6-92) at the completion of requisition entry.

---

### Important

Even though the **F6=PRT/FAX PO** function key has the ability to print POs from the End Requisition Screen (p. 6-92) and is available, you should not use it as the normal means for printing POs. Each print job submitted via this function key creates a separate Transaction Processor job. Unlike printing POs through Purchase Orders (MENU POMAIN), which creates a single Transaction Processor batch job for all POs, printing via this function key creates individual jobs for each. The result is that the Transaction Processor queue space is under-utilized and valuable processing time is inefficiently used.

---

The following explains the distinction between a requisition and a purchase order as used in this user guide:

- **Requisition:** Entered through this option - it remains a requisition until Purchase Orders are printed (after the requisition is approved) through Purchase Orders (MENU POMAIN).
- **Purchase Order:** Previously a requisition - once a requisition has a Purchase Order form printed for it, it becomes an open purchase order. The purchase order is closed after receipts for all items on the purchase order are entered and posted. Closed purchase orders are moved to purchase order history during Day-End Processing (MENU XAMAST).

---

NOTE: Receipts are entered through Enter or Change Receivers or PO Receipts (MENU POMAIN). You can also enter receipts through Warehouse Management (MENU WMMAIN) or the Receiving task in Radio Frequency, if you have those modules

---

installed.

Additionally, receipts are posted through Enter or Change Receivers or PO Receipts (MENU POMAIN), PO Receipts Register (MENU POMAIN), or, if Warehouse Management is installed, through Warehouse Management (MENU WMMAIN).

---

## Enter or Change Requisitions

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| <b>Title</b>   | <b>Purpose</b>   |
|--|--|
| Enter/Change Requisitions Start Screen               | Use to specify the requisition or shipping location you are adding or changing.  |
| Open Requisition Search Screen                       | Use to select an open requisition for the selected company and vendor.   |
| Requisition/Purchase Order Maintenance Header Screen | Use to specify the header information for a requisition/purchase order.  |
| Shipping Location Screen                             | Use to define from 1 to 999 shipping locations for each company.   |
| Order Comments/Line Item Comments Entry Screen       | Use to enter and review comments for a requisition/purchase order and the line items within the requisition/purchase order.  |
| Order Comments/Line Item Comments Change Screen      |  |
| I/C Currency Information Screen                      | Use to override the exchange rate for this order when International Currency is installed. This shared screen is described in the International Currency User Guide. |
| Requisition/Purchase Order Item Detail Entry Screen  | Use to key the individual items for a requisition/purchase order and review that information for existing items for change or deletion.                              |
| Requisition/Purchase Order Item Detail Review Screen |  |
| Requisition/Purchase Order Item Summary Screen       | Use to select an existing item on the requisition/purchase order for change, or to add new items to this requisition/purchase order.                                 |
| Requisition/Purchase Order Special Charge Screen     | Use to enter and review special charges for a requisition/purchase order.  |

---

| Title   | Purpose   |
|---|---|
| Requisition/PO Entry Item Search/Browse Screen  | Use to search for and select items to order on this requisition/purchase order.   |
| Requisition/PO Entry Item Search Inquiry Selections Screen  | Use to select an item and launch to the Item Inquiry (MENU IAMAIN), launch to the Vendor/Item Information Inquiry (MENU POMAIN), review the Inventory Management Buying Information Screen, or review a list of additional vendors to source the item from. |
| Ordering Information Screen   | Use to review vendor/item information for the vendor on the current requisition/purchase order, and the item being ordered.   |
| Assign Customer Order Numbers Screen  | Use to identify the order numbers of up to 15 customer orders that have been backordered, and are waiting for the item keyed on the Requisition/Purchase Order Item Detail Review Screen (p. 6-38).   |
| Requisition/Purchase Order Item Landing Costs Screen  | Use to access and, if desired, modify landing cost information for the requisition/purchase order line item displayed on the Requisition/Purchase Order Item Detail Review Screen (p. 6-38).  |
| End Requisition Screen<br>End Purchase Order Changes Screen   | Use to review summarized order data and approve the requisition/purchase order.   |
| End Requisition/Purchase Order Landing Costs Screen<br>End Requisition/Purchase Order Landing Costs Override Screen | Use to override landing cost values for the entire requisition/purchase order and to distribute the totals to the individual items in the requisition/purchase order.   |

## Enter/Change Requisitions Start Screen

```

                                ENTER/CHANGE REQUISITIONS
                                Company? 01

Function:  _      (A,C)
Req No:    .....

Order Type: ..    (O/R)
Vendor/WH: .....      Find: .....
Receiving WH?: ...    City: .....
or Ship-To No: ....

                                F3=Exit      F4=Open Req

```

This screen is displayed when you select option 1 - Enter or Change Requisitions (MENU POMAIN). Use this screen to specify the requisition or shipping location you are adding or changing.

Additionally, if using Warehouse Transfers and warehouse transfer options have been setup, this screen may be used to establish a warehouse transfer. This is done by creating the requisition in the warehouse transfer company with the vendor designated as the “transfer from” warehouse and the receiving warehouse encoded as the “ship-to location.” For a detailed explanation of warehouse transfers, refer to the Warehouse Transfer appendix.

---

NOTE: For warehouse transfers, if the warehouse number is the same as the vendor number, the vendor number will always be extracted first.

---

When Consignment is installed, if the **Receiving WH** is a consignment warehouse, the purchase order will be used to move inventory into a consignment warehouse.

---

**Enter/Change Requisitions Start Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Company            | <p>This field is display only if the <b>Multi Company</b> field is set to <b>N</b> through System Options Maintenance (MENU XAFILE).</p> <p>A requisition is created/modified for the company number that you key in this field.</p> <p>Key the company number to be associated with this requisition.</p> <hr/> <p>NOTE: For warehouse transfers, key the warehouse transfer company for which the requisition will be created.</p> <hr/> <p><i>Default Value:</i> The default company defined in Authority Profile Maintenance (MENU XASCTY) if one has been defined; otherwise, this is the default company defined through System Options Maintenance (MENU XAFILE)</p> <p><i>Valid Values:</i> A valid company number defined through Company Name Maintenance (MENU XAFILE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(N 2,0) Display/Required</p> |
| Function           | <p>Key <b>A</b> to add a new requisition or shipping location for the specified company.</p> <p>Key <b>C</b> to change a requisition or shipping location.</p> <p>(A 1) Required</p>  |

---

**Enter/Change Requisitions Start Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Req No             | <p>NOTE: If you are changing a requisition or shipping location, this field is required; otherwise, it is optional.</p> <hr/> <p>If adding a requisition, key a number to assign to the requisition or leave this field blank to automatically assign the next requisition number.</p> <hr/> <p>NOTE: If you are adding a requisition number that comes from a Product Activity Data (852) (PAD) document that was sent to a vendor and a requisition number has been pre-assigned to the vendor, key the requisition number from the PAD document in this field.</p> <hr/> <p>If changing a requisition, key the requisition number. If you do not know the requisition number, use the Open Requisition Search by entering a vendor in the <b>Vendor/WH</b> field and pressing F4=OPEN REQ.</p> <p>If adding a shipping location, key <b>DFT</b> followed by a ship-to number, which is used to retrieve the shipping location when you enter requisitions. For example, if you are defining several shipping locations for each of your warehouses, you may want to assign numbers as follows:</p> <p>Warehouse / Ship-to numbers</p> <p>1 / 010 through 019</p> <p>2 / 020 through 029</p> <p>3 / 030 through 039</p> <p>If defining the default shipping location for the company, key <b>DFT000</b>. The information for DFT000 is used for the default values on the Requisition/ Purchase Order Maintenance Header Screen (p. 6-13).</p> <p>If changing a shipping location, key <b>DFT</b> followed by the ship-to number (e.g., <b>DFT021</b>).</p> <p>For more information on shipping locations, refer to the Shipping Location Screen (p. 6-13).</p> <p>(A 6) Required/Optional</p> |

---

**Enter/Change Requisitions Start Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Order Type         | <p>The <b>Order Type</b> field is required when adding a new requisition; it must be blank when changing an existing requisition.</p> <p>This field indicates if the requisition being created is for an order or for a return.</p> <p>Key <b>O</b> if the requisition is an order. Order type requisitions can only have positive item quantities.</p> <hr/> <p>NOTE: For warehouse transfers, key <b>O</b> in this field. Note that Returns are not allowed for a warehouse transfer company.</p> <hr/> <p>Key <b>R</b> if the requisition is for a return. Return type requisitions can only have negative item quantities.</p> <p>(A 1) Required/Blank</p>   |
| Vendor/WH          | <p>The <b>Vendor/WH</b> field is optional when changing an existing requisition or purchase order; it is required when adding a requisition.</p> <p>This field may be used during regular requisition entry, or for warehouse transfers.</p> <p>For regular requisition entry, key the vendor for whom a requisition will be created. If you do not know a vendor's number, use the <b>Find/City</b> fields to activate the vendor search.</p> <p>For warehouse transfers, use this field to designate the vendor as the "transfer from" warehouse.</p> <p>Key the vendor/warehouse from which you are ordering. If you are unsure of the vendor number, use the <b>Find</b> and <b>City</b> fields with the <b>ENTER</b> key to activate the vendor search.</p> <hr/> <p>NOTE: If you key a vendor that is defined as a warehouse vendor, a message will display informing you of this and the company number will be automatically changed to the warehouse transfer company number.</p> <hr/> <p><i>Valid Values:</i> A vendor number defined through Vendor Master Maintenance (MENU POFILE).</p> <p>(A 6) Required/Optional</p> |

---

**Enter/Change Requisitions Start Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| Find               | <p>Use this field to activate the Vendor Search feature when you do not know the vendor's number.</p> <p>Key the vendor's name or up to 10 characters (the first 10) of one or more words in the vendor's name and press <b>ENTER</b> to display the Vendor Search Screen.</p> <p>To limit the vendor search by city (i.e., search for the specified vendor name within a particular city), key a city in the <b>City</b> field as well.</p> <p>For more information on using searches and for a description of the search screens, refer to the Cross Applications User Guide.</p> <p>(A 40) Optional</p>  |
| City               | <p>When using the <b>Find</b> field to search for a vendor, you can limit the search to a particular city by keying a partial or complete city name in this field.</p> <p>If you enter characters in this field, the Vendor Search Screen displays only vendors that meet the criteria specified here and in the <b>Find</b> field.</p> <p>For more information on using searches and for a description of the search screens, refer to the Cross Applications User Guide.</p> <p>(A 8) Optional</p>  |
| Receiving WH       | <p>This field is optional when adding a requisition; it must be blank when changing a requisition.</p> <p>For warehouse transfers, use this field to designate the receiving warehouse as the “ship-to location.”</p> <p>For a consignment replenishment directly from the vendor, use this field to designate the consignment warehouse for receiving.</p> <p>Key the warehouse that is receiving the order.</p> <p>(A 2) Optional/Blank</p>   |
| Ship-To No         | <p>This field is optional when adding a requisition; it must be blank when changing a requisition.</p> <p>For regular requisition entry, specify the location to which you want the items shipped by keying the ship-to number. If the <b>Ship-To No</b> field is left blank, the default shipping information (i.e., DFT000) is used. You can override this information on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13).</p> <p>If you are adding or changing a ship-to location, key the number of the ship-to location. This number is different from the DFTxxx number. For more information on ship-to numbers, refer to the Shipping Location Screen (p. 6-13).</p> <p>(N 3,0) Optional/Blank</p> |
| F3=Exit            | <p>Press <b>F3=EXIT</b> to cancel this option. MENU POMAIN will display.</p>  |

---

---

**Enter/Change Requisitions Start Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| F4=Open Req        | After selecting a company and vendor, press F4=OPEN REQ to display the Open Requisition Search Screen (p. 6-10).   |
| Enter              | This key serves different purposes depending on the screen values. <ul style="list-style-type: none"><li data-bbox="527 453 1422 522">• If the requisition number contains DFT followed by a ship-to number, the Shipping Location Screen (p. 6-13) will display.</li><li data-bbox="527 533 1422 602">• If you entered vendor search criteria in the <b>Find</b> or <b>Find</b> and <b>City</b> fields, the Vendor Search Screen (p. 43-7) will display.</li><li data-bbox="527 613 1422 716">• After making requisition and vendor selections and pressing ENTER, the Requisition/Purchase Order Maintenance Header Screen (p. 6-13) will display.</li></ul> |

Selection: \_

F11=Loc Cur    F12=Return

This screen displays after selecting a company and vendor, and pressing F4=OPEN REQ from the Enter/Change Requisitions Start Screen (p. 6-4). Use this screen to select an open requisition for the selected company and vendor.

A requisition is open after being created, it contains at least one item, and before the Purchase Order prints for the requisition is printed through Purchase Orders (MENU POMAIN).

NOTE: Purchase Orders may also be printed from the F6=PRT/FAX PO function key at the completion of requisition entry. Refer to the F6=PRT/FAX PO function key description on the End Requisition Screen (p. 6-92) for important details about the use of this key.

Additionally, this is a roll screen. Refer to the Cross Application User Guide for instructions about roll screens.

### Open Requisition Search Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| (Currency)         | This field only displays when International Currency is installed and only if the trading currency differs from the company's local currency and the F11=LOC CUR / F11=TR CUR function key displays as F11=LOC CUR.<br><br>This field displays the description for the trading currency, if the vendor's currency is different from the company's local currency.<br><br>Display |

### Open Requisition Search Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Reference Number   | The reference number of the open requisition displayed. To select one of the displayed open requisitions, you must key this number in the <b>Selection</b> field on this screen.<br>Display   |

You may access the Requisition/Purchase Order Maintenance Header Screen while working in this menu option, as follows:

- After making requisition and vendor selections and pressing **ENTER** from the Enter/Change Requisitions Start Screen (p. 6-4), Open Requisition Search Screen (p. 6-10), or Vendor Search Screen (p. 43-7).

- After pressing **F2=HEAD** from the Requisition/Purchase Order Item Summary Screen (p. 6-61).
- After pressing **F10=HEAD** from the End Requisition Screen (p. 6-92) or the End Purchase Order Changes Screen (p. 6-92).

The Requisition/Purchase Order Maintenance Header Screen is also accessed by pressing **F5=MAINTENANCE** while in Req/PO Inquiry (MENU POMAIN), on the Req/PO Inquiry Screen (p. 14-9) or in the Vendor/Order Shipment Inquiry on the Vendor Order/Shipment Inquiry Screen (p. 15-7). When you access this screen through the inquiries, minor differences exist if you selected a purchase order instead of a requisition and will be noted within the field/function key descriptions.

Use the Requisition/Purchase Order Maintenance Header Screen to specify the header information for a requisition/purchase order, and it is the only screen from which you may delete a requisition/purchase order. The information on this screen applies to the entire requisition and is printed once on a Purchase Order. Detail or item information, unlike header information, applies to the individual items on the requisition [see Requisition/Purchase Order Item Detail Entry Screen (p. 6-38)]. The vendor information displayed is retrieved from and defined through Maintaining Vendors (MENU POFIELD).

The Shipping Location Screen view of this screen appears when you enter **DFT** followed by a ship-to number in the **Req No** field on the Enter/Change Requisitions Start Screen (p. 6-4).

You must define at least one location to be used as the default shipping location (**DFT000**) for each company. When you enter a requisition, you can accept the default shipping location or retrieve information for another location by entering the assigned ship-to number in the **Ship-To No** field on the Enter/Change Requisitions Start Screen (p. 6-4). You can also change ship-to information for an individual requisition on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13).

Use this screen to define from 1 to 999 shipping locations for each company. For each location, you specify a ship-to address and the receiving warehouse, among other information. For each company, including the warehouse transfer company, add a default ship-to record for every warehouse.

Since the fields used to define shipping locations are the same as those used on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13), the same screen is used for both. The following fields are applicable only on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13) and therefore protected on the Shipping Location Screen:

**Fields Protected on the Shipping Location Screen**

**Requisition/Purchase Order Maintenance Header Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Req No / PO No     | <p>This field displays as <b>Req No</b> when entering or changing requisitions and <b>PO No</b> when maintaining purchase orders.</p> <p>The <b>Req No</b> is the unique number of the requisition for the selected company. If you did not specify a requisition number on the Enter/Change Requisitions Start Screen (p. 6-4), the automatically assigned requisition number is displayed.</p> <p>The <b>PO No</b> is the purchase order number automatically assigned or manually keyed for this order. When the requisition number and purchase order number are not the same based on the <b>Use Requisition No. for Purchase Order No.</b> field defined as <b>N</b> through Purchasing Options Maintenance (MENU XAFILE), the purchase order number is generated when the purchase order is printed through Purchase Orders (MENU POMAIN) or through or the <b>F6=PRT/FAX PO</b> function key at the completion of requisition entry.</p> <p>Display</p>  |
| Contact            | <p>The contact person for this vendor as defined in Vendor Master Maintenance (MENU POFILE).</p> <p>Display</p>  |
| Buyer              | <p>This field indicates the code of the buyer who primarily deals with this vendor and is responsible for this requisition.</p> <p>Buyer codes may be assigned to a vendor through Vendors Maintenance (MENU POFILE), to a vendor/warehouse through Vendor/Warehouse Assignments (MENU POFILE), to a vendor/item and/or a vendor/item/warehouse through Vendor/Item Information Maintenance (MENU POFILE). Enter or Change Requisitions will locate the buyer at the most unique level in which it exists and place that buyer code in this field.</p> <p>If <b>Keep Buyer Analysis Information</b> is set to <b>Y</b> in Purchasing Options Maintenance (MENU XAFILE), this field will become a required entry on this screen in order to track buyer budgets and buyer actual purchase amounts. Once a purchase order has been printed, the buyer cannot be changed for that PO, because the Buyer Actual File (BYACT) has been updated.</p> <p><i>Default Value:</i> The buyer defined for this vendor through Vendors Maintenance (MENU POFILE) or Vendor/Warehouse Assignments Maintenance (MENU POFILE), if one exists</p> <p><i>Valid Values:</i> A valid buyer defined through Buyers Maintenance (MENU POFILE)</p> <p>(A 3) Optional/Required</p> |

---

**Requisition/Purchase Order Maintenance Header Screen Fields and Function Keys**

---

| Field/Function Key | Description  |
|--------------------|--|
| Due Date           | <p>For purchase orders, use this field to specify the date by which items should be received from the vendor.</p> <p>For returns, use this field to specify the date on which items will be shipped from the warehouse to be returned to the vendor.</p> <p>This <b>Due Date</b> defaults into the <b>Due</b> field for individual items on the Requisition/Purchase Order Item Detail Review Screen (p. 6-38), unless the due date is being calculated. When the <b>Calculate PO Due Dates Based on Lead Times</b> field is set to <b>Y</b> for the company through Purchasing Options (MENU XAFILE), the due date for an item will be calculated as: <b>System Date + Lead Time</b>.</p> <p>When the requisition is ended, the value in this <b>Due Date</b> field will be updated with the earliest item due date from all the items in the requisition.</p> <p>Key the due date. You will receive a warning message if the <b>Due Date</b> is earlier than the <b>Vnd Ship Date</b>.</p> <hr/> <p>NOTE: When the <b>Due Date</b> field is changed, and the Requisition/Purchase Order includes special order lines for sales orders with a Requested Ship Date that is earlier than the new Requisition/PO Due Date, a warning message will display.</p> <hr/> <p><i>Default Value:</i> The current system date</p> <p><i>Valid Values:</i> Key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFILE).</p> <p>(N 6,0) Required</p> |
| Ship Via           | <p>The standard shipping instructions for the purchase order.</p> <p><i>Default Value:</i> The shipping instructions defined for this vendor through Vendor Master Maintenance (MENU POFIL)</p> <p>(A 20) Optional</p>   |

---

## Requisition/Purchase Order Maintenance Header Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Vnd Shp Date       | <p>This field does not display on the Shipping Location Screen, or for Return Purchase Orders (type <b>R</b>).</p> <p>For orders, use this field to specify the date by which items will be shipped from the vendor.</p> <p>You will receive an error message if the <b>Vnd Ship Date</b> is earlier than the <b>Order Date</b>.</p> <p>You will receive a warning message if the <b>Vnd Ship Date</b> is later than the <b>Due Date</b>.</p> <p><i>Default Value:</i> The value in the <b>Due Date</b> field on this screen.</p> <p><i>Valid Values:</i> Cannot be earlier than the Order Date; key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFILE).</p> <p>(N 6,0) Required</p>  |
| Misc Notes         | <p>Use this field to enter additional information about the requisition. The text that you enter in this field will print on the Purchase Order.</p> <p>Key the text you want printed.</p> <p>(A 20) Optional</p>  |
| Warehouse          | <p>On the Shipping Location Screen, use this field to specify the warehouse that is assigned to this shipping location to receive the items shipped into this location.</p> <p>On the Requisition/Purchase Order Maintenance Header Screen, use this field to specify the warehouse into which the items on this requisition/purchase order will be received.</p> <p>This field is required when <b>Use Multiple Warehouses</b> is set to <b>Y</b> in Purchasing Options (MENU XAFILE). It is a display-only field under the following circumstances:</p> <ul style="list-style-type: none"> <li>• If <b>Use Multiple Warehouses</b> is set to <b>N</b>.</li> <li>• If <b>Use Multiple Warehouses</b> is set to <b>Y</b> and line items have been entered on this requisition.</li> </ul> <p>Key the warehouse number.</p> <p><i>Default Value:</i> Shipping Location Screen: The default warehouse defined in Authority Profile Maintenance (MENU XASCTY) if one has been defined; otherwise, the warehouse specified for the <b>DFT000</b> shipping location if that location has already been defined.</p> <p>Requisition/Purchase Order Maintenance Header Screen: The default warehouse for this ship-to address as defined for requisition number <b>DFTnnn</b> (where <b>nnn</b> is the ship-to number)</p> <p>(A 2) Required/Display</p> |

---

**Requisition/Purchase Order Maintenance Header Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| Transport Mode     | <p>The <b>Transport Mode</b> field displays only if the country code in the vendor's address is defined as a European Community (EC) member through Country Names Maintenance (MENU POFIL1).</p> <p>Companies in EC member countries are required to submit a monthly Intrastat Report (MENU IAREPT) to their respective governments detailing shipments to and receipts from other EC member countries. The mode of transport for each shipment or receipt is required on the report.</p> <p>Key the transport mode code for this requisition.</p> <p><i>Default Value:</i> The transport mode code for this vendor in the Vendor Master File.</p> <p><i>Valid Values:</i> A transport mode code defined through Transport Mode Maintenance (MENU OEFIL3/MENU POFIL2).</p> <p>(A 2) Required</p>   |
| FOB Cd             | <p>The FOB code contains shipping information for the order, including who is responsible (you or the vendor) for shipping charges and for freight damages.</p> <hr/> <p>NOTE: If your company is located in a European Community member country and is required to submit a monthly Intrastat Report, the FOB code on the requisition is used to determine the Intrastat delivery terms, which are required for the report. If you are required to submit the Intrastat Report, you should not leave this field blank.</p> <hr/> <p>If you are using vendor volume discounts, you can assign a different FOB code to each discount for a vendor through Vendor Volume Discounts Maintenance (MENU POFIL2). However, the FOB code on the vendor volume discount is for informational purposes, only. If a vendor volume discount that has an FOB code assigned applies to this order, the FOB code you enter here will print on the Purchase Order, not the FOB code from the discount.</p> <p>Key the FOB code you want printed on the Purchase Order.</p> <p><i>Default Value:</i> The FOB code assigned to this vendor through Vendor Master Maintenance (MENU POFIL1).</p> <p><i>Valid Values:</i> An FOB code defined through FOB Codes Maintenance (MENU POFIL2/MENU OEFIL3).</p> <p>(A 5) Optional</p> |
| Quote No           | <p>If the vendor provides a quotation number for this requisition, you may key it in this field. This quotation number will print on the Purchase Order.</p> <p>(A 15) Optional</p>   |

**Requisition/Purchase Order Maintenance Header Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Sales Tax %        | <p>On the Shipping Location Screen, use this field to specify the sales tax percentage to be applied to all taxable items that are shipped to this warehouse location. This value is used as the default value for the <b>Sales Tax %</b> field on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13).</p> <p>On the Requisition/Purchase Order Maintenance Header Screen, this is the sales tax percentage that is applied to all taxable items on this requisition. The total sales tax for the requisition will display on the End Requisition Screen (p. 6-92).</p> <p>Key the sales tax percentage.</p> <p><i>Default Value:</i> Shipping Location Screen: 0<br/>                     Requisition/Purchase Order Maintenance Header Screen: Sales tax percentage defined for the <b>DFT000</b> shipping location if you did not enter a ship-to number on the Enter/Change Requisitions Start Screen (p. 6-4).<br/>                     (N 5, 3) Optional</p> |
| Terms              | <p>The vendor's payment terms for this requisition, which are printed on the Purchase Order.</p> <p><i>Default Value:</i> The payment terms defined for this vendor through Vendor Master Maintenance (MENU POFILE)<br/>                     (A 20) Optional</p>   |

**Requisition/Purchase Order Maintenance Header Screen Fields and Function Keys**

---

| Field/Function Key | Description  |
|--------------------|--|
| Update Cst         | <p>On the Shipping Location Screen, use this field to indicate if the average costs for this ship-to location's items should be updated when receipts are posted for purchase orders. The value keyed in this field is used as the default for the <b>Update Cst</b> field on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13). Refer to that field for information on how the average cost may be affected.</p> <p>Key <b>Y</b> if you typically want to update the average cost of items when receipts are posted.</p> <p>Key <b>N</b> if you typically do not want to update the average cost of items when receipts are posted.</p> <p>On the Requisition/Purchase Order Maintenance Header Screen, this field indicates if the average cost for the item is updated when receipts are posted for this purchase order. The value keyed in this field is used as the default for the <b>UpdCst</b> field for each item on the Requisition/Purchase Order Item Detail Review Screen (p. 6-38). The value in this field affects the following:</p> <ul style="list-style-type: none"> <li>• If <b>Y</b> is keyed here or on the Requisition/Purchase Order Item Detail Entry Screen (p. 6-38), using the receipt cost (including zero cost) of the item which may include landing costs, the average cost is recalculated.</li> <li>• If <b>N</b> is keyed here or on the Requisition/Purchase Order Item Detail Entry Screen (p. 6-38), regardless the purchase cost of the item, the average cost is not recalculated. Keying <b>N</b> also records a zero for the item receipt cost that displays in the Item Inquiry on the Transaction History Screen (MENU IAMAIN). If a zero cost item has a Landing Code so the normal receipt cost will include landing costs, the receipt cost that displays in the Item Inquiry on the Transaction History Screen (MENU IAMAIN) is the value of the landing factor costs.</li> </ul> <p>Key <b>Y</b> to have the average cost of the item updated when the receipts are posted for this PO.</p> <p>Key <b>N</b> if you do not want to have the average cost of the item updated when the receipts are posted for this PO.</p> <p><i>Default Value:</i> Shipping Location Screen: The <b>Update Cst</b> value for the <b>DFT000</b> shipping location if that location has already been defined.<br/> Requisition/Purchase Order Maintenance Header Screen: The <b>Update Cst</b> value specified for the <b>DFT000</b> shipping location if you did not enter a ship-to number on the Enter/Change Requisitions Start Screen (p. 6-4).</p> <p>(A 1) Required</p> |
| Assignee           | <p>The number of the assignee for this purchase order. This field is for informational purposes only.</p> <p>(A 6) Optional</p>  |

**Requisition/Purchase Order Maintenance Header Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Update Inv         | <p>On the Shipping Location Screen, use this field to indicate if the items for this ship-to location update your inventory on-hand balances. The value keyed in this field is used as the default for the <b>Update Inv</b> field on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13).</p> <p>Key <b>Y</b> if you typically want items to update your on-hand inventory balances.</p> <p>Key <b>N</b> if you typically do not want items to update your on-hand inventory balances.</p> <p>On the Requisition/Purchase Order Maintenance Header Screen, use this field to indicate if the items on this purchase order will update your inventory balance when received. The value keyed in this field is used as the default for the <b>Update Inv</b> field for each item on the Requisition/Purchase Order Item Detail Review Screen (p. 6-38).</p> <hr/> <p>NOTE: A return requisition will allocate inventory if you key <b>Y</b> in this field. Inventory allocated to return PO's is not available to order entry sales orders.</p> <hr/> <p>Key <b>Y</b> to update inventory balances for this item on this requisition/purchase order when it is received. A return requisition will allocate inventory if you key <b>Y</b> in this field, making the in-stock inventory unavailable to order entry sales orders. When the <b>Interfaces: I/A to G/L</b> is set to <b>Y</b> in Company Name Maintenance (MENU XAFILE), keying <b>Y</b> also determines that the value of the inventory does change, so G/L transactions are created and G/L Source drill down is available in the transaction history of the Item Inquiry.</p> <p>Key <b>N</b> if you do not want to update inventory balances for this requisition/purchase order item. You must key <b>N</b> in this field if either the <b>Drp Shp</b> or <b>Non-St</b> field is <b>Y</b>; inventory balances will not be updated for drop shipments or non-stock items. When the <b>Interfaces: I/A to G/L</b> is set to <b>Y</b> in Company Name Maintenance (MENU XAFILE), keying <b>N</b> also determines that the value of the inventory does not change, so G/L transactions are not created and G/L Source drill down is not available in the transaction history of the Item Inquiry.</p> <p><i>Default Value:</i> Shipping Location ScreenThe <b>Update Inv</b> value for the <b>DFT000</b> shipping location if that location has already been defined.</p> <p>Requisition/Purchase Order Maintenance Header Screen: <b>Update Inv</b> value specified for the <b>DFT000</b> shipping location if you did not enter a ship-to number on the Enter/Change Requisitions Start Screen (p. 6-4).</p> <p>(A 1) Required</p> |
| F5=Comments        | <p>Press <b>F5=COMMENTS</b> to enter or review comments for this requisition. The Order Comments/Line Item Comments Entry Screen (p. 6-34) will display.</p>  |

---

**Requisition/Purchase Order Maintenance Header Screen Fields and Function Keys**

---

| Field/Function Key | Description  |
|--------------------|--|
| F6=Sp Ord          | <p>Press the <b>F6=SP ORD</b> function key to review special order items for this requisition/purchase order's company and warehouse (and optionally ship-to address for drop-ships) that are not currently on an existing requisition/purchase order. Changes to the special orders can be made and the special order items can be selected for inclusion on this requisition/purchase order. The Work With Special Orders Screen (p. 10-13) appears. Refer to Work With Special Orders (MENU POMAIN) for an explanation of this screen.</p> <p>This key will not display under any of the following conditions:</p> <ul style="list-style-type: none"> <li>• You are modifying a default ship-to address.</li> <li>• You are entering a return.</li> <li>• You are restricted from manually adding special order items to an approved requisition or purchase order, as defined through Special Order Options Maintenance (MENU XAFILE).</li> <li>• Special Order Options (MENU XAFILE) have not been defined for this company and you are maintaining a purchase order.</li> <li>• You are restricted from adding special order items to a warehouse transfer approved requisition or purchase order, as defined through Purchasing Options Maintenance (MENU XAFILE).</li> </ul> |
| F10=End            | <p>The <b>F10=END</b> function key is used to end the creation or modification of this requisition. When accessing this screen through Enter or Change Requisitions (MENU POMAIN), the End Requisition Screen (p. 6-92) will display. When accessing this screen through Req/PO Inquiry (MENU POMAIN) or the Vendor Order/Shipment Inquiry (MENU POMAIN), the End Purchase Order Changes Screen (p. 6-92) will display.</p> <hr/> <p><b>NOTE:</b> If a purchase order for this requisition/purchase order was previously sent through EDI and this screen was accessed through Req/PO Inquiry (MENU POMAIN) or the Vendor Order/Shipment Inquiry (MENU POMAIN), a message will display warning you that the PO should be sent through EDI again if modifications were made to it.</p>  |
| F15=IC Info        | <p>The <b>F15=IC INFO</b> function key only displays when International Currency is installed and only if a foreign currency vendor is selected.</p> <p>Press <b>F15=IC INFO</b> to access data pertaining to the vendor's currency, where you may enter or change the vendor's exchange code, if any, override the vendor's default exchange rate, enter a lock date for the exchange rate, or specify a currency contract to be used for the transaction. The I/C Currency Information Window will display. This shared screen is described in the International Currency User Guide.</p>  |

**Requisition/Purchase Order Maintenance Header Screen Fields and Function Keys**

| Field/Function Key                                 | Description  |
|--|--|
| F16=Contract Lst                                   | <p>Press F16=CONTRACT LST to display the Vendor/Item Contract List Screen (p. 55-8), from which you can view information for any of this vendor's contracts that are not currently suspended. Expired contracts are included in the list if they meet the selection criteria at the bottom of the screen.</p>  |
| F20=Prm  | <p>Press F20=PRM to change the <b>Prm</b> (Promised) field on every open item currently included in this Req/PO to <b>Y</b> (Yes). The <b>Prm</b> field is located on the Requisition/Purchase Order Item Detail Entry Screen (p. 6-38).</p> <p>If you press F20=PRM and there are no open items on this Req/PO, you will receive a message stating that the Req/PO has no items to update. Otherwise, you will be prompted to press F20=PRM again to confirm your action and change the <b>Prm</b> field to <b>Y</b> (Yes) on every open item currently included in this Req/PO.</p>  |
| <p>F24=Delete /<br/>F24=Close /<br/>F24=Delete</p> | <p>When working with requisitions, this function key displays as F24=DELETE; otherwise, when working with purchase orders this function key displays as F24=CLOSE.</p> <p>Press the F24=DELETE key twice to delete the selected Requisition from the Open Requisition Files (RQHED, RQDET, etc.).</p> <p>Press the F24=CLOSE key to close the selected Purchase Order from the Open Purchase Order Header Files (POHED, PODET, etc.). If the purchase order is currently in a receipt group on receiver, you will not be able to close it.</p> <p>You can close a warehouse transfer Purchase Order that has been invoiced and for which receipts have been posted, however, you will be warned if there is a balance in the Warehouse Transfer In-Transit general ledger account (meaning that invoice transactions and receipt transactions do not clear). You can use the GL Reconciliation Report - Warehouse Transfer option (MENU GLREPT) to print a report of unbalanced transactions in that account.</p> <p>If the <b>Mark Item for Cycle Count when Closing PO</b> field is set to <b>Y</b> through Purchasing Options Maintenance (MENU POFIELD) for the receiving warehouse and/or the shipping warehouse and the quantity received for the item was less than the quantity shipped, the item will be marked for an immediate count and included in the number of immediate counts the next time count sheets are printed through Print Count Sheets (MENU WMPHYS).</p> <p>On the Shipping Location Screen, press F24=DELETE twice to delete the shipping location and return to the Enter/Change Requisitions Start Screen (p. 6-4)</p> |

The Order Comments Entry Screen displays after pressing **F5=COMMENTS** from the Requisition/Purchase Order Maintenance Header Screen (p. 6-13). Use this screen to enter and review comments for a requisition/purchase order. These comments may print on the Purchase Order, Receiving List, or both for this order, and also may be used for internal purposes only. Order comments are general for the entire requisition/purchase order.

The Line Item Comments Entry Screen displays after pressing **F5=COMNT** from the Requisition/Purchase Order Item Detail Review Screen (p. 6-38). Use this screen to enter and review comments for an item on a requisition/purchase order. Line Item Comments are specific to the selected item. These comments may print on the Purchase Order, Receiving List, or both for this order.

If you are reviewing comments for a special order requisition/purchase order, comments entered in Order Entry and those comments that, based on special order company options, have been selected to be extracted from the order, can display on this screen based on special order company options defined in Special Order Options Maintenance (MENU XAFILE). Up to 999 comments can be entered for each line item.

If you previously defined comments through Standard Comments Maintenance (MENU POFILE), one type of comment will already be displayed on this screen. For details about defining different types of comments, refer to Standard Comments (MENU POFILE). The system checks for which type of comment to display in the following sequence and displays the first type it locates:

- Vendor
- Vendor/item comment
- Item comment

---

NOTE: Order comments may be saved to purchase order history if the Purchasing Options Maintenance (MENU XAFILE) to **Keep Order Comments in History** is **Y**.

---

---

NOTE: If **Keep Detail Comments in History** is **Y** in Purchasing Options Maintenance (MENU XAFILE), comments may be saved to purchase order history.

---

The Requisition/Purchase Order Item Detail Entry Screen displays after pressing **ENTER** on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13). Use this screen to key the individual items to be added to a requisition/purchase order.

---

NOTE: The entry of Global Trade Item Numbers (GTINs) is also allowed on this screen when placing an order with a vendor. The GTIN will be replaced by the Distribution A+ Item Number.

---

The Requisition/Purchase Order Item Detail Review Screen displays after pressing **ENTER** from the following screens:

- Requisition/Purchase Order Item Detail Entry Screen (p. 6-38) when adding items
- Requisition/Purchase Order Item Summary Screen (p. 6-61) after keying an item number and quantity and pressing **ENTER**, or selecting an item on a requisition/purchase order for change using **F13** through **F20**
- Requisition/PO Entry Item Search/Browse Screen (p. 6-69) after selecting one of the items in the search and pressing **ENTER**

Use this screen to review/change information for one item on a requisition/purchase order.

---

NOTE: The default values specified for this screen appear only after you press **ENTER**, at which point you are viewing the Requisition/Purchase Order Item Detail Review Screen (p. 6-38).

---

## Approval Code Authorization

If you are changing a requisition or purchase order and the **Use Approval Code Authorization for Req/PO** field is set to **Y** through Purchasing Company Options Maintenance (MENU XAFIL2) and an **Approval Code** and **Approval Amount** have been previously specified for this requisition/purchase order on the End Requisition Screen (p. 6-92) or the End Purchase Order Changes Screen (p. 6-92), pressing **ENTER** will perform an authorization check. This authorization check compares the new total requisition/purchase order value to the value in the **Approval Amount** field to ensure the approval amount has not been exceeded. When International Currency is installed, for trading currency requisitions/purchase orders, the local equivalent of the requisition/purchase order's total trading value will be used in the comparison since the approval amount is always expressed in the company's local currency.

For the changes made to the requisition/purchase order to be approved, the following limits apply:

- If you are not the user ID associated with the approval code through Approval Codes Maintenance (MENU POFIL2), the total requisition/purchase order value after the changes must be less than or equal to the previously defined approval amount. If the changes are greater, a different approval code with a greater maximum approval amount must be keyed on the End Requisition Screen (p. 6-92) or the End Purchase Order Changes Screen (p. 6-92).
- If you are the user ID associated with the approval code, the total requisition/purchase order value after the changes must be less than or equal to the **Maximum Approval Amount** defined for the approval code through Approval Codes Maintenance (MENU POFIL2). Otherwise, a different approval code with a greater maximum approval amount must be keyed on the End Requisition Screen (p. 6-92) or the End Purchase Order Changes Screen (p. 6-92).

Once the authorization check is complete press **ENTER** to confirm your selections on Requisition/Purchase Order Item Detail Review Screen.

If the **Use Approval Code Authorization for Req/PO** field is set to **N** through Purchasing Company Options Maintenance (MENU XAFILE), no authorization check will be performed.

**Requisition/Purchase Order Item Detail Entry Screen and Requisition/Purchase Order Item Detail Review Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Vendor             | <p>The number and name of the vendor from whom the items keyed on this screen will be ordered.</p> <p>Display</p>   |

F2=Head    F6=Spec Chg    F9=Sch/Brws    F10=End    F11=Local    F13-20 to Change

This screen will display after pressing **ENTER** from the Requisition/Purchase Order Maintenance Header Screen (p. 6-13) when changing an existing requisition/purchase order, or after pressing **F2=Rvw** from the Requisition/Purchase Order Item Detail Review Screen (p. 6-38) or **F2=REVIEW** on the End Requisition Screen (p. 6-92) or End Purchase Order Changes Screen (p. 6-92).

This screen displays all of the items that have been selected for this requisition/purchase order. You may use this screen to select an existing item on the requisition/purchase order for change, or to add new items to this requisition/purchase order. Additionally, you may access several of the features of requisition entry/purchase order change maintenance from this screen.

If you are changing a requisition/purchase order and add more line items to it, you will be positioned to the most recently added items when you access this screen. You can view the previously entered items by scrolling down the list.

**NOTE:** This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. **Last** appears at the bottom of the last screen of data. To scroll through information on roll screens press:

- \* **PAGE DOWN** or **SHIFT-ROLL FWD** to display the next screen
- \* **PAGE UP** or **SHIFT-ROLL BACK** to display the previous screen.

**NOTE:** Items may be deleted with the **F24=DELETE / F24=CLOSE** key only after first selecting an item to change using one of the **F13** through **F20** keys. Otherwise, **F24=DELETE / F24=CLOSE** does not appear on the Requisition/Purchase Order Item Detail Review Screen (p. 6-38).

### Requisition/Purchase Order Item Summary Screen Fields and Function Keys

| Field/Function Key         | Description   |
|----------------------------|---|
| Req No / PO No             | <p>This field displays as <b>Req No</b> when entering or changing requisitions and <b>PO No</b> when maintaining purchase orders.</p> <p>The requisition number for this purchase order which may or may not be the same as the purchase order number based on the Purchasing option to <b>Use Requisition No. for Purchase Order No.</b> set to <b>Y</b> or <b>N</b>.</p> <p>Display</p> |
| (Vendor Information)       | <p>The number and name of the vendor for whom the requisition is being created/changed.</p> <p>Display</p>  |

## Requisition/Purchase Order Item Summary Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Locate             | <p>Use this field to locate an item on this requisition. The located item will display at the top of this screen.</p> <p>Key the complete or partial item number to locate, then press <b>ENTER</b>. The item that closest meets the item number keyed will display at the top of the screen.</p> <p>If you also key a sequence number in the <b>Top</b> field, the item number keyed in this field is ignored. Additionally, the item number that displays in the first line of the list should not be keyed in this field, as it already displays at the top of the list.</p> <p>(A 27) Optional</p>   |
| Top                | <p>Use this field to display an item with the specified sequence number at the top of this screen.</p> <p>Key the desired sequence number, then press <b>ENTER</b>. The item that has been assigned the closest sequence number will display at the top of this screen.</p> <p>(N 4,0) Optional</p>  |
| F2=Head            | <p>Press <b>F2=HEAD</b> to display the Requisition/Purchase Order Maintenance Header Screen (p. 6-13) for this requisition/purchase order.</p>   |
| F6=Spec Chg        | <p>Press <b>F6=SPEC CHG</b> to enter a special charge for this requisition. The Requisition/Purchase Order Special Charge Screen (p. 6-66) will display.</p>   |
| F9=Sch/Brws        | <p>Press <b>F9=SCH/BRWS</b> to display the Requisition/PO Entry Item Search/Browse Screen (p. 6-69).</p> <p><b>NOTE:</b> If accessed for a warehouse transfer order, the Item Search/Browse Screen will include all items whose primary vendor in the Item Master File matches the warehouse transfer vendor, not just those which have vendor/item records in the Vendor/Item File. This is due to the fact that vendor/item records are not created for warehouse transfer vendors.</p>  |
| F10=End            | <p>Press <b>F10=END</b> to end item entry for this requisition/purchase order. The End Requisition Screen (p. 6-92) or the End Purchase Order Changes Screen (p. 6-92) will display.</p>   |
| F11=Local/Trading  | <p>Press the <b>F11=TRADING / F11=LOCAL</b> function key to toggle between a display of the currency description and unit/total costs in the vendor's trading currency and a display of the currency description and unit/total costs in the company's local currency.</p> <p>Press <b>F11=TRADING</b> to display unit and total costs in the trading currency. The trading currency description will display at the top of the screen.</p> <p>Press <b>F11=LOCAL</b> to display unit and total costs and total costs in the company's local currency. The description for the company's local currency will display at the top of the screen.</p> |

---

**Requisition/Purchase Order Item Summary Screen Fields and Function Keys**

---

| Field/Function Key | Description  |
|--------------------|--|
| F13-F20 To Change  | <p>Press the key that corresponds to the <b>Reference Number</b> field of an item that you wish to change or delete. Use the function keys as follows to change an item:</p> <p>F13=Reference Number 1<br/>           F14=Reference Number 2<br/>           F15=Reference Number 3<br/>           F16=Reference Number 4<br/>           F17=Reference Number 5<br/>           F18=Reference Number 6<br/>           F19=Reference Number 7<br/>           F20=Reference Number 8</p> <p>If the function keys on your keyboard are arranged in a single row, then press the shift key and the corresponding reference number.</p> <p><b>EXAMPLE:</b> To change line 8, press <b>SHIFT</b> and <b>F8</b>.</p> <p>-OR-</p> <p>If the function keys on your keyboard are arranged in a two rows, press the key which is directly above the reference number key in the bottom row.</p> <p><b>EXAMPLE:</b> To change line 8, find function key 8 in the bottom row. Press <b>F20</b> in the top row because it is directly above <b>F8</b>.</p> <p>After you enter the desired function key, the Requisition/Purchase Order Item Detail Review Screen (p. 6-38) displays.</p> |
| Enter              | <p>Press <b>ENTER</b> after keying a complete or partial item number to <b>Locate</b> that item in this requisition/purchase order. The item that closest meets the item number keyed will display at the top of the screen.</p> <p>Press <b>ENTER</b> after keying the desired sequence number in the <b>Top</b> field. The item that has been assigned the closest sequence number will display at the top of this screen.</p> <p>Press <b>ENTER</b> to confirm an item number and quantity keyed on this screen. The Requisition/Purchase Order Item Detail Review Screen (p. 6-38) will display for the item to add to this requisition.</p> <hr/> <p><b>NOTE:</b> If you are adding or changing a return, and Warehouse Management is installed, the Location Reservations Screen will display. Refer to the Warehouse Management User Guide for further explanation of this screen and subsequent ones.</p> <hr/>  |

## Requisition/Purchase Order Special Charge Screen

|                       |               |   |            |
|-----------------------|---------------|---|------------|
| Req No: 100182        |               | Vendor: IC4000 GUADALJARA OFFICE SUPPLIES |            |
| <u>Special</u>        |               |   |            |
| <u>Chg Cd?</u>        | <u>Amount</u> | <u>Charge Desc</u>                        | <u>Tax</u> |
| /1                    | 234.98        | PS< Freight                               | Y          |
|                       | 24.35         | US\$                                      |            |
| F10=End    F12=Return |               |   |            |

This screen displays after pressing F6=SPEC CHG from the Requisition/Purchase Order Item Detail Entry Screen (p. 6-38) or from the Requisition/Purchase Order Item Summary Screen (p. 6-61). It also appears when selecting a special charge line for changes from the Requisition/Purchase Order Item Summary Screen (p. 6-61).

The screen appears blank when adding special charges; existing data displays for changes. The **Req No** field displays as when entering or changing requisitions and **PO No** displays when maintaining purchase orders.

Use this screen to enter and review special charges for a requisition/purchase order. Special charges may be required by your vendor for freight, handling, packaging, or other charges. Special charges may be specific to an item on the order (a line charge), or general for the entire order (an order charge).

Like item entries, special charges will display on the Requisition/Purchase Order Item Summary Screen (p. 6-61).

---

NOTE: When special charges are created through Special Charges Maintenance, each is assigned a two character code. The first character is a / or &. Special charges with the first character of / are order charges; special charges with the first character of & are line charges.

---

---

**Requisition/Purchase Order Special Charge Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Special Chg Cd     | <p>The code representing this special charge. You may define up to eighteen special charges through Special Charge Definitions Maintenance - up to nine order charges, and up to nine line charges. Order charges are applied to an entire purchase order; line charges are applied to an individual item on the purchase order.</p> <p>Key the special charge code for this requisition/purchase order or item.</p> <p>If the special charge is an order charge, the charge is applied to the entire order. If the special charge is a line charge, the charge is applied for the item on the order that is immediately before the line charge.</p> <p><i>Valid Values:</i> Any special charge code, /1 - /9 or &amp;1 - &amp;9, defined through Special Charges Information Maintenance (MENU POFILE)</p> <p>(A 1) Required</p> |
| Amount             | <p>Use this field to enter the amount of the special charge.</p> <p>Key the amount of the corresponding order or line charge. If the special charge is for a return requisition (R), key a negative amount in this field.</p> <p>When International Currency is installed, key the amount of the corresponding order or line charge in the vendor's trading currency. The company's local currency will display on the line below. The local equivalent displays only if the vendor's trading currency differs from the company's local currency. The currency symbol for each currency will display to the right of each value.</p> <p><i>Valid Values:</i> Cannot be zero</p> <p>(N 13,2) Required</p>  |
| Charge Desc        | <p>The description of the special charge. You may accept or override the default.</p> <p>Key a description of the special charge, if you wish to change the default description.</p> <p><i>Default Value:</i> The special charge description as defined through Special Charge Definitions Maintenance (MENU POFILE)</p> <p>(2 @ A 31) Required</p>   |

### Requisition/Purchase Order Special Charge Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Tax                | <p>Determines if this special charge is subject to sales tax. You may override or accept the default.</p> <p>Key <b>Y</b> if this special charge is subject to sales tax.</p> <p>Key <b>N</b> if this special charge is not subject to sales tax.</p> <p><i>Default Value:</i> The value for this special charge which indicates if it is taxable as defined through Special Charges Information Maintenance (MENU POFILE)</p> <p><i>Valid Values:</i> Y or N</p> <p>(A 1) Required</p> |
| F10=End            | <p>Press <b>F10=END</b> to end special charge entry for this requisition/purchase order. The End Requisition Screen (p. 6-92) or the End Purchase Order Changes Screen (p. 6-92) will display.</p> <hr/> <p>NOTE: If you press <b>F10=END</b> before pressing <b>ENTER</b> to confirm this special charge, the special charge is not saved for this requisition/purchase order.</p>   |
| F12=Return         | <p>Press <b>F12=RETURN</b> to return to the calling screen without entering a special charge or updating changes. Either the Requisition/Purchase Order Item Summary Screen (p. 6-61), or the Requisition/Purchase Order Item Detail Entry Screen (p. 6-38) will display.</p>   |
| F24=Delete         | <p>The <b>F24=DELETE</b> function key displays only if you selected to change an existing special charge.</p> <p>Press <b>F24=DELETE</b> to delete an existing special charge that was selected using <b>F13</b> through <b>F20</b> on the Requisition/Purchase Order Item Summary Screen (p. 6-61). The charge line is removed from the requisition/purchase order and will no longer display. You must press <b>F24=DELETE</b> a second time to confirm deletion.</p>                 |
| Enter              | <p>Press <b>ENTER</b> to confirm your selections. The screen from which this screen was selected will display.</p>  |

## Requisition/PO Entry Item Search/Browse Screen

| P Our Item No/Description |                                    | Cost      | Net Avail | Stk | Buy | Alt |

|                    |   |                |               |
|--------------------|---|----------------|---------------|
| ITEM SEARCH/BROWSE | Sel: _ . Qty: .....000. Below Min + ....% |                |               |
|                    | Find: .....                               |                |               |
|                    | Item No: A..... (? Ours)                  |                |               |
| F23=Speed Entry    | F4=Inquiries                              | F6=All Vendors | F11=Below Min |
| F2=Desc Left       | F5=Mfg No's                               | F9=Excl Suspnd | F12=Return    |

This screen displays after pressing F9=SEARCH from the Requisition/Purchase Order Item Detail Entry Screen (p. 6-38) or Requisition/Purchase Order Item Detail Review Screen (p. 6-38), or F9=SCH/BRWS on the Requisition/Purchase Order Item Summary Screen (p. 6-61).

Use this screen to search for and select items to order on this requisition/purchase order. The initial display shows the Item Search File (ISCHX) filtered by the vendor for the current requisition/purchase order. You may use item search criteria, and display items that are below (or a specified percentage above) their minimum stocking level to limit the items displayed. Additionally, you may access various Purchasing and Inventory Accounting inquiries for a single item.

NOTE: Many roll screens that show the item number and description will display the item description on a separate line or the item and description on the same line, depending on the system options. This display of single or double line per item can be changed by pressing F24=DOUBLE LINE / F24=SINGLE LINE. F24=DOUBLE LINE will expand a collapsed screen or F24=SINGLE LINE will collapse an expanded screen.

NOTE: This is a roll screen. More... appears at the bottom of a roll screen to indicate that more data is available for viewing. Last appears at the bottom of the last screen of data. To scroll through information on roll screens press:

- \* PAGE DOWN or SHIFT-ROLL FWD or F7=PAGE DOWN to display the next screen
- \* PAGE UP or SHIFT-ROLL BACK or F8=PAGE UP to display the previous screen.

**Requisition/PO Entry Item Search/Browse Screen Fields and Function Keys**

| Field/Function Key   | Description   |
|--|---|
| Reference Number   | Used to reference an item. Key this number in the <b>Sel</b> field to select the desired item to include on this requisition/purchase order.<br>Display   |
| P  | This column indicates if the vendor on the current requisition/purchase order is the primary vendor for the corresponding item. The primary vendor for this item is defined through Item Balance Maintenance (MENU IAFILE).<br>The letter <b>P</b> displays in this column if the vendor for whom the current requisition/purchase order has been created is defined as the primary vendor for this item.<br><br>NOTE: For <b>P</b> to display in this column, this vendor must have been defined for this item's warehouse record through Item Balance Maintenance (MENU IAFILE). If a primary vendor has not been specified for the Item Balance File (ITBAL) record, the vendor defined for the Item Master File (ITMST) record through Item Master Maintenance (MENU IAFILE) is the primary vendor. |
|  | If the vendor for whom the current requisition/purchase order has been created is not the primary vendor for the item displayed, this field is blank.<br>Display  |
| Our Item No/<br>Description<br>Mfg Item No/<br>Description | This field displays the items resulting from the item search criteria (see <b>Below Min +</b> , <b>Find</b> , and <b>Item No</b> ) You may use the following function keys to show different item attributes in this column:<br><ul style="list-style-type: none"> <li>• F2=DESC LEFT / F2=DESC RIGHT / F2=ITEM &amp; DESC to toggle the display of the item number and item description.</li> <li>• F5=MFG NO's / F5=OUR NO's to toggle the manufacturer's item number/description (Mfg item), or the stocking item number/description (Our item).</li> </ul> Display  |

---

**Requisition/PO Entry Item Search/Browse Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| Below Min +        | <p>Use this field in conjunction with F11=BELOW MIN / F11=ALL ITEMS function key to display only the items that are within a percentage of their minimum balance. You specify that percentage in this field. The item's minimum balance is either calculated by Inventory Management &amp; Planning, Advanced Inventory Management, or is keyed for an item and warehouse through Item Balance Maintenance (MENU IAFILE).</p> <p>Key the percentage of minimum balance for which items, whose quantities fall within that percentage, will display on this screen.</p> <p><b>EXAMPLE:</b> Assume that the minimum balance for Item-A has been determined to be 950 cases. There are currently 975 cases of Item-A available. If you press F11=BELOW MIN from this screen to display items that are below their minimums, Item-A will not display since its quantity of items available is above its minimum balance.</p> <p>You may, instead, select to display items that are within 2% of their minimum balance by keying 2 in this field. Item-A still will not display since it is not within 2% of its minimum balance (<math>1 - (950/975) * 100 = 2.6\%</math>).</p> <p>However, if you select to display items that are within 3% of their minimum balance by keying 3 in this field, then Item-A will display.</p> <p>Key 99 to display items within any percentage over 99% of their minimum balance. Items that are within 100%, 150%, 500%, and up of their minimum balances will display</p> <p>(N 2,0) Optional</p> |
| Find               | <p>Use this field to search for an item using one or more words that closely match the item for which you are searching. The words you key may be up to 15 characters long and may appear in any order. Key the most unique words to improve the speed of the search. Leave this field blank if you would like to search on an item class.</p> <p>To search for manufacturer item numbers, prefix the criteria you enter with <b>M/</b>. The system will search based on the Vendor/Item File (VNITM) valid manufacturer item number.</p> <p>To search for customer item numbers, prefix the criteria you enter with <b>C/</b>. The system will search based on the Item/Customer Cross Reference File (IAXRF) valid customer item numbers.</p> <p>To search for UPC cross references, prefix the criteria you enter with <b>U/</b>. The system will search based on the Universal Product Code File (ITUPC) for valid UPC cross references.</p> <p>To search for GTIN cross references, prefix the criteria you enter with <b>G/</b>. The system will search based on the Global Trade Item Number File (ITGTIN) for valid GTIN cross references.</p> <p>(A 40) Optional</p>   |

---

**Requisition/PO Entry Item Search/Browse Screen Fields and Function Keys**

---

| Field/Function Key                              | Description  |
|---|--|
| Item No   | <p>This field may be used in addition to, or in place of, entering search criteria in the <b>Find</b> field to further limit the items to display.</p> <p>Key a partial item number. All items that match the characters of the item number keyed in this field will display. This is helpful if you recall part of an item number, but not the entire number.</p> <p>For information on entering search criteria, refer to the Cross Applications User Guide.</p> <p>Key a <b>?</b> to filter the items on the screen to all items that have vendor/item records defined for the vendor of the requisition.</p> <hr/> <p>NOTE: You cannot key <b>?</b> in this field if you have selected to display items for “all vendors” on this screen using the <b>F6=ALL VENDORS / F6=THIS VENDOR</b> function key. Also note, if accessed for a warehouse transfer order, the Item Search/Browse Screen will include all items whose primary vendor in the Item Master File matches the warehouse transfer vendor, not just those which have vendor/item records in the Vendor/Item File. This is due to the fact that vendor/item records are not created for warehouse transfer vendors.</p> <hr/> <p>(A 27) Optional</p> |
| F2=Desc Left<br>F2=Desc Right<br>F2=Item & Desc | <p>The <b>F2=DESC LEFT / F2=DESC RIGHT / F2=ITEM &amp; DESC</b> toggle function exists only if you selected not to normally display both description lines [as selected in System Options Maintenance (MENU XAFIL) or with the <b>F24=DOUBLE LINE / F24=SINGLE LINE</b> function key].</p> <p>Press <b>F2=DESC LEFT</b> to show the “left window” of the item description starting with the left-most word in the description.</p> <p>Press <b>F2=DESC RIGHT</b> to show the “right window” of the description so the last word in the description will appear at the end of the description field. The left and right windows will be the same if the entire description can fit on the screen.</p> <p>Press <b>F2=ITEM &amp; DESC</b> to show the complete item number and as much of the description as will fit (two blanks separate the fields.) The item number is high intensity to distinguish it from the description.</p>  |
| F4=Inquiries                                    | <p>Press <b>F4=INQUIRIES</b> to access various inquiries for each of the items displayed. The Requisition/PO Entry Item Search Inquiry Selections Screen (p. 6-77) displays.</p>   |

---

**Requisition/PO Entry Item Search/Browse Screen Fields and Function Keys**

---

| Field/Function Key              | Description  |
|---------------------------------|--|
| F5=Mfg No's / F5=Our No's       | <p>The F5=MFG NO'S / F5=OUR NO'S function key is used as a toggle to display either the manufacturer's item number or the stocking item number in the <b>Our Item No/Description / Mfg Item No/Description</b> column.</p> <p>Press F5=MFG NO'S to display the manufacturer's item number and description in the <b>Mfg Item No/Description</b> column.</p> <p>Press F5=OUR NO'S to display the stocking item number and description in the <b>Our Item No/Description</b> column.</p>   |
| F6=All Vendors / F6=This Vendor | <p>The F6=ALL VENDORS / F6=THIS VENDOR function key is used as a toggle to display the results of the item search for the vendor specified on the current requisition/purchase order only, or for all vendors.</p> <p>Press F6=ALL VENDORS to display the results of the item search for all vendors. Items assigned to different vendors through Vendor/Item Information Maintenance (MENU POFILE) that meet the search criteria are displayed. However, when keying an order you may only select an item that is for the current vendor. The <b>Vendor</b> column will display on this screen.</p> <p>Press F6=THIS VENDOR to display the results of the item search for the vendor for whom the current requisition/purchase order has been created. Only items for the selected vendor meeting the search criteria are displayed. You may select any of these items when keying items on the requisition/purchase order. The <b>Vendor</b> column will not display on this screen.</p> |
| F7=Page Down / F8=Page Up       | <p>More... appears at the bottom of a roll screen to indicate that more data is available for viewing. Last appears at the bottom of the last screen of data. On some roll screens, F7=PAGE DOWN and F8=PAGE UP are available for use but do not display.</p> <p>Use the F7=PAGE DOWN to display the next screen of information on a roll screen. The PAGE DOWN or SHIFT-ROLL FWD function keys perform the same task.</p> <p>Use the F8=PAGE UP to display the previous screen of information on a roll screen. The PAGE UP or SHIFT-ROLL BACK function keys perform the same task.</p>   |

**Requisition/PO Entry Item Search/Browse Screen Fields and Function Keys**

---

| Field/Function Key                 | Description   |
|------------------------------------|---|
| F9=Excl Suspnd /<br>F9=Incl Suspnd | <p>The F9=EXCL SUSPND / F9=INCL SUSPND function key is used as a toggle to display the results of the item search for items that are or are not suspended.</p> <p>After entering criteria in either the <b>Find</b> or <b>Item No</b> fields, press F9=EXCL SUSPND to display the results of the item search. Items that meet the search criteria are displayed, excluding those items that are suspended.</p> <p>After entering criteria in either the <b>Find</b> or <b>Item No</b> fields, press F9=INCL SUSPND to display the results of the item search. Items that meet the search criteria are displayed, including those that are suspended.</p> <hr/> <p>NOTE: The default value of the F9=EXCL SUSPND / F9=INCL SUSPND function key is defined through Suspended Defaults Maintenance (MENU XAFIL2) for the Suspended Items <b>Search (REQ/PO)</b> field.</p> <hr/>   |
| F11=Below Min /<br>F11=All Items   | <p>The F11=BELOW MIN / F11=ALL ITEMS function key is used as a toggle to display only the items that are below (or within a percentage of) their minimum balances, or to display all items regardless of their minimum balances.</p> <p>Press F11=BELOW MIN to display the items (of those currently displayed) that have an available quantity that is less than their minimum balance. Using the <b>Below Min +</b> field, you may also display those items that have an available quantity within a specified percentage of their minimum balances. Also, when you press F11=BELOW MIN, the <b>Net Avail</b> column will change and display the <b>Order Qty</b> field.</p> <p>Press F11=ALL ITEMS to display all items meeting the item search criteria on this screen, regardless of their minimum balances. Also, when you press F11=ALL ITEMS, the <b>Order Qty</b> column will change and display the <b>Net Avail</b> field.</p> <hr/> |
| F12=Return                         | <p>Press F12=RETURN to return to the previous screen. When keying items on a requisition/purchase order, you must press F12=RETURN to terminate the item search.</p> <hr/>  |
| F23=Speed Entry /<br>F23=Reg Entry | <p>Press F23=SPEED ENTRY / F23=REG ENTRY to enter transactions without displaying the Requisition/Purchase Order Item Detail Review Screen (p. 6-38) after entering each item, provided that there are no errors in the entry. This makes the process of entering items for an order faster. Since this key toggles regular entry from speed entry, press F23=SPEED ENTRY / F23=REG ENTRY when in speed entry to resume regular entry mode.</p> <p>If you leave the Requisition/PO Entry Item Search/Browse Screen and return to any other screen, regular entry mode is reset upon return here.</p> <hr/>  |

### Requisition/PO Entry Item Search/Browse Screen Fields and Function Keys

| Field/Function Key                   | Description   |
|--------------------------------------|---|
| F24=Double Line /<br>F24=Single Line | <p>F24=DOUBLE LINE / F24=SINGLE LINE is non-display.</p> <p>Press F24=DOUBLE LINE / F24=SINGLE LINE to toggle between double line mode and single line mode. The default mode of this screen is based on the selection to <b>Show 2nd Desc Line</b> as determined in System Options Maintenance (MENU XAFILE).</p> <p>In single line mode, the initial display shows the item number field based on the <b>Longest Item Length</b> field specified in System Options (MENU XAFILE) followed by the beginning of the item description.</p> <p>In double line mode, the two lines of item description are displayed below the full display of the item number field.</p>  |
| Enter                                | <p>Press ENTER with no selection criteria to redisplay the screen and show all items based on the F6=ALL VENDORS / F6=THIS VENDOR function key.</p> <p>Press ENTER to with search / selection criteria confirm your selections. The items meeting the criteria keyed in the <b>Find</b>, <b>Item No</b>, or <b>Below Min +</b> fields will display on this screen.</p> <p>If you keyed a reference number in the <b>Sel</b> field and you are in Regular Entry mode, the Requisition/Purchase Order Item Detail Review Screen (p. 6-38) will display for the selected item.</p> <p>If you keyed a reference number in the <b>Sel</b> field and you are in Speed Entry mode, the item is edited. If there are no warning or halt error messages, the item is added to the order and you remain on this screen for additional item search/entry. If there are warning or halt error messages the Requisition/Purchase Order Item Detail Review Screen (p. 6-38) will display for the selected item.</p> |

Inquiry Selections: I - Item Inquiry  
 Y - Vendor/Item Information  
 L - Vendor List  
 B - Buying Information

F12=Return

This screen displays after pressing F4=INQUIRIES from the Requisition/PO Entry Item Search/Browse Screen (p. 6-69). Use this screen to select an item and research more information about the selected item.

NOTE: Many roll screens that show the item number and description will display the item description on a separate line or the item and description on the same line, depending on the system options. This display of single or double line per item is based on the view selection on the Requisition/PO Entry Item Search/Browse Screen (p. 6-69).

NOTE: This is a roll screen. More... appears at the bottom of a roll screen to indicate that more data is available for viewing. Last appears at the bottom of the last screen of data. To scroll through information on roll screens press:

- \* PAGE DOWN or SHIFT-ROLL FWD to display the next screen
- \* PAGE UP or SHIFT-ROLL BACK to display the previous screen.

**Requisition/PO Entry Item Search Inquiry Selections Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Inquiry Selections | <p>Select a line by keying an Inquiry Selections value to access various inquiries for each of the items displayed. The <b>Reference Number</b> field is replaced with a single character field in which you may key one of the following:</p> <ul style="list-style-type: none"> <li>• Key <b>I</b> to access the Item Inquiry for the corresponding item. This inquiry may also be called through Item Inquiry (MENU POMAIN).</li> <li>• Key <b>V</b> to access Vendor/Item Information for the corresponding item. This information may also be called through Vendor/Item Information Inquiry (MENU POMAIN).</li> <li>• Key <b>B</b> to access Buying Information (if Inventory Management &amp; Planning or Advanced Inventory Management is installed) for the corresponding item. This information may also be called by pressing <b>F11=BELOW MIN / F11=ALL ITEMS</b> from the Requisition/Purchase Order Item Detail Review Screen (p. 6-38). For details about this buying information appearing on the Buying Information Screen (and other screens accessed via this screen), refer to Interactive Forecasting (MENU IMMAIN) in the Inventory Management &amp; Planning User Guide.</li> <li>• Key <b>L</b> to access the Vendor List of all vendors to whom this item has been assigned through Vendor/Item Information Maintenance (MENU POFILE) on the Vendor/Item Information Summary Screen (p. 19-3). You may select one of the vendors on this screen to display vendor/item information.</li> </ul> |
|                    | (1 A) Optional  |
| P                  | <p>This column indicates if the vendor on the current requisition/purchase order is the primary vendor for the corresponding item. The primary vendor for this item is defined through Item Balance Maintenance (MENU IAFILE). The letter <b>P</b> displays in this column if the vendor for whom the current requisition/purchase order has been created is defined as the primary vendor for this item.</p>   |
|                    | <p>NOTE: For <b>P</b> to display in this column, this vendor must have been defined for this item's warehouse record through Item Balance Maintenance (MENU IAFILE). If a primary vendor has not been specified for the Item Balance File (ITBAL) record, the vendor defined for the Item Master File (ITMST) record through Item Master Maintenance (MENU IAFILE) is the primary vendor.</p>   |
|                    | <p>If the vendor for whom the current requisition/purchase order has been created is not the primary vendor for the item displayed, this field is blank.</p>  |
|                    | Display   |

    .....
    .....
    F12=Return

```

This screen displays after pressing F14=ORD NOS from the Requisition/Purchase Order Item Detail Review Screen (p. 6-38). Use this screen to identify the order numbers of up to 15 customer orders that have been backordered, and are waiting for the item keyed on the Requisition/Purchase Order Item Detail Entry Screen (p. 6-38).

When this item is received and posted through Purchasing or, if applicable, Warehouse Management, the Backorder Release Report (p. 24-9) will print indicating the order numbers keyed on this screen.

---

NOTE: If the item is on a special order, the company number and order number will be updated automatically on this screen.

---

### Assign Customer Order Numbers Screen Fields and Function Keys

F5=Refresh F10=Continue

This overlay screen displays after pressing F15=LND CST on the Requisition/Purchase Order Item Detail Review Screen (p. 6-38). Use this screen to access and, if desired, modify landing factor information for the requisition/purchase order line item displayed on the Requisition/Purchase Order Item Detail Review Screen (p. 6-38).

When landing codes are added to the Vendor/Item/Price File (VIPRC) after the item has been added to a purchase order, press F5=REFRESH to attach those values to the item in the purchase order.

Also use this screen to view or override landing factor amounts for line items. Overall access to allow overrides is determined via Warehouse Numbers Maintenance (MENU IAFILE). Note that an individual line item's landing factors cannot be overridden if a group override [refer to the End Requisition/Purchase Order Landing Costs Screen (p. 6-106)] for all items in a requisition/purchase order has occurred. Likewise, a requisition/purchase order override cannot occur for any landing factors that have had individual line item overrides performed.

The **Landing Cost(s)** and **Landed Cost** values displayed are calculated in accordance with the values keyed in the **Factor** and **Mth** fields based on the total quantity ordered.

---

NOTE: Landing costs are not available for returns.

---

**Example:** Landing Costs

**Assumption:** The cost for item A150 is \$5.00, and a quantity of 10 is requested.

**Procedure:** On this screen, key a landing cost factor of 2.000 and a calculation method of % (for percentage of extended cost) for the landing factor 1. Press **ENTER**.

**Results:** The landing cost 1 value reflects an amount equal to 2% of the total value of the line item; in other words, a value of \$1.00.

**Procedure:** Change the calculation method to U (for all units) for the landing cost 1 and press **ENTER**.

**Results:** The landing cost 1 value reflects an amount equal to the 2.000 factor multiplied by the number of units expected to be received (10): in other words, a value of \$20.00.

**Procedure:** Change the calculation method to C (for a specified currency amount) and the factor to 12 for the landing cost 1 and press **ENTER**.

**Results:** The landing cost 1 value reflects an amount equal to the 12 factor: in other words, a value of \$12.00.

---

**Requisition/Purchase Order Item Landing Costs Screen Fields and Function Keys**

| Field/Function Key  | Description   |
|---------------------|---|
| (Landing Factor(s)) | This field displays the landing factor descriptions defined through Warehouse Numbers Maintenance (MENU IAFILE).  |
|                     | <p>NOTE: If specific landing cost factors are not specified, but landing factors are used [as determined through Warehouse Numbers Maintenance (MENU IAFILE)], the display on this screen will show all zeros for the landing costs.</p>  |
|                     | Modifications to individual landing factors for a line item on this screen may be made only if both the following are true:   |
|                     | <ul style="list-style-type: none"> <li>• Overrides are allowed for that landing factor as determined through Warehouse Numbers Maintenance (MENU IAFILE).</li> <li>• An override for the indicated landing factor has not been performed on a group level. Refer to the End Requisition/Purchase Order Landing Costs Screen (p. 6-106). Note that likewise, if a landing factor override is performed on this screen for a line item, a group override for all items in the requisition cannot be performed for that landing factor.</li> </ul> |
|                     | Display   |

---

---

**Requisition/Purchase Order Item Landing Costs Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| Landing Cost(s)    | <p>A line item's landing costs are those costs incurred due to specific situations (overhead, duty, etc.), whereas a line item's landed cost is the total cost of that line item calculated as the vendor's price plus all individual landing costs.</p> <p>The <b>Landing Cost(s)</b> values displayed in this field are calculated in accordance with the values keyed in the <b>Factor</b> and <b>Mth</b> fields.</p> <p>When International Currency is installed, these fields display in the applicable currency defined for each landing code. If landing cost(s) are calculated in currencies different from the company's local currency, these fields may be toggled with the <b>F11=LOC CUR / F11=TR CUR</b> key to display landing cost(s) in the trading currency with the applicable currency symbol displayed to the right of each cost, or in the company's local currency with the local currency symbol displayed to the right of each cost.</p> |

|        |   |
|--------|---|
| Factor | <p><b>NOTE:</b> This field is display-only for any landing factor whose values (<b>Factor</b> or <b>Mth</b>) cannot be overridden because either it was defined as not allowing overrides through Warehouse Numbers Maintenance (MENU IAFILE), or because a group override for the specific landing factor has occurred [refer to the End Requisition/Purchase Order Landing Costs Screen (p. 6-106)].</p> <hr/> <p>Key override values to be used with the calculation methods for each of the landing costs. Pressing <b>ENTER</b> will cause the recalculation of the landing costs values, in accordance with the factor values keyed here and in the <b>Mth</b> field. The default landing factor amounts are assigned to specific landing codes. Landing codes are assigned to an item for a vendor through Vendor/Item Information Maintenance (MENU POFILE).</p> <p>When International Currency is installed, if the trading currency differs from the company's local currency, these fields may be toggled with the <b>F11=LOC CUR / F11=TR CUR</b> key to display values in the trading currency or in the company's local currency.</p> |
|--------|---|

---

**Important**

When **F11=TR CUR** key displays and local currency values are displayed, these fields will become display-only. When keying factors using a method of **C** for currency, you must key these amounts in the applicable trading currency. If you have pressed **F11=LOC CUR** to display local currency values, you must return to a display of trading currency values before keying new amounts.

This screen is displayed when you press F10=END from the Requisition/Purchase Order Maintenance Header Screen (p. 6-13), Requisition/Purchase Order Item Detail Entry Screen (p. 6-38), Requisition/Purchase Order Item Detail Review Screen (p. 6-38), Requisition/Purchase Order Item Summary Screen (p. 6-61) or the Requisition/Purchase Order Special Charge Screen (p. 6-66).

This screen displays summarized order data and allows you to approve the requisition/purchase order.

## Approval Code Authorizations

Regardless of the **Use Approval Code Authorization for Req/PO** field, a value is required in the **Approval Code** field required to print a Purchase Order.

If the **Use Approval Code Authorization for Req/PO** field is set to **Y** through Purchasing Company Options Maintenance (MENU XAFIL2), the value keyed in the **Approval Code** field must be an approval code defined for your user ID through Approval Codes Maintenance (MENU POFIL2). The user logged onto Distribution A+ must be the user ID assigned to the **Approval Code** through Approval Codes Maintenance (MENU POFIL2). If the user IDs do not match, the requisition/purchase order will not be approved. Once a purchase order has been approved, if an **Override Password** has been defined for an **Approval Code** through Approval Codes Maintenance (MENU POFIL2), this password can be used to override an approval code when changes are being made to an approved purchase order by a user other than the original approver. This allows you to approve and exit an approved purchase order on the End Order Screen even though the approval code does not match the current user's user ID.

The **Approval Amount** field displays the approved value for this requisition/purchase order. When you key an approval code in the **Approval Code** field and press **ENTER**, the total requisition/purchase order value will default into the **Approval Amount** field. You can key a different amount, within the limits of the **Maximum Approval Amount** defined for the approval code through Approval Codes Maintenance (MENU POFIL2). Additionally, through Approval Codes Maintenance (MENU POFIL2), you have the option to determine if the overriding of an approved purchase order (if being overridden) will validate (on this screen) the purchase order amount against the maximum approval amount defined for the approval code.

If a change is made to the requisition/purchase order that changes the total requisition/purchase order value, the following applies:

- If the user ID of the user making the changes is the same as the user ID associated with the approval code, the amount in the approval amount field will change automatically, as long as the new value does not exceed the **Maximum Approval Amount** defined for the approval code through Approval Codes Maintenance (MENU POFIL2). If the new total requisition/purchase order value exceeds the maximum approval amount, the changes will not be approved. You can either enter a different approval code with a greater approval amount or blank out the approval code and leave the requisition/purchase order unapproved. A user with a greater approval amount must log on and enter an approval code

If a different user entered an approval code and you want to change the requisition/purchase order, you can do one of the following:

- Change the requisition/purchase order within the approval amount value defined by the approval code. If your **Maximum Approval Amount** defined through Approval Codes Maintenance (MENU POFIL2) is less than or equal to the approval amount for the requisition/purchase order, this is your only option.
- Change the approval code fields to your approval code and amount and press **F2=REVIEW** and then change the item information on the requisition/purchase order. Use this method if you want to increase the approval amount. You can use this method only if your **Maximum Approval Amount** defined through Approval Codes Maintenance (MENU POFIL2) is greater than the former **Approval Amount** value.
- Have a user with override ability enter their approval code and press **ENTER**. The override password can be entered and it can be determined if the overriding of an approved purchase order will validate the purchase order amount against the maximum approval amount defined for the approval code.

### End Requisition Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| EDI PO             | <p>This field displays only if the EDI module is installed. Since Purchase Orders may be printed and/or sent via EDI or FAX, it is required to identify the method(s) to be used.</p> <p>A <b>Y</b> indicates that an EDI Outgoing Purchase Order (850) document will be sent to the vendor for this purchase order.</p> <p>An <b>N</b> indicates that EDI Outgoing Purchase Order (850) documents will not be sent.</p> |

---

### Important

When sending a Purchase Order through EDI, it is important to remember that even if the **Prt** field is **N**, indicating a hard-copy PO is not to be printed, the act of “printing” the Purchase Order via the **F6=PRT/FAX PO** function key or the Purchase Orders (MENU POMAIN) option must still occur. It is this act of “printing” the Purchase Order in either of these ways that updates the necessary files to complete PO processing through Distribution A+.

Also, be sure to refer to the **Prt** field description for details about PO printing options and requirements for printing POs as related to EDI.

---

*Default Value:* The value defined for the selected vendor in the **EDI Purchase Orders** field in Vendors Maintenance (MENU POFIELD).

(A 1) Required

---

## End Requisition Screen Fields and Function Keys

| Field/Function Key                | Description  |
|-----------------------------------|--|
| F6=Prt/Fax PO<br>F6=Re-Prt/Fax PO | <p>The F6=PRT/FAX PO function key displays only if you have allowed Purchase Orders to be printed from this screen, as determined through Purchasing Options Maintenance (MENU XAFILE). This key will also only work if the PO has an <b>Approval Code</b>, and no restriction criteria to print the PO is set in Purchasing Options Maintenance.</p> <p>Press F6=PRT/FAX PO to submit the Purchase Order for hardcopy printing, EDI, FAX, or e-mail. The values keyed in the <b>Prt</b>, <b>EDI</b>, <b>Fax</b>, and <b>Eml</b> fields determine which method(s) will be used.</p> <hr/> <p>NOTE: You will be restricted from printing the PO, when you press F6=PRT/FAX PO, if there are any item(s) from a special order that is currently on (or eventually will be on) a Credit (CR) or Slow Pay (SP) hold and the Purchasing options (MENU XAFILE) are set to not allow the PO print for such holds.</p> <hr/> <p>After you press F6=PRT/FAX PO, the Report Options Screen will display (refer to Cross Applications User Guide for details about this screen). You will not, however, be able to change the <b>Submit to Batch</b> field on that screen since this job is submitted to the Transaction Processor.</p> <p>After your selections on the Report Options Screen, the job is submitted to the Transaction Processor. If, however, the interface is on between General Ledger and Inventory (as determined through Company Name Maintenance) and you requested a hardcopy, EDI or FAX printing for a PO return, the G/L Posting Date Selection Screen (p. 23-15) will display before the job is submitted to the Transaction Processor. Refer to Purchase Orders (MENU POMAIN) for details about the G/L Posting Date Selection Screen (p. 23-15).</p> <hr/> <p>NOTE: If FAX is being used to send this particular PO as an interactive job [as opposed to sending a batch job through Purchase Orders (MENU POMAIN)], a Fax Cover Sheet Screen will display. On that screen, you can override FAX data related to this vendor with data from the installed fax system's (e.g., QUADRANT's FastFax) files. Refer to the description of the FAX Cover Sheet Screen, as provided in the FAX User Guide.</p> <hr/> |

### Important

Each print job submitted with this function key creates a separate Transaction Processor job; unlike printing POs through Purchase Orders (MENU POMAIN), which creates a single Transaction Processor batch job for all POs. The result is that the queue space is under-utilized and valuable processing time is inefficiently used.

```

The End Requisition/Purchase Order Landing Costs Screen appears after you press **F5=LND CST** on the End Requisition Screen (p. 6-92) or from the End Purchase Order Changes Screen (p. 6-92).

The End Requisition/Purchase Order Landing Costs Override Screen appears when you press **F5=OVERRIDE** on the End Requisition/Purchase Order Landing Costs Screen. Use this screen to override landing cost values for the entire requisition/purchase order and to distribute the totals to the individual

---

items in the requisition/purchase order. Overall access to allow overrides at the group level is determined through Warehouse Numbers Maintenance (MENU IAFILE) in Inventory Accounting.

---

NOTE: Any group ("G") level landing costs overridden on this screen should be estimated costs (not fixed). The group level landing costs are redistributed according to the value received during receipt processing.

---

If you key a group override for a landing factor, you can change the landing cost on this screen. The method of distribution keyed here determines how the override value is to be distributed among each of the line items that was used in calculating the original landing cost.

### Example:

**Assumption:** The total weight of line item 1 is 10 pounds. The total weight of line item 2 is 30 pounds. The total weight of line item 3 is 60 pounds. The displayed freight landing cost for all three lines is \$15.00. You wish to override the freight landing cost to reflect \$30.00 and desire to distribute the \$30.00 among the three line items according to their weight.

**Procedure:** Press the F5=OVERRIDE key to make the change. Key the \$30.00 in the Freight **Landing Cost** field and key a **W** (for weight) in the **Dst** field. Press ENTER.

**Results:** While this screen simply appears updated with the new values, the freight landing costs of each of the three items has been modified in the following manner:

- Weight of line item 1 (10 pounds) is 10% of the total weight of 100 pounds. Therefore, the amount equal to 10% of the total \$30.00 fee is attributed to line item 1; in other words, a value of \$3.00.
- Weight of line item 2 (30 pounds) is 30% of the total weight of 100 pounds. Therefore, the amount equal to 30% of the total \$30.00 fee is attributed to line item 2; in other words, a value of \$9.00.
- Weight of line item 3 (60 pounds) is 60% of the total weight of 100 pounds. Therefore, the amount equal to 60% of the total \$30.00 fee is attributed to line item 3; in other words, a value of \$18.00.

If you were to review each individual item's Landing Cost information on the Requisition/Purchase Order Item Landing Costs Screen (p. 6-87), you would see that the landing factor line for Freight was changed to the newly calculated landing cost amount, the factor value is zero, and the method has been set to **G**.

---

**End Requisition/Purchase Order Landing Costs Screen and End Requisition/Purchase Order Landing Costs Override Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Landing Cost       | <p>The landing cost values displayed here are a calculated combination of those defined for each line item in the requisition/purchase order. The number of landing factors used in calculating the landing costs is based on the number of landing factors selected for use for the requisition/purchase order's receiving warehouse through Warehouse Numbers Maintenance (MENU IAFILE).</p> <p>When International Currency is installed, these <b>Landing Cost</b> fields display in the applicable currency defined for each landing factor associated with the requisition. If landing cost(s) are calculated in currencies different from the company's local currency, these fields may be toggled with the F11=LOC CUR / F11=TR CUR key to display landing cost(s) in the trading currency with the applicable currency symbol displayed to the right of each cost, or in the company's local currency with the local currency symbol displayed to the right of each cost.</p> <p>This field is also used to key group level overrides. To key overrides in this field, press F5=OVERRIDE to begin data entry mode. Once in data entry mode, key the desired landing factor values (the field is no longer just a cost amount). You will be required to also key a method of distribution (<b>Dst</b>). Note that only those landing factors that can be overridden will change from display mode to data entry mode.</p> <p>When International Currency is installed, if you are keying override landing factors values based on currency (V for value), you must key these amounts in the applicable trading currency.</p> <p>(N 16,2) Display/Required</p> |

| Field/Function Key | Description  |
|--------------------|--|
| Dst                | <p>The available distribution methods are as follows:</p> <p><b>V</b>: Key <b>V</b> to distribute the cost to the line items according to the extended cost (excluding landing costs) of those items.</p> <p><b>W</b>: Key <b>W</b> to distribute the cost to the line items according to the weight of those items based on the purchasing buying unit of measure (<b>BUY</b>). Purchase orders for quantities in the alternate purchasing unit of measure (<b>ALT</b>) will be converted accordingly. The calculated landing cost will reflect the total weight of all items included in the line.</p> <p><b>S</b>: Key <b>S</b> to distribute the cost to the line items according to the size of those items per size (cube) based on the purchasing buying unit of measure (<b>BUY</b>). Purchase orders for quantities in the alternate purchasing unit of measure (<b>ALT</b>) will be converted accordingly. The calculated landing cost will reflect the total cubic space for all units in the line item.</p> <p><b>Z</b>: Key <b>Z</b> if no landing cost is to be calculated. Each item's applicable landing factor field will be zeroed out.</p> <p><b>I</b>: The <b>I</b> code may denote that the total landing cost amount has or will be calculated based on the individual items landing cost amounts. The <b>I</b> code can also be used to recalculate or correct a group override.</p> <p>Use this code if you make a mistake in a <b>Landing Cost</b> field. Before pressing <b>ENTER</b> to accept the erroneous data, blank out the data, key <b>I</b> in this <b>Dst</b> field, and then press <b>ENTER</b>. The <b>Landing Cost</b> field will be replaced with the data originally displayed prior to the mistake. This data is obtained by re-reading the individual item landing cost data as it existed immediately prior to the mistake. In other words, if changes had been made to individual records prior to your accessing this screen, those changes would be considered. This differs from a "recalculate" function such as that achieved by blanking out this field and the distribution method which actually recalculates values, as opposed to simply re-reading what has been keyed to this point.</p> <p>(<b>blank</b>): Blank out the <b>Landing Cost</b> field and this <b>Dst</b> field to recalculate the landing costs for the items by resetting all line item landing costs to their default landing factor values. These values will then be totaled to calculate the total landing cost amount. Blanking out this field differs from using the <b>I</b> code in that line item landing costs will actually be recalculated and updated; the <b>I</b> code only re-reads the line item landing costs to redisplay the total on this screen.</p> <p><i>Valid Values:</i> V, W, S, Z, I, blank</p> <p>(A 1) Required</p> |

## End Requisition/Purchase Order Landing Costs Screen and End Requisition/Purchase Order Landing Costs Override Screen Fields and Function Keys

| Field/Function Key   | Description   |
|--|---|
| (Total Landing Cost)   | <p>This field displays the total amount of all the individual landing factor costs that will be added to the items/purchase order receipt group during the receiving process.</p> <p>If you keyed overrides to the group level landing costs, the total landing cost will be recalculated and redisplayed when you press <b>ENTER</b>.</p>  |
| <h3>Important</h3> <p>This field displays for landing cost(s) calculated in trading currencies only if all landing factor costs are in the same currency. If the landing factor cost(s) are in mixed currencies, zeros will display in this field, and you must press <b>F11=LOC CUR</b> to display local currency equivalents in order to review this total. The company's local currency symbol will display to the right of all landing cost(s), and the total will appear in the company's local currency.</p> |   |
| <p>Display</p>   |   |
| F5=Override  | <p>The <b>F5=OVERRIDE</b> key only displays on the End Requisition/Purchase Order Landing Costs Screen view.</p> <p>Press <b>F5=OVERRIDE</b> to change from display mode to data entry mode to modify the landing cost and distribution values if the landing cost is defined as allowing group level overrides. Group level overrides are determined through Warehouse Numbers Maintenance (MENU IAFILE) in Inventory Accounting.</p> <p>Note that any group ("G") level landed costs overridden on this screen should be estimated costs (not fixed). The group level landed costs are redistributed according to the value received during receipt processing.</p> <p>To account for this, overrides for landing costs are available when entering receipts.</p> |
| F10=Continue   | <p>Press <b>F10=CONTINUE</b> to return to the End Requisition Screen (p. 6-92) if you accessed this screen from this option. Or, press <b>F10=CONTINUE</b> to return to the End Purchase Order Changes Screen (p. 6-92) if you accessed this screen from Req/PO Inquiry (MENU POMAIN) or the Vendor Order/Shipments Inquiry (MENU POMAIN).</p> <p>If you pressed <b>F5=OVERRIDE</b> and made changes, the changes will be updated to the file when you press <b>ENTER</b>. If you do not press <b>ENTER</b> before you continue, the override values will not be saved.</p>   |

**End Requisition/Purchase Order Landing Costs Screen and End Requisition/Purchase Order Landing Costs Override Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| Enter              | Press <b>ENTER</b> to accept and recalculate values on this screen and for the individual line items. The total landing cost will be recalculated and displayed for verification. If the new total is correct, press the <b>F10=CONTINUE</b> key to continue. |

---

---

This option is used to print the Requisition Edit List (p. 7-5). Use this report to validate and verify requisitions keyed through Enter or Change Requisitions (MENU POMAIN) or created automatically through Special Order Automatic Req Creation (MENU POMAST).

---

## Requisition Edit List

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title   | Purpose  |
|---|--|
| Print Requisitions Edit List Selection Screen | Use to select the requisitions that will print on the Requisition Edit List (p. 7-5).                                |
| Requisition Edit List                         | Prints the requisitions meeting the criteria selected on the Print Requisitions Edit List Selection Screen (p. 7-2). |

This report prints the requisitions meeting the criteria selected on the Print Requisitions Edit List Selection Screen (p. 7-2). The requisition header information is printed for each requisition selected to edit and is printed in the same format as it will print on the Purchase Order.

NOTE: If one of the requisitions that you have selected for this report is being used at another workstation, the message \*\*\*\*\* REQ NUMBER: xxxxxx CURRENTLY IN USE BY ws \*\*\*\*\* will print, where ws is the ID of the other workstation.

### Requisition Edit List

| Report/Listing Fields | Description   |
|-----------------------|---|
| Headings              | <p>Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.</p> <p>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings.</p> |
| Vendor                | Vendor information includes the number, name, address, city, state, zip code and country of the vendor for whom the requisition was created.  |
| Ship-To               | Vendor Ship-To information includes the ship-to number, address, city, state, zip code and country where the items on this requisition will be shipped.   |
| CO                    | The number of the company for which the requisition was created.  |
| WH                    | The Warehouse ID of the warehouse where items will be received.   |

**Requisition Edit List**

| <b>Report/Listing Fields</b> | <b>Description</b>   |
|------------------------------|--|
| Order Date                   | The date the requisition was initially created.  |
| Ship VIA                     | The standard shipping instructions for this requisition.   |
| FOB                          | The freight terms (freight on board) for this requisition.   |
| Terms                        | The payment terms for this requisition.  |
| Req Number                   | The number of the requisition.   |
| Buyer                        | The three character code of the buyer who primarily deals with this vendor.  |
| Quote Number                 | The quote number supplied by the vendor for this requisition, if any.  |
| Apprvd                       | The approval code for the requisition: <b>YES</b> if approved, description if not approved.  |
| Currency                     | Currency description of the vendor's trading currency when International Currency is installed.  |
| Item Number                  | The number of the item to order.   |
| Due Date                     | The date that receipt of the item is expected.   |
| Ord Qty                      | The quantity of the item to order.   |
| U/M                          | The buying unit of measure for this vendor and item that corresponds with the order quantity.  |
| Unit Cost                    | The cost of the item.<br>When International Currency is installed, the vendors trading currency unit cost prints below the company's local currency.   |
| U/M                          | The costing unit of measure for this vendor and item that corresponds with the unit cost.  |
| TX                           | Indicates if this item is taxable or not: <b>Y</b> if the item is taxable; <b>N</b> if it is not.  |
| Total Amt                    | The total value of this item that is requested to be ordered on this requisition.<br>When International Currency is installed, the vendors trading currency total amount prints below the company's local currency. The local and trading currency symbols print to the right. |

---

**Requisition Edit List**

| Report/Listing Fields | Description  |
|-----------------------|--|
| Landed Costs          | <p>When an item is defined with a landing code or the landing factors are overridden during the creation of the requisition, the cost of the item, including all landing costs prints beneath the unit cost.</p> <p>When International Currency is installed, the <b>Landed</b> cost prints before the trading currency unit cost.</p> |
| Item Description      | The 2 lines of the item description of the items in this order.  |
| Line Item Comment     | When there are item related comments, the comment prints on the line below the item description.   |
| Order Comment         | Comments applicable to the entire order will print after the last item and before the totals section.  |
| Subtotal              | <p>The subtotal of the requisition, before taxes.</p> <p>When International Currency is installed, the vendors trading currency subtotal amount prints below the company's local currency. The local and trading currency symbols print to the right.</p>  |
| Tax                   | <p>The total amount of the tax applied to this requisition.</p> <p>When International Currency is installed, the vendors trading currency sales tax amount prints below the company's local currency. The local and trading currency symbols print to the right.</p>   |
| Total                 | <p>The total value of the requisition; the sum of the subtotal and tax.</p> <p>When International Currency is installed, the vendors trading currency purchase order total prints below the company's local currency. The local and trading currency symbols print to the right.</p>   |

---

Use this option to:

- Create and maintain “receivers” which include one or more line items from one or more of a vendor’s purchase orders. Once line items are incorporated into a receiver, they can be modified, received, approved, and posted. If the Warehouse Management (WM) module is installed, you can also perform these tasks through Warehouse Management (MENU WMMAIN). You can also create receivers and receive items through the Receiving task in the Radio Frequency (RF) module, if you have that module installed.

Warehouse transfer purchase orders can be included on receivers once the corresponding sales order has been shipped and invoiced. A receiver cannot be created if the sales order has been deleted. When receiving line items for warehouse transfer purchase orders, **Cost** and **Cost Code** fields will be display-only and the **Subst Item No** and **Non-Stock** fields will not display on the PO Enter Item Detail Screen (p. 8-46). The warehouse transfer purchase order received quantity cannot be greater than the In Transit Quantity minus the Total Quantity on other open receivers.

- Enter item receipts into Purchasing via manual receipt group creation (called purchase order processing).
- Post receipt groups created through receiver processing. To post receipt groups created through purchase order processing, you must use the PO Receipts Register option (MENU POMAIN). Note that before posting receiver items, you should have printed the Receiver Edit List (p. 8-79). This list allows you to review receipts that have been keyed.

---

### Important

These types of inventory postings (receiver and PO processes both use receipt groups to post) will update the Item Balance File, any quantities on-hand, etc. Related general ledger updates do not occur, however, until you run either Day-End Processing (MENU XAMAST) or Post IA Transactions to G/L (MENU IAMAST). Once these general ledger postings occur, general ledger information will be incorporated into all applicable item files.

---

## Receiver Processing

Receivers are usually created upon receipt of an Advanced Shipping Notice (ASN), identifying the items expected to be shipped and the expected ship date. After you create the receiver, you can approve

---

line items in the receiver as soon as they arrive. Once approved, line items can be put away and posted individually.

The difference between posting a receiver line item and posting a partial purchase order is that as soon as you select to post the receiver, the system creates a receipt group and posts the inventory. To post a partial purchase order, you must first create a receipt group manually, then submit it for inventory posting.

One advantage of receiver processing is this immediate posting. The items you received are available to fill customer orders almost immediately after you receive them. Also, receivers can include line items from more than one purchase order, and receivers allow you to include the same purchase order line item in more than one receiver. For example, a purchase order line indicating quantity 15 of item number A100, can be included in receiver 1 as item A100, quantity 5; in receiver 2 as item A100, quantity 5; and in receiver 3 as item A100, quantity 5. Once you receive individual line items, you should approve and post them immediately to make the items available in inventory for order entry processing.

After all items in a receiver are posted, it is closed. Closed receivers are retained in Receiver history immediately upon the completion of the posting activity.

---

NOTE: You can also perform receiver processing through Warehouse Management. Rather than identifying this on each and every receiver screen in this Purchasing User Guide, W/M will be mentioned only when options in that module provides added features (such as “putting away” while in the midst of receiver processing). When this is the case, the W/M feature will be mentioned, and you will be referred to the Warehouse Management User Guide for specific details.

---

## Purchase Order Processing

For purchase order processing, use this option to create a receipt group. You can then enter receipts for selected line items, or for all items on a PO (specify that a PO has been received complete). The receipt group can then be processed and submitted for posting through PO Receipts Register (MENU POMAIN).

After all items on a PO are received, or if a PO is received complete, it is closed. Closed POs are retained in Purchasing history after you perform Day-End Processing (MENU XAMAST).

After a receipt group has been successfully posted, it is closed. Closed receipt groups are retained in Receipt history after you perform Day-End Processing (MENU XAMAST).

---

## Enter or Change Receivers or PO Receipts

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title   | Purpose   |
|---|---|
| PO Receipt Processing Selection Screen                            | Use to determine the type of receipt processing to be performed.  |
| PO Receipt Group Entry/Edit Screen                                | Use to identify the receipt group to be created or maintained.  |
| PO Receipt Processing Group Selection Screen                      | Use to review a list of existing receipt groups. A group may be selected for processing if it is not already in use and if it is not an open drop ship receipt group. |
| PO Receipt Processing Screen                                      | Use to view or maintain general information concerning the receipt group being processed.   |
| Enter/Change PO Receipts Screen                                   | Use to select the company and open purchase orders for which receipt information will be entered.   |
| Pending Receipts Summary Screen                                   | Use to review summary information for receipts that have been keyed for the selected receipt group.   |
| Pending Receipts Detail Screen                                    | Use to review detailed information concerning receipts that have been keyed for the selected receipt group.   |
| PO Header Screen  | Use to review the header information for the purchase order for which receipts will be entered. Also use to receive a purchase order complete.                        |
| End Receipts Screen   | Use to review summary information and the new status for the purchase order receipts entered through this option.   |
| PO Item Review Screen   | Use to enter the quantity or cost of each item, or select an item for detail purchase order information.  |
| PO Enter Receipts Screen  | Use to enter the item quantity received, close an open line item, and change the item unit or lot cost.   |
| PO Enter Item Detail Screen                                       | Use to review detailed item and receiving information for a single item on the purchase order.  |
| Order Special Charge Screen;<br>Order Special Charge Merge Screen | Use to enter and review order entry special charges at receipt time.  |
| PO Line Item Comments Screen                                      | Use to review comments entered for the selected item.   |
| PO Enter Item Detail Landing Costs Screen                         | Use to review landing cost information for the selected line item on the purchase order.  |

| <b>Title</b>  | <b>Purpose</b>   |
|---|--|
| Customer Order Numbers Screen   | Use to review the customers awaiting arrival of a specific item in the purchase order.   |
| Pre-Received Line Items Screen  | Use to select the desired pre-received items to include in your receipt group.   |
| Receiver List Selection Screen  | Displays a list of existing receivers and provides access to receiver maintenance screens through which receivers can be created or modified. This screen is also included in the Warehouse Management User Guide and contains the same information. |
| Put-Away List Reprint Screen  | Use to select reprinting put-away labels and/or item labels when reprinting a Put-Away List.   |
| Receiver Edit List  | Prints a combination of values keyed during the processing of a receiver and default item information included in item records (e.g., Item Balance File, Item Master File, etc.).  |
| Receiver Entry/Maintenance Selection Screen   | Use to create a new receiver for processing or to select an existing receiver for maintenance or deletion.   |
| Receiver Header Information Screen  | Use to enter/modify the overall information provided for a receiver.   |
| End Receiver Information Screen   | Use to review high-level receiver information or to access data entry screens for modifications.   |
| Receiver Review Selection Screen  | Use to review a list of items contained in the identified receiver. Individual line items can be selected for viewing, modification, or removal from the receiver.   |
| Line Items On PO Select Screen  | Use to select individual line items for viewing and inclusion into the receiver as they are, or you can first modify the displayed quantity information.   |
| Line Items On PO Select Change Screen;<br>Receiver Review Change Screen;<br>Receiver Approval Change Screen | Use to review current information about the line items selected, and allows modifications to be made.  |
| I/A Receipt Comment Maintenance Screen  | Use to add, change or delete inventory transaction comments, or review previously entered inventory transaction comments. This screen is also included in the Inventory Accounting User Guide and contains the same information.                     |

| Title  | Purpose   |
|--|---|
| Line Items On PO Select Landing Costs Screen;<br>Receiver Review Landing Costs Screen;<br>Receiver Approval Landing Costs Screen | Use to view or override landing cost amounts for specific items.  |
| Assignments - Lot No. Screen;<br>Assignments - Serial No. Screen   | Use to add, change, review, or delete the lot numbers of lot items that are assigned to warehouse locations.<br><br>Use to add, change, review, or delete the serial numbers of serial number items that have been assigned to warehouse locations. |
| Receiver Approval Selection Screen   | Use to review a list of items contained in the identified receiver.   |
| End Receiver Information Landing Costs Screen  | Use to override landing cost values for the entire receiver and distribute the totals to the individual items in the receiver.  |
| PO Receiver Note Pad Screen  | Use to review previously entered events relating to the selected receiver.  |
| PO Receiver Note Pad Event Screen  | Use to add, change, or delete notes/comments or entire events to/from the note pad.   |
| Receipt Post Errors Screen   | Displays approved items not yet assigned warehouse locations after selecting to post receivers.   |
| Post Received Items Screen   | Use to post all or selected items.  |
| G/L Posting Date Selection Screen  | Use to select the date under which inventory transactions will be posted.   |
| Post Items - Review Location Receipts Screen   | Use to review the location assignments when Warehouse Management is installed.  |
| Post Items - Review Lot/Serial Assignments Screen  | Use to review the lot number or serial numbers assigned to specific locations when Warehouse Management is installed.   |
| Receiver Inquiry Header Information Review Screen  | Use to review high-level receiver information or to access data entry screens for modifications.  |
| Receiver Inquiry Header Landing Costs Screen   | Use to review landing cost values for the entire receiver.  |
| Receiver Inquiry Detail Item Selection Screen  | Use to review a list of items contained in the identified receiver. Individual line items can be selected for viewing in detail, or for reviewing associated purchase order information.  |

| <b>Title</b>  | <b>Purpose</b>   |
|---|--|
| Receiver Inquiry Item Detail Screen                           | Use to review current information about the line items selected.                                       |
| Receiver Inquiry Detail Landing Costs Screen                  | Use to review landing cost amounts for specific items.   |
| Receiver Inquiry Detail Lot No / Serial No Assignments Screen | Use to review the lot numbers of lot items or serial numbers that are assigned to warehouse locations. |

## PO Receipt Processing Selection Screen

PO RECEIPT PROCESSING

Type of Receipt Processing: - 1 = by Purchase Order  
2 = by Receiver

F3=Exit

This screen displays after selecting option 4 - Enter or Change Receivers or PO Receipts on the Purchasing Main Menu (MENU POMAIN). This screen is used to determine the type of receipt processing to be performed.

This screen also displays from Print Receiving List on the Warehouse Management Main Menu (MENU WMMAIN).

### PO Receipt Processing Selection Screen Fields and Function Keys

| Field/Function Key         | Description  |
|----------------------------|--|
| Type of Receipt Processing | Use this field to select which type of receipt processing you want to perform.<br>Key 1 to process by purchase order (that is, manual receipt group processing).<br>Key 2 to process by receiver.<br>(N 1,0) Required                        |
| F3=Exit                    | Press F3=EXIT to exit from this option. MENU POMAIN will display.  |
| Enter                      | Press ENTER to confirm your selections. If you select purchase order processing, the PO Receipt Group Entry/Edit Screen (p. 8-8) will display. If you select receiver processing, the Receiver List Selection Screen (p. 8-69) will display. |

## PO Receipt Group Entry/Edit Screen

The screenshot shows a terminal window titled "PO RECEIPT GROUP ENTRY/EDIT" with "Workstation: AM" in the top right corner. The main display area contains the text "Group ID: AM...". At the bottom of the window, three function keys are listed: "F3=Exit", "F4=Group List", and "F5=New Group".

This screen displays after selecting to process PO receipts by purchase order on the PO Receipt Processing Selection Screen (p. 8-7). This screen is used to identify the receipt group to be created or maintained. Since receipt groups are not limited to any one workstation, many different receipt groups can be processed from a single workstation.

**NOTE:** If you create a receipt group here but do not enter any receipts, the group is automatically deleted. This prevents empty receipt groups from being maintained.

### PO Receipt Group Entry/Edit Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Workstation        | The ID of the physical workstation. This will be used as the default for the <b>Group ID</b> for receipt processing.<br>(A 2) Display   |
| Group ID           | Key a one to five character Receipt Group ID (or leave the default) to create a receipt group. The <b>F5=NEW GROUP</b> function key is available to clear the field prior to keying a group ID, if desired.<br><br>The ID keyed must not exist elsewhere, or an error will display. Press the <b>F4=GROUP LIST</b> function key to display a list of existing receipt groups.<br><br><i>Default Value:</i> The <b>Workstation ID</b> of the physical workstation.<br>(A 5) Required/Display |
| F3=Exit            | Press <b>F3=EXIT</b> to exit from this option. MENU PMAIN will display.   |

---

**PO Receipt Group Entry/Edit Screen Fields and Function Keys**

| <b>Field/Function Key</b> | <b>Description</b>   |
|---------------------------|--|
| F4=Group List             | Press F4=GROUP LIST to display a list of existing receipt groups. The PO Receipt Processing Group Selection Screen (p. 8-10) will display. |
| F5=New Group              | Press F5=NEW GROUP to clear the <b>Group ID</b> field prior to keying a different receipt group ID.  |
| Enter                     | Press ENTER to confirm your selection. The PO Receipt Processing Screen (p. 8-14) will display.  |

---

## PO Receipt Processing Group Selection Screen

| PO RECEIPT PROCESSING GROUP SELECTION |                              |               |    |            |           |            |
|---------------------------------------|------------------------------|---------------|----|------------|-----------|------------|
| ID                                    | Description                  | Rcpt Date     | WH | Orig User  | Status    |            |
| 1                                     | AB501 Create f/ D/S Vch Grp. | FRIDY 5/27/10 | 1  | APDEMO     | Available |            |
|                                       |                              |               |    |            |           | Last       |
| Selection: _ .                        |                              |               |    |            |           |            |
| F2=Ent Dt/Tm                          |                              | F4=Orig WS    |    | F6=TP Inq  |           | F12=Return |
| F3=Exit                               |                              |               |    | F24=Delete |           |            |

This screen displays after pressing F4=GROUP LIST from the PO Receipt Group Entry/Edit Screen (p. 8-8) and presents a list of existing receipt groups. A group may be selected for processing if it is not already in use and if it is not an open drop ship receipt group. An open drop ship receipt group is one that was created via the drop ship receipt validation process and is still associated with a voucher that has not yet been posted. Open drop ship receipt validation groups can only be processed via the Voucher Entry menu option (MENU APMAIN). A saved drop ship receipt validation group is one that was created via the drop ship receipt validation process but is not associated with a voucher for either of the following reasons:

- After the drop ship receipt group was created, a save was selected; thus the voucher was never created.
- After the drop ship receipt group and it's associated voucher was created, the voucher was deleted/ canceled.

NOTE: This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. **Last** appears at the bottom of the last screen of data. To scroll through information on roll screens press:

- \* PAGE DOWN or SHIFT-ROLL FWD or F7=PAGE DOWN to display the next screen
- \* PAGE UP or SHIFT-ROLL BACK or F8=PAGE UP to display the previous screen.

### PO Receipt Processing Group Selection Screen Fields and Function Keys

| Receipt Date       | <p>Key the date that receipts for the POs in the receipt group were received. When a purchase order is not received complete, this date indicates the last time that receipts were entered for the purchase order. When a purchase order is received complete, the date is saved to purchase order receipt history.</p> <p>This date will be included in the PO record for each of the POs in the group, and will also be maintained in Purchase Order history.</p> <p>If the receipt date is changed for a receipt group, the change will be carried to each of the PO records, just as the initial entry of the receipt date did.</p> <p><i>Valid Values:</i> Key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFILE).</p> <p>(N 6,0) Required</p> |
| F3=Exit            | <p>Press F3=EXIT to exit from this option. MENU POMAIN will display.</p>   |
| F12=Return         | <p>Press F12=RETURN to return to the PO Receipt Group Entry/Edit Screen (p. 8-8) without making any selection on this screen.</p>  |
| Enter              | <p>Press ENTER to confirm your selection. The Enter/Change PO Receipts Screen (p. 8-16) will display.</p>  |

## Enter/Change PO Receipts Screen

ENTER/CHANGE PO RECEIPTS Group: I4000

Company?     01

PO Number:   - . . . . .

Warehouse:   1   Hartford, CT

F3=Exit            F4=Pnd Rcpt Sum            F6=Pnd Rcpt Dtl

This screen displays after selecting/creating a receipt group for processing on the PO Receipt Processing Screen (p. 8-14). This screen is used to select the company and open purchase orders for which receipt information will be entered.

If you have accessed this screen at the completion of a receipt group creation or modification, an informational message with the **Last PO Received** and the **New Status** of the receipt group it was processed in, is displayed.

---

NOTE: For warehouse transfer purchase orders that are being automatically received, the system will not allow you to maintain the purchase order while the inventory is in-transit.

---

          Receipt Date: 1/01/13
F5=Rec PO Complete   F10=End Receipts   F12=Return

```

This screen displays the header information for the purchase order for which receipts will be entered. It displays after:

- pressing **ENTER** from the Enter/Change PO Receipts Screen (p. 8-16)
- after making a selection and pressing **ENTER** from the Pending Receipts Summary Screen (p. 8-18)
- after making a selection and pressing **ENTER** from the Pending Receipts Detail Screen (p. 8-20)
- after pressing **ENTER** on the Drop Ship Receipt Validation Screen within Voucher Entry (MENU APMAIN)
- after pressing **F12=RETURN** on the End Drop Ship Receipt Validation Screen within Voucher Entry (MENU APMAIN)

Additionally, this screen may be used to receive a purchase order complete. A purchase order may be received complete if all items on the purchase order have been received, provided that the quantities and costs of the items received are the same as the costs and quantities of the items ordered.

All the fields on this screen are display only and cannot be changed.

---

NOTE: All dates will display in the **Default Date Format** for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, the date using the system's **Default Date Format** specified through System Options Maintenance (MENU XAFIELD).

---

**PO Header Screen Fields and Function Keys**

| Field/Function Key      | Description  |
|-------------------------|--|
| PO                      | The company number and the purchase order number of the requisition for the selected company.  |
| Buyer                   | This field indicates the code of the buyer who primarily deals with this vendor and is responsible for this requisition.   |
| Vendor                  | The vendor number, name and address, zip/postal code and country of the vendor from which you are ordering items that was entered on the requisition to print on the Purchase Order. Also, order history is recorded using this address.   |
| Foreign Currency Vendor | This message field only displays when International Currency is installed and only for vendors whose trading currency is different from the company's local currency. If the vendor's trading currency is the same as the company's local currency, this message field will not display. |
| (Currency Description)  | This field only displays when International Currency is installed and the selected vendor is defined as a trading currency vendor.<br>This field displays the description of the vendor's currency.  |
| Ship To                 | The ship-to number for the location of the warehouse to which the items will be shipped. The ship-to number location will then bring in the name and address, zip/postal code and country to the requisition.  |
| Order Date              | This is the date that the requisition is created.  |
| Ship Via                | The standard shipping instructions for the purchase order.   |

---

**PO Header Screen Fields and Function Keys**

---

| Field/Function Key | Description  |
|--------------------|--|
| Due Date           | <p>For orders, this field indicates the date by which items should be received in your warehouse.</p> <p>For returns, this field indicates the date on which items will be shipped from the warehouse.</p> <p>The system date defaults into the <b>Due Date</b> field for individual items on the Requisition/Purchase Order Item Detail Review Screen (p. 6-38), unless the due date is being calculated. If the <b>Calculate PO Due Dates Based on Lead Times</b> field is set to <b>Y</b> for the company through Purchasing Options Maintenance (MENU XAFILE), the due date for an item will be calculated as:</p> <p>System Date + Vendor Lead Time</p> <p>The vendor lead time for the item will be determined using the following hierarchy:</p> <ul style="list-style-type: none"> <li>• IM&amp;P Balance Record (when installed), if the item is planned by IM&amp;P</li> <li>• AIM Balance Record (when installed), if the item is planned by AIM</li> <li>• Vendor Item Record</li> <li>• Vendor Master Record</li> </ul> |
| FOB                | <p>The FOB code contains shipping information for the order, including who is responsible (you or the vendor) for shipping charges and for freight damages.</p> <hr/> <p>NOTE: If your company is located in a European Community member country and is required to submit a monthly Intrastat Report, the FOB code on the requisition is used to determine the Intrastat delivery terms, which are required for the report. If you are required to submit the Intrastat Report, you should not leave this field blank. A sample Intrastat Report is included in the Inventory Accounting User Guide.</p> <hr/>  |
| Vnd Shp Date       | The date by which items are expected to ship from the vendor.  |
| Drop Ship          | Indicates if all the items on this purchase order will be drop-shipped by the vendor. Drop-shipped items are shipped directly from your vendor to your customer.   |
| Warehouse          | The warehouse number that will receive the inventory from the vendor into stock.   |
| Cmplt Ship         | The complete shipment field is used to inform the vendor if you want this order to be held until it can be completely shipped. A <b>Y</b> indicates you want the vendor to ship all of the items on this purchase order at the same time. A message will print on the Purchase Order for this requisition indicating to please ship complete. A <b>N</b> indicates you do not want this message to print on the Purchase Order.  |

```

This screen displays summary information and the new status for the purchase order receipts entered through this option. It displays after pressing F10=END RECEIPTS from the PO Header Screen (p. 8-23), PO Item Review Screen (p. 8-35), or the PO Enter Receipts Screen (p. 8-41). This screen may also display after pressing F5=REC PO COMPLETE from the PO Header Screen (p. 8-23).

When International Currency is installed, if you are receiving a warehouse transfer order and the currency of the receiving warehouse is different from the currency of the warehouse transfer company, the information on this screen will be displayed in the currency of the receiving warehouse and a message will appear to inform you that all information is displayed in the currency of the receiving warehouse.

The Landing Cost fields display those landing factors being used, as determined through Warehouse Numbers Maintenance (MENU IAFILE) in Inventory Accounting. The formulas for calculating landing costs are defined for a landing code (and optionally a warehouse) through Landing Factors Maintenance (MENU IAFILE). Finally, the landing codes are assigned to an item through Vendor/Item Information Maintenance (MENU POFILE).

The landing cost column values will display as zero values when:

- there is no landing code assigned to the item(s) through Vendor/Item Information Maintenance (MENU POFILE)
- there is no amount or method assigned to a landing factor in the landing code (i.e. no Duty will be charged)
- the calculation result is zero

This screen is also used to key landing cost overrides with the use of the F5=OVR LC function key. Pressing the F5=OVR LC function key will open up the keying fields. After keying a landing cost value and a distribution method, pressing ENTER will result in the individual line items being updated and the

**Dst** field returning to indicate **I** (since the totals you see on this screen are generated using individual line item totals).

### Example:

#### Assumption:

The total weight of the first line item is 10 pounds. The total weight of the second line item is 30 pounds. The total weight of the third line item 3 is 60 pounds. The displayed freight landing cost for all three lines is \$15.00. You wish to override the freight landing cost to reflect \$30.00 and desire to distribute the \$30.00 among the three line items according to their weight.

#### Procedure:

Press the **F5=OVR LC** function key to make the change. Key the \$30.00 in the freight factor **Landing Cost** field and key a **W** in the **Dst** field. Press **ENTER**.

#### Results:

While this screen simply appears updated with your new values, the freight factor landing costs of each of the three items has been modified in the following manner:

- Weight of the first line item (10 pounds) is 10% of the total weight of 100 pounds. Therefore, the amount equal to 10% of the total \$30.00 fee is attributed to that first line item; in other words, a value of \$3.00.
- Weight of the second line item (30 pounds) is 30% of the total weight of 100 pounds. Therefore, the amount equal to 30% of the total \$30.00 fee is attributed to that second line item; in other words, a value of \$9.00.
- Weight of the third line item (60 pounds) is 60% of the total weight of 100 pounds. Therefore, the amount equal to 60% of the total \$30.00 fee is attributed to that third line item; in other words, a value of \$18.00.

### End Receipts Screen Fields and Function Keys

| Field/Function Key | Description  |

|-------------------------------|--|
| New Status                    | <p>The status of the receipts for this purchase order. This may be one of the following:</p> <ul style="list-style-type: none"> <li>• <b>OPEN - No Receipts Entered:</b> If you selected a purchase order and did not key any receipt quantities for any items on it, then the purchase order remains open since no receipts were entered.</li> <li>• <b>OPEN - Partially Received:</b> If you keyed receipts for some items, or keyed partial receipts for any items without closing the item, then the purchase order remains open since there are remaining items that need to be received.</li> <li>• <b>CLOSED - Fully Received:</b> If receipts were entered for all items that were ordered, the purchase order is closed since all items have been received in full.</li> <li>• <b>CLOSED - Partially Received:</b> If all items have been closed, and at least one item was closed having the quantity received not equal to the quantity ordered (the item's complete ship code is C), the purchase order is closed even though the quantity of items received is different than the quantity of items ordered.</li> </ul> <p>Display</p>  |
| (Landing Factor Descriptions) | <p>The first column displays the landing factors defined through Warehouse Numbers Maintenance (MENU IAFILE).</p> <p>Display</p>   |
| Landing Cost                  | <p>The landing cost values displayed here are a calculated combination of those defined for each line item in the purchase order receipts. The number of landing factors available for calculating the landing costs is based on the number of landing factors selected for use for the purchase order's warehouse through Warehouse Numbers Maintenance (MENU IAFILE).</p> <p>These fields are also used to key group level overrides. To key overrides in these fields, press <b>F5=OVR LC</b> to begin override entry mode for those landing factors whose definitions allow overrides. Note that any landing factors that cannot be overridden at the group level will be display only.</p> <p>Once in override entry mode, key the desired landing factor values (the field is no longer just for cost). You will be required to also key a method of distribution (<b>Dst</b>).</p> <p>When International Currency is installed, if you are keying override landing factors values based on currency (<b>V</b> for value), you must key these amounts in the applicable trading currency when different than the company's local currency. The column is display only when toggled with the <b>F11=LOCAL CURR / F11=TRADING CURR</b> function key to display the company's local currency values.</p> <p>(N 16,2) Display/Required</p> |

## End Receipts Screen Fields and Function Keys

| Field/Function Key   | Description   |
|----------------------|---|
| (Total Landing Cost) | <p>This field displays the total monetary amount of all landing cost(s) that will be included in this receipt at the bottom of the <b>Landing Cost</b> column.</p> <p>When International Currency is installed, this field displays for landing cost(s) calculated in trading currencies only if all costs are in the same currency. If the landing cost(s) are in mixed currencies, zeros will display in this field, and you must press F11=LOC CUR to display local currency equivalents in order to review this total. All landing cost(s) will display in the company's local currency with that currency symbol and the total will appear in the company's local currency.</p> <p>Display</p>   |
| Dst                  | <p>If a group override has been keyed for a landing cost, a method of distribution is required. The method of distribution keyed here determines how the override value is to be distributed among each of the line items in the receiver.</p> <p>The available distribution methods are defined as follows:</p> <p>Key <b>V</b> to distribute the cost to the line items according to the extended cost value (excluding landing costs) of those items.</p> <p>Key <b>W</b> to distribute the cost to the line items according to the total receipt weight of those items.</p> <p>Key <b>S</b> to distribute the cost to the line items according to the cubic size based on the receipt quantity of those items.</p> <p>Key <b>Z</b> if no landing cost is entered. Each item's applicable landing cost field will be zeroed out.</p> <p>Use <b>I</b> if you make a mistake in a <b>Landing Cost</b> field. Before pressing <b>ENTER</b> to accept the erroneous data, blank out the data, key <b>I</b> in this <b>Dst</b> field, and then press <b>ENTER</b>. The <b>Landing Cost</b> field will be replaced with the data originally displayed prior to the mistake. This data is obtained by re-reading the individual item landing cost data as it existed immediately prior to the mistake. In other words, if changes had been made to individual records prior to your accessing this screen, those changes would be considered. This differs from a "recalculate" function such as that achieved by blanking out this field which actually recalculates values, as opposed to simply re-reading what has been keyed to this point.</p> <p>(blank) Blank out the <b>Landing Cost</b> field and this <b>Dst</b> field to recalculate the landing costs for the items. Blanking out this field differs from using the <b>I</b> code in that line item landing costs will actually be recalculated and updated; the <b>I</b> code only re-reads the line item landing costs to redisplay the total on this screen.</p> <p><i>Valid Values:</i> V, W, S, Z, I, blank</p> <p>(A 1) Required</p> |

**PO Item Review Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| Unposted Receipts  | <p>This column displays two quantities for each item displayed (one above the other).</p> <p>The first number is the quantity of unposted receipts that are keyed through this option on the PO Enter Receipts Screen (p. 8-41) (see F2=ENTER QTYS); or the PO Enter Item Detail Screen (p. 8-46) using F13=F20 ITEM DETAIL; or are automatically assigned if you selected to receive the PO complete by pressing F5=REC PO COMPLETE from the PO Header Screen (p. 8-23). If you have not yet keyed any receipt quantities, the first quantity is blank.</p> <p>The second quantity is the balance (<b>Bal</b>). This is the quantity of each item that has been ordered, but not yet received. You cannot change this value through this option. When displaying this screen for an item that has not yet had any receipts posted, this quantity is the same as the quantity of the item that was ordered. If you display this screen after partial receipts have been posted for this item on this PO through Purchasing or, if applicable, Warehouse Management, then the quantity in this field is the quantity of items ordered minus the quantity of this item that has been posted for this PO.</p> <p>Display</p> |
| Rec'd Cmpl         | <p>This column indicates if an item is received complete or not. An item is received complete when the quantity of items received equals the quantity ordered minus any previously posted item receipts. When this is the case, C displays in this column; otherwise, it is blank.</p> <p>If an item is only partially received, you may still receive it complete. This may be the case if you do not want to leave an item open on a PO, so you may indicate that the item is received complete, even if the quantity received is less than the order quantity.</p> <p>You can change the value of this field on the PO Enter Receipts Screen (p. 8-41) (see F2=ENTER QTYS); or the PO Enter Item Detail Screen (p. 8-46) using F13=F20 ITEM DETAIL.</p> <p>Display</p>   |
| Cost               | <p>The cost per unit, in the costing unit of measure, of the each item. You may change this cost on the PO Enter Receipts Screen (p. 8-41) or the PO Enter Item Detail Screen (p. 8-46). If you do change the cost, however, the purchase order will not change. Only purchase order receipt history and the current average cost of the item is affected.</p> <p>When International Currency is installed, this field may be toggled with the F11=LOCAL CURR / F11=TRADING CURR function key to display the cost per unit, in the costing unit of measure, of each item in the trading currency or in the company's local currency.</p> <p>Display</p>   |

The Order Special Charge Screen displays after pressing F4=OE CHARGES during the receipt process for a drop ship special order. Use this screen to enter and review order entry special charges at receipt time. Special charges may be needed on an order for freight, handling, packaging, or other charges.

With the use of this screen, entering order entry special charges during the drop ship receipt process allows you to pass these special charges onto the customer order at receipt time, eliminating the need

to add the charges to the customer order before the invoice is printed. You will be able to key in the special charge with the special charge code allowed in Order Entry. Once you enter the charge and press F10=UPDATE, the charge will automatically be added to the customer sales order as an order level special charge and Order Activity will be updated. If International Currency is installed, the International Currency Order Detail Record will also be added/updated.

The Order Special Charge Merge Screen will display when the special charge is already on the sales order at least once for the same charge code entered in the **Charge Cd** field. The charge most recently added will be shown on the lower portion of this screen and a message will display informing you that the charge amount on the order will be changed by the new amount entered. For example, if a previous special charge of 25.00 was entered, and you are adding a new charge of 33.49, the screen would appear as shown above.

As indicated on the above screen, the charge amount on the order will be changed by the new amount entered. Meaning, the new charge amount applied to the order will be 58.49 (the amounts are totaled to arrive at the new charge, preventing a charge from being added to the order multiple times).

---

NOTE: If you need to adjust the amount applied to the order for the same charge code, key the difference in the **Charge Amount** field. The amount you key will be added or subtracted (if you key a negative amount) from the amount of the special charge. For special charges that have been adjusted to be a value of zero, the system will automatically remove the charge upon pressing F10=UPDATE.

---

### Order Special Charge Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Charge Cd          | <p>Use this field to select the code representing this order entry special charge. Key the special charge code to apply to this order. The charge can be applied to the entire order only, not a line item on the order. Therefore, the <b>Type</b> field is protected and displays <b>O</b> for Order type charge.</p> <p>If you are unsure of the charge to enter, key a <b>?</b> in this field to present a list of valid order charge codes from which you may select the appropriate code (note that line charge codes set up through Special Charge Definitions Maintenance will not display in the list).</p> <p><i>Valid Values:</i> An order charge code defined through Special Charge Definitions Maintenance (MENU POFILE)</p> <p>(N 1,0) Required</p> |
| Type               | <p>This field represents the type of charge to apply (Order or Line charges). However, since a special charge entered at receipt time can be applied to the entire order only, this field is protected and displays <b>O</b> for order type charge.</p> <p>Display</p>   |

```

F11=Local Curr      F12=Return

This overlay screen displays landing cost information for the selected line item on the purchase order. It displays after pressing **F6=LND CST** on the PO Enter Item Detail Screen (p. 8-46).

The landing cost fields display those landing factors being used, as determined through Warehouse Numbers Maintenance (MENU IAFILE) in Inventory Accounting. The formulas for calculating landing costs are defined for a landing code (and optionally a warehouse) through Landing Factors Maintenance (MENU POFILE). Finally, the landing codes are assigned to an item through Vendor/Item Information Maintenance (MENU POFILE).

The landing cost column values will display as zero values when:

- there is no landing code assigned to the item through Vendor/Item Information Maintenance (MENU POFILE)
- there is no amount or method assigned to a landing factor in the landing code (i.e. no Duty will be charged)
- the calculation result is zero.

When International Currency is installed, the **Landing Cost(s)** column displays for landing costs calculated in trading currencies with the specific currency symbol. If the landing cost(s) are in mixed currencies, zeros will display in the **Total Landing Cost(s)** field, and you must press **F11=LOCAL CURR** to display local currency equivalents to review the Total Landing Cost(s) amount. All landing cost(s) will display the company's local currency symbol to the right and the total will appear in the company's local currency.

All the fields on this screen are display only and cannot be changed.

---

**PO Enter Item Detail Landing Cost Screen Fields and Function Keys**

| Field/Function Key                   | Description   |
|--------------------------------------|---|
| (Landing Factor Descriptions)        | The first column displays the landing factors defined through Warehouse Numbers Maintenance (MENU IAFILE).  |
| Landing Cost(s)                      | The Landing Cost(s) extended value totals based on the receipt quantity for the individual landing factor.  |
| [Total Landing Cost(s)]              | The total monetary amount of all the landing cost(s) at the bottom of the <b>Landing Cost(s)</b> column.  |
| Landed Cost                          | <p>The total cost of the item calculated as the vendor's price plus all the individual landing costs. This amount will be shown for both the purchase order buying unit of measure followed by the costing unit of measure, if different.</p> <p>When International Currency is installed, this value displays in the company's local currency.</p>   |
| F11=Local Curr /<br>F11=Trading Curr | <p>Press F11=LOCAL CURR / F11=TRADING CURR to toggle between a display of landing cost(s) in the trading currency and a display of landing cost(s) and the landing cost total in the company's local currency.</p> <p>Press F11=LOCAL CUR to display landing cost(s) in the company's local currency. The currency symbol for the company's local currency will display to the right of each landing cost. If landing factors are calculated using mixed currencies, the total will display in the company's local currency.</p> <p>Press F11=TRADING CURR to display landing cost(s) in the trading currency's. The symbol for the applicable trading currency will display to the right of each cost. Note that if landing factors are calculated using mixed currencies, the total will not display.</p> |
| F12=Return                           | Press F12=RETURN to return to the PO Enter Item Detail Screen (p. 8-46).  |

## Customer Order Numbers Screen

F2=Desc Left    F5=Mfg Item    F6=Locate    F10=Continue    F12=Return  
F13=Clear

NOTE: This screen only displays if Warehouse Management is installed.

This screen displays after pressing **ENTER** on the PO Header Screen (p. 8-23), if any of the selected PO line items have been pre-received through Warehouse Management. From this screen, select the desired pre-received items to include in your receipt group. This will be of assistance in trying to post a portion of a large order so that it is not necessary to wait until the entire order is physically put-away prior to making the inventory available.

### Pre-Received Line Items Screen Fields and Function Keys

| Field/Function Key             | Description  |
|--------------------------------|--|
| Opt                            | <p>Use this field to determine whether or not the specified pre-received item should be included in the receipt group. This field may also be utilized to review warehouse location information for the selected PO line item.</p> <p>If you do not want to include a displayed line in the receipt group, blank out this field before continuing the posting process. Refer to the F13=CLEAR function key to blank out this field for all line items.</p> <p>An R displayed next to a line item indicates that receipts have already been keyed for this item.</p> <p>Key a Y to receive the line item(s) and press ENTER to update your choices.</p> <p>Key a V to view warehouse location information for the line item. The Post Items - Review Location Receipts Screen (p. 8-154) will display.</p> <p><i>Default Value:</i> Y</p> <p><i>Valid Values:</i> blank, Y, V</p> <p>(A 1) Optional</p> |
| Our Item/Desc<br>Mfg Item/Desc | <p>The stocking item number and description (<b>Our</b>) used in the warehouse, or the manufacturers item and description (<b>Mfg</b>) used by the vendor. Use the F5=MFG ITEM / F5=OUR ITEM toggle key to change the display.</p> <p>The item number and item description for the lines on the purchase order. Use the F2=DESC LEFT / F2=DESC RIGHT / F2=ITEM &amp; DESC toggle key to toggle the column to the description beginning in the left-most position, the description beginning at the right-most position, and the item number and description.</p> <p>Display</p>  |

Selection:   , Vendor:            WH: 5 Co? 01 Receiver:             
 PO:           

F2=Complete F5=P/A List F9=Edit List F11=Approve F13=Nt Pad F17=P/A Status  
 F4=Put-Away F6=In-Use F10=Add/Maint F12=Return F15=Post F18=RF Rcts

This screen displays:

- in Purchasing, after you select **2 = By Receivers** on the PO Receipt Processing Selection Screen (p. 8-7) within Enter or Change Receivers or PO Receipts (MENU POMAIN).
- in Purchasing, after pressing **F4=LIST** from the Receiving List by Receiver Number Selection Screen (p. 22-6) within Enter or Change Receivers or PO Receipts (MENU POMAIN).
- in Warehouse Management, after pressing **F18=RECEIVERS** on the *Warehouse Management Selection Screen* within Warehouse Management (MENU WMMAIN).
- in Warehouse Management, after pressing **F18=RECEIVERS** on the *PO Selection Screen* within Warehouse Management (MENU WMMAIN).

This screen is also included in the Warehouse Management User Guide and contains the same information.

This screen displays a list of existing receivers and provides access to receiver maintenance screens with the **F10=ADD/MAINT** function key through which receivers can be created or modified. Limiting criteria can be entered on this screen to limit the display to particular receivers, such as specifying a particular purchase order number or receiver for which you want to display related receivers.

The body of the screen displays the receivers that meet the selection criteria in the fields at the bottom of the screen. To limit which receivers are listed, enter selection criteria in the fields at the bottom of the screen and press **ENTER**. To expand the list of receivers, blank out the entry in one or more of those fields and press **ENTER** again.

The default list of receivers displayed are those that are currently open. Use the **F2=COMPLETE / F2=OPEN** toggle key to change the display to receivers that are received and closed.

Additional function keys display on this screen only when is accessed through Warehouse Management (MENU WMMAIN). Also note that some of the function keys displayed on this screen do not appear when accessing this screen through Enter or Change Receivers or PO Receipts (MENU POMAIN).

From this screen, you can:

- print the Receiver Edit List (p. 8-79) for a receiver
- access the screens required to add, change, or delete a receiver
- access the Receiver Approval Selection Screen (p. 8-126), where you can approve or unapprove specific line items on the receiver
- access the PO Receiver Note Pad Screen (p. 8-136), where you may review, maintain or delete dated events associated with the selected receiver, as well as add new PO receiver events
- post a receiver

If you displayed this screen by pressing F18=RECEIVERS on the Warehouse Management Selection Screen [Warehouse Management (MENU WMMAIN)], the warehouse number for the receiver defaults to the warehouse number you entered on that screen. Additionally, the **Stage Back Orders** and **Auto Put-Away** fields for the receiver default to the values set in Warehouse Options Maintenance (MENU WMFILE) for the warehouse. To change any of these fields, press the F12=RETURN function key to display the *PO Selection Screen*.

If you select a receiver for put-away that contains only drop ship items, the status of the receiver will be set to pre-received. If the receiver contains a mix of stock and drop ship items, the drop shop items will not affect the status of the receiver.

---

NOTE: This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. **Last** appears at the bottom of the last screen of data. To scroll through information on roll screens press:

\* PAGE DOWN or SHIFT-ROLL FWD or F7=PAGE DOWN to display the next screen

\* PAGE UP or SHIFT-ROLL BACK or F8=PAGE UP to display the previous screen.

---

|---------------------------|---|
| WS                        | <p>The ID of the workstation where the receiver is currently in use. An <b>*R</b> appearing next to the Workstation ID indicates that the receiver is contained in a receipt group (i.e., it is currently in the process of being posted).</p> <p>This field will toggle with the status of the receiver (<b>Stat</b>) field with the F6=IN-USE / F6=STATUS function key.</p> <p>Display</p>  |
| #Item                     | <p>The total number of items included in the receiver from the Line Items On PO Select Screen (p. 8-97).</p> <p>Display</p>   |
| Description               | <p>The receiver description, as keyed when the receiver was created or modified on the Receiver Entry/Maintenance Selection Screen (p. 8-81) or Warehouse Management (MENUWMMAIN).</p> <p>Display</p>   |
| Selection                 | <p>Use this field to select a receiver for processing.</p> <p>Key the <b>Reference Number</b> corresponding to the receiver you want to select and press <b>ENTER</b>.</p> <p>(N 2,0) Required</p>  |
| Vendor                    | <p>Use this field to limit the receivers on the screen to those associated only with a specific vendor.</p> <p>Key a vendor number to limit the receivers on this screen to only those associated with this vendor.</p> <p>Leave this field blank to display receivers for all vendors.</p> <p><i>Valid Values:</i> A vendor number defined through Vendor Master Maintenance (MENU POFIELD/MENU APFILE).</p> <p>(A 6) Optional</p> |

## Receiver List Selection Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| WH                 | <p><b>Purchasing</b></p> <p>Key a warehouse number to limit the receivers on this screen to only those associated with this warehouse. If left blank, orders for all warehouses will display.</p> <p><b>Warehouse Management</b></p> <p>This field displays the warehouse number you entered on the <i>Warehouse Management Selection Screen</i> within Warehouse Management (MENU WMMAIN). Only receivers for this warehouse are listed on the screen.</p> <p><i>Default Value:</i> The default warehouse defined in Authority Profile Maintenance (MENU XASCTY) if one has been defined; otherwise, this is the <b>Default Warehouse</b> defined through Company Name Maintenance (MENU XAFILE)</p> <p><i>Valid Values:</i> A valid warehouse number defined through Warehouse Numbers Maintenance (MENU IAFILE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(A 2) Optional/Display</p> |
| Co                 | <p>This field displays only if the <b>Multi Company</b> field is set to <b>Y</b> in System Options Maintenance (MENU XAFILE).</p> <p><b>Purchasing</b></p> <p>Key a company number to limit the receivers on this screen to only those associated with this company.</p> <p><b>Warehouse Management</b></p> <p>This field displays the company number with which the warehouse in the <b>WH</b> field is associated.</p> <p><i>Default Value:</i> The default company defined in Authority Profile Maintenance (MENU XASCTY) if one has been defined; otherwise, this is the default company defined through System Options Maintenance (MENU XAFILE)</p> <p><i>Valid Values:</i> A valid company number defined through Company Name Maintenance (MENU XAFILE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(N 2,0) Optional/Display</p>  |
| Receiver           | <p>Use this field to limit the receivers on the screen to only those associated with a specific receiver.</p> <p>Key a receiver number to limit the receivers on this screen to this receiver number only.</p> <p>Leave this field blank to display all receivers.</p> <p>(A 8) Optional</p>   |

## Receiver List Selection Screen Fields and Function Keys

| Field/Function Key       | Description  |
|--------------------------|--|
| PO                       | <p>Use this field to limit the receivers on the screen to only those associated with a specific purchase order.</p> <p>Key a valid purchase order number to limit the receivers on this screen to only those associated with this purchase order.</p> <p>Leave this field blank to display receivers for all purchase orders.</p> <p>(A 6) Optional</p>  |
| F2=Complete /<br>F2=Open | <p>Press F2=COMPLETE / F2=OPEN to toggle between displaying open and completed receivers. Note that while displaying completed receivers, the F11=APPROVE, F13=NT PAD, and F15=POST function keys become unnecessary and therefore do not display.</p> <p>Press F2=COMPLETE to display all completed receivers. If you have entered limiting criteria at the bottom of the screen, only completed receivers that meet the criteria you entered will display.</p> <p>Press F2=OPEN to display all open receivers. If you have entered limiting criteria at the bottom of the screen, only open receivers that meet the criteria you entered will display.</p>   |
| F4=Put-Away              | <p>The F4=PUT-AWAY function key displays only from within Warehouse Management (MENU WMMAIN) when Warehouse Management is installed, and only if the list on this screen currently displays <b>OPEN</b> receivers.</p> <p>Select a receiver and press F4=PUT-AWAY to access the <i>Put-Away Complete Screen</i> [Warehouse Management (MENU WMMAIN)]. W/M will select the locations to put away the items based on the selected backorder staging and put-away modes (see <b>Stage Back Orders</b> and <b>Auto Put-Away</b> fields). From this screen, you can put away approved receiver line items</p>   |
| F5=P/A List              | <p>The F5=P/A LIST function key displays only when Warehouse Management is installed, and only if the list on this screen currently displays OPEN receivers.</p> <p>Press F5=P/A LIST to print the Put-Away List for the selected receiver. The quantities of the pre-received items, and the locations where the items are to be put when they are received will be printed. If you have not pre-received any items for the specified receiver, the Put-Away List [Warehouse Management (MENU WMMAIN)] will not print.</p> <p>Depending on the selections made through Warehouse Management Options Maintenance (MENU WMFILE), Put-Away Labels and Item Labels may or may not print when the Put-Away List is printed. Refer to Put-Away Labels (MENU WMMAIN) for details about Put-Away Labels; refer to Item Labels (MENU WMREPT) for details about Item Labels.</p> <p>If you have already printed the Put-Away List and Put-Away Labels/Item Labels for this Purchase Order, the Put-Away List Reprint Screen (p. 8-78) (Warehouse Management, MENU WMMAIN) will display.</p> |

## Receiver List Selection Screen Fields and Function Keys

| Field/Function Key            | Description   |
|-------------------------------|---|
| F5=P/A List w/Radio Frequency | <p>If Radio Frequency is installed, and depending on the selection made through Warehouse Management Options Maintenance (MENU WMFILE), all items in the receiver may be automatically posted to the receiving dock immediately following the printing of the Put-Away List. This receiving dock is defined as all 4's (e.g., 44.444.44).</p> <p>If you have selected the option to prompt for a response as to whether or not this posting to the receiver dock should occur, the <i>Post Receiver Option Screen</i> (Warehouse Management, MENU WMMAIN) will display.</p>                     |
| F6=In-Use / F6=Status         | <p>Press F6=IN-USE / F6=STATUS to toggle the between displaying the status of each receiver in the <b>Stat / WS</b> field and displaying the workstation ID of any receiver that is currently being used elsewhere. If an <b>*R</b> appears next to the workstation ID, the receiver is contained in a receipt group (i.e., it is currently in the process of being posted).</p> <p>Press F6=STATUS to display the status of each receiver.</p> <p>Press F6=IN-USE to display the workstation ID where the receiver is currently being used.</p>  |
| F7=Page Down / F8=Page Up     | <p><b>More...</b> appears at the bottom of a roll screen to indicate that more data is available for viewing. Last appears at the bottom of the last screen of data. On some roll screens, F7=PAGE DOWN and F8=PAGE UP are available for use but do not display.</p> <p>Use the F7=PAGE DOWN to display the next screen of information on a roll screen. The PAGE DOWN or SHIFT-ROLL FWD function keys perform the same task.</p> <p>Use the F8=PAGE UP to display the previous screen of information on a roll screen. The PAGE UP or SHIFT-ROLL BACK function keys perform the same task.</p> |
| F9=Edit List                  | <p>Key a <b>Reference Number</b> in the <b>Selection</b> field and press F9=EDIT LIST to print the Receiver Edit List (p. 8-79) for the indicated receiver. The Report Options Screen appears to allow you to submit your request for processing (refer to the Cross Applications User Guide for details about this screen). You can use the edit list to review details about the receiver, including cost information. Refer to the Receiver Edit List (p. 8-79) for a description of the data contained on the list.</p>   |
| F10=Add/Maint                 | <p>To add a new receiver, leave the <b>Selection</b> field blank and press F10=ADD/MAINT. The Receiver Entry/Maintenance Selection Screen (p. 8-81) or within Warehouse Management (MENU WMMAIN) appears where you can create a new receiver.</p> <p>To work with a receiver from the list on the screen, key a <b>Reference Number</b> in the <b>Selection</b> field and press F10=ADD/MAINT. The Receiver Header Information Screen (p. 8-85) or within Warehouse Management (MENU WMMAIN) appears.</p>   |

## Receiver List Selection Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| F11=Approve        | <p>F11=APPROVE is available only if you are displaying open receivers.</p> <p>Key a <b>Reference Number</b> in the <b>Selection</b> field and press F11=APPROVE to access the Receiver Approval Selection Screen (p. 8-126) or within Warehouse Management (MENU WMMAIN). From that screen, you can approve or unapprove specific line items in the receiver. Prior to the posting of receipts for any items in a receiver, those items must be approved as having been actually received.</p>   |
| F12=Return         | <p>If you accessed this screen from Purchasing, press F12=RETURN to exit the receiving process and return to Menu POMAIN.</p> <p>If you accessed this screen from Warehouse Management, press F12=RETURN to return to the PO Selection Screen within Warehouse Management (MENU WMMAIN).</p>   |
| F13=Nt Pad         | <p>F13=NT PAD is available only if the list on this screen currently displays open receivers.</p> <p>Key a <b>Reference Number</b> in the <b>Selection</b> field and press F13=NT PAD to access the PO Receiver Note Pad Screen (p. 8-136), or within Warehouse Management (MENU WMMAIN), where you may review, maintain or delete dated events associated with this receiver, as well as add new events.</p>  |
| F15=Post           | <p>F15=POST is available only if the list on this screen currently displays open receivers.</p> <p>Key a reference number in the <b>Selection</b> field and press F15=POST to post the receiver. If no errors are found, the Post Received Items Screen (p. 8-146) or within Warehouse Management (MENU WMMAIN) displays. Each approved item in the receiver will be checked for errors, and if none are found, will be included in a system-generated receipt group and submitted to the Transaction Processor for immediate posting. For details about the Transaction Processor, refer to the Cross Applications User Guide.</p> <p>When Warehouse Management is installed, approved receiver items will be checked to ensure warehouse locations have been assigned for each, before posting can occur. If errors are found because locations have not been assigned to all items in the receiver, the Receipt Post Errors Screen (p. 8-144) within Enter or Change Receivers or PO Receipts (MENU POMAIN) will display.</p> |
| F17=P/A Status     | <p>The F17=P/A STATUS function key displays only if Warehouse Management and Radio Frequency are installed and Radio Frequency is being used for putting away inventory [as determined through Radio Frequency Options Maintenance (MENU RFFILE)].</p> <p>Select an item and press F17=P/A STATUS to display the status of the put-away. The <i>RF Put-Away Status Selection Screen</i> [Warehouse Management (MENU WMMAIN)] will display.</p>   |

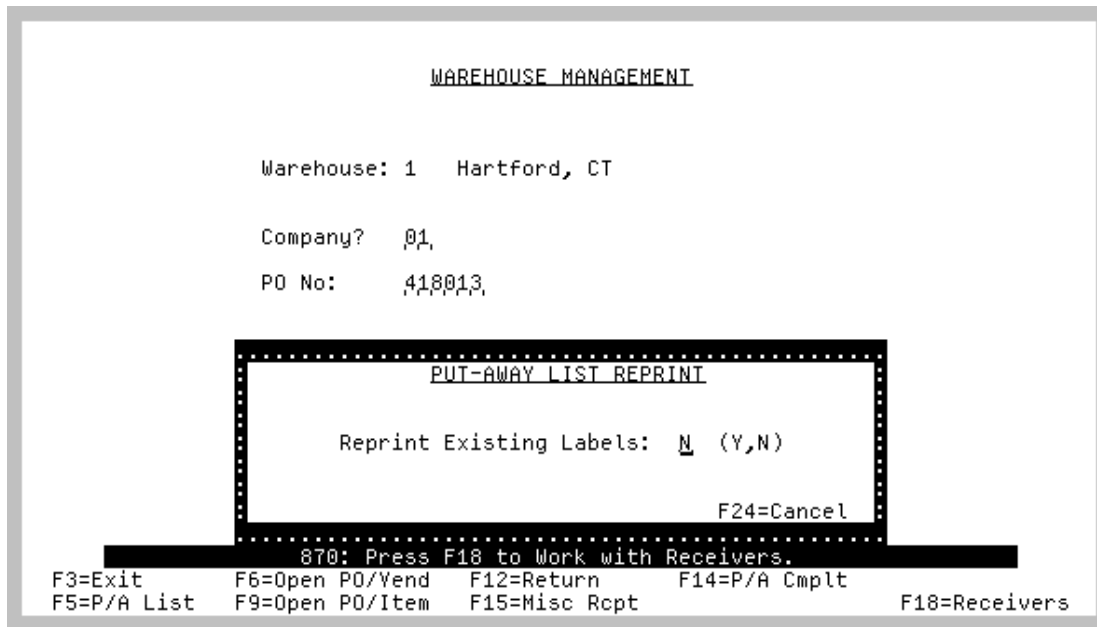

---

**Receiver List Selection Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| F18=R/F Rcts       | <p>The F18=R/F RCTS function key displays only if Warehouse Management and Radio Frequency are installed and Radio Frequency is being used for receiving inventory as determined through Radio Frequency Options Maintenance (MENU RFFILE).</p> <p>Press F18=R/F RCTS to display the receipts that have been entered through Radio Frequency, but not yet put away. These receipts may be reviewed for accuracy against any previously created receivers (entered through Warehouse Management or Purchasing). The <i>R/F Receipts List Screen</i> within Warehouse Management (MENU WMMAIN) will display.</p> |
| Enter              | <p>This key performs 2 functions:</p> <ul style="list-style-type: none"><li>• To limit the receivers on the list, key limiting criteria in the <b>Vendor, WH, Co, Receiver, or PO</b> fields and press ENTER. The display will include only those receivers that meet the criteria you entered.</li><li>• To review a receiver, key a reference number in the <b>Selection</b> field and press ENTER. The Receiver Inquiry Header Information Review Screen (p. 8-160) will display for the selected receiver.</li></ul>   |

---

## Put-Away List Reprint Screen

If you have already printed the Put-Away List, Put-Away Labels, and optionally Item Labels, for the Purchase Order selected when pressing **F5=P/A LIST** on the Receiver List Selection Screen (p. 8-69) this pop-up overlay window displays.

This screen is also included in the Warehouse Management User Guide and contains the same information.

### Put-Away List Reprint Screen

| Field/Function Key      | Description  |
|-------------------------|--|
| Reprint Existing Labels | You have the option to reprint existing Put-Away Labels and Item Labels for the Purchase Order as well as any new labels or you have the option to print only new labels for this Purchase Order.<br><br>Key a <b>Y</b> to in this field reprint existing Put-Away Labels and Item Labels for this purchase order as well as any new labels.<br><br>Key a <b>N</b> in this field to only print new labels for this purchase order. |
| F24=Cancel              | Press <b>F24=CANCEL</b> to not print any labels for this put-away list.  |
| Enter                   | Press <b>ENTER</b> to print put-away labels and/or item labels based on the selection criteria specified.  |

This report is generated after selecting the F9=EDIT LIST function key from the Receiver List Selection Screen (p. 8-69) and then pressing ENTER on the Report Options Screen. Data presented in this report is a combination of values keyed during the processing of a receiver and default item information included in item records (e.g., Item Balance File, Item Master File, etc.).

### Receiver Edit List

| Report/Listing Fields | Description  |
|-----------------------|--|
| Headings              | <p>Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.</p> <p>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings as explained on the Receiver Header Information Screen (p. 8-85).</p> <ul style="list-style-type: none"> <li>• Company</li> <li>• Receiver Number</li> <li>• Receiver Description</li> <li>• Ship Date</li> <li>• Receipt Date</li> <li>• Warehouse</li> <li>• Vendor Number and Vendor Name</li> <li>• Vendor's currency code and currency code description</li> </ul> |
| (Item Information)    | The item number and 2 description lines for the item in the purchase order.  |
| PO Num                | The purchase order number associated with the line item.   |
| Seq                   | The sequence number of this line item as included in the purchase order.   |

**Receiver Edit List**

| <b>Report/Listing Fields</b> | <b>Description</b>  |
|------------------------------|---|
| Sts                          | The status of the line item.  |
| NS                           | Identifies if the item is a non-stock item or not, as identified.   |
| Upd Inv                      | Identifies if inventory counts should be updated when this item is received.  |
| Ord Bal                      | The order balance identifies the original purchase order quantity minus any received and posted quantity.   |
| Rcpt Qty                     | Identifies the quantity of this line item received in the specified receiver.   |
| PO Cost                      | Identifies the cost, when ordered, of an item. When International Currency is installed, the vendor's trading currency displays below the local currency of the company for the purchase order.   |
| Rcpt Cost                    | Identifies the cost of one item in the line item, determined either by default item data, or by keyed override data. When International Currency is installed, the vendor's trading currency displays below the local currency of the company for the purchase order.   |
| Cost Code                    | The buying unit of measure for the item's cost.   |
| Rcpt Value                   | Identifies the line item value for the quantity in the <b>Rcpt Qty</b> column, by calculations performed using the <b>Rcpt Cost</b> and <b>Cost Code</b> values. When International Currency is installed, the currency symbol displays to the right of this value.   |
| Weight                       | Identifies the line item weight for the quantity in the <b>Rcpt Qty</b> column, determined either by default item data, or by keyed override data.  |
| (Discrepancy Message)        | <p>This message prints on the Receiver Edit List for each line item whenever there is a discrepancy between the quantity on the receiver and the quantity actually received for that line item. The discrepancy message can be printed in one of two forms, depending upon the type of discrepancy (where xx is the quantity and unit of measure that is in discrepancy):</p> <p><b>QTY RECEIVED IS xx MORE THAN ORIGINAL QTY</b><br/> <b>QTY RECEIVED IS xx LESS THAN ORIGINAL QTY</b></p> <p>Review the edit quantity against the actual quantities received and correct any discrepancies found.</p> |

## Receiver Entry/Maintenance Selection Screen

```

RECEIVER ENTRY/MAINTENANCE

Function:   A      (A,C,D)
Company?   01
Receiver No:  .....
Warehouse? 1,
Vendor:    .....
Find: .....
City: .....
- or - PO No:  .....

F3=Exit

```

This screen displays after you press F10=ADD/MAINT from the Receiver List Selection Screen (p. 8-69).

Use this screen to create a new receiver for processing or to select an existing receiver for maintenance or deletion. Receivers are created for a specific warehouse and vendor.

If you typed a reference number in the **Selection** field on the Receiver List Selection Screen (p. 8-69), the **Function** field defaults to **C** (Change) and the **Company**, **Receiver No**, **Warehouse**, and **Vendor** fields are filled in with information for the receiver you selected.

If you left the **Selection** field blank on the Receiver List Selection Screen (p. 8-69), the **Function** field defaults to **A** (Add). The entries you make on this screen determine what open PO line items appear on the Line Items On PO Select Screen (p. 8-97), where you select the line items to include on the new receiver.

### Receiver Entry/Maintenance Selection Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Function           | Key <b>A</b> to add a new receiver.<br>Key <b>C</b> to change an existing receiver.<br>Key <b>D</b> to delete an existing receiver.<br>(A 1) Required |

## Receiver Header Information Screen

```

                                HEADER INFORMATION
Receiver No:  1 / 418004
Warehouse:   1   Hartford, CT
Vendor:      IC9000 SPANISH OFFICE PRODUCTS
Currency:    ESP   Spanish Peseta
Description:  meds

Status:      PUT-AWAY LIST PRINTED

Ship Date:   7/01/18
Receipt Date: 7/11/18

Number of Items:          5
Number of Approved Items: 5
Total Value:              1964117.31 S>P
                        13123.61 US$
Total Weight:             970.0000
Total Cubes:              40.35870

Created by:   APDEMO          7/09/18

                                F6=Lnd Cst   F9=Note Pad   F12=Return

```

This screen displays after selecting a function, keying data, and pressing **ENTER** from the Receiver Entry/Maintenance Selection Screen (p. 8-81), if you are changing an existing receiver, or if you are adding a receiver and **Skip Receiver Header Screen on Add Receiver** is **N** in the warehouse options set through Purchasing Options Maintenance (MENU XAFILE). This screen also displays when you press **F12=RETURN** from the Line Items On PO Select Screen (p. 8-97).

Additionally, if you have EDI installed, this screen is displayed after you select a completed Advance Shipping Notice (ASN) (**Action** of **1=Select**) and press **F15=RECEIVE**, or after you select a receiver (**Action** of **5=Receiver**) and press **ENTER** on the Completed Incoming EDI Advance Shipping Notices Screen (MENU EIMAIN).

Use this screen to enter/modify the overall information provided for a receiver. Additionally, if **F24=DELETE** is displayed, you can use this screen to delete the displayed receiver. The receiver number, warehouse, and vendor for the receiver selected from the Receiver List Selection Screen (Receiver List Selection Screen (p. 8-69), or keyed on the Receiver Entry/Maintenance Selection Screen (p. 8-81), or (if you have EDI installed) selected on the Completed Incoming EDI Advance Shipping Notices Screen (MENU EIMAIN), is displayed and cannot be modified. The user creating (or the user who previously created) the receiver, as well as the creation date is also displayed for information.

### Receiver Header Information Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Receiver No        | The number of the receiver assigned when it was originally created on the Receiver Entry/Maintenance Selection Screen (p. 8-76) or Warehouse Management (MENUWMMAIN).<br>Display |

### Receiver Header Information Screen Fields and Function Keys

| Field/Function Key       | Description  |
|--------------------------|--|
| Warehouse                | The warehouse associated with the receiver when it was originally created on the Receiver Entry/Maintenance Selection Screen (p. 8-76) or Warehouse Management (MENUWMMAIN).<br>Display  |
| Vendor                   | The vendor associated with the receiver when it was originally created on the Receiver Entry/Maintenance Selection Screen (p. 8-76).<br>Display  |
| Currency                 | This field only displays when International Currency is installed.<br>This field displays the currency code and description for the vendor's trading currency.<br>Display  |
| Description              | Key a description or special notes for the receiver being processed.<br>(A 30) Optional  |
| Ship Date                | Key the date that the vendor shipped the receiver items. If you are creating this receiver prior to shipment of the items, you may leave this field blank now and update the information at a later date.<br><i>Valid Values:</i> Key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFILE).<br>(N 6,0) Optional |
| Receipt Date             | Key the date that the receiver items were received, or key an expected date of receipt. This field may be updated in the future, if necessary.<br><i>Valid Values:</i> Key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFILE).<br>(N 6,0) Optional  |
| Number of Items          | This field only displays when changing an existing receiver.<br>The total number of items from all the PO lines that have been included in this receiver.<br>Display   |
| Number of Approved Items | This field only displays when changing an existing receiver.<br>The total number of the items included in the receiver that have been approved.<br>Display   |

V=View

PO No: .....  
Find (F6): .....

F2=Desc Left      F5=Mfg Item      F9=Enter/Select      F11=Approve  
F4=Change Qty    F6=Locate        F10=End            F12=Header

This screen displays after the Receiver Header Information Screen (p. 8-85) when pressing F10=ADD/ MAINTAIN on the Receiver List Selection Screen (p. 8-69), after pressing F5=OVERRIDE on the End Receiver Information Screen (p. 8-89) or F9=REVIEW from the Line Items On PO Select Screen (p. 8-97).

This screen displays a list of items contained in the identified receiver. Individual line items can be selected for viewing, modification, or removal from the receiver.

The display of line items is sequenced numerically by item number, but can be manipulated in several ways:

- Key a purchase order number in the **PO No** field to display only those items associated with that PO.
- Key an item number in the **Find** field and press F6=LOCATE to bring that item number to the top of the screen.

---

NOTE: Many roll screens that show the item number and description will display the item description on a separate line or the item and description on the same line, depending on the system options. This display of single or double line per item can be changed by pressing F24=DOUBLE LINE / F24=SINGLE LINE. F24=DOUBLE LINE will expand a collapsed screen or F24=SINGLE LINE will collapse an expanded screen. Refer to the Cross Applications User Guide for additional information about roll screens.

---

NOTE: This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. **Last** appears at the bottom of the last screen of data. To scroll through information on roll screens press:

- \* PAGE DOWN or SHIFT-ROLL FWD or F7=PAGE DOWN to display the next screen
  - \* PAGE UP or SHIFT-ROLL BACK or F8=PAGE UP to display the previous screen.

## Receiver Review Selection Screen Fields and Function Keys

| Field/Function Key   | Description  |
|--|--|
| Receiver   | The company number and the number of the receiver being processed.   |
| WH   | The warehouse associated with the receiver.  |
| Vendor   | The vendor associated with the receiver.   |
| Opt  | <p>Key a valid option in this field next to the item you wish to change (C), remove from the receiver (R), or view (V).</p> <hr/> <p>NOTE: If receipts for the purchase order in which this item is included have been entered (but not yet posted), you will not be able to change the values. If an item has already been approved, you will not be able to remove the item without first unapproving it on the Receiver Approval Selection Screen (p. 8-126). In either case, an error message will display.</p> <hr/> <p>Key a C to modify the data for a displayed item. The Receiver Review Change Screen (p. 8-104) will display. If you wish to just change the quantity of the item received, you can utilize the F4=CHANGE QTY function key (if necessary) to allow data entry to be performed, key a C in the Opt field, and key the new quantity here on this screen.</p> <p>Key an R to remove an item from the receiver. Note that once included you key R and press ENTER, the line item is removed from this screen. It will be displayed instead on the Line Items On PO Select Screen (p. 8-97).</p> <p>Key a V to view detailed information about the selected purchase order and item. The Requisition/Purchase Order Item Detail Screen (p. 14-30) displays. For specific information concerning the fields, refer to the Req/PO Inquiry (MENU POMAIN).</p> <p><i>Valid Values:</i> C, R, V</p> <p>(A 1) Required</p> |
| Received   | <p>This is the quantity of the items that has been identified as received [refer to the <b>Received</b> field description in the Line Items On PO Select Screen (p. 8-97)].</p> <p>Display</p>   |
| Our Item No/<br>Description<br>Mfg Item No/<br>Description | <p>Your organization's item number and description or the manufacturer's item number and description. The F5=MFG ITEM / F5=OUR ITEM function key is used to toggle the display between the two.</p> <p>Display</p>   |

## Receiver Review Selection Screen Fields and Function Keys

| Field/Function Key                                  | Description   |
|---|---|
| PO No   | <p>The purchase order number that the item is affiliated with. The displayed number may have a lower case letter appended. The letters designate the following:</p> <ul style="list-style-type: none"> <li>• <b>a</b> Line has order assignments.</li> <li>• <b>b</b> Line has order assignments and comments.</li> <li>• <b>c</b> Line has comments.</li> </ul> <p>Display</p>   |
| On PO   | <p>The open quantity of the item on the PO.</p> <p>Display</p>  |
| U/M   | <p>The buying unit of measure respective to the quantity ordered for the item. Buying units of measure are defined for the item through Vendor/Item Information Maintenance (MENU POFIELD).</p> <p>Display</p>  |
| PO No   | <p>Key a valid purchase order number to limit the display of items on this screen to only those that are affiliated with that purchase order.</p> <p>(A 6) Optional</p>   |
| Find  | <p>This field, used in conjunction with the <b>F6=LOCATE</b> function key, will bring a specific item to the top of the displayed list. Depending upon the item number/description mode you are in (toggled with <b>F5=MFG ITEM</b> / <b>F5=OUR ITEM</b>), the item number keyed must be the manufacturer's number or the stocking (our) item number.</p> <p>(A 27) Optional</p>  |
| F2=Desc Left /<br>F2=Desc Right /<br>F2=Item & Desc | <p><b>F2=DESC LEFT</b> / <b>F2=DESC RIGHT</b> / <b>F2=ITEM &amp; DESC</b> will display only if you selected not to display both description lines [as selected in System Options Maintenance (MENU XAFIELD) or with the <b>F24=DOUBLE LINE</b> / <b>F24=SINGLE LINE</b> hidden function key].</p> <p>Press <b>F2=DESC LEFT</b> to show the "left window" of the item description starting with the left-most word in the description.</p> <p>Press <b>F2=DESC RIGHT</b> to show the "right window" of the description so the last word in the description will appear at the end of the description field. The left and right windows will be the same if the entire description can fit on the screen.</p> <p>Press <b>F2=ITEM &amp; DESC</b> to show the complete item number and as much of the description as will fit (two blanks separate the fields.) The item number is high intensity.</p> |

## Receiver Review Selection Screen Fields and Function Keys

| Field/Function Key                | Description  |
|-----------------------------------|--|
| F4=Change Qty /<br>F4=Protect Qty | The F4=CHANGE QTY / F4=PROTECT QTY is key is used as a toggle to allow or disallow data entry modifications to the <b>Received</b> column on this screen. Before you can key modifications in this field for an item, you must be in Change mode.  |
| F5=Mfg Item /<br>F5=Our Item      | The F5=MFG ITEM / F5=OUR ITEM key is used as a toggle to display either the manufacturer's item number or the item number in your organization (our item number) in the <b>Our Item No/Description / Mfg Item No/Description</b> column.<br><br>Press F5=MFG ITEM to display the manufacturer's item number in the <b>Mfg Item No/Description</b> column.<br><br>Press F5=OUR ITEM to display the complete or partial item number used by your organization (our item number) in the <b>Our Item No/Description</b> column.  |
| F6=Locate                         | Press F6=LOCATE to bring the item identified in the <b>Find</b> field to the top of the display screen for processing.   |
| F7=Page Down /<br>F8=Page Up      | <b>More...</b> appears at the bottom of a roll screen to indicate that more data is available for viewing. Last appears at the bottom of the last screen of data. On some roll screens, F7=PAGE DOWN and F8=PAGE UP are available for use but do not display.<br><br>Use the F7=PAGE DOWN to display the next screen of information on a roll screen. The PAGE DOWN or SHIFT-ROLL FWD function keys perform the same task.<br><br>Use the F8=PAGE UP to display the previous screen of information on a roll screen. The PAGE UP or SHIFT-ROLL BACK function keys perform the same task. |
| F9=Enter /<br>F9=Select           | Press F9=ENTER / F9=SELECT to add new items to this receiver. The Line Items On PO Select Screen (p. 8-97) will display.   |
| F10=End                           | Press F10=END complete processing for this receiver. The End Receiver Information Screen (p. 8-89) will display.   |

V=View Item No: ..... Qty: .....

F2=Desc Left F5=Mfg Item F10=End F12=Header  
F4=Change Qty F9=Review F11=Select All F13=Order No

This screen displays after pressing **ENTER** from the Receiver Entry/Maintenance Selection Screen (p. 8-81) [(if the Purchasing warehouse options are set to **Skip Receiver Header Screen on Add Receiver** through Purchasing Options Maintenance (MENU XAFILE))] or the Receiver Header Information Screen (p. 8-85) if you are adding a new receiver.

If you entered a vendor number on the Receiver Entry/Maintenance Selection Screen (p. 8-81), when this screen first appears it displays all open purchase order line items for the vendor. If you entered a PO number, this screen initially displays only the open line items on that purchase order. You can change which line items display by making an entry in the **PO No** field or by blanking out that field.

On this screen, you can select individual line items for viewing and inclusion into the receiver as they are, or you can first modify the displayed quantity information. The **F11=SELECT ALL** function key is available to select all displayed line items at once.

Line items are listed alphabetically by item number, but you can manipulate the list in several ways:

- To see only the open line items for one PO, key a purchase order number in the **PO No** field and press **ENTER**.
- To see all of the open line items for this vendor, blank out the entry in the **PO No** field and press **ENTER**.
- To position the cursor at the first open line for a specific item, key the item number in the **Item No** field and press **ENTER**. You will then have the option of selecting this line for addition to the receiver. For more information, see the description of the **Item No** field.

**NOTE:** Many roll screens that show the item number and description will display the item description on a separate line or the item and description on the same line, depending on the system options. This display of single or double line per item can be changed by pressing **F24=DOUBLE LINE / F24=SINGLE LINE**. **F24=DOUBLE LINE**

will expand a collapsed screen or F24=SINGLE LINE will collapse an expanded screen. Refer to the Cross Applications User Guide for additional information about roll screens.

---

NOTE: This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. **Last** appears at the bottom of the last screen of data. To scroll through information on roll screens press:  
\* PAGE DOWN or SHIFT-ROLL FWD or F7=PAGE DOWN to display the next screen  
\* PAGE UP or SHIFT-ROLL BACK or F8=PAGE UP to display the previous screen.

---

#### Line Items On PO Select Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Receiver           | The company number and the number of the receiver being processed. |
| WH                 | The warehouse associated with the receiver.                        |
| Vendor             | The vendor associated with the receiver.                           |

---

---

**Line Items On PO Select Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Opt                | <p>Key a valid option in this field next to the item you wish to change (C), select for inclusion into the receiver (S), or view (V).</p>  |
|                    | <hr/> <p>NOTE: If receipts for the purchase order in which this item is included have been entered (but not yet posted), you will not be able to change the values or select the item for inclusion into the receiver. An error message will display if this is the case.</p> <hr/>  |
|                    | <p>Key a C to modify the data for a displayed item. The Line Items On PO Select Change Screen (p. 8-104) will display. If the item you want to change has no quantity displayed, you must key a quantity that you wish to receive. To change just the <b>Received</b> quantity, press the F4=CHANGE QTY function key. The <b>Received</b> column becomes a data entry field where you can easily change the quantity to be received for all the items. If you also key a C in the <b>Opt</b> field when you key a quantity in the <b>Received</b> field and press ENTER, the Line Items On PO Select Change Screen (p. 8-104) will also display.</p> <p>Key an S to select an item for inclusion into the receiver. Note that once you key S and press ENTER, the line item is removed from this screen. It will be displayed instead on the Receiver Review Selection Screen (p. 8-92).</p> |
|                    | <hr/> <p>NOTE: Although the item is removed from this screen during processing for this receiver, it will again be included on the screen for the next receiver (minus the received quantity you keyed here), until the item has completed the cycle by being posted.</p> <hr/>  |
|                    | <p>Key a V to view detailed information about the selected purchase order and item. The Requisition/Purchase Order Item Detail Screen (p. 14-30) will display as described for Req/PO Inquiry (MENU POMAIN).</p>   |
|                    | <p><i>Valid Values:</i> C, S, V</p>  |
|                    | <p>(A 1) Optional</p>  |

### Line Items On PO Select Screen Fields and Function Keys

| Field/Function Key   | Description   |
|--|---|
| Received   | <p>When this screen first displays, the value defaulted in this field is the outstanding quantity still waiting to be received. This allows for the easy receipt of an item's entire quantity by simply keying an <b>S</b> next to the item.</p> <p>The quantity awaiting receipt value is calculated as follows:<br/> <b>Calculation:</b> (Quantity on order) - (Quantity of those for which receipts have been posted) - (Quantity of those that are included in another receiver)</p> <hr/> <p><b>NOTE:</b> When including only some of an item's quantity in a receiver, key the received amount in the <b>Qty</b> field on this screen, or the <b>Received</b> field on the Line Items On PO Select Change Screen (p. 8-104). This amount then, will override the amount in the <b>Received</b> column to show the amount received, as opposed to the amount awaiting receipt which displayed when first accessing this screen.</p> <hr/> <p>Display</p> |
| Our Item No/<br>Description<br>Mfg Item No/<br>Description | <p>The stocking item number and description or the manufacturer's item number and description. The <b>F5=MFG ITEM / F5=OUR ITEM</b> function key is used to toggle the display between the two.</p> <hr/> <p>Display</p>  |
| PO No /<br>Order No  | <p>The purchase order number that the item is affiliated with. The displayed number may have a lower case letter appended. The letters designate the following:</p> <ul style="list-style-type: none"> <li>• <b>a</b> = Line has order assignments</li> <li>• <b>b</b> = Line has order assignments and comments</li> <li>• <b>c</b> = Line has comments</li> </ul> <p>The <b>F13=ORDER NO / F13=PO NO</b> function key is used to toggle the display between the purchase order number or sales order number, if the PO is a drop ship and there is a sales order number associated with this purchase order line.</p> <hr/> <p>Display</p>  |
| On PO  | <p>The quantity of the item requested by the identified PO.</p> <hr/> <p>Display</p>  |
| U/M  | <p>The buying unit of measure respective to the quantity ordered for the item. Buying units of measure are defined for the item through Vendor/Item Information Maintenance (MENU POFIELD).</p> <hr/> <p>Display</p>  |
| PO No  | <p>Key a valid purchase order number to limit the display of items on this screen to only those that are affiliated with that purchase order. Press <b>ENTER</b> to activate the filter.</p> <hr/> <p>(A 6) Optional</p>  |

---

**Line Items On PO Select Screen Fields and Function Keys**

---

| Field/Function Key                                   | Description   |
|--|---|
| Item No  | <p>This field is used to select items for inclusion into the receiver by keying a partial or complete item number. Depending upon the item number/description mode you are in (toggled with F5=MFG ITEM / F5=OUR ITEM, the item number keyed must be the manufacturer's number or your (our) number.</p> <p>If you key a partial item number and press ENTER, you will see a message indicating that the list has been scrolled to present the first item matching the partial number at the top of the screen. Pressing ENTER again, will select the item at the top of the screen for inclusion into the receiver.</p> <p>If you key a complete item number and press ENTER, the following will occur:</p> <ul style="list-style-type: none"> <li>• If only one of the specified item is included in this screen, and no receipts have been posted against the PO, the item is included in the receiver. Note that prior to pressing ENTER you may optionally key a new quantity received in the Qty field (otherwise, the item will be received for the "awaiting receipt" quantity displayed in the <b>Received</b> column of this screen).</li> <li>• If more than one of the specified item is included in this screen, a message will display indicating such, and the first item with that number will be included (unless receipts have been posted against the related PO, in which case, an error message will be provided).</li> </ul> <p>(A 27) Optional</p> |
| Qty  | <p>Use this field in conjunction with the <b>Item No</b> field to update the quantity displayed in the Received column.</p> <p>Key the receipt quantity for the item that you are including in the receiver.</p> <p>(N 10,3) Optional</p>   |
| F2= Desc Left /<br>F2=Desc Right /<br>F2=Item & Desc | <p>This key will display only if you selected not to display both description lines [as selected in System Options Maintenance (MEU XAFILE)] or with the F24=DOUBLE LINE / F24=SINGLE LINE hidden function key.</p> <p>Press F2=DESC LEFT to show the "left window" of the item description starting with the left-most word in the description.</p> <p>Press F2=DESC RIGHT to show the "right window" of the description so the last word in the description will appear at the end of the description field. The left and right windows will be the same if the entire description can fit on the screen.</p> <p>Press F2=ITEM &amp; DESC to show the complete item number and as much of the description as will fit (two blanks separate the fields.) The item number is high intensity.</p>  |

---

NOTE: Depending upon the method used to access this screen, the fields on this screen will be display only, or you will be able to edit them. The field descriptions provided here explain the maintenance of the fields.

---

This screen displays from various places:

- In the Purchasing module, Enter or Change Receivers or PO Receipts (MENU POMAIN), this screen also displays after keying a **Y** in the **Rct Comment** field on the
  - Line Items On PO Select Change Screen (p. 8-104)
  - Receiver Review Change Screen (p. 8-104)
  - Receiver Approval Change Screen (p. 8-105)
- In the Warehouse Management module, on the Enter/Change PO Receipts Screen within Warehouse Management (WMMAIN)
- In the Warehouse Management module, for Miscellaneous Receipts on the Pre-receive Item Selection Action Screen within Warehouse Management (WMMAIN) when **Action C** for Receipt Comments is selected
- From any place where the **F2=RECEIPTS CMNTS** function key is pressed (i.e., through MENU APMAIN or MENU POMAIN when processing a return)

---

NOTE: If you delete a PO that has an I/A comment associated with it, the comment also will be deleted along with the PO.

---

Use this screen to add, change or delete inventory receipt comments, or review previously entered inventory receipt comments. Comments entered on this screen will be displayed in the Item Inquiry (MENU IAMAIN) on the Transaction History Detail Screen.

### I/A Receipt Comment Maintenance Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Co                 | <p>The <b>Co</b> field only displays when this screen displays from a Purchasing or Warehouse Management screen.</p> <p>The company associated with the warehouse in which the item is being received.</p> <p>Display</p>   |
| PO No              | <p>The <b>PO No</b> field only displays when this screen displays from a Purchasing or Warehouse Management screen.</p> <p>The purchase order number selected or the miscellaneous purchase order created for this item's receipt.</p> <p>Display</p>   |
| Item               | <p>This is the number and description of the item for which a transaction has been entered.</p> <p>Display</p>  |
| Text               | <p>Manually key text describing the transaction. If the <b>Comment Code</b> field is used, and <b>ENTER</b> is pressed, the pre-defined text will display in this field.</p> <p>(4 @ A 60) Required</p>   |
| Comment Code       | <p>This field is used to call in a previously created comment, alleviating the need to manually key the comment. These previously created comments were defined through Transaction Comments (MENU IAFILE) along with the comment code.</p> <p>Key a valid comment code.</p> <p>(A 2) Optional</p>  |
| F12=Return         | <p>Press <b>F12=RETURN</b> to return to the previous screen without making any updates.</p>   |
| F24=Delete         | <p>The <b>F24=DELETE</b> function key displays only if maintenance of the fields on this screen is allowed, depending on how this screen was accessed.</p> <p>Press <b>F24=DELETE</b> to delete comment text displayed on this screen. You will have to press <b>F24=DELETE</b> twice to confirm your choice. The previous screen will display.</p> |
| Enter              | <p>If you are maintaining fields on this screen, press <b>ENTER</b> to accept comment text keyed on this screen. You will have to press <b>ENTER</b> twice to confirm your choice. The previous screen will display.</p>  |

(%,C,U,W,S or Z)

F5=Refresh      F10=Continue      F11=Local Curr

The Receiver Approval Landing Costs Screen displays after pressing F5=LND CST from the Receiver Approval Change Screen (p. 8-105). The top and body of the screen are the Receiver Approval Selection Screen (p. 8-126) and are described there.

The landing cost fields display those landing factor being used, as determined through Warehouse Numbers Maintenance (MENU IAFILE) in Inventory Accounting. The formulas for calculating landing costs are defined for a landing code (and optionally a warehouse) through Landing Factors Maintenance (MENU POFILE). Finally, landing codes are assigned to an item through Vendor/Item Information Maintenance (MENU POFILE).

Use the overlay landing costs screen to view or override landing cost amounts for specific items. A line item's landing costs are those costs incurred due to specific situations (overhead, duty, etc.), whereas a line item's landed cost is the total cost of that line item calculated as the vendor's price plus all individual landing costs. The values shown are the extended values based on the receipt quantity of the item.

Modifications to individual landing costs for a line item on this screen may be made only if:

- Overrides are allowed for that landing factor [determined through Warehouse Numbers Maintenance (MENU IAFILE)].
- An override for the indicated landing factor has not been performed on a group level. Note that likewise, if a landing factor override is performed on this screen for a line item, a group override for all items in the receiver cannot be performed for that landing factor.

The landing cost column values will display as zero values when:

- there is no landing code assigned to the item through Vendor/Item Information Maintenance (MENU POFILE)
- there is no amount or method assigned to a landing factor in the landing code (i.e. no Duty will be charged)
- the calculation result is zero

When International Currency is installed, these fields display each landing cost(s) associated with the requisition in the applicable trading currency. If landing cost(s) are calculated in currencies other than the company's local currency, the currency symbol will display to the right of each landing cost, and the F11=LOCAL CURR / F11=TRADING CURR function key may be used to toggle to the local currency equivalents of all landing cost(s) in these fields

The values displayed in the **Landing Cost(s)** field are calculated in accordance with the values keyed in the **Factor** and **Mth** fields.

**Example:**

The expected unit cost for item A150 is \$10.00, and a quantity of 10 is received. The landing code assigned to the item is using one landing factor for freight

**Percent of cost** (percentage of cost for each unit)

On this screen, key a freight landing cost factor of 2.000 and a calculate method of %. Press ENTER.

The freight landing cost value reflects an amount equal to 2% of the total value of the line item, a value of \$2.00 for the receipt quantity of 10.

**Units** (for all units)

Change the calculate method to U for the freight landing cost and press ENTER.

The freight landing cost value reflects an amount equal to the 2.000 factor multiplied by the receipt quantity of 10, a value of \$20.00.

**Currency amount** (fixed amount)

Change the calculate method to C and the freight landing cost factor to 12.000 and press ENTER.

The freight landing cost value reflects an amount equal to the 12 factor, a flat charge of \$12.00.

**Line Items on PO Select Landing Costs Screen, Receiver Review Landing Costs Screen, and Receiver Approval Landing Costs Screen Fields and Function Keys**

| Field/Function Key                  | Description   |

| 2                             | 1776544              |   |        |       |            |
|                               |                      |   |        |       | Last       |
| <u>Sl</u>                     | <u>Serial Number</u> | <u>Notes</u>                            |        |       |            |
| ...                           | 1776544              | .....                                   |        |       |            |
|                               | 2.000                | Entered                                 | 18.000 | To Go | F12=Return |

NOTE: This screen displays only if Warehouse Management is installed.

The Assignments - Lot No. Screen is used to add, change, review, or delete the lot numbers of lot items that are assigned to warehouse locations.

The Assignments - Serial No. Screen is used to add, change, review, or delete the serial numbers of serial number items that have been assigned to warehouse locations.

They are displayed by pressing **F9=ASSIGNMENTS** from the Receiver Approval Change Screen (p. 8-105), the Line Items On PO Select Change Screen (p. 8-104), or the Receiver Review Change Screen (p. 8-104).

### Important

If the **Require Lot/Serial Info for Drop Ships** field in Warehouse Management Options Maintenance (MENU WMFILE) is set to **A** (always require lot/serial information for drop shipments), and your purchase order contains lot/serial drop ship items, you need to complete the assignments on this screen before posting the purchase order receipt.

If the **Require Lot/Serial Info for Drop Ships** field in Warehouse Management Options Maintenance (MENU WMFILE) is set to **I** (require lot/serial information for drop shipments based on the item), and your purchase order contains lot/serial drop ship items, and those items are set to have their lots/serials print on the invoice or set to print on both the invoice and packing list (that is, the **Print Lot/Ser** field is set to either **I** for invoice or **B** for both in Item Master Maintenance (MENU IAFILE)), you need to complete the assignments on this screen before posting the purchase order receipt.

Receiver Processing through Warehouse Management (MENU WMMAIN) will not prompt for or require lot/serial numbers be entered for posting drop ship receipts since they are not assigned to a warehouse location.

NOTE: If a lot item is defined as a fixed case quantity item in Item Balance File Maintenance (MENU IAFILE), lots will not need to be assigned, regardless of the Warehouse Management Options as these type of lot items are ignored for the print process.

### Assignments - Lot No. or Assignments - Serial No. Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Lot Aging Date     | <p>If you are authorized to change or override the aging date for a lot item, as determined by the <b>Allow Changes to the Lot Aging Date</b> field in Application Action Authority (MENU XASCTY), this field is input-capable. This field allows you to override the aging date for the lot item at the lot assignment line-level.</p> <p>Key the Age Date for the lot item. This date will then be used (when the PO group is posted) instead of the receipt date entered at the PO receiver/group header level (via PO Processing). If a date is not entered here, when the PO group is posted, the PO group header receipt date will be used as the lot aging date.</p> <p>If you are not authorized to change or override the aging date for a lot item, this field will still display on this screen but it will be protected. If no lot aging date could be entered, the PO group header receipt date would be used as the lot aging date for the received lot items when the group posts.</p> <hr/> <p>NOTE: If a WM Location Balance File (WMBAL) record already exists for the same item/lot number/location for the assignment line where the lot aging date is being entered, but stored with a different WMBAL lot aging date, you will receive a warning message. This message will inform you to select another location to receive this lot item into, if you do not want to update the lot aging date of this pre-existing WMBAL record with the earliest date (of the two).</p> <hr/> <p><i>Valid Values:</i> Key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG); or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFILE).</p> <p>(N 6,0) Optional/Display</p> |
| Entered            | <p><b>Lot:</b></p> <p>This value tells you the quantity of lot numbers already keyed for this lot (i.e., this is the sum of the <b>Qty</b> fields for this lot item). When you have completed entering lots, this number should equal the quantity of items specified to store in this location.</p> <p><b>Serial:</b></p> <p>This value tells you how many serial numbers have been keyed for this item assignment. When you have completed entering serial numbers, this number should equal the quantity of the item specified to store in this location.</p> <p>Display</p>  |

Options: A=Approve  
 C=Change/View  
 U=Unapprove

PO No: ..... \*  
 Find (F6): .....

F2=Desc Left      F5=Mfg Item      F9=Unapproved      F12=Return  
 F6=Locate      F11=Order Qty      F15=Approve All

This screen displays after pressing F11=APPROVE from the Receiver List Selection Screen (p. 8-69), the Receiver Review Selection Screen (p. 8-92), or the End Receiver Information Screen (p. 8-89).

This screen displays a list of items contained in the identified receiver. Individual line items can be selected for modification/viewing and for approval (or to unapprove if previously approved). The F9=UNAPPROVED / F9=APPROVED function key exists to display only the approved or unapproved items for the receiver, while the F15=APPROVE ALL function key allows for the approval of all items on the screen in one step.

The display of line items is sequenced numerically by item number, but can be manipulated in several ways:

- Key a purchase order number in the **PO No** field and press ENTER to display only those items associated with that PO.
- Key an item number in the **Find** field and press F6=LOCATE to bring that item number to the top of the screen.

---

NOTE: Many roll screens that show the item number and description will display the item description on a separate line or the item and description on the same line, depending on the system options. This display of single or double line per item can be changed by pressing F24=DOUBLE LINE / F24=SINGLE LINE. F24=DOUBLE LINE will expand a collapsed screen or F24=SINGLE LINE will collapse an expanded screen. Refer to the Cross Applications User Guide for additional information about roll screens.

---

NOTE: This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. **Last** appears at the bottom of the last screen of data. To scroll through information on roll screens press:

\* PAGE DOWN or SHIFT-ROLL FWD or F7=PAGE DOWN to display the next screen

\* PAGE UP or SHIFT-ROLL BACK or F8=PAGE UP to display the previous screen.

```

The End Receiver Information Landing Costs Screen displays after pressing **F9=LND CST** from the End Receiver Information Screen (p. 8-89). This overlay screen is positioned in the middle of the screen and allows you override landing cost values for the entire receiver and distribute the totals to the individual items in the receiver.

The Landing Cost fields display those landing factors being used, as determined through Warehouse Numbers Maintenance (MENU IAFILE) in Inventory Accounting. The formulas for calculating landing costs are defined for a landing code (and optionally a warehouse) through Landing Factors Maintenance (MENU IAFILE). Finally, the landing codes are assigned to an item through Vendor/Item Information Maintenance (MENU POFILE).

The landing cost column values will display as zero values when:

- there is no landing code assigned to the item(s) through Vendor/Item Information Maintenance (MENU POFILE)
- there is no amount or method assigned to a landing factor in the landing code (i.e. no Duty will be charged)
- the calculation result is zero

When International Currency is installed, these **Landing Cost** column displays in the applicable currency defined for each landing factor associated with the requisition. If landing cost(s) are calculated in currencies different from the company's local currency, these fields may be toggled with the **F11=LOCAL CURR / F11=TRADING CURR** function key to display landing cost(s) in the trading currency's with the applicable currency symbol displayed with each cost, or in the company's local currency with the local currency symbol displayed.

Overall access to allow overrides is determined through Warehouse Numbers Maintenance (MENU IAFILE). Additionally, an individual line item's landing costs cannot be overridden if a group override

for all items in a receiver has occurred. Likewise, a receiver group override cannot occur for any landing costs that have had individual overrides performed. For example, if you overrode the broker fees landing cost for a line item on the Receiver Approval Selection Screen (p. 8-126)), you will not be able to override the displayed broker fees landing cost for the entire receiver on this screen.

If a group override has been keyed for a landing cost, a method of distribution is required. The method of distribution keyed here determines how the override value is to be distributed among each of the line items in the receiver.

---

**Example:****Assumption:**

The total weight of the first line item is 10 pounds. The total weight of the second line item is 30 pounds. The total weight of the third line item is 60 pounds. The displayed freight landing cost for all three lines is \$15.00. You wish to override the freight landing cost to reflect \$30.00 and desire to distribute the \$30.00 among the three line items according to their weight.

---

**Procedure:**

Press the **F5=OVERRIDE** function key to make the change. Key the \$30.00 in the freight factor **Landing Cost** field and key a **W** in the **Dst** field. Press **ENTER**.

---

**Results:**

While this screen simply appears updated with your new values, the freight factor landing costs of each of the three items has been modified in the following manner:

- Weight of the first line item (10 pounds) is 10% of the total weight of 100 pounds. Therefore, the amount equal to 10% of the total \$30.00 fee is attributed to the first line item; in other words, a value of \$3.00.
- Weight of the second line item (30 pounds) is 30% of the total weight of 100 pounds. Therefore, the amount equal to 30% of the total \$30.00 fee is attributed to the second line item; in other words, a value of \$9.00.
- Weight of the third line item (60 pounds) is 60% of the total weight of 100 pounds. Therefore, the amount equal to 60% of the total \$30.00 fee is attributed to the third line item; in other words, a value of \$18.00.

---

**End Receiver Information Landing Costs Screen Fields and Function Keys**

---

| Field/Function Key            | Description   |
|-------------------------------|---|
| (Landing Factor Descriptions) | The first column displays the landing factors defined through Warehouse Numbers Maintenance (MENU IAFILE).<br>Display |

---

---

**End Receiver Information Landing Costs Screen Fields and Function Keys**

---

| Field/Function Key   | Description   |
|----------------------|---|
| Landing Cost         | <p>The landing cost values displayed here are a calculated combination of those defined for each line item in the purchase order receiver. The number of landing factors available for calculating the landing costs is based on the number of landing factors selected for use for the purchase order's warehouse through Warehouse Numbers Maintenance (MENU IAFILE).</p> <p>These fields are also used to key group level overrides. To key overrides in these fields, press F5=OVERRIDE to begin override entry mode for those landing factors whose definitions allow overrides. Note that any landing factors that cannot be overridden at the group level will be display only.</p> <p>Once in override entry mode, key the desired landing factor values (the field is no longer just for cost). You will be required to also key a method of distribution (<b>Dst</b>).</p> <p>When International Currency is installed, if you are keying override landing factors values based on currency (V for value), you must key these amounts in the applicable trading currency when different than the company's local currency. The column is display only when toggled with the F11=LOCAL CURR / F11=TRADING CURR function key to display the company's local currency values.</p> <p>(N 16,2) Display/Required</p> |
| (Total Landing Cost) | <p>This field displays the total monetary amount of all landing cost(s) that will be included in this receipt at the bottom of the <b>Landing Cost</b> column.</p> <p>When International Currency is installed, this field displays for landing cost(s) calculated in trading currencies only if all costs are in the same currency. If the landing cost(s) are in mixed currencies, zeros will display in this field, and you must press F11=LOC CUR to display local currency equivalents in order to review this total. All landing cost(s) will display in the company's local currency with that currency symbol and the total will appear in the company's local currency.</p> <p>Display</p>   |

---

## End Receiver Information Landing Costs Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Dst                | <p>If a group override has been keyed for a landing cost, a method of distribution is required. The method of distribution keyed here determines how the override value is to be distributed among each of the line items in the receiver.</p> <p>The available distribution methods are defined as follows:</p> <p>Key <b>V</b> to distribute the cost to the line items according to the extended cost value (excluding landing costs) of those items.</p> <p>Key <b>W</b> to distribute the cost to the line items according to the total receipt weight of those items.</p> <p>Key <b>S</b> to distribute the cost to the line items according to the cubic size based on the receipt quantity of those items.</p> <p>Key <b>Z</b> if no landing cost is entered. Each item's applicable landing cost field will be zeroed out.</p> <p>Use <b>I</b> if you make a mistake in a <b>Landing Cost</b> field. Before pressing <b>ENTER</b> to accept the erroneous data, blank out the data, key <b>I</b> in this <b>Dst</b> field, and then press <b>ENTER</b>. The <b>Landing Cost</b> field will be replaced with the data originally displayed prior to the mistake. This data is obtained by re-reading the individual item landing cost data as it existed immediately prior to the mistake. In other words, if changes had been made to individual records prior to your accessing this screen, those changes would be considered. This differs from a "recalculate" function such as that achieved by blanking out this field which actually recalculates values, as opposed to simply re-reading what has been keyed to this point.</p> <p>(blank) Blank out the <b>Landing Cost</b> field and this <b>Dst</b> field to recalculate the landing costs for the items. Blanking out this field differs from using the <b>I</b> code in that line item landing costs will actually be recalculated and updated; the <b>I</b> code only re-reads the line item landing costs to redisplay the total on this screen.</p> <p><i>Valid Values:</i> V, W, S, Z, I, blank</p> <p>(A 1) Required</p> |
| Reference          | <p>Key a user comment or reference information that will assist in the association of the identified landing cost values to the source of the cost. For example, you might wish to key in <b>UPS</b> (to indicate United Parcel Service) next to a freight landing cost incurred for that company. This would assist when matching landing cost amounts to the correct landing cost invoices by helping to associate the two. You can even use this reference during receipt validation via Voucher Entry (MENU APMAIN) to limit the display of items to only those with that reference.</p> <p>(A 20) Optional</p>   |

This screen displays after selecting a receiver and pressing F13=NT PAD on the Receiver List Selection Screen (p. 8-69). A scrolling list of existing events are displayed in descending date order. Use this screen to review previously entered events relating to the selected receiver. You also may use this screen to:

- position an event (using the **Position To** or **Position To Event** field and F6=POSITION TO function key) at the top of the list based on a specified date or event code;
- access and maintain further detail [on the PO Receiver Note Pad Event Screen (p. 8-140)] relating to a given event with the use of the **Selection** field;
- add an event [on the PO Receiver Note Pad Event Screen (p. 8-140)] by pressing F5=ADD.

NOTE: This is a roll screen. More... appears at the bottom of a roll screen to indicate that more data is available for viewing. Last appears at the bottom of the last screen of data. To scroll through information on roll screens press:

\* PAGE DOWN or SHIFT-ROLL FWD or F7=PAGE DOWN to display the next screen

\* PAGE UP or SHIFT-ROLL BACK or F8=PAGE UP to display the previous screen.

### PO Receiver Note Pad Screen Fields and Function Keys

The PAGE UP or SHIFT-ROLL BACK function keys perform the same task.</p> |
| F12=Return                   | Press F12=RETURN to complete your review of the note pad and return to the Receiver List Selection Screen (p. 8-69).   |
| Enter                        | After entering a reference number in the <b>Selection</b> field of an existing event that you want to display in detail, press ENTER. The PO Receiver Note Pad Event Screen (p. 8-140) will display, where you may review or maintain events on the receiver's note pad.   |

---

## PO Receiver Note Pad Event Screen

This screen displays after pressing **F5=ADD** from the PO Receiver Note Pad Screen (p. 8-136), or after selecting an existing event from that screen with the use of the **Selection** field. Use this screen to add, change, or delete notes/comments or entire events to/from the note pad.

**NOTE:** This is a roll screen. More... appears at the bottom of a roll screen to indicate that more data is available for viewing. Last appears at the bottom of the last screen of data. To scroll through information on roll screens press:

- \* **PAGE DOWN** or **SHIFT-ROLL FWD** to display the next screen
- \* **PAGE UP** or **SHIFT-ROLL BACK** to display the previous screen.

### PO Receiver Note Pad Event Screen Fields and Function Keys

| Field/Function Key       | Description  |
|--------------------------|--|
| (Vendor Number and Name) | The number and name of the vendor associated with the selected receiver.<br>Display  |
| Company                  | The number and name of the company associated with the selected receiver.<br>Display |
| Receiver                 | The number and description of the receiver.<br>Display                               |
| Warehouse                | The ID and name of the warehouse associated with the receiver.<br>Display            |

---

**PO Receiver Note Pad Event Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Evt Code           | <p>Use this field to enter the code for the event you plan to add to the note pad, if in the “Add” mode. If you selected an existing event, you may change the event code in this field, if desired.</p> <p>Key the appropriate code. Any events keyed on this screen will be saved and stored based on this code.</p> <p><i>Default Value:</i> If you selected an existing event on the PO Receiver Note Pad Screen (p. 8-136), this is the code for the event, if any; if you pressed F5=ADD, this field is blank.</p> <p><i>Valid Values:</i> Any event code created through Event Codes Maintenance (MENU POFILE)</p> <p>(A 3) Optional</p>  |
| Evnt Date          | <p>If you selected an existing event on the PO Receiver Note Pad Screen (p. 8-136), this field displays the date associated with the event, if any. Otherwise, if you are in the “Add” mode, it displays the current system date.</p> <p>Accept the default or key the appropriate date.</p> <p><i>Default Value:</i> The current system date, or a previously entered date</p> <p><i>Valid Values:</i> Key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system’s <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFILE).</p> <p>(N 6,0) Required</p> |
| Last Change        | <p>This field displays the date upon which the last modification was made to this note pad. This date is automatically assigned using the current system date.</p> <p>Display</p>  |
| User               | <p>This field displays the ID of the user who is currently adding an event.</p> <p>Display</p>   |
| Description        | <p>Use this field to enter a summarized (short) description of the event you are adding or maintaining, or to change an existing description. This description will appear on the PO Receiver Note Pad Screen (p. 8-136) in the <b>Event Description</b> field.</p> <p><i>Default Value:</i> The description of the event code in the <b>Evnt Cde</b> field on this screen, if any; or, this is a description manually keyed on the PO Receiver Note Pad Screen (p. 8-136), if any.</p> <p>(A 30) Optional</p>   |

**PO Receiver Note Pad Event Screen Fields and Function Keys**

| Field/Function Key   | Description  |
|--|--|
| (Line Delete)  | <p>You only can access the fields in this column by first pressing <b>F6=ALLOW DELETE</b>.</p> <p>These fields are used to delete specific notes/comments for an event. Note that if you delete all notes/comments associated with an event, you will delete the event itself.</p> <p>To delete one or more notes/comments, press <b>F6=ALLOW DELETE</b>. The <b>F6=ALLOW DELETE</b> will open this column for entry and the cursor will be positioned in this column on the first line. Place the cursor in the field(s) corresponding to the notes/comments you wish to delete and key a <b>D</b> in each of those fields. Press either <b>ENTER</b> to delete the designated notes/comments and remain on this screen (the cursor will be positioned on the first line in the <b>Notes/Comments</b> field), or <b>F10=UPDATE</b> to delete the notes/comments and return to the PO Receiver Note Pad Screen (p. 8-136).</p>       |
| <p><b>Important</b></p>  |  |
| <p>Do not use the <b>F24=DELETE ALL</b> function key to delete individual notes/comments. <b>F24=DELETE ALL</b> is used to delete the entire note/comment, not individual lines.</p> |  |
| <p><i>Valid Values:</i> D or blank<br/>(12 @ A 1) Optional</p>   |  |
| (Notes/Comments)   | <p>Use these fields to key notes/comments associated with the event that transpired. To display the additional lines that are available, use the <b>PAGE UP</b> or <b>PAGE DOWN</b> function keys.</p> <p>(12 @ A 70) Required</p>   |
| <p><b>F6=Allow Delete /<br/>F6=Edit Text</b></p>   | <p>Press <b>F6=ALLOW DELETE / F6=EDIT TEXT</b> to delete a specific note/comment displayed on this screen; press it again to return this screen to its original edit mode without deleting any notes/comments.</p> <p>In the “allow delete” mode, after pressing <b>F6=ALLOW DELETE</b>, the cursor will be positioned in the <b>Line Delete</b> column on the first line. Place the cursor in the field(s) corresponding to the notes/comments you wish to delete and key a <b>D</b> in each of those fields. Press either <b>ENTER</b> to delete the notes/comments and remain on this screen (the cursor will be positioned on the first line in the <b>Notes/Comments</b> field), or <b>F10=UPDATE</b> to delete the notes/comments and return to the PO Receiver Note Pad Screen (p. 8-136).</p> <p>To delete ALL notes/comments displayed on this screen and thereby delete the event itself, press <b>F24=DELETE ALL</b>.</p> |

---

**PO Receiver Note Pad Event Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| F10=Update         | Press <b>F10=UPDATE</b> to confirm the additions/modifications you have made to the note pad and return to the PO Receiver Note Pad Screen (p. 8-136). The event date, event code, event description, date of last change, and last user will be updated accordingly on the PO Receiver Note Pad Screen. |
| F12=Return         | Press <b>F12=RETURN</b> to complete your review of receiver events and return to the PO Receiver Note Pad Screen (p. 8-136) without updating this screen.  |
| F24=Delete All     | Press <b>F24=DELETE ALL</b> to delete the entire event. You will be prompted to press <b>F24=DELETE ALL</b> again to confirm your deletion(s). The PO Receiver Note Pad Screen (p. 8-136) will display.  |

---

**Important**

Do not use this key to delete individual notes/comments. Use **F6=ALLOW DELETE** to delete one or more notes/comments associated with an event without deleting the entire event from the note pad.

---

## Receipt Post Errors Screen

```

Receiver: 1 / THURSDAY    RECEIPT POST ERRORS    WH: 1    Vendor: IC8000

Our Item No/Desc          Quantity  U/M
C110 Seth Thomas Desk Set Gold Plt. Sold Brss. +    2.000    EA

611: Items listed above do not have locations fully assigned.

Total Items: 1

F2=Desc Left    F5=Mfg Item    F10=Continue    F12=Return
    
```

This screen displays after selecting to post receivers from the Receiver List Selection Screen (p. 8-69), but all approved items have not yet been assigned warehouse locations.

All the fields on this screen are display only and cannot be changed.

NOTE: Many roll screens that show the item number and description will display the item description on a separate line or the item and description on the same line, depending on the system options. This display of single or double line per item can be changed by pressing F24=DOUBLE LINE / F24=SINGLE LINE. F24=DOUBLE LINE will expand a collapsed screen or F24=SINGLE LINE will collapse an expanded screen. Refer to the Cross Applications User Guide for additional information about roll screens.

### Receipt Post Errors Screen Fields and Function Keys

| Field/Function Key   | Description   |
|--|---|
| Receiver   | The company number and the number of the receiver being processed.  |
| WH   | The warehouse associated with the receiver.   |
| Vendor   | The vendor associated with the receiver.  |
| Our Item No/<br>Description<br>Mfg Item No/<br>Description | The stocking item number and description or the manufacturer's item number and description. The F5=MFG ITEM / F5=OUR ITEM function key is used to toggle the display between the two. |

### Receipt Post Errors Screen Fields and Function Keys

| Field/Function Key                                | Description   |
|---|---|
| Quantity  | This is the quantity of the item that has been identified as received.  |
| U/M   | The buying unit of measure respective to the quantity ordered for the item.<br>Buying units of measure are defined for the item through Vendor/Item Information Maintenance (MENU POFIELD).   |
| Message   | The line items displayed on this screen are those which need location assignments. This message indicates why the receipts could not be posted for the displayed items. Warehouse locations can be assigned through Warehouse Management (MENU WMMAIN) from the Receiver List Selection Screen (p. 8-69) and using the F4=PUT-AWAY function key.  |
| F2=Desc Left /<br>F2=Desc Right /<br>F2=Item/Desc | The F2=DESC LEFT / F2=DESC RIGHT / F2=ITEM/DESC toggle function displays only if you selected not to display both descriptions lines [as determined in System Options Maintenance (MENU XAFIELD), or as selected with the non-display F24=DOUBLE LINE / F24=SINGLE LINE function key].<br><br>Press F2=DESC LEFT to show the “left window” of the item description starting with the left-most word in the description.<br><br>Press F2=DESC RIGHT to show the “right window” of the item description starting with the right-most word in the description.<br><br>Press F2=ITEM/DESC to show the item number and as much of the description as will fit (two blanks separate the fields.) The item number displays in high intensity to distinguish it from the description. |
| F5=Mfg Item /<br>F5=Our Item                      | The F5=MFG ITEM / F5=OUR ITEM function key is used as a toggle to display either the manufacturer’s item number or the item number in your organization (our item number) in the Our/Mfg Item/Description column.<br><br>Press F5=MFG ITEM to display the manufacturer’s item number in the Our/Mfg Item/Description column.<br><br>Press F5=OUR ITEM to display the complete or partial item number used by your organization (our item number) in the Our/Mfg Item/Description column.  |
| F10=Continue                                      | Press F10=CONTINUE to continue processing for those approved items in the receiver that do have warehouse locations assigned. The Post Received Items Screen (p. 8-146) will display to identify exactly which items those are.<br><br>If no approved items with location assignments exist, you will be returned to the Receiver List Selection Screen (p. 8-69) and no posting activity will occur.   |
| F12=Return  | Press F12=RETURN to return to the Receiver List Selection Screen (p. 8-69) without performing any posting activity.   |

## Post Received Items Screen

```

Receiver: 1 / 100196   POST RECEIVED ITEMS   WH: 1   Vendor: IC3000

  Opt  Our Item No/Desc                Quantity  U/M
  Y    W1131 Casing Overhead Connector Casing      100.000  EA
  Y    W1132 Screws 3mm Overhead Connector Screws 1000.000  EA

-----

Options:  Y=Post      V=View Loc Assignments      Total Items: 2
          Job Template: .....      Modify Selections: N
Locate Item (F6): .....      F6=Locate      F10=Continue      F12=Return
F2=Desc Left      F5=Mfg Item      F9=Job Template List      F13=Clear
    
```

This screen displays after selecting F15=POST to post receivers from the Receiver List Selection Screen (p. 8-69). From this screen, you can post all or selected items (by keying a Y in the **Opt** field for each).

If Warehouse Management is installed, all approved items must be assigned warehouse locations prior to being posted. The line items displayed on this screen are those which have successfully passed the check to ensure location assignments have been assigned, and are therefore ready for posting.

NOTE: Many roll screens that show the item number and description will display the item description on a separate line or the item and description on the same line, depending on the system options. This display of single or double line per item can be changed by pressing F24=DOUBLE LINE / F24=SINGLE LINE. F24=DOUBLE LINE will expand a collapsed screen or F24=SINGLE LINE will collapse an expanded screen.

NOTE: This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. **Last** appears at the bottom of the last screen of data. To scroll through information on roll screens press:

- \* PAGE DOWN or SHIFT-ROLL FWD to display the next screen
- \* PAGE UP or SHIFT-ROLL BACK to display the previous screen.

**Post Received Items Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Job Template       | <p>Job templates are defined through Job Template Maintenance (MENU XAFILE) to allow parameter selections to be pre-defined for a particular process (such as, GL Year End) ahead of time. Once defined, this template can be used repeatedly, eliminating the need to manually provide these parameters for every submission of this job process.</p> <p>For the current job submission, you can enter a pre-defined job template in this field to use the established parameters (with or without any modifications), or you can leave this field blank and the system will prompt you to provide your own parameters.</p> <p>If you enter a pre-defined job template in this field, and do not want to make any changes to the established parameter selections for this current job submission, key <b>N</b> in the <b>Modify Selections</b> field. You will then bypass all the output parameter screens.</p> <p>If you enter a pre-defined job template in this field, but want to review and/or make modifications to the established parameter selections for this current job submission, key <b>Y</b> in the <b>Modify Selections</b> field. You will be presented with the established parameters for that job template and can review/make changes as needed for this job.</p> <p>If you leave this field blank, you will be presented with a series of prompts for you to provide the desired parameters for this current job submission.</p> <hr/> <p>NOTE: To review a list of existing job templates that have been created for the Purchase Order Receipt Post job, press <b>F9=JOB TEMPLATE LIST</b>.</p> <hr/> <p><i>Valid Values:</i> A job template defined for Purchase Order Receipt Post jobs (that is, PO605P) through Job Template Maintenance (MENU XAFILE).<br/>(A 10) Optional</p> |

---

## Post Received Items Screen Fields and Function Keys

| Field/Function Key                                  | Description   |
|---|---|
| Modify Selections                                   | <p>If using a job template (you keyed a job template name in the <b>Job Template</b> field on this screen or select one with F9=JOB TEMPLATE LIST), this field determines if you will be presented with that template's parameters for review and/or modification for this current job submission.</p> <p>Key <b>Y</b> if you want to be able to review and/or modify the selections of the indicated job template. Any changes you make to the template through this post run will not impact the actual predefined template. The changes apply for this run of the job only. If you key <b>Y</b>, a series of selection screens will display allowing you to review and/or make changes. For details about the screens that display, refer to Job Template Maintenance (MENU XAFILE) in the Cross Applications User Guide.</p> <p>Key <b>N</b> if you want to use the template as-is and you do not want to make any modifications. If you key <b>N</b>, a series of selections screens will not be displayed.</p> <p><i>Valid Values:</i> Y or N; cannot be <b>Y</b> if the <b>Job Template</b> field is blank.</p> <p>(A1) Optional</p> |
| Locate Item   | <p>Use this field to locate an item in the displayed list. Use the manufacturer's item number, or the stocking item number, depending upon the mode you are in. The F5=MFG ITEM / F5=OUR ITEM toggle key will switch the mode from the manufacturer's item number (<b>Mfg</b>) and the stocking (<b>Our</b>) item number.</p> <p>Key the complete or partial item number to locate in this field, then press F6=LOCATE to find the item number. The item that closest meets the item number keyed here will display at the top of the screen.</p> <p>(A 27) Optional</p>  |
| F2=Desc Left /<br>F2=Desc Right /<br>F2=Item & Desc | <p>The F2=DESC LEFT / F2=DESC RIGHT / F2=ITEM &amp; DESC function key will display only if you selected not to display both description lines [as selected in System Options Maintenance (MENU XAFILE) or with the F24=DOUBLE LINE / F24=SINGLE LINE hidden function key].</p> <p>Press F2=DESC LEFT to show the "left window" of the item description starting with the left-most word in the description.</p> <p>Press F2=DESC RIGHT to show the "right window" of the description so the last word in the description will appear at the end of the description field. The left and right windows will be the same if the entire description can fit on the screen.</p> <p>Press F2=ITEM &amp; DESC to show the complete item number and as much of the description as will fit (two blanks separate the fields.) The item number is high intensity.</p>   |

### Post Received Items Screen Fields and Function Keys

| Field/Function Key           | Description  |
|------------------------------|--|
| F5=Mfg Item /<br>F5=Our Item | <p>The F5=MFG ITEM / F5=OUR ITEM key is used as a toggle to display either the manufacturer's item number or the stocking item number (our item number) in the <b>Our Item No/Desc / Mfg Item No/Desc</b> column.</p> <p>Press F5=MFG ITEM to display the manufacturer's item number in the <b>Our/Mfg Item/Description</b> column.</p> <p>Press F5=OUR ITEM to display the complete or partial item number used by your organization (our item number) in the <b>Our/Mfg Item/Description</b> column.</p>   |
| F6=Locate                    | <p>Press F6=LOCATE to locate the item number that was keyed in the <b>Locate Item</b> field. The item that closest meets the item number keyed here will display at the top of the screen.</p>   |
| F9=Job Template List         | <p>Press F9=JOB TEMPLATE LIST to display the Job Template List Screen, where you can review a list of existing job templates that have been created for PO Receipt Posts.</p> <p>Refer to Job Template Maintenance (MENU XAFILE) in the Cross Applications User Guide for further details.</p>   |
| F10=Continue                 | <p>Press F10=CONTINUE to continue the posting processing. A receipt group will automatically be generated for the items on this screen marked with a Y in the <b>Opt</b> field.</p> <p>The job template posting selection screens display. If the interface is on between Inventory Accounting and General Ledger, the G/L Posting Date Selection Screen (p. 8-152) will display following the template selection screens. Otherwise, press F10=CONTINUE to receive message confirming that the job has been submitted to the Transaction Processor. For more information about the Transaction Processor, refer to the Cross Applications User Guide.</p> |
| F12=Return                   | <p>Press F12=RETURN to return to the Receiver List Selection Screen without performing any posting activities.</p>   |
| F13=Clear                    | <p>Press F13=CLEAR to clear out the values in the <b>Opt</b> field for all items on this screen. This is a valuable tool if desiring to only post one or two items out of the entire screen: use this key to blank out all Y values, and then just key a Y next to the desired items.</p>  |

---

**Post Received Items Screen Fields and Function Keys**

| Field/Function Key                   | Description  |
|--------------------------------------|--|
| F24=Double Line /<br>F24=Single Line | <p data-bbox="526 310 1097 344">F24=DOUBLE LINE / F24=SINGLE LINE is non-display.</p> <p data-bbox="526 352 1430 491">Press F24=DOUBLE LINE / F24=SINGLE LINE to toggle between double line mode and single line mode. The default mode of this screen is based on the selection to <b>Show 2nd Desc Line</b> as determined in System Options Maintenance (MENU XAFILE).</p> <p data-bbox="526 499 1430 604">In single line mode, the initial display shows the item number field based on the <b>Longest Item Length</b> field specified in System Options (MENU XAFILE) followed by the beginning of the item description.</p> <p data-bbox="526 613 1430 684">In double line mode, the two lines of item description are displayed below the full display of the item number field.</p> |

---

## G/L Posting Date Selection Screen

---

**NOTE:** This screen is displayed only if the interface is on between General Ledger and Inventory Accounting.

---

Additionally, depending on your selections in the **Job Template** and **Modify Selections** fields on this screen, various job template screens may or may not display once you press **ENTER**. This screen displays after pressing **F10=CONTINUE** on the Post Received Items Screen (p. 8-146).

Use this screen to select the date under which inventory transactions will be posted. Each time an inventory journal will be updated in General Ledger, this screen will display.

---

### Important

These inventory postings will update the Item Balance File, any quantities on-hand, etc. Related general ledger updates do not occur, however, until Day-End Processing (MENU XAMAST) or Post IA Transactions to G/L (MENU IAMAST) is run. Once these general ledger postings occur, general ledger information will be incorporated into all applicable item files.

---

### G/L Posting Date Selection Screen Fields and Function Keys

| Field/Function Key       | Description   |
|--------------------------|---|
| Status                   | <p>The status of the receiver:</p> <ul style="list-style-type: none"> <li>• <b>Pending Approval</b></li> <li>• <b>Fully Approved</b></li> <li>• <b>Done</b> (posted completed)</li> <li>• <b>Posting</b> (in process)</li> <li>• <b>Pre-received</b></li> <li>• <b>Printed</b> (Put-Away List has been printed)</li> </ul> <hr/> <p>NOTE: The status for the entire receiver is equivalent to the lowest status of any line item in that receiver. For example, if one item in the receiver is approved, but another item is still pending, the status for the receiver is still pending.</p> |
| Ship Date                | The date the items in the receiver were shipped (or the estimated date of when they will be shipped).   |
| Receipt Date             | The date the items in the receiver were received (or the estimated date of when they will be received).   |
| Number of Items          | The total number of items from all the PO lines that have been included in this receiver.   |
| Number of Approved Items | The total number of the items included in the receiver that have been approved.   |
| Total Value              | <p>This field displays the total value of items in the receiver.</p> <p>When International Currency is installed, if the vendor's trading currency differs from the company's local currency, this value will display in the company's local currency with the local currency symbol displayed to the right. The trading currency equivalent value will display on the right side of the screen with the trading currency symbol.</p>   |
| Total Weight             | The total weight calculated by combining the individual receipt values for all items included in the receiver.  |
| Total Cubes              | The total cubes are calculated from the total cubic size of all the individual items being received in the receiver.  |
| Created By               | The ID of the user who created the receiver and the date the receiver was created.  |

This overlay screen displays after pressing F6=LND CST from the Receiver Inquiry Header Information Review Screen (p. 8-160). This overlay screen is positioned in the middle of the screen and allows you view landing cost values for the entire receiver.

The landing cost fields display those landing factors being used, as determined through Warehouse Numbers Maintenance (MENU IAFILE) in Inventory Accounting. Related general ledger account information for landing costs is defined through G/L Transfer Definition (MENU GLXFER) in General Ledger. The formulas for calculating landing costs are defined for a vendor (and optionally a warehouse) through Landing Factors Maintenance (MENU POFILE). Finally, landing costs are assigned to an item through Vendor/Item Information Maintenance (MENU POFILE) in Purchasing.

All the fields on this screen are display only and cannot be changed.

### Important

When International Currency is installed, the Landing Costs column displays for landing cost(s) calculated in trading currencies with the specific currency symbol. If the landing cost(s) are in mixed currencies, zeros will display in the Total Landing Cost(s) field, and you must press F11=LOCAL CURRENCY to display local currency equivalents to review the Total Landing Cost(s) amount. All landing cost(s) will display the company's local currency symbol to the right and the total will appear in the company's local currency.

---

**Receiver Inquiry Header Landing Costs Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Landing Cost       | The landing cost values displayed here are a calculated combination of those defined for each line item in the receiver. If any overrides were keyed when the receiver was entered, they will be included in this display.  |
| Cur                | <p>When International Currency is installed, the fields in this column display the symbol for the currency associated with each landing factor.</p> <p>The values in the <b>Landing Cost</b> fields display in the applicable trading currency with the currency symbol displayed to the right. The <b>F11=LOCAL CURRENCY / F11=TRADING CURRENCY</b> key may be used to toggle to the local currency equivalents of all landing cost(s) in these fields; the local currency symbol will display to the right of each.</p>   |
| Dst                | <p>If a group override was previously keyed for a landing cost [through Receiver Entry/Maintenance (MENU PMAIN)], a method of distribution was required. The method of distribution displayed here determined how the override amount was to be distributed among each of the line items in the receiver.</p> <p>The possible distribution methods are defined as follows:</p> <ul style="list-style-type: none"> <li>• <b>V</b>: The cost was distributed to the line items according to the extended value (excluding landing costs) of those items.</li> <li>• <b>W</b>: The cost was distributed to the line items according to the weight of those items.</li> <li>• <b>S</b>: The cost was distributed to the line items according to the size of those items.</li> <li>• <b>Z</b>: No landing cost was entered. Each item's applicable landing cost field was zeroed out.</li> </ul> |
| Reference          | <p>Any previously keyed user comment or reference information that was to assist in the association of the identified landing cost values to the source of the cost. For example, <b>UPS</b> (to indicate United Parcel Service) might have been keyed next to a freight landing cost incurred for that company. This would assist when matching landing cost amounts to the correct landing cost invoices by helping to associate the two. You can even use this reference during receipt validation [via Voucher Entry (MENU APMAIN)] to limit the display of items to only those with that reference.</p>  |

---

**Receiver Inquiry Header Landing Costs Screen Fields and Function Keys**

---

| Field/Function Key    | Description   |
|-----------------------|---|
| (Total Landing Costs) | This field displays the total monetary amount of all landing cost(s) at the bottom of the column. |

---

**Important**

This field displays for landing cost(s) calculated in trading currencies only if all landing factor costs are in the same currency. If the landing factor cost(s) are in mixed currencies, zeros will display in this field, and you must press **F11=LOCAL CURR** to display local currency equivalents in order to review this total. The company's local currency symbol will display to the right of all landing cost(s), and the total will appear in the company's local currency.

---

|  |   |
|--|---|
| F11=Local Currency /<br>F11=Trading Currency | <p>Press <b>F11=LOCAL CURRENCY / F11=TRADING CURRENCY</b> to toggle between a display of landing cost(s) in the trading currency and a display of landing cost(s) and the landing cost total in the company's local currency.</p> <p>Press <b>F11=LOCAL CURRENCY</b> to display landing cost(s) in the company's local currency. The currency symbol for the company's local currency will display to the right of each landing cost. If landing factors are calculated using mixed currencies, the total will display in the company's local currency.</p> <p>Press <b>F11=TRADING CURRENCY</b> to display landing cost(s) in the trading currency's. The symbol for the applicable trading currency will display to the right of each cost. Note that if landing factors are calculated using mixed currencies, the total will not display.</p> |
| F12=Return                                   | Press <b>F12=RETURN</b> to return to the Receiver Inquiry Header Information Review Screen (p. 8-160).  |

         V=View PO         Find (F6): .....

                F2=Desc Left      F5=Mfg Item      F11=Order Qty
                                F6=Locate           F10=Header       F12=Return
    
```

This screen displays after pressing **ENTER** from the Receiver Inquiry Header Information Review Screen (p. 8-160). This screen displays a list of items contained in the identified receiver. Individual line items can be selected for viewing in detail, or for reviewing associated purchase order information.

The display of line items is sequenced numerically by item number, but can be manipulated in several ways:

- Key a purchase order number in the **PO No** field to display only those items associated with that PO.
- Key an item number in the **Find** field and press **F6=LOCATE** to bring that item number to the top of the screen.

---

**NOTE:** Many roll screens that show the item number and description will display the item description on a separate line or the item and description on the same line, depending on the system options. This display of single or double line per item can be changed by pressing **F24=DOUBLE LINE / F24=SINGLE LINE**. **F24=DOUBLE LINE** will expand a collapsed screen or **F24=SINGLE LINE** will collapse an expanded screen. Refer to the Cross Applications User Guide for additional information about roll screens.

---

**NOTE:** This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. **Last** appears at the bottom of the last screen of data. To scroll through information on roll screens press:

- \* **PAGE DOWN** or **SHIFT-ROLL FWD** or **F7=PAGE DOWN** to display the next screen
- \* **PAGE UP** or **SHIFT-ROLL BACK** or **F8=PAGE UP** to display the previous screen.

---

## Receiver Inquiry Detail Item Selection Screen Fields and Function Keys

| Field/Function Key                   | Description  |

This screen displays after keying an **R** in the **Opt** field and pressing **ENTER** from the Receiver Inquiry Detail Item Selection Screen (p. 8-166). This screen displays current information about the line items selected. Information displayed was originally keyed through Enter or Change Receivers or PO Receipts (MENU POMAIN).

All the fields on this screen are display only and cannot be changed.

## Receiver Inquiry Item Detail Screen Fields and Function Keys

| Field/Function Key                   | Description   |
|--------------------------------------|---|
| Receiver                             | The company number and number of the receiver being processed.  |
| WH                                   | The warehouse ID and description associated with the receiver.  |
| Vendor                               | The vendor number and name associated with the receiver.  |
| Opt                                  | An <b>R</b> displays for those items marked for review of the receiver item in detail.<br><br>A <b>V</b> displays for those items marked to view detailed information about the selected purchase order item on the Requisition/Purchase Order Item Detail Screen (p. 14-30). |
| Our Item No/Desc<br>Mfg Item No/Desc | The stocking item number and description or the manufacturer's item number and description based on the <b>F5=MFG ITEM</b> / <b>F5=OUR ITEM</b> function key selection on the Receiver Inquiry Detail Item Selection Screen (p. 8-166).                                       |

### Receiver Inquiry Item Detail Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| PO No              | <p>The purchase order number that the item is affiliated with. The displayed number may have a lower case letter appended. The letters designate the following:</p> <ul style="list-style-type: none"> <li>• <b>a</b> Line has order assignments</li> <li>• <b>b</b> Line has order assignments and comments</li> <li>• <b>c</b> Line has comments.</li> </ul>  |
| Status             | <p>The status of the item. The status is either:</p> <ul style="list-style-type: none"> <li>• <b>Pend:</b> Pending approval</li> <li>• <b>Appr:</b> Approved</li> <li>• <b>Done:</b> Completed</li> <li>• <b>Post:</b> Posted</li> <li>• <b>Prt:</b> Put-Away List has been printed through Warehouse Management (MENU WMMAIN). This is applicable only if Warehouse Management is installed.</li> <li>• <b>PRcv:</b> Pre-received through Warehouse Management (MENU WMMAIN). This is applicable only if Warehouse Management is installed.</li> </ul> |
| On PO / Received   | <p>The quantity of the item requested by the identified PO or the quantity received. The F11=ORDER QTY / F11=RECEIVED QTY function key selection on the Receiver Inquiry Detail Item Selection Screen (p. 8-166).</p>   |
| U/M                | <p>The buying unit of measure respective to the ordered / received quantity for the item.</p>   |
| Item               | <p>The item number and description of the item selected to be reviewed.</p>   |
| PO No              | <p>The company and purchase order number included in this receiver for the selected item being received.</p>  |
| Received           | <p>This field is used to display the quantity received for the specified purchase order.</p>  |
| Rec Cmplt          | <p>This field indicates whether or not the item is considered “received complete”. A <b>C</b> in this field indicates received complete; blank indicates it is not. Even if an item’s order quantity has not been met (i.e., received), it may have been decided that the line item was still “received complete”.</p>  |
| On PO              | <p>The quantity ordered for this line item in this PO.</p>  |
| Other Rcvrs        | <p>This field indicates how many of the indicated item are included in other receivers.</p>   |

## Receiver Inquiry Item Detail Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Cost               | <p>This value is the current item unit cost or the lot cost. If a cost of <b>0</b> was keyed, a cost code of <b>N</b> (No charge) must also have been keyed.</p> <p>When International Currency is installed, this field displays the item cost in the company's local currency. The trading currency equivalent displays below with the trading currency symbol. The trading currency equivalent of the item's cost only shows if the trading currency differs from the company's local currency.</p> |
| Cost Code          | <p>This code indicates the type of cost keyed in the <b>Cost</b> field:</p> <ul style="list-style-type: none"> <li>• <b>U</b> if the cost is a unit cost</li> <li>• <b>L</b> if the cost is a lot cost</li> <li>• <b>N</b> if there is no charge for this item.</li> </ul>   |
| Total Weight       | <p>This is the total weight for the entire quantity received (as identified in the <b>Received</b> field.) This is a required field for catch weight items.</p> <p>The unit weight for the item and buying U/M from the Purchase Order Detail File (PODET) is displayed for reference below the <b>Total Weight</b> when the unit weight value is greater than zero.</p>   |
| Comment            | <p>This field indicates whether or not receipt transaction comments are affiliated with the item. If <b>Y</b> is in this field, receipt item comments were entered on the I/A Receipt Comment Maintenance Screen (p. 8-110). If <b>N</b> is in this field, then no receipt transaction comments are indicated for this item.</p>   |
| N-Stk              | <p>This field identifies if the indicated substitute item is a non-stock item or not. A <b>Y</b> indicates that the substitute item is a non-stock item. An <b>N</b> indicates that the substitute item is a stocked item.</p>   |
| Sub Item           | <p>An item number in this field indicates that it has been designated as a substitute item and it may be received instead of the original item.</p>  |
| Last Qty           | <p>This field displays the quantity last received for this line item on this receiver.</p>   |
| Orig Qty           | <p>This field displays the quantity that was expected to be received for this line item when the receiver was created.</p>   |
| F6=Lnd Cst         | <p>The <b>F6=LND CST</b> function key will display only if you are using Landing Factors, as defined through Warehouse Numbers Maintenance (MENU IAFILE). Press <b>F6=LND CST</b> to display the Receiver Inquiry Detail Landing Costs Screen (p. 8-175).</p>  |

**Receiver Inquiry Item Detail Screen Fields and Function Keys**

| <b>Field/Function Key</b> | <b>Description</b>  |
|---------------------------|---|
| F9=Assignments            | <p>The F9=ASSIGNMENTS function key displays only if all the following are true:</p> <ul style="list-style-type: none"><li>• Warehouse Management is installed.</li><li>• The item selected has been defined as a lot or serial item [lot/serial determination is done through Item Master Maintenance (MENU IAFILE)].</li><li>• The lot/serial assignments were not made during put-away (MENU WMMAIN). To add or change lot/serial assignments made during put-away, you must access the put-away function through Warehouse Management (MENU WMMAIN).</li></ul> <p>Press F9=ASSIGNMENTS to display the Assignments - Lot No. Screen (p. 8-118) or Assignments - Serial No. Screen (p. 8-118).</p> |
| F12=Return                | <p>Press F12=RETURN to return to the Receiver Inquiry Detail Item Selection Screen (p. 8-166).</p>  |
| Enter                     | <p>When multiple items were selected for receiver detail review, pressing ENTER will display the next item selected for review. After the last item is reviewed, the Receiver Inquiry Detail Item Selection Screen (p. 8-166) displays.</p>   |

| <hr/>                 |  |                 |                    |            |                         |
|                       | 496.04                                   |                 | F11=Local Currency |            | F12=Return              |

This overlay screen displays after pressing F6=LND CST from the Receiver Inquiry Item Detail Screen (p. 8-171). Use this screen to view landing cost amounts for specific items.

The Landing Cost fields display those landing factors being used, as determined through Warehouse Numbers Maintenance (MENU IAFILE) in Inventory Accounting. The formulas for calculating landing costs are defined for a landing code (and optionally a warehouse) through Landing Factors Maintenance (MENU IAFILE). Finally, the landing codes are assigned to an item through Vendor/Item Information Maintenance (MENU POFILE).

When International Currency is installed, if the landing cost(s) are in mixed currencies, zeros will display in the **Total Landing Cost(s)** field, and you must press F11=LOCAL CURR to display local currency equivalents to review the total. All landing cost(s) will display the company's local currency symbol to the right and the total will appear in the company's local currency.

All the fields on this screen are display only and cannot be changed.

## Receiver Inquiry Detail Landing Costs Screen Fields and Function Keys

| Field/Function Key            | Description  |
|-------------------------------|--|
| (Landing Factor Descriptions) | The first column displays the landing factors defined through Warehouse Numbers Maintenance (MENU IAFILE). |
| Landing Cost(s)               | The Landing Cost(s) extended value totals based on the receipt quantity for the individual landing factor. |

## Receiver Inquiry Detail Landing Costs Screen Fields and Function Keys

| Field/Function Key      | Description   |
|-------------------------|---|
| (Total Landing Cost(s)) | <p>This field displays the total value of items in the receiver.</p> <p>When International Currency is installed, if the vendor's trading currency differs from the company's local currency, this value will display in your the company's currency with the local currency symbol displayed to the right. The trading currency equivalent value will display on the right side of the screen with the trading currency symbol displayed to the right.</p>   |
| Factor                  | The landing factor with which the landing costs were calculated based on the receiving warehouse, in accordance with the values in the <b>Mth</b> field.  |
| Mth                     | <p>This field displays the method previously used to calculate the landing costs values. The possible values are described as follows:</p> <ul style="list-style-type: none"> <li>• <b>%</b>: Defines the landing factor amount as a percentage of the line item's extended cost.</li> <li>• <b>C</b>: Defines the landing factor amount as a specific currency amount.</li> <li>• <b>U</b>: Defines the landing factor amount as a currency amount per item based on the purchasing buying unit of measure (<b>BUY</b>). Purchase orders for quantities in the alternate purchasing unit of measure (<b>ALT</b>) will be converted accordingly. The calculated landing cost will reflect the total charge for all units in a line item.</li> <li>• <b>W</b>: Defines the landing factor amount to be a currency amount per line item weight based on the purchasing buying unit of measure (<b>BUY</b>). Purchase orders for quantities in the alternate purchasing unit of measure (<b>ALT</b>) will be converted accordingly. The calculated landing cost will reflect the total weight of all items included in a line.</li> <li>• <b>S</b>: Defines the landing factor amount to be a specific currency amount per size (cube) based on the purchasing unit of measure (<b>BUY</b>). Purchase orders for quantities in the alternate purchasing unit of measure (<b>ALT</b>) will be converted accordingly. The calculated landing cost will reflect the total cubic space for all units in the line item.</li> <li>• <b>Z</b>: Defines the landing factor amount to be zero.</li> <li>• <b>G</b>: Identifies that the landing cost has been overridden on a group level.</li> </ul> |
| Landed Cost             | This is the total cost of the item calculated as the vendor's price plus all individual landing costs. This amount will be shown for both the purchase order unit of measure and the costing unit of measure, if different.   |

This report prints the purchase order receipts that were keyed in the group selected on the PO Receipt Group Edit List Screen (p. 9-2). The entered receipts are printed in sequence by purchase order number; for each purchase order number, by item number.

### Purchase Order Receipts Edit List

| Report/Listing Fields | Description  |
|-----------------------|--|
| Headings              | Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.<br><br>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings. |
| PO No                 | The purchase order number assigned when the purchase order is created.   |
| Vendor                | The number and name of the vendor with whom the order is placed.   |
| Receipt Date          | The date on which receipts were keyed for this purchase order.   |
| Whse                  | The warehouse where the items on the purchase order were received.   |
| Item No/Description   | The stocking item number and description that are used.  |
| NS                    | The Non Stock field will be <b>Y</b> if the item is a non-stock item, or <b>N</b> if the item is a stocked item.   |
| Upd In                | Update inventory will be <b>Y</b> if this item's inventory balances will be updated when this item receipt is posted; <b>N</b> if inventory is not updated.  |

---

**Purchase Order Receipts Edit List**

| Report/Listing Fields | Description  |
|-----------------------|--|
| Upd Avg               | Update average cost will be <b>Y</b> if the average cost of this item is updated when this item receipt is posted; <b>N</b> if it is not.  |
| Ord Bal               | The order balance is the quantity of the item that was ordered.  |
| U/M                   | The unit of measure corresponding to the order quantity balance, one of the buying units of measure.   |
| Receipt Qty           | The quantity of items that were received, as entered through Enter or Change PO Receipts (MENU POMAIN) for this purchase order.  |
| PO Cost               | The cost of the item, as indicated on the purchase order.<br>When International Currency is installed, the cost of the purchase order in the vendor's trading currency is shown below the company's local currency.  |
| Lot                   | When this field is a <b>Y</b> , it indicates that the item is using lot charge pricing, otherwise this column is blank.  |
| Cmp Cd                | The item complete ship code of <b>C</b> reflects the quantity of this item that has been received is less than the quantity that was ordered, yet the item was closed when receipts were posted; otherwise this code is blank. A warning message may print: <b>*** WARNING: Rec'd complete code is "C", but qty rec'd less than bal due.</b> |
| Receipt Cost          | The cost of the item when the item was received. This will be different only if you changed the item cost when entering receipts through Enter or Change PO Receipts (MENU POMAIN).<br>When International Currency is installed, the receipt cost in the vendor's trading currency is show below the company's local currency.               |
| Cost Code             | The cost code assigned to this item on the purchase order: <b>U</b> for unit cost, <b>L</b> for lot cost, <b>N</b> for no charge cost.   |
| Receipt Value         | The total received monetary value of the item.<br>When International Currency is installed, the receipt value of the purchase order in the vendor's trading currency is shown below the company's local currency.  |
| Remaining Balance     | The quantity, in the buying unit of measure, that remains to be received for this item   |
| Transaction Comment   | Transaction comments added during the creation or modification of a transaction are displayed on this list. If no comments were created for the transaction, none will print.  |

**Purchase Order Receipts Edit List**

| Report/Listing Fields            | Description  |
|----------------------------------|--|
| Landing Costs, Dst, Reference    | When an item has landing costs associated with it, the amount of the landing costs that will be added to the item's cost is shown for each landing factor identified. The distribution code and reference information per landing factor is also shown.        |
| Total PO Receipts Quantity       | Reflects the hash total of quantities for the purchase order.  |
| Total PO Receipts Value          | The total item receipt value based on the item's receipts in this purchase order.<br><br>When International Currency is installed, the total receipt value of the purchase order in the vendor's trading currency is shown below the company's local currency. |
| Final Total PO Receipts Quantity | The final hash total of quantities for all the purchase orders in this receipt group.  |
| Final Total PO Receipts Value    | The final total item receipt value based on all the item's receipts in this receipt group expressed in the company's local currency.   |

---

This option is used to maintain special orders that are created through Order Entry. Use this option to work with special order items and review special orders by vendor.

If your company is not using the change request process, as determined through Special Order Options Maintenance (MENU XAFILE), use this option to manually maintain your special orders.

If your company is using the change request process, you will not have to manually change all special order components (customer order, special order, and requisition/purchase order) to keep values in sync. Instead, the change request process, accessed through this menu option, provides a central location where you can enter changes pertaining to a special order, eliminating the need for you to manually perform multiple tasks to maintain the separate components of a special order.

---

**NOTE:** The change request process is not intended for use with the warehouse transfer company.

---

For additional information about using special order processing and the change request process, refer to Purchasing Overview (p. 1-1), Purchase Order Processing (p. 2-1), and “Special Order Processing Overview” on page 4-1, and Tools to Assist the Buyer (p. 5-1).

---

### **Important**

If the vendor has not been assigned in O/E, or if there is not a primary vendor identified in the Item Balance File, you must run this option after creating any special orders in Order Entry, and before creating a requisition through Enter or Change Requisitions (MENU POMAIN) of this menu or Special Order Automatic Req Creation (MENU POMAST), so that the special order can be copied to the new requisition.

---

## **Work with Special Orders**

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

---

| Title                                     | Purpose  |
|---|--|
| Work With Special Orders Selection Screen | Use to select the special order items you want to review or maintain.  |
| Vendor Summary Screen                     | Use to review the vendors for whom special orders have been created.   |
| Work With Special Orders Screen           | Use to change or review a special order line item. You can also use this screen to submit or maintain a change request or review all change requests for a special order line item, if your company is using the change request process. |
| Work With Special Orders Change Screen    | Use to change Special Orders File (SPORD) values associated with the special order item.   |
| Special Orders Comments Screen            | Use to mark line level and order level comments in the customer order to be copied into the requisition/PO, and to modify, remove, or review selections.   |
| End Special Order Selection Screen        | Use to review summary information of the special order items selected for this requisition/purchase order, and update the requisition/purchase order with these special order items.   |

## Work With Special Orders Selection Screen

This screen displays after selection option **7** - Work with Special Orders (MENU POMAIN). Use this screen to select the special order items you want to review or maintain. Filters are provided to limit the special order items you want to maintain or review to only those that match the criteria you enter. Using selection criteria, you can locate the latest special orders that have not yet been placed on purchase orders, review previously ordered line items to select for change, and access special order history to review past order information.

You can also use this screen to access detail and summary information for each vendor's special orders, search for an item, vendor, or customer, or access the Special Order Change Request Inquiry (MENU POMAIN).

---

NOTE: If Work with Special Orders is accessed from the Req/PO Inquiry (MENU POMAIN), this screen will be bypassed.

---

**Work With Special Orders Selection Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| WH                 | <p>Key the number of the warehouse for which you want to review or maintain special order line items.</p> <p><i>Default Value:</i> The default warehouse defined in Authority Profile Maintenance (MENU XASCTY) if one has been defined; otherwise, this is the <b>Default Warehouse</b> defined through Company Name Maintenance (MENU XAFILE)</p> <p><i>Valid Values:</i> A valid warehouse number defined through Warehouse Numbers Maintenance (MENU IAFILE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(A 2) Optional</p>   |
| Vendor             | <p>Key the number of the vendor to whom the special orders that you want to review or maintain are assigned. Leave this field blank to display only those special orders that have not been assigned to a specific vendor.</p> <p>When a special order is created, the vendor to which the special order is assigned is the one that has been defined for the item and warehouse through Item Balance Maintenance (MENU IAFILE) unless that vendor was overridden during Order Entry. If a vendor has not been so defined for the item and warehouse, the special order is created for the vendor assigned to the item through Item Master Maintenance (MENU IAFILE).</p> <p>If you have not defined a vendor for the item through Item Balance Maintenance or through Item Master Maintenance, the special order has not been created for a specific vendor. You must assign the special order to a vendor through this option.</p> <p>If you do not know the vendor's number, use the vendor search by pressing F16=VND SCH to display vendors meeting search word criteria, or F4=VND/WH SUMMARY to display vendors for whom special orders have been created.</p> <p><i>Valid Values:</i> A vendor defined through Vendors Maintenance (MENU POFILE). The <b>Vendor</b> field is required to inquire by a <b>Req No</b> or a <b>PO No</b>.</p> <p>(A 6) Optional</p> |
| Req No             | <p>Use this field to limit the special orders you want to review or maintain to a specific Requisition number.</p> <p>Key the Requisition number. You must key a vendor number in the <b>Vendor</b> field and a company number in the <b>Company</b> field if a value is entered in this field.</p> <p>(A 6) Optional</p>  |

---

**Work With Special Orders Selection Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| PO No              | <p>Use this field to limit the special orders you want to review or maintain to a specific Purchase Order number.</p> <p>Key the Purchase Order number. You must key a vendor number in the <b>Vendor</b> field and a company number in the <b>Company</b> field if a value is entered in this field.</p> <p>(A 6) Optional</p>   |
| Company            | <p>If the <b>Multi Company</b> field is set to <b>N</b> through System Options Maintenance (MENU XAFILE), this field is for display purposes only.</p> <p>Key the number of the company for which you want to review or maintain special order line items.</p> <p>If you keyed a customer number in the <b>Customer</b> field or keyed a <b>Req No</b> or <b>PO No</b>, this field is required; otherwise, this field is optional.</p> <p><i>Valid Values:</i> A valid company number defined through Company Name Maintenance (MENU XAFILE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(N 2,0) Optional/Required</p>   |

F4=Summary Rpt    F2=Detail Rpt    F5=Units    F12=Return    F16=Vnd Sch

This screen displays after pressing **F4=VND/WH SUMMARY** on the Work With Special Orders Selection Screen (p. 10-3). This screen displays the vendors for whom special orders have been created for the type of special orders selected on the Work With Special Orders Selection Screen (p. 10-3).

You may restart the search with different criteria, view detail information, and print the Special Order Summary Report (MENU POREPT) with the **F4=SUMMARY RPT** function key or Special Order Detail Report (MENU POREPT) with the **F2=DETAIL RPT** function key.

### Vendor Summary Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| (Reference Number) | This field displays the reference number of the vendor displayed. To select a vendor for whom special orders are to be maintained, or to print the Special Order Summary Report (p. 40-4) or the Special Order Detail Report (p. 41-4), you must key this number in the <b>Select</b> field on this screen.<br>Display |
| WH                 | The Warehouse ID of the warehouse selected on the Work With Special Orders Selection Screen (p. 10-3).<br>Display  |

**Vendor Summary Screen Fields and Function Keys**

| Field/Function Key                     | Description   |
|--|---|
| Buy                                    | <p>The code of your buyer for this vendor. You may display vendors for a single buyer if specified in the <b>Buyer</b> field on the Work With Special Orders Selection Screen (p. 10-3).</p> <hr/> <p>NOTE: If a code in this column is highlighted, this indicates that there are special orders included in that vendor's summary which are not assigned to any buyer. If asterisks (***) display in this column, this indicates that the special orders included in that vendor's summary are assigned to multiple buyers or possibly no buyer at all if one has not been assigned.</p> <hr/> <p>Display</p> |
| Vendor                                 | <p>The vendor number. If you specified a single vendor in the <b>Vendor</b> field on the Work With Special Orders Selection Screen (p. 10-3), then only that vendor will display on this screen.</p> <hr/> <p>Display</p>   |
| Name                                   | <p>The name of the vendor. <b>Vendor not Assigned</b> will group together all special orders not yet assigned to a vendor.</p> <hr/> <p>Display</p>   |
| Orders/Units<br>Dr Shp, Non St, Sp Ord | <p>The number of orders or units of drop-ship, non-stock, and special order types of special orders for each vendor. You may display orders or units using the F5=UNITS / F5=ORDERS toggle key.</p> <hr/> <p>Display</p>  |
| Select                                 | <p>Key the <b>Reference Number</b> of the vendor for whom a report will be printed, or special orders will be maintained. After keying the reference number in this field, press F4=SUMMARY RPT to print the Special Order Summary Report (p. 40-4); press F2=DETAIL RPT to print the Special Order Detail Report (p. 41-4); or press ENTER to maintain special orders for the vendor.</p> <hr/> <p>(N 2,0) Required</p>  |
| WH                                     | <p>Key the warehouse to limit the data for which you want a vendor summary displayed. If this field is left blank, vendor summaries will be displayed for all warehouses.</p> <p><i>Valid Values:</i> A valid warehouse number defined through Warehouse Numbers Maintenance (MENU IAFILE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <hr/> <p>(A 2) Required</p>  |

---

**Vendor Summary Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Vendor             | <p>Key the vendor for which summary information will be displayed. If this field is left blank, summary information will display for all vendors, including the special orders that are not assigned to a vendor.</p> <p><i>Valid Values:</i> Any existing vendor specified in Vendors Maintenance (MENU POFILE/MENU APFILE)</p> <p>(A 6) Required</p>  |
| Co                 | <p>Key the company number to limit the data for which special orders will be summarized. If a company is entered then only orders for the company keyed will be included in the summary information.</p> <p><i>Valid Values:</i> A valid company number defined through Company Name Maintenance (MENU XAFIELD) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(N 2,0) Required</p>   |
| Buyer              | <p>Key the code of the buyer whose vendors will be included in the vendor summary information. Additionally, all vendors that do not have an associated buyer will have vendor summary displayed if they meet the additional selection criteria.</p> <p><i>Valid Values:</i> a buyer codes are defined through Buyers Maintenance (MENU POFILE). Buyer codes may be assigned to a vendor (through MENU POFILE), vendor/warehouse (through MENU POFILE), vendor/item (through MENU POFILE), and/or vendor/item/warehouse (also through MENU POFILE).</p> <p>(A 3) Required</p> |
| Status             | <p>Use to determine the data to be included in the vendor summary information on this screen.</p> <p>Key <b>A</b> to have all special orders included in the special order information.</p> <p>Key <b>O</b> to have only special orders that have been placed in a requisition or purchase order be included.</p> <p>Key <b>P</b> to have special orders that have not been included in a requisition or purchase order be included.</p> <p><i>Valid Values:</i> A, O, P</p> <p>(A 1) Optional</p>  |
| F2=Detail Rpt      | <p>Press <b>F2=DETAIL RPT</b> after keying a <b>Reference Number</b> in the <b>Sel</b> field to print the Special Order Detail Report (p. 41-4) for the selected vendor. The Report Options Screen will display and the report will print. Refer to the Appendix section of the Cross Applications User Guide for details about the Report Options Screen.</p>  |

**Vendor Summary Screen Fields and Function Keys**

| <b>Field/Function Key</b> | <b>Description</b>  |
|---------------------------|---|
| F4=Summary Rpt            | Press <b>F4=SUMMARY RPT</b> after keying a <b>Reference Number</b> in the <b>Sel</b> field to print the Special Order Summary Report (p. 40-4) for the selected vendor. The Report Options Screen will display and the report will print. Refer to the Appendix section of the Cross Applications User Guide for details about the Report Options Screen.   |
| F5=Units/F5=Orders        | <p>Press <b>F5=UNITS / F5=ORDERS</b> to toggle between displaying the quantity of units (items) or the number of orders containing special orders for this vendor in the <b>Orders / Units</b> fields for the three columns <b>Dr Shp</b>, <b>Non St</b>, and <b>Sp Ord</b>.</p> <p>Press <b>F5=UNITS</b> to display the quantity of units that have been special ordered for each vendor. The quantity of units is the total number of all items special ordered for the vendor.</p> <p>Press <b>F5=ORDERS</b> to display the quantity of orders that contain special ordered items for each vendor.</p> |
| F12=Return                | Press <b>F12=RETURN</b> to return to the Work With Special Orders Selection Screen (p. 10-3).   |
| F16=Vnd Sch               | Press <b>F16=VND SCH</b> to display the Vendor Search Screen (p. 43-7). From this screen, you may display and select vendors using part or all of the vendor name.  |
| Enter                     | <p>The <b>ENTER</b> key has two functions.</p> <p>Press <b>ENTER</b> after keying a <b>Reference Number</b> in the <b>Select</b> field to maintain special orders for that vendor. The Work With Special Orders Selection Screen (p. 10-3) will display.</p> <p>Press <b>ENTER</b> after keying limiting criteria in the <b>WH</b>, <b>Vendor</b>, <b>Co</b>, <b>Buyer</b> or <b>Status</b> fields. The screen will redisplay to match the selected criteria.</p>   |

| F2=Desc Left                                       |             | F5=Mfg Item                |                               | F9=Customer   |               | F11=Price             | F13=Ordered        |
| F4=Drop Ships                                      |             | F6=Locate                  |                               | F12=Previous  |               | F15=Itm Sch           | F18=Cust Sch       |

Depending on where you accessed this screen from, determines what information will be displayed, as outlined in the following bullets:

- If you accessed this screen from within this menu option, this screen displays all special order line items that match the criteria entered on the Work With Special Orders Selection Screen (p. 10-3).
- If you accessed this screen from Enter or Change Requisitions (MENU POMAIN) or Req/PO Inquiry (MENU POMAIN), based on Special Order Options Maintenance (MENU XAFIL), this screen displays all items that have been put on special order for the selected warehouse, company, and vendor. In addition to the options (C, V, Q and A) available on this screen, if you accessed this screen through Enter or Change Requisitions, two additional options (O and R) will be available. You can order one or more of the available special order items, which will include them on the current requisition/purchase order or, if the items are already selected for inclusion on a requisition/purchase order, remove the items' inclusion status; the item(s) will not be included on the current requisition/purchase order.
  - When attempting to order (O) one or more special order items, which will be added to the requisition, if the items are from a special order that is currently on (or eventually will be on) a Credit (CR) or Slow Pay (SP) hold and the Purchasing options (MENU XAFIL) are set to not allow the PO print for special orders on CR or SP hold, you will receive the message: **WARNING - One or more selected orders are on CR or SP hold.** You will not be allowed to print the Purchase Order until the hold has been cleared, but you will still be allowed to add the items to the requisition.
- If you accessed this screen from the Requisition/Purchase Order Header Screen (p. 14-23) via the Req/PO Inquiry option (MENU POMAIN), this screen displays only special order line items that are placed on the Req/PO selected on the Req/PO Inquiry Screen (p. 14-9).
- If you accessed this screen via F14=OPEN SP ORD from the Requisition/Purchase Order Header Screen (p. 14-23), this screen will be limited to only open (not in history) special order items placed on the Req/PO selected. If you accessed this screen via F16=HIST SP ORD from the Requisition/

Purchase Order Header Screen (p. 14-23), this screen will be limited to only history special order items placed on the Req/PO selected.

---

NOTE: If you accessed this screen via F14=OPEN SP ORD from the Requisition/Purchase Order Header Screen (p. 14-23), you must have authority to access the Work With Special Orders menu option (MENU POMAIN) in order to maintain special orders.

---

- If you accessed this screen via F7=MNT LNK from the Add/Remove All Qualifying Special Ordered Items To/From Suggested Order Screen (p. 38-22) in Buyers Workbench (MENU POREPT), this screen will be limited to only special orders that have not been placed on a requisition, purchase order, or a different suggested order run number than the one that you are maintaining links for.
- In addition to the options (C, V, Q and A) available on this screen, two additional options (L and U) will be available. You can link one or more of the available special order items, which will include them on the current suggested order run or, if the items are already selected for inclusion on the current suggested order run, unlink the items' inclusion status; the item(s) will not be included on the current suggested order run.

Use this screen to change or review a special order line item. If your company is using the change request process, as determined through Special Order Options Maintenance (MENU XAFIL), you can also use this screen to submit or maintain a change request or review all change requests for a special order line item. The change request process is not intended for use with the warehouse transfer company.

---

NOTE: Many roll screens that show the item number and description will display the item description on a separate line or the item and description on the same line, depending on the system options. This display of single or double line per item can be changed by pressing F24=DOUBLE LINE / F24=SINGLE LINE. F24=DOUBLE LINE will expand a collapsed screen or F24=SINGLE LINE will collapse an expanded screen.

|--------------------|---|
| Options: O, R      | <p>This field is located to the left of the <b>Typ</b> column on the top portion of this screen.</p> <p>If you accessed this screen from either “Enter or Change Requisitions” on page 6-2 or “Req/PO Inquiry” on page 14-1, based on Special Order Options Maintenance (MENU XAFILE), in addition to <b>Options: C, V, Q, A</b>, you can use this field to order (O) an item, placing it on the current requisition/purchase order, or remove (R) an item that has been selected for inclusion on the current requisition/purchase order.</p> <p>See <b>Options: L, U</b> for further functions.</p> <p>Key O in the <b>Options</b> field for the special ordered line item for which you want to include on the current requisition/purchase order.</p> <p>The item cannot be selected if any errors exist. If this is the case you must first change the special order item by keying C in this field. After an item is selected to be ordered, the company and requisition number are displayed in the <b>Req or PO</b> column on this screen. Please consider the following when selecting a special order item for a requisition:</p> <ul style="list-style-type: none"> <li>• If you select a drop-ship special order item for this requisition, you will not be able to select any other type of special order item for this requisition. An error message will display on the End Special Order Selection Screen (p. 10-45) if you attempt to do this.</li> <li>• The vendor specified for the special order item must be the same as the vendor for this requisition. If it is not, you will not be able to order this special order item on the current requisition. You may, however, change the vendor for the special order item on the Work With Special Orders Change Screen (p. 10-30) by keying C in this field.</li> <li>• If you select a special order item that is added (linked) to a suggested order, a <b>Warning</b> message (<a href="#">This special order item is added to a suggested order</a>) will be displayed. However, you will still be able to add the linked special order item to the requisition/purchase order, if needed.</li> </ul> <hr/> <p>NOTE: All displayed items can be selected for the requisition at the same time, rather than individually, by utilizing the F14=ORD ALL function key.</p> <hr/> <p>Key R in the <b>Options</b> field for the special ordered line item you want to remove from the current requisition/purchase order. The order is no longer selected for this requisition, and the company and requisition number will no longer display in the <b>Req or PO</b> column on this screen. This option is also only available if you are not using the change request process, as defined through Special Order Options Maintenance (MENU XAFILE).</p> <p>(A 1) Optional</p> |

## Work With Special Orders Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Options: L, U      | <p>This field is located to the left of the <b>Typ</b> column on the top portion of this screen.</p> <p>If you accessed this screen via F7=MNT LNK from the Add/Remove All Qualifying Special Ordered Items To/From Suggested Order Screen (p. 38-22) in Buyers Workbench (BWB), in addition to the other options, these two additional options appear, allowing you to link (L) or unlink (U) a special order line item to this suggested order.</p> <p>See F13=LINKED / F13=UNLINKED / F13=ALL for further details.</p> <p>Key <b>L</b> in the <b>Options</b> field to link the selected special orders to the current suggested order. If some of the selected records are already linked to an order, an error message will appear and you will need to deselect those records in order to continue. When you link a special order item to suggested order, it allows you to include Special Order items as part of a Suggested run.</p> <p>Key <b>U</b> in the <b>Options</b> field to remove the link from the selected special orders to the current suggested order. If some of the selected records are already unlinked to an order, an error message will appear and you will need to deselect those records in order to continue. Once the link from the selected special orders to the current suggested order is removed, the requisition number in the Special Order File (SPORD) for the item will be cleared. The following also occurs:</p> <ul style="list-style-type: none"> <li>• Suggested order totals will be recalculated.</li> <li>• Suggested order priority will be reevaluated.</li> <li>• Special Order Items grid will be refreshed and redisplayed</li> </ul> <p>Note the following Link rules:</p> <ul style="list-style-type: none"> <li>• Special order items can only be linked to a suggested order if these items are not already added to a requisition, purchase order or another suggested order. There might also be some cases when a special order item cannot be linked to a suggested order; that is, for the same reasons a special order item cannot be added to a requisition in the Distribution A+ Enter or Change Requisitions, Add Special Orders option (for example, if the user is not authorized to the sales order company).</li> <li>• Once a special order item is linked to a suggested order, the Requisition Number field (SORQNO) in the Special Order File (SPORD) record for the item will be filled with the suggested order run number preceded by a # character. This will indicate that the SPORD record is linked to a suggested order run.</li> </ul> <p>Also, suggested order totals will be recalculated, and in addition to suggested order items, the suggested order totals will include the totals of all linked special order items, except drop-ship items (since these are directly shipped to the customer).</p> |

## Work With Special Orders Screen Fields and Function Keys

| Field/Function Key   | Description   |
|--|---|
| Options: L, U<br>continued...  | <ul style="list-style-type: none"> <li>Suggested order priority will be reevaluated. A suggested order that has linked special order items will have the priority Document Ties as long as all lines on the suggested order have lower priorities than Document Ties. Document Ties priority means that the suggested order has been linked to Distribution A+ Sales Orders which contain special order items.</li> </ul> <p>Special order items linked to a suggested order will be added to a Requisition/PO created from a Suggested run.</p> <p>(A 1) Optional</p>  |
| Typ  | <p>This field indicates the type of each special order displayed. The information displayed may be toggled with the F4=DROP SHIPS / F4=NON STOCKS / F4=SPEC ORDERS / F4=ALL TYPES function key. A special order may be one of the following:</p> <ul style="list-style-type: none"> <li><b>D/S</b>: A drop-ship item that will be shipped directly from your vendor to your customer.</li> <li><b>N/S</b>: A non-stock item that requires a special order.</li> <li><b>S/O</b>: A regular item (i.e., not a drop-ship or non-stock item) that requires a special order.</li> <li><b>HLD</b>: The order is on hold in Order Entry.</li> </ul> <p>Display</p> |
| Our Item/Description /<br>Mfg Item/Description<br>-OR- Customer Name | <p>This field will display either item information or the customer name, and may be toggled with the F9=CUSTOMER / F9=ITEM function key.</p> <p>When showing item information, this field displays the item that has been special ordered. You may use F2=DESC LEFT / F2=DESC RIGHT / F2=ITEM &amp; DESC and F5=MFG ITEM / F5=OUR ITEM function keys to show different item attributes in this column.</p> <p>If you selected F9=CUSTOMER / F9=ITEM to display customer information, the customer's name will display instead of item information. Refer to the F9=CUSTOMER / F9=ITEM toggle function key for further details.</p> <p>Display</p>           |
| PO Qty/Ord Prc/Ord<br>Cst  | <p>This column displays either the purchase order quantity, price, or cost of the special ordered item from the customer's order. Use F11=PRICE / F11=COST / F11=QUANTITY to change the value displayed in this column.</p> <p>Display</p>  |

## Work With Special Orders Screen Fields and Function Keys

| Field/Function Key                      | Description   |
|---|---|
| F9=Customer/F9=Item                     | <p>Use the F9=CUSTOMER / F9=ITEM function key to display either customer or item information on this screen.</p> <p>Press F9=CUSTOMER to display the name of the customer in the <b>Our Item/Description / Mfg Item/Description</b> column (the title of the column becomes <b>Customer Name</b>), and to display the <b>Order No</b> in place of the <b>Req/PO</b> column. The customer name displayed for each special order is the customer for whom the special order was created in Order Entry.</p> <p>After pressing F9=CUSTOMER, the following function keys will no longer display:</p> <ul style="list-style-type: none"> <li>• F2=DESC LEFT / F2=DESC RIGHT / F2=ITEM &amp; DESC</li> <li>• F5=MFG ITEM / F5=OUR ITEM</li> <li>• F6=LOCATE</li> </ul> <p>Press F9=ITEM to display item information for the special order items displayed. You may control the item information displayed by using the F2=DESC LEFT / F2=DESC RIGHT / F2=ITEM &amp; DESC, F5=MFG ITEM / F5=OUR ITEM, and F6=LOCATE function keys.</p> <hr/> <p>NOTE: When you toggle with F9 to show the customer name and instead see the message, “* Open Order Does Not Exist *”, this might occur if the order number referenced (that is, the order number on the SPORD record) is not found in the <b>Open Order File</b>. For example, the order has been deleted or has moved to history. Even if the order no longer exists, the special order item could still be on an open requisition/PO (as seen when toggled with F9 to view the <b>Req/PO</b> column). If the special order is on a Req/PO, then an evaluation should be done to see if that line on the Req/PO should be processed, or deleted/closed. If the special order is not on a Req/PO (meaning, it is not on an open order nor an open Req/PO), then it could be considered a stray special order item which could possibly be removed via the Special Order Edit Report option (MENU POREPT). Refer to the Special Order Edit Report option for details about removing stray special orders.</p> <hr/> |
| F10=End                                 | <p>The F10=END function key displays only if you are accessing this screen from within Enter or Change Requisitions (MENU POMAIN).</p> <p>Press the F10=END function key once you have completed the options available on this screen.</p>  |
| F11=Price/<br>F11=Cost/<br>F11=Quantity | <p>Press the F11=PRICE / F11=COST / F11=QUANTITY function key to change the data displayed on the top portion of this screen to show the purchase order quantity, order price, or order cost. These values are from the customer order and are not necessarily the same values as those in the special order.</p>   |

## Work With Special Orders Screen Fields and Function Keys

| Field/Function Key  | Description  |
|---|--|
| F12=Previous<br>or<br>F12=Prv (if screen accessed from BWB)                                     | <p>The F12=PREVIOUS/F12=PRV function key displays only if this screen is accessed through Work With Special Orders (MENU POMAIN) or Buyers Workbench (BWB).</p> <p>Press F12=PREVIOUS to return to the calling screen.</p>   |
| F13=Ordered/<br>F13=Unordered/<br>F13=All<br>(see <b>F13</b> below if screen accessed from BWB) | <p>Use the F13=ORDERED / F13=UNORDERED / F13=ALL function key to display either ordered items, unordered items, or both ordered and unordered items on this screen. The selection that you make with this function key is displayed in the <b>All/Unordered/Ordered</b> field on the top of this screen.</p> <p>Press F13=ORDERED to display ordered items only. The special order items that will display have been selected for a requisition (this is done by keying <b>O</b> in the <b>Option</b> field on this screen).</p> <p>Press F13=UNORDERED to display unordered items only. The special order items that will display have been created in Order Entry, but have not been selected for a requisition.</p> <p>Press F13=ALL to display all items. The special order items that will display are both unordered and ordered.</p>  |
| F13=Unlinked/<br>F13=Linked/<br>F13=All<br>(if screen accessed from BWB)                        | <p>The F13=UNLINKED/F13=LINKED/F13=ALL function key appears in place of the F13=ORDERED / F13=UNORDERED / F13=ALL function key, if you accessed this screen via F7=MNT LNK from the Add/Remove All Qualifying Special Ordered Items To/From Suggested Order Screen (p. 38-22) in Buyers Workbench (BWB).</p> <p>Use the F13=UNLINKED/F13=LINKED/F13=ALL function key to display either unlinked special ordered items, linked special ordered items, or both unlinked and linked special order items on this screen. The selection that you make with this function key is displayed in the <b>Linked/Unlinked</b> field on the top of this screen.</p> <p>Press F13=UNLINKED to display unlinked special ordered items on this screen only.</p> <p>Press F13=LINKED to display linked special ordered items on this screen only.</p> <p>Press F13=ALL to display both unlinked and linked special order items on this screen.</p> |
| F14=Ord All<br>(see <b>F14</b> below if screen accessed from BWB)                               | <p>The F14=ORD ALL function key does not display if you accessed this screen through Work With Special Orders (MENU POMAIN).</p> <p>Press F14=ORD ALL to order all items from the point in which the list is displayed up to the end of the list. If an order action is attempted and an error is returned, the item will be skipped and the next item will be processed. Items with comments are also skipped.</p> <p>If the <b>Type</b> field is blank or if <b>Comment Type</b> is <b>A</b>, F14=ORD ALL will not work for that line.</p>   |

This screen display when you key **C** in the **Options** column to change a special order on the Work With Special Orders Screen (p. 10-13).

If you select a special order item that is added (linked) to a suggested order, a **Warning** message ([This special order item is added to a suggested order](#)) will be displayed. However, you will still be able to make changes to the linked special order item, if needed.

If your company is **not** using the change request process, as determined through Special Order Options Maintenance (MENU XAFILE), use this screen to change Special Orders File (SPORD) values associated with the special order item, including:

- Requested ship date
- Vendor (provided it does not currently exist on a requisition/purchase order)
- Manufacturer's item number and description
- Purchase order and order quantity
- Purchase order unit of measure
- Item cost
- Override price
- Access order and/or line charges.

Changing any of these values will not automatically change their corresponding values in the customer order, requisition, or purchase order. Use the Special Order Error Report (MENU POREPT) to list any discrepancies between the special order, customer order, and requisition/purchase order; then make any adjustments to those components manually, as needed.

If your company is using the change request process, as determined through Special Order Options Maintenance (MENU XAFILE), you will not have to change all special order components to keep the values in sync. Instead, the fields on this screen will be display-only and you will be required to use the change request process (with F6=CHG RQST) to request any special order item changes related to the order or purchase order.

Regardless if your company is or is not using the change request process:

- if a vendor has not been assigned, F6=CHG RQST will not be available and you will be required to enter a vendor before you can make changes using the change request process
- this screen provides access to the Special Orders Comments Screen (p. 10-42)
- you will be able to enter the item's country of origin, if the item is set up to track country of origin as defined through Item Master Maintenance (MENU IAFILE).

Function keys and some fields display differently with the change request process activated. Review the field description information carefully for appropriate details.

#### Work With Special Orders Change Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Type               | <p>This field displays the special order type selected. The selected types that may appear in this field are as follows:</p> <ul style="list-style-type: none"> <li>• <b>S/O</b> (special order)</li> <li>• <b>D/S</b> (drop ship)</li> <li>• <b>N/S</b> (non-stock)</li> </ul> <p>If a value of <b>HLD</b> displays, the customer order has been placed on hold.</p> <p>Display</p> |
| Order              | <p>This field displays the company and order number for the selected order. The name of the customer displays to the right of the order number.</p> <p>Display</p>   |

**Work With Special Orders Change Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| Rq Shp             | <p>If you are using the change request process, as determined through Special Order Options Maintenance (MENU XAFILE), the <b>Rq Shp</b> field is for display purposes only. You will be required to use the <b>F6=CHG RQST</b> function key to use the change request process to request any special order item changes.</p> <p>This is the requested ship date that exists in the Special Orders File (SPORD). This value should match the value in the customer order. If this value is changed in the customer order, then use this field to change it in the Special Orders File. If you change this value here, be sure to change its value in the customer order.</p> <p>Depending on whether or not a carrier-specific schedule is identified for the selected carrier, this value will either reflect the changed date or the next carrier scheduled date.</p> <p>Use the Special Order Error Report (MENU POREPT) to identify discrepancies between the special order values, the customer order, and the requisition or purchase order.</p> <p><i>Valid Values:</i> Key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFILE).</p> <p>(N 6,0) Optional/Display</p> |

---

**Work With Special Orders Change Screen Fields and Function Keys**

| Field/Function Key             | Description  |
|--------------------------------|--|
| Vendor                         | <p>If you are using the change request process, as determined through Special Order Options Maintenance (MENU XAFILE), and a vendor has been assigned, the <b>Vendor</b> field is for display purposes only. You will be required to use the <b>F6=CHG RQST</b> function key to use the change request process to request any special order item changes. If a vendor has not been assigned, you will be required to enter a vendor before you can access the change request process to request special order item changes.</p> <p>If you change the vendor to a work order vendor, you can no longer maintain this special order item through this option; you must use Maintain Work Orders (MENU WOMAIN) instead. Also, any special order comments in the Special Order Comment File (SPCMT) for this line item will be deleted.</p> <p>Use this field to change the vendor for this special order item. This value cannot be changed if this item currently exists on a requisition or purchase order or if this screen is being accessed through requisition entry or through purchase order maintenance. If a vendor has not yet been assigned, all other fields will be display-only until a value is entered in this field.</p> <p><i>Default Value:</i> The number of the vendor for whom this special order was created through Order Entry. This is the primary vendor defined for the item and warehouse through Item Balance Maintenance (MENU IAFILE). If a vendor was not assigned to this item and warehouse, the vendor assigned to this item through Item Master Maintenance (MENU IAFILE) is the default.</p> <p><i>Valid Values:</i> A vendor defined through Vendors Maintenance (MENU POFILE).</p> <p>(A 6) Display/Required</p> |
| Pnd Rq /<br>Rq Num /<br>PO Num | <p>This field displays only after selecting a special order for change that has previously been selected to be placed on a purchase order. The heading displays based on the <b>Special Order Status</b> field in the Special Order File (SPORD):</p> <ul style="list-style-type: none"> <li>• <b>PND RQ - 1</b> currently selected for inclusion into a pending requisition</li> <li>• <b>RQ NUM - 2</b> currently on an existing requisition</li> <li>• <b>PO NUM - 3</b> currently on an existing PO</li> </ul> <p>If you have accessed this screen from the Work With Special Orders Screen (p. 10-13) and are not using the change request process, you may be allowed to clear this requisition / PO number from the special order record using the <b>F13=CLEAR REQ / F13=CLEAR PO</b> function key.</p> <p>This is the number of the pending requisition or purchase order that contains this special order item.</p> <p>Display</p>   |

**Work With Special Orders Change Screen Fields and Function Keys**

---

| Field/Function Key | Description  |
|--------------------|--|
| Approve            | <p>This field only displays if the order quantity and purchase order quantity are different; a different unit of measure exists in Order Entry and Purchasing. This field is not available if, based on special order company options defined through Special Order Options Maintenance (MENU XAFILE), order quantity increases do not require approval.</p> <p>Use this field to approve a special order. You will need to approve a special order if the quantity that you are ordering from your vendor is not the same as the quantity on the special order.</p> <p>Key <b>Y</b> to approve a special order.</p> <p>(A 1) Optional</p>   |
| Mfg Item No        | <p>If you are using the change request process, as determined through Special Order Options Maintenance (MENU XAFILE), the <b>Mfg Item No</b> field is for display purposes only. You will be required to use the <b>F6=CHG RQST</b> function key to use the change request process to request any special order item changes</p> <p>If manufacturer's item numbers are required for this vendor as defined in Vendors Maintenance (MENU POFILE), this field is required; otherwise, this field is optional.</p> <p>This field should contain the manufacturer's item number to be placed in the purchase order. This value should match the value in the requisition or purchase order. If this value is changed in the requisition or purchase order, then use this field to change it in the Special Orders File. If you change this value here, be sure to change its value in the requisition or purchase order. Use the Special Order Error Report (MENU POMAIN) to identify discrepancies between the special order values, the customer order and requisition or purchase order.</p> <p>(A 27) Required/Optional</p> |

---

---

**Work With Special Orders Change Screen Fields and Function Keys**

---

| Field/Function Key | Description  |
|--------------------|--|
| PO Qty             | <p>If you are using the change request process, as determined through Special Order Options Maintenance (MENU XAFIELD), the <b>PO Qty</b> field is for display purposes only. You will be required to use the <b>F6=CHG RQST</b> function key to use the change request process to request any special order item changes.</p> <p>This is the quantity to be purchased for this special order item. This value should match the value in the requisition or purchase order. If this value is changed in the requisition or purchase order, then use this field to change it in the Special Orders File. If you change this value here, be sure to change its value in the requisition or purchase order. Use the Special Order Error Report (MENU POMAIN) to identify discrepancies between the special order values and the customer order and requisition or purchase order.</p> <p><b>Example:</b> Assume that an item has two units of measure: EA for each and CS for case. A CS consists of 100 EA. The buying unit of measure for this item is the CS (meaning you can only order this item from this vendor by the case). If a customer places a special order with you, and orders 75 EA, the default value that displays in this field will be 1 CS. Directly below this field, 100 EA will display, indicating that there are 100 each units in a case.</p> <p><i>Default Value:</i> The quantity of this item ordered by the customer, in the buying unit of measure.</p> <p>(N 10,3) Required</p> |
| U/M                | <p>If you are using the change request process, as determined through Special Order Options Maintenance (MENU XAFIELD), the <b>U/M</b> field is for display purposes only. You will be required to use the <b>F6=CHG RQST</b> function key to use the change request process to request any special order item changes.</p> <p>This is the unit of measure for the quantity to be purchased for this special order item. This unit of measure should be equal to the value in the customer order, keeping unit of measure conversions and special order options (that increase the purchase order quantity to a multiple of the standard pack) in mind. If this unit of measure is changed in the requisition or purchase order, then use the <b>U/M</b> field to change it in the Special Orders File. If you change this value here, be sure to change its value in the requisition or purchase order. Use the Special Order Error Report (MENU POREPT) to identify discrepancies between the special order values, customer order and requisition or purchase order.</p> <p><i>Default Value:</i> The buying unit of measure for this vendor</p> <p><i>Valid Values:</i> Either the buying or alternate U/M for this vendor/item as defined on the Vendor/Item File Detail Screen (p. 44-17).</p> <p>(A 3) Required</p>   |

---

---

## Work With Special Orders Change Screen Fields and Function Keys

---

| Field/Function Key | Description   |
|--------------------|---|
| Cost/Ovr Price     | <p>The <b>Cost</b> field toggles with the use of the F7=COST / F7=OVR PRICE function key to display the <b>Ovr Price</b> field.</p> <p>If you are using the change request process, as determined through Special Order Options Maintenance (MENU XAFILE), the <b>Cost</b> and <b>Ovr Price</b> fields are for display purposes only. You will be required to use the F6=CHG RQST function key to use the change request process to request any special order item changes</p> <p>The <b>Cost</b> is the purchase cost of the special order item. This value should be equal to the value in the customer order, requisition or purchase order, keeping currency conversions in mind. If this value is changed in the customer order or requisition or purchase order, then use this field to change it in the Special Orders File. If you change this value here be sure to change its value in the customer order. Use the Special Order Error Report (MENU POREPT) to identify discrepancies between the special order values, customer order and requisition or purchase order.</p> <p>When International Currency is installed, for foreign currency vendors, this field displays the cost of the item in the vendor's trading currency with the currency symbol shown to the right. The company's local currency will appear on the line below this value and will be protected. Key the override cost of item in the trading currency or accept the default. If you override the cost, the company's local equivalent cost will be recalculated after you press ENTER.</p> <p>When the <b>Ovr Price</b> field displays, you may use it as an override to enter the price that the customer should be charged for the quantity of items ordered. The override price for this special order item will not be updated in the customer order but the Special Order Error Report (MENU POREPT) will identify discrepancies between the order price and this override price.</p> <p><i>Default Value:</i> The <b>Cost</b> of the item in the buying unit of measure, as defined through Vendor/Item Price File Screen (p. 44-26). For items that do not have Vendor/Item Price records (VIPRC) the cost from the sales order displays.</p> <p>(N 15,5) Required for Cost, Optional for Ovr Price</p> |

---

---

**Work With Special Orders Change Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| COO                | <p>This field displays only if the special order item is set up to track country of origin.</p> <p>Use this field to key a non-restricted country of origin for the special order item. The system determines the default country of origin for a special order item, if country of origin is being tracked for the item, based on the following hierarchy:</p> <ol style="list-style-type: none"> <li>1. PO Vendor/Item Price File (VIPRC), warehouse specific (if country of origin is not blank)</li> <li>2. PO Vendor/Item Price File (VIPRC), no warehouse (if country of origin is not blank)</li> <li>3. Vendor's Country on this purchase order (RQHED), if not blank</li> <li>4. Ship-to country on this purchase order (RQHED)</li> </ol> <hr/> <p>NOTE: If restrictions are being checked (as determined through System Options Maintenance), a restriction check may occur based on the shipping warehouse of the Order Entry order and on the customer's ship-to country.</p> <hr/> <p><i>Valid Values:</i> a country defined through Country Name Maintenance (MENU POFILE/MENU ARFIL2)</p> <p>(A 3) Required</p> |
| PO Desc            | <p>If you are using the change request process, as determined through Special Order Options Maintenance (MENU XAFIL2), the <b>PO Desc</b> field is for display purposes only. You will be required to use the F6=CHG RQST function key to use the change request process to request any special order item changes.</p> <p>This is the manufacturer item description to be printed on the purchase order. This value should match the value in the requisition or purchase order. If this value is changed in the requisition or purchase order, then use this field to change it in the Special Orders File. If you change this value here, be sure to change its value in the requisition or purchase order. Use the Special Order Error Report (MENU POREPT) to identify discrepancies between the special order values, customer order and requisition or purchase order.</p> <p>(2 @ A 31) Optional</p>  |

---

---

**Work With Special Orders Change Screen Fields and Function Keys**

---

| Field/Function Key | Description  |
|--------------------|--|
| Ord Qty            | <p>If you are using the change request process, as determined through Special Order Options Maintenance (MENU XAFILE), the <b>Ord Qty</b> field is for display purposes only. You will be required to use the <b>F6=CHG RQST</b> function key to use the change request process to request any special order item changes.</p> <p>This is the special order quantity in the customer order. This value should match the value in the customer order. If this value is changed in the customer order, then use this field to change it in the Special Orders File. If you change this value here, be sure to change its value in the customer order. Use the Special Order Error Report (MENU POREPT) to identify discrepancies between the special order values, customer order and requisition or purchase order.</p> <p>Based on special order company options defined through Special Order Options Maintenance (MENU XAFILE), the special order quantity may be different from the customer order quantity. The quantities may also be different if you manually override them.</p> <p>(N 10,3) Required</p>   |
| New Item           | <p>If you are using the change request process, as determined through Special Order Options Maintenance (MENU XAFILE), the <b>New Item</b> field is for display purposes only. You will be required to use the <b>F6=CHG RQST</b> function key to use the change request process to request any special order item changes.</p> <p>Use this field to change the item number in the special order line. This field should be used to override the item previously special ordered. If you change the item, the cost will be recalculated when the purchase order is printed. The same result can be achieved by deleting the line from Order Entry and adding a new line with the new item. You can delete the line only if company options allow the deletion of special order line items and if the line item does not already exist on a requisition/purchase order.</p> <p>The old item and the new item you key in this field must have the same units of measure in Item Master Maintenance (MENU IAFILE). If the items have vendor/item records defined through Vendor/Item Information Maintenance (MENU POFILE), the units of measure must be the same there as well.</p> <p>(A 27) Optional</p> |
| F5=Ord Cmt         | <p>Press <b>F5=ORD CMT</b> to display the line/order comments from the customer order. The Special Orders Comments Screen (p. 10-42) will appear. You can then use this comment screen to view or, if applicable, to mark or unmark a line/order comment to be included on/excluded from a requisition/purchase order.</p> <p>If any errors exist on this screen, the <b>F5=ORD CMT</b> function key will not be available.</p>  |

## Special Orders Comments Screen

| ORDER COMMENTS |            | ORDER COMMENTS               |             |
|----------------|------------|------------------------------|-------------|
| <u>Cpy</u>     | <u>Prt</u> | <u>Comment</u>               | <u>Type</u> |
| -              | -          | Please ship to customer ASAP |             |

---

Last

Cpy: Y or blank      Prt: P,R,I or blank

F2=Line Comments    F7=Forward      F8=Backwards      F12=Return

This screen displays after pressing F5=ORD CMT from the Work With Special Orders Change Screen (p. 10-30). Use this screen to mark line level and order level comments in the customer order to be copied into the requisition/purchase order and to modify, remove, or review selections. Up to 999 comments can be copied into the requisition/purchase order.

---

**NOTE:** Only line level and order level comments entered through Order Entry are displayed on this screen. Order Entry and Purchasing comments (i.e., customer PO number, FOB code, carrier, and ship via instructions) you flagged to display through Special Order Options Maintenance (MENU XAFILE) will not be shown on this screen.

---

### Special Orders Comments Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Cpy                | <p>This field is display-only if the special order item currently exists on a requisition/purchase order and indicates whether the comment was copied into the requisition/purchase order when the special order item was.</p> <p>Use this field to indicate if the comments will be copied to the requisition/purchase order when the special order item is copied to the requisition/purchase order.</p> <p>Key <b>Y</b> next to comments that will be copied into the requisition/purchase order.</p> <p><i>Default Value:</i> Blank, if no special order options exist for the company associated with this special order item as defined through Special Order Options Maintenance (MENU XAFILE); otherwise it is the value specified in Special Order Options Maintenance (MENU XAFILE) or the overridden value specified in Order Entry.</p> <p>(A 1) Display/Optional</p> |
| Prt                | <p>This field is display-only if the special order item currently exists on a requisition/purchase order and indicates the print code that was assigned to the comment, if any, when and if the comment was copied into the requisition/purchase order.</p> <p>Use this field to change the print code of the corresponding comment.</p> <p>Key <b>P</b> if you want the comment to print on the Purchase Order only.</p> <p>Key <b>R</b> if you want the comment to print on the Receiving List only.</p> <p>Key <b>I</b> if you do not want the comment to print on either the Purchase Order or Receiving List, but have it display on this screen only.</p> <p>Leave this field blank if you want the comment to print on the Purchase Order and the Receiving List. This field must be blank if the <b>Cpy</b> field is blank.</p> <p>(A 1) Display/Optional</p>             |
| Comment            | <p>This field displays the text of the comment.</p> <p>Display</p>  |
| Type               | <p>This field indicates the type of comment:</p> <ul style="list-style-type: none"> <li>• <b>(Blank)</b>: The comment will print on the Pick List and Invoice.</li> <li>• <b>P</b>: The comment will print on the Pick List only.</li> <li>• <b>I</b>: The comment will print on the Invoice only.</li> </ul> <p>Display</p>  |

**Special Orders Comments Screen Fields and Function Keys**

| <b>Field/Function Key</b>              | <b>Description</b>  |
|--|---|
| F2=Order Comments/<br>F2=Line Comments | Press the <b>F2=ORDER COMMENTS / F2=LINE COMMENTS</b> function key to toggle between displaying order level or line level comments on this screen. The top right portion of the screen will indicate what type of comment is displayed in reverse image.  |
| F7=Forward /<br>F8=Backwards           | <p>More... appears at the bottom of a roll screen to indicate that more data is available for viewing. Last appears at the bottom of the last screen of data. On some roll screens, <b>F7=PAGE DOWN</b> and <b>F8=PAGE UP</b> are available for use but do not display.</p> <p>Use the <b>F7=FORWARD</b> (page down) to display the next screen of information on a roll screen. The <b>PAGE DOWN</b> or <b>SHIFT-ROLL FWD</b> function keys perform the same task.</p> <p>Use the <b>F8=BACKWARD</b> (page up) to display the previous screen of information on a roll screen. The <b>PAGE UP</b> or <b>SHIFT-ROLL BACK</b> function keys perform the same task.</p> |
| F12=Return                             | Press <b>F12=RETURN</b> to return to the previous screen.   |
| Enter                                  | Press <b>ENTER</b> to update the changes to the <b>Cpy</b> and <b>Prt</b> fields before pressing <b>F12=RETURN</b> to complete other changes. When <b>MORE...</b> displays, you may make changes to multiple screens before pressing the <b>ENTER</b> key to record the update.   |

---

## End Special Order Selection Screen

| <u>END SPECIAL ORDER SELECTION</u>            |              |             |
|---|--------------|-------------|
| Req No: 01/100182                             |              |             |
| Vendor: IC4000 GUADALJARA OFFICE SUPPLIES     |              |             |
|   | <u>Lines</u> | <u>Qtys</u> |
| Drop Ship:                                    |              |             |
| Non Stock:                                    |              |             |
| Spec Order:                                   | 1            | 10          |
| F2=Review      F13=Update Req      F24=Cancel |              |             |

This screen displays after pressing **F10=END** from the Work With Special Orders Screen (p. 10-13). This screen displays a summary of the special order items selected for this requisition/purchase order, and allows you to update the requisition/purchase order with these special order items.

**NOTE:** If you selected any drop-ship and non-stock or special order type items for this requisition/purchase order, you will not be able to update the requisition/purchase order with these items. An error message is displayed if you attempt to do this.

### End Special Order Selection Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Req No/PO No       | This is the company and requisition/purchase order number of the current requisition/purchase order. The special order items summarized on this screen will be ordered using this requisition/purchase order.<br><br>This field displays as Req No when you are creating a requisition and will display as PO No when you are maintaining an existing purchase order.<br><br>Display |
| Vendor             | The number and name of the vendor for whom the current requisition/purchase order is being created.<br><br>Display   |
| Lines              | The number of special order items that have been selected for each of the special order types (drop-ship, non-stock, and special order).<br><br>Display  |

### End Special Order Selection Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Qtys               | <p>The total quantity of all special order items that have been selected for each of the special order types (drop-ship, non-stock, and special order). This is the total quantity of individual special order items that will be ordered on this requisition/purchase order.</p> <p>Display</p>   |
| F2=Review          | <p>Press <b>F2=REVIEW</b> to display the Work With Special Orders Screen (p. 10-13), from which you may review or make additional changes to the special order items selected.</p>   |
| F13=Update Req     | <p>Press <b>F13=UPDATE REQ</b> to update the requisition/purchase order with the special order items selected (and summarized on this screen). The Requisition/Purchase Order Item Summary Screen (p. 6-61) will display containing these special order items.</p>   |
| F24=Cancel         | <p>Press <b>F24=CANCEL</b> to cancel any selections made on the Work With Special Orders Screen (p. 10-13). You will return to the Requisition/Purchase Order Item Detail Entry Screen (p. 6-38) without having extracted any of the special ordered items for inclusion in the requisition/purchase order.</p> <p><b>WARNING!Warning: If you made any changes on the Special Orders Change Screen or the Special Orders Comments Screen, they are not canceled when you use the F24=CANCEL key.</b></p> |

---

**NOTE:** To use this option, RTV Processing must be activated through Purchasing Options Maintenance (MENU XAFILE). If RTV Processing is not activated, a message appears when you attempt to enter information in this option.

---

Use this option to perform the following tasks for items in the Return to Vendor Log File:

- Review items
- Change information such as the vendor, cost, quantity, unit of measure, and flags for updating inventory
- Create return requisitions

The Return to Vendor Log File stores information for all items being returned to the vendor. Items are added to this file when you create a return sales order and print the credit memo invoice in Order Entry or add items through Return to Vendor Additions (MENU POMAIN/MENU WMMAIN).

---

## Return to Vendor Processing

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| <b>Title</b>                                 | <b>Purpose</b>   |
|--|--|
| Return to Vendor Processing Selection Screen | Use to limit the list of items displayed.  |
| RTV Processing Screen                        | Use to mark items to be included on return requisitions.   |
| RTV Return Requisition Creation Report       | Prints the company, customer number, and ship-to number for each requisition created for a customer consignment warehouse. |

---

| <b>Title</b>                  | <b>Purpose</b>  |
|-------------------------------|---|
| RTV Change Screen             | Use to enter information regarding the item being returned.   |
| RTV Line Item Comments Screen | Use to enter and review comments for the item and to specify whether or not to print each comment line on the Purchase Order. |

---

## Return to Vendor Processing Selection Screen

```

Selection: \_ .

F2=Unmark All    F4=Desc Left    F6=Mark/Unmark    F11=Mark All    F13=Add Item  
 F3=Exit        F5=Show Mfg No    F10=Create Req    F12=Return      F14=Vnd/Itm Inq

This screen appears when you press **ENTER** from the Return to Vendor Processing Selection Screen (p. 11-3). It displays information for each item in the Return to Vendor Log File.

Use this screen to mark items to be included on return requisitions. You can also use function keys to gain access to screens to perform the following functions:

- Change the vendor, cost, quantity, unit of measure, and inventory update flag for an item.
- View a list of vendors for an item.
- Add items to the Return to Vendor Log File.

You can mark items only if all of the following conditions are true:

- The item has a vendor assigned to it and the vendor is not defined as a warehouse transfer vendor.
- The return sales order created for this item through Enter, Change & Ship Orders (MENU OEMAIN) has been posted to inventory through Day-End Processing or Immediate Returns Processing. This does not apply to items added to the Return to Vendor Log File through Return to Vendor Additions (MENU POMAIN/MENU WMMAIN).
- The item is not being maintained by another user or process.

### RTV Processing Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| SI                 | The reference number to be keyed in the <b>Selection</b> field when choosing an item. The number in this field is highlighted when an item has been marked during this session of RTV processing or any other session including those performed by other users.<br>Display |
| Vnd Asg            | Indicates whether the item being returned has been assigned to a particular vendor.<br>Display   |
| Mlt Vnd            | A <b>Y</b> appears if the item is defined for multiple vendors through Vendor/Item Maintenance (MENU POFILE/MENU APFILE). Otherwise, the field is blank.<br>Display  |
| Item/Description   | Item number and description. Use the F4= DESC LEFT / F4=DESC RIGHT / F4=ITEM & DESC and F5= SHOW MFG NO / F5=HIDE MFG NO to toggle the information displayed here.<br>Display  |
| Order              | Order number for the return sales order created in Order Entry. This field is blank if the item was added to the Return to Vendor Log File through Return to Vendor Additions (MENU POMAIN/MENU WMMAIN).<br>Display  |
| Qty Returned       | The quantity being returned.<br>Display  |
| U/M                | Unit of measure for the quantity being returned.<br>Display  |
| Rt Cd              | Return reason code from return sales order.<br>Display   |
| C                  | A <b>Y</b> appears if comments exist. Otherwise, this field is blank.<br>Display   |
| Selection          | Use this field to select the item for which you are performing an activity. Key the reference number from the <b>SI</b> column.<br>(N 2, 0) Optional   |
| F2=Unmark All      | Press F2=UNMARK ALL to unmark all items marked during this session. The reference number in the <b>SI</b> field is highlighted when an item is marked.   |
| F3=Exit            | Press F3=EXIT to cancel your selections and return to MENU POMAIN.   |

### RTV Processing Screen Fields and Function Keys

| Field/Function Key                                | Description  |
|---|--|
| F4=Desc Left/<br>F4=Desc Right/<br>F4=Item & Desc | Press F4= DESC LEFT / F4=DESC RIGHT / F4=ITEM & DESC to toggle between displaying the first 30 characters of the item's description (Desc Left), the last 30 characters of an item's description (Desc Right), and the item number and description (Item & Desc).  |
| F5=Show Mfg No/<br>F5=Hide Mfg No                 | The F5= SHOW MFG NO / F5=HIDE MFG NO key appears only when the item number and description are displayed.<br>Press F5= SHOW MFG NO / F5=HIDE MFG NO to toggle between displaying our item number and the manufacturer's item number.                               |
| F6=Mark/F6=Unmark                                 | After selecting an item, press F6=MARK / F6=UNMARK to mark or unmark the item. Items can be marked only if they meet the criteria described in the overview section for this screen.   |
| F10=Create Req                                    | Press F10=CREATE REQ to create return requisitions for all marked items. When you press F10=CREATE REQ the Report Options Screen appears. Press ENTER from that screen to create the requisitions and print the RTV Return Requisition Creation Report (p. 11-10). |
| F11=Mark All                                      | Press F11=MARK ALL to mark all items that meet the criteria specified in the overview section for this screen. This includes items that are not currently displayed on the screen (i.e., you must scroll down to view them).                                       |
| F12=Return  | Press F12=RETURN to save your changes and return to the Return to Vendor Processing Selection Screen (p. 11-3).  |
| F13=Add Item                                      | Press F13=ADD ITEM to display the Return to Vendor Log Additions Selection Screen (p. 12-2), which is used to add items to the Return to Vendor Log File.  |
| F14=Vnd/Itm Inq                                   | After selecting an item, press F14=VND/ITM INQ to display the Vendor/Item Information Summary Screen (p. 19-3), which displays a list of vendors to which this item is assigned. Use this screen to choose the vendor to which you will return the item.           |
| Enter   | After selecting an item, press ENTER to display the RTV Change Screen (p. 11-12) which is used to change the vendor, cost, quantity, unit of measure, and inventory update flags for an item.  |

This report is created when you press F10=CREATE REQ from the RTV Processing Screen (p. 11-7). If Customer Consignment is installed, this report identifies the company, customer number, and ship-to number for each requisition created for a customer consignment warehouse.

The report provides information for the requisitions created through Return to Vendor Processing (MENU POMAIN). The first line of information contains the requisition number. Lines 2-5 provide item information, displayed in columnar format with headings at the top of the report.

### RTV Return Requisition Creation Report

| Report/Listing Fields      | Description  |
|----------------------------|--|
| Req No                     | This field contains the requisition number, which is automatically assigned when the requisition is created.   |
| Line #                     | Number assigned to this line item. This number appears as the sequence number on the Requisition Item Summary Screen in Enter or Change Requisitions (MENU POMAIN).  |
| Our Item Number            | Our item number as defined through Item Master Maintenance (MENU IAFILE).  |
| Manufacturer's Item Number | Manufacturer's item number as defined through Item Master Maintenance (MENU IAFILE).   |
| PO Quantity & U/M          | Quantity being returned and the unit of measure for that quantity.   |
| Unit Cost & U/M            | Unit cost and unit of measure for that cost.   |
| Ext Cost w/Disc            | Extended cost, which is calculated by multiplying the <b>PO Quantity</b> by the <b>Unit Cost</b> and conversion factors for units of measure. The calculated extended cost includes applicable vendor discounts. |
| Cmt                        | If comments exist for this item, <b>Y</b> appears. Otherwise, <b>N</b> appears.  |

---

**RTV Return Requisition Creation Report**

| Report/Listing Fields | Description   |
|-----------------------|---|
| Upd Inv               | Y appears if the item's on-hand quantity will be updated in the Item Balance File when the Purchase Order is printed. Otherwise N appears.  |
| Upd Cst               | A Y appears if the item's average cost will be updated when the Purchase Order is printed. Otherwise N appears.   |
| PO Item Description   | This line displays the item's description as it will appear on the Purchase Order.  |
| RTV Log #             | This line displays the Return to Vendor log number assigned when the item was added to the Return to Vendor Log File.   |
| (Warning Messages)    | <p>These lines will contain informational messages if any of the following conditions are true:</p> <ul style="list-style-type: none"> <li>• The item does not exist in the location you specified during RTV Processing.</li> <li>• The unit of measure conversion could not be used. Items were added to the Return to Vendor Log File in their stocking unit of measure, and they were returned to the vendor in their buying or alternate buying unit of measure.</li> <li>• The manufacturer's item number, which is supposed to be printed on the Purchase Order based on the Item <b>Prt</b> code in Vendor Master Maintenance (MENU POFILE), could not be found.</li> <li>• The item's extended cost equals zero. This no charge return may distort average cost.</li> <li>• There is no vendor/item record for the line item.</li> <li>• The item tracks country of origin (as defined through Item Master Maintenance), and there are country of origin restrictions that exist or if a country of origin could not be determined.</li> </ul> |

### RTV Change Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Date               | This field displays the date the item was added to the Return to Vendor Log File.<br>Display  |
| Marked             | This field indicates whether or not the item is marked to be included on a return requisition.<br>Display   |
| Rsv Cmp            | This field appears only if Warehouse Management is installed.<br>This field indicates whether or not Return to Vendor location reservations are complete for this item.<br>Display  |
| F2=Order Inquiry   | The F2=ORDER INQUIRY function key appears only if a return order was created for this item through Enter, Change & Ship Orders (MENU OEMAIN) and the selected <b>Return Reason Code</b> has a <b>Return Disposition Code</b> of V for vendor and the credit memo invoice has been printed.<br>Press F2=ORDER INQUIRY to view summary information for the return order containing this item.<br>If the order has been invoiced but is still in the open orders files (ORHED/ORDET) (i.e., Day-End Processing has not been run) the Order Display Screen appears. For an explanation of this screen, refer to Open Orders Inquiry (MENU OEMAIN) in the Order Entry User Guide.<br>If Day-End Processing was run after this order was invoiced, the Invoice Display Screen appears. For an explanation of this screen, refer to Customer Order/Shipment Inquiry (MENU OEMAIN) in the Order Entry User Guide. |
| F4=Recvd POs       | Press F4=RECVD POs to display the Purchase Order Inquiry By Item History Screen (p. 17-7), which provides purchase order history information for this item.   |
| F5=Comments        | Press F5=COMMENTS to display the RTV Line Item Comments Screen (p. 11-18), where you can enter and review comments for this item.   |
| F9=Reserve         | The F9=RESERVE function key appears only if Warehouse Management is installed.<br>Press F9=RESERVE to display the RTV Location Reservation Screen (p. 12-8), where you can enter a reservation for each warehouse location from which you expect the item to be picked.   |
| F12=Return         | Press F12=RETURN to return to the RTV Processing Screen (p. 11-7) without saving your changes.  |
| F14=Vnd Itm        | Press F14=VND ITM to display the Vendor/Item Information Summary Screen (p. 19-3), which displays a list of vendors to which this item is assigned.   |

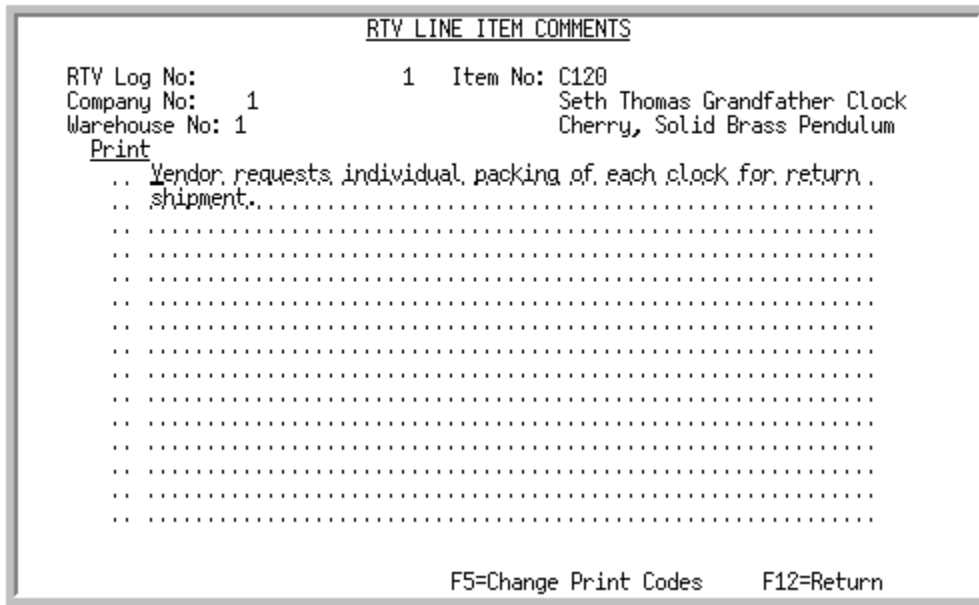

---

**RTV Change Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| F22=Item Inq       | <p>Press F22=ITEM INQ to display the Inventory Status Screen, which provides item information such as on-hand quantity, net available quantity, quantity on purchase orders and backordered quantity.</p> <p>For an explanation of this screen, refer to Item Inquiry (MENU IAMAIN) in the Inventory Accounting User Guide.</p>  |
| F24=Delete         | <p>Press F24=DELETE to delete this item from the Return to Vendor Log File. When you press F24=DELETE, a confirmation window appears at the bottom of the screen.</p> <p>Key Y to delete the item from the Return to Vendor Log File.</p> <p>Key N to cancel the delete function.</p>  |
| Enter              | <p>This key serves two purposes:</p> <ul style="list-style-type: none"> <li>• If you change the <b>Vendor</b>, press ENTER to refresh the screen values with information for the new vendor. <p>When you press ENTER, a confirmation window appears at the bottom of the screen.</p> <p>Key Y to refresh the screen values.</p> <p>Key N to redisplay the screen for further maintenance without refreshing the values.</p> </li> <li>• If you change other information and do not change the Vendor, press ENTER to update the item information in the Return to Vendor Log File. <p>When you press ENTER, a confirmation window appears at the bottom of the screen.</p> <p>Key Y to update the item information and return to the RTV Processing Screen (p. 11-7).</p> <p>Key N to redisplay the screen for further maintenance without updating item information</p> </li> </ul> |

---

## RTV Line Item Comments Screen

This screen appears when you press **F5=COMMENTS** from the RTV Change Screen (p. 11-12) or the Return to Vendor Log Additions Screen (p. 12-5). Use this screen to enter and review comments for the item and to specify whether or not to print each comment line on the Purchase Order. Comment print codes from Order Entry are not assumed to be Purchasing comment print codes.

---

NOTE: Order Entry type **X** (Internal) and type **I** (Invoice) comments become Purchasing type **I** (Internal) comments. Order Entry type **P** (Pick List) comments become Purchasing type **P** (Purchase Order) comments.

---

### RTV Line Item Comments Screen Fields and Function Keys

|--------------------|--|
| RTV Log No         | This field displays the RTV log number assigned when the item was added to the Return to Vendor Log File.<br>Display |
| Item No            | The item number selected to be returned with the description lines.<br>Display                                       |
| Company No         | The company number and name for the return.<br>Display   |
| Warehouse No       | The warehouse from which the item is being returned.<br>Display  |

---

**RTV Line Item Comments Screen Fields and Function Keys**

| Field/Function Key                           | Description  |
|--|--|
| Print  | <p>Use this field to indicate whether or not to print the associated comment line on the Purchase Order.</p> <p>To change the value in this field, press <b>F5=CHANGE PRINT CODES / F5=CHANGE COMMENT TEXT</b>, which toggles between editing the print codes and the comment text.</p> <p>Key <b>P</b> or leave this field blank to print the comment on the Purchase Order.</p> <p>Key <b>I</b> to indicate that this is an internal comment which should not be printed on the Purchase Order. The comment will appear on this screen only, and if <b>Keep Detail Comments in History</b> is set to <b>Y</b> in Purchasing Options Maintenance (MENU XAFILE), it will be saved to purchase order history.</p> <p><i>Valid Values:</i> P, I or blank</p> <p>(A 1) Optional</p> |
| Comment Text                                 | <p>Use this field to enter the item comment to be displayed on this screen and printed on the documents specified in the <b>Print</b> field.</p> <p>Key the comment text.</p> <p>(15 @ A 62) Optional</p>  |
| F5=Change Print Codes/F5=Change Comment Text | <p>Press <b>F5=CHANGE PRINT CODES / F5=CHANGE COMMENT TEXT</b> to toggle between editing print codes and comment text.</p>   |
| F12=Return                                   | <p>Press <b>F12=RETURN</b> to return to the previous screen without saving your changes.</p>   |
| Enter  | <p>Press <b>ENTER</b> to save your changes and return to the previous screen.</p>  |

---

**NOTE:** To use this option, RTV Processing must be activated through Purchasing Options Maintenance (MENU XAFILE). If RTV Processing is not activated, a message appears when you attempt to enter information in this option.

---

Use this option to add items to the Return to Vendor Log File when you do not want to enter a return sales order (e.g., if you find damaged merchandise in your warehouse). The Return to Vendor Log File stores data for all items being returned to the vendor.

---

## Return to Vendor Additions

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| <b>Title</b>                                    | <b>Purpose</b>  |
|---|---|
| Return to Vendor Log Additions Selection Screen | Use to specify the item you are adding to the Return to Vendor Log File.  |
| Return to Vendor Log Additions Screen           | Use to enter the quantity being returned.   |
| RTV Location Reservation Screen                 | Use to specify the item quantity, unit of measure, lot or serial number, and expiration date for each warehouse location from which you expect the item to be picked. |

---

## Return to Vendor Log Additions Selection Screen

```

RETURN TO VENDOR LOG ADDITIONS

Company?   01 (01-99)

Warehouse? 1 .

Item No:   .....

Find:     .....
Item:     ..... Class? .....

F3=Exit
    
```

This screen appears when you select option 9 - Return to Vendor Additions from MENU POMAIN. Use this screen to specify the item you are adding to the Return to Vendor Log File.

### Return to Vendor Log Additions Selection Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Company            | <p>This field appears only if the <b>Multi Company</b> field is set to <b>Y</b> through System Options Maintenance (MENU XAFILE).</p> <p>Use this field to specify the company for which you are returning the item.<br/>Key the company number.</p> <p><i>Default Value:</i> The default company defined in Authority Profile Maintenance (MENU XASCTY) if one has been defined; otherwise, this is the default company defined through System Options Maintenance (MENU XAFILE)</p> <p><i>Valid Values:</i> A valid company number defined through Company Name Maintenance (MENU XAFILE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(N 2,0) Required</p> |

---

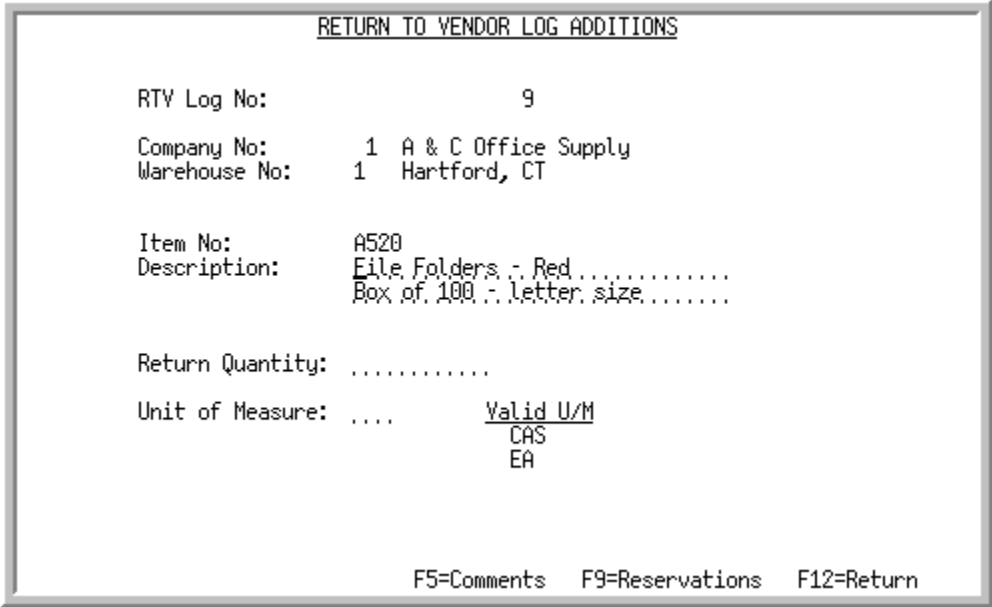

**Return to Vendor Log Additions Selection Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Warehouse          | <p>Use this field to specify the warehouse in which the item is currently stored.<br/>Key the warehouse ID.</p> <p><i>Default Value:</i> The default warehouse defined in Authority Profile Maintenance (MENU XASCTY) if one has been defined; otherwise, this is the <b>Default Warehouse</b> defined through Company Name Maintenance (MENU XAFILE)</p> <p><i>Valid Values:</i> A valid warehouse number defined through Warehouse Numbers Maintenance (MENU IAFILE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(A 2) Required</p> |
| Item No            | <p>Use this field to specify the item you are adding to the Return to Vendor Log File.<br/>Key the item number.</p> <p>If you do not know the item number, use the <b>Find</b> and <b>Item</b> fields to activate the item search feature. For information on using searches, refer to the Cross Applications User Guide.</p> <p><i>Valid Values:</i> An item number defined through Item Master Maintenance (MENU IAFILE).</p> <p>(A 27) Optional</p>   |
| Find               | <p>If you do not recall the complete item number that you want to inquire into, key item description search criteria to activate the item search. Items with descriptions matching the search criteria keyed will display on the Item Description Search Screen.</p> <p>For information on entering search criteria and the Item Description Search Screen, refer to the Inventory Accounting User Guide.</p> <p>(A 40) Optional</p>   |
| Item               | <p>This field may be used in addition to, or in place of, entering search criteria in the <b>Find</b> field to further limit the items to display.</p> <p>Key a partial item number. All items that match the characters of the item number keyed in this field will display. This is helpful if you recall part of an item number, but not the entire number.</p> <p>For information on entering search criteria and the Item Description Search Screen, refer to the Inventory Accounting User Guide.</p> <p>(A 27) Optional</p>   |

### Return to Vendor Log Additions Selection Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Class              | <p>This field may be used in addition to (not in place of) the search criteria in the <b>Find</b> or <b>Item No</b> fields to further limit the number of items that will display, based on their item class.</p> <p>Key the appropriate item class and sub-class, if any. Only items that have been assigned the item class that is keyed in this field will display on the Item Description Search Screen.</p> <p>For information on entering search criteria and the Item Description Search Screen, refer to the Cross Applications User Guide.</p> <p>(A 2/A 2) Optional</p> |
| F3=Exit            | <p>Press F3=EXIT to return to MENU POMAIN without saving any changes.</p>   |
| Enter              | <p>Press ENTER to confirm your selections. The Return to Vendor Log Additions Screen (p. 12-5) appears.</p>   |

# Return to Vendor Log Additions Screen

This screen appears when you press **ENTER** from the Return to Vendor Log Additions Selection Screen (p. 12-2). Use this screen to enter the quantity being returned.

### Return to Vendor Log Additions Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| RTV Log No         | <p>This field displays the RTV log number, which is assigned to the returned item.</p> <p>The RTV log number is printed on the Return Goods Authorization Slip (RGA) and Return Requisition Pick List if <b>Track Return to Vendor Log Numbers</b> is set to <b>Y</b> in Purchasing Company Options (MENU XAFIL). If <b>Track Return to Vendor Log Numbers</b> is set to <b>N</b>, the RTV log number appears on applicable screens but is not printed on any document.</p> <p>Display</p> |
| Company No         | <p>The company selected on the Return to Vendor Log Additions Selection Screen (p. 12-2) screen.</p> <p>Display</p>  |
| Warehouse No       | <p>The warehouse ID selected on the Return to Vendor Log Additions Selection Screen (p. 12-2) screen.</p> <p>Display</p>   |
| Item No            | <p>The item number selected on the Return to Vendor Log Additions Selection Screen (p. 12-2) screen for which inventory is being returned to the vendor.</p> <p>Display</p>  |

### Return to Vendor Log Additions Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Description        | <p>Use this field to specify the item description to be printed on the Purchase Order.</p> <p>Key a description for the item.</p> <p><i>Default Value:</i> The item description defined in Item Master Maintenance (MENU IAFILE).</p> <p><i>Valid Values:</i> Any alphanumeric character. The second description line is optional.</p> <p>(2 @ A 31) Required</p>   |
| Return Quantity    | <p>Use this field to specify the quantity being returned to the vendor.</p> <p>Key the quantity being returned.</p> <p>(N 10,3) Required</p>  |
| Unit of Measure    | <p>This is a display-only field when only one unit of measure is defined for the item in Item Master Maintenance (MENU IAFILE).</p> <p>If more than one unit of measure is defined for the item, use this field to specify the unit of measure for the item and quantity being returned to the vendor.</p> <p>Key the unit of measure. All units of measure defined for this item are listed in the <b>Valid U/M</b> field.</p> <p>(A 3) Required/Display</p>         |
| Valid U/M          | <p>This field appears only when there is more than one unit of measure defined for the item.</p> <p>This field displays all units of measure defined for this item in Item Master Maintenance (MENU IAFILE). Use this field as a reference when keying a unit of measure in the <b>Unit of Measure</b> field.</p> <p>Display</p>  |
| F5=Comments        | <p>Press <b>F5=COMMENTS</b> to display the RTV Line Item Comments Screen (p. 11-18), which allows you to enter and review comments for the item being returned.</p>   |
| F9=Reservations    | <p>The <b>F9=RESERVATIONS</b> function key appears only if Warehouse Management installed.</p> <p>Press <b>F9=RESERVATIONS</b> to display the RTV Location Reservation Screen (RTV Location Reservation Screen (p. 12-8)), where you enter a reservation for each warehouse location from which you expect the item to be picked. This information is used to create the actual Warehouse Management location reservation when you create the return requisition.</p> |
| F12=Return         | <p>Press <b>F12=RETURN</b> to return to the Return to Vendor Log Additions Selection Screen (p. 12-2) without saving your changes.</p>  |

---

**Return to Vendor Log Additions Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Enter              | <p>Press <b>ENTER</b> to save your changes. A confirmation window appears at the bottom of the screen.</p> <p>Key <b>Y</b> to save your changes. The Return to Vendor Log Additions Selection Screen (p. 12-2) appears.</p> <p>Key <b>N</b> to return to the Return to Vendor Log Additions Screen (p. 12-5) without saving your changes.</p> <p>If Customer Consignment is installed and the warehouse specified in the <b>Warehouse</b> field on the Return to Vendor Log Additions Selection Screen (p. 12-2) is a consignment warehouse, the Customer/Ship-To Selection Screen will appear before the confirmation window appears. Refer to this screen in the Moving Goods to a Consignment Warehouse chapter in the Customer Consignment User Guide.</p> |

---

## RTV Location Reservation Screen

```

LOCATION RESERVATION
RTV Log No:          2  WH: 1  Item: A100
  Rw.Bin.Sh          Qty    U/M  Serial No.

-----
Sl  Rw.Bin.Sh          Qty    Serial No.          .000  Ent/d
-----
  ..... EA .....          3.000  To Go
-----
F12=Return
    
```

---

NOTE: Do not confuse this screen with the Location Reservations Screen from Enter, Change & Ship Orders (MENU OEMAIN).

---

This screen appears when you press F9=RESERVATIONS from the Return to Vendor Log Additions Screen (p. 12-5).

Use this screen to specify the item quantity, unit of measure, lot or serial number, and expiration date for each warehouse location from which you expect the item to be picked. When you create the return requisition, you use this information to create the actual Warehouse Management location reservation.

### RTV Location Reservation Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| RTV Log No.        | The RTV Log number assigned to this return transaction.<br>Display   |
| WH                 | The warehouse to which the item is being returned.<br>Display  |
| Item               | The item number selected on the Return to Vendor Log Additions Selection Screen (p. 12-2) screen for which inventory is being returned to the vendor.<br>Display |

---

---

**RTV Location Reservation Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| (Reference Number) | Reference number to be keyed in the <b>SI</b> field when choosing location information to be changed or deleted.<br>Display  |
| Rw.Bin.Sh          | Warehouse location from which the item will be picked. If a return order was entered for the item through the Order Entry module, the location specified at that time appears here.<br>Display   |
| Qty                | Quantity to be picked from this location.<br>Display   |
| U/M                | Unit of measure for the quantity being picked.<br>Display  |
| Lot No./Serial No  | This field only displays for items identified as lot ( <b>L</b> ) or serial ( <b>S, T</b> ) with the <b>WH Mgmt Code</b> field in Item Master Maintenance (MENU IAFILE).<br>Lot or serial number (if applicable) for the item to be picked.<br>Display   |
| Exp Date           | This field only displays for items identified with the <b>WH Mgmt Code</b> field set to <b>L</b> for lot control in Item Master Maintenance (MENU IAFILE).<br>Item's expiration date (if applicable). Expiration dates are only applicable to certain lot control items identified with <b>Exp Date Req'd</b> set to <b>Y</b> in Item Master Maintenance (MENU IAFILE).<br>Display |
| SI                 | Use this field to select the location you are changing or deleting. If you are adding a location, leave this field blank.<br>Key the number from the <b>Reference Number</b> column.<br>(N 2,0) Optional   |
| Rw.Bin.Sh          | Use this field to specify the location from which the item will be picked.<br>Key the warehouse location using the warehouse location number format defined in Warehouse Management Options Maintenance (MENU WMFILE).<br>(A 16) Required  |

### RTV Location Reservation Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Qty                | <p>Use this field to specify the quantity to be picked from the corresponding location.</p> <p>Key the quantity in the item's stocking unit of measure, which appears to the right of this field.</p> <p>If the item is a serial item, you must key a separate entry for each item by keying <b>1</b> here and a unique serial number at the <b>Serial No.</b> field until the <b>To Go</b> field quantity is <b>0</b> and the <b>Ent/d</b> field reflects the total quantity being returned.</p> <p><i>Valid Values:</i> A multiple of the value in the <b>Quantity per Case</b> field if the item is a case quantity item.</p> <p>(N 10,3) Required</p> |
| Serial No./Lot No. | <p>This field appears for serial number and lot items only.</p> <p>Use this field to specify the serial number or lot number of the item to be picked from the corresponding location.</p> <p>Key the serial number or lot number.</p> <p>(A 20) Required</p>   |
| Quantity per Case  | <p>This field appears only for case quantity items. If the case quantity item has a fixed quantity, you cannot change this value.</p> <p>Key the number of items in each case for variable case quantity items.</p> <p>(N 4,0) Required/Display</p>   |
| Expo Date          | <p>This field appears only when <b>Exp Date Red</b> is set to <b>Y</b> in Item Master Maintenance (MENU IAFIELD).</p> <p>Key the expiration date for this lot item.</p> <p><i>Valid Values:</i> Key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFIELD).</p> <p>(N 6,0) Required</p>   |
| Net/d              | <p>This field displays the quantity of this item that is assigned a location.</p> <p>Display</p>  |
| To Go              | <p>This field displays the quantity of items that have not been assigned a location. This value is the difference between the quantity you are returning and the quantity in the <b>Ent/d</b> field.</p> <p>Display</p>   |

---

**RTV Location Reservation Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| F4=Dsp XXX         | <p>The F4=DSP XXX function key appears for case quantity items only.</p> <p>F4=DSP XXX, where XXX is the stocking unit of measure or the case quantity unit of measure for this item.</p> <p>Press F4=DSP XXX to toggle between expressing all quantities in the item's stocking unit of measure or the case quantity unit of measure.</p>   |
| F12=Return         | <p>Press F12=RETURN to save your changes and return to the Return to Vendor Log Additions Screen (p. 12-5).</p>  |
| F24=Delete         | <p>Key a reference number in the <b>SI</b> field and press F24=DELETE to delete the location information.</p>  |
| Enter              | <p>This key has two purposes:</p> <ul style="list-style-type: none"><li>• To select location information to be changed or deleted, key the selection number in the <b>SI</b> field and press ENTER to choose the location.</li><li>• To apply the values entered in the fields at the bottom of the screen, press ENTER. The location information will be added to the information in the top portion of the screen.</li></ul> |

---

---

Use this option to display detailed information for all items defined in Inventory Accounting.

Refer to Item Inquiry (MENU IAMAIN) in the Inventory Accounting User Guide for an explanation of this option.

---

---

The Req/PO Inquiry allows you to view the current status of:

- requisitions
- open, partially received and fully received purchase orders for which PO Receipts Register (MENU POMAIN) has not been run
- closed purchase orders for which PO Receipts Register (MENU POMAIN) has been run
- purchase orders in history

You may display header and detail item information for each requisition or purchase order, enter receipts for a purchase order, and select a requisition or purchase order to maintain.

In addition, function keys are available that allow you to:

- Reprint a Purchase Order from history (if authorized).
- Change the Req/PO header or detail item Due Date only without changing other data on the Req/PO (if authorized).
- Access Work With Special Orders (MENU POMAIN) and the Special Order Change Request Process if a Req/PO includes special order items.
- Access the Requisition/Purchase Order Maintenance Header Screen (p. 6-13) and other edit/entry screens available in Enter or Change Requisitions (MENU POMAIN). Access to these screens allows the immediate maintenance of open purchase order files.
- Create a new requisition from an existing purchase order.

---

NOTE: This inquiry and the Vendor Order/Shipment Inquiry (MENU POMAIN) provide the only means in Purchasing to make any changes to a Purchase Order after it has been printed.

---

---

## Req/PO Inquiry

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

---

| <b>Title</b>  | <b>Purpose</b>  |
|---|---|
| Req/PO Inquiry Selection Screen   | Use to select any specific criteria for requisitions, purchase orders, or purchase orders in history.                                     |
| Req/PO Inquiry Screen   | Use to select the requisition or purchase order for which you are performing maintenance, receiving items, or viewing detail information. |
| Multi-WH PO Review Screen   | Use to review purchase order information for all of the individual POs that are part of the selected Multi-WH purchase order.             |
| Multi-WH PO Item Review Screen  | Use to review a list of all items ordered on the Multi-WH purchase order.   |
| Requisition/Purchase Order Header Screen                                    | Use to review header information for the requisition or purchase order selected.  |
| Requisition/Purchase Order Item Detail Screen                               | Use to review detail information for one item on the current requisition or purchase order.   |
| Purchase Order Order Comments Screen<br>Purchase Order Item Comments Screen | Use to review the vendor and order level comments for the requisition/purchase order and also to view the item level specific comments.   |
| End Requisition/Purchase Order Screen                                       | Use to review summary information about the requisition or purchase order.  |
| Reprint History Purchase Orders Output Options Screen                       | Refer to Purchase Orders (MENU POMAIN) for details about this screen.   |
| Display Purchase Orders Screen  | Use to select another requisition or purchase order to inquiry on.  |
| Requisition/Purchase Order Item Review Screen                               | Use to select an existing item on the requisition for detail inquiry.   |
| Create Duplicate Requisition Screen   | Use to create a new requisition from an existing purchase order.  |
| Select Items for Duplicate Requisition Screen                               | Use to review and select which items to include on the new requisition being created from the existing purchase order.                    |
| New Requisition Information Screen  | Use to review if the requisition was created or not.  |

| Title   | Purpose  |
|---|--|
| Copy Purchase Order Errors/Warnings Report        | Prints if, during the create duplicate requisition process, <i>header</i> errors are encountered (requisition not created), <i>header</i> warnings are encountered (requisition could be created if only warnings), or all lines are dropped from the requisition (requisition not created). |
| Copy Purchase Order Dropped Lines/Warnings Report | Prints if, during the create duplicate requisition process, <i>detail</i> errors are encountered (resulting in the line being dropped from the requisition) or <i>detail</i> warnings are encountered (the line could be included if only warnings occurred).                                |
| Purchase Order Activity Screen                    | Use to review each action taken on the requisition/purchase order.   |
| Purchase Order Activity Detail Screen             | Use to review field values before and after a change was made.   |
| Purchase Order Activity Report                    | Prints information from the Purchase Order Activity Screen (p. 14-67) and the Purchase Order Activity Detail Screen (p. 14-73).  |
| Receipt History Screen                            | Use to review history information for the item displayed on the Requisition/Purchase Order Item Detail Screen (p. 14-30).  |
| Landing Cost Detail Screen                        | Use to review landing cost breakdown information. Landing costs are those costs incurred due to specific situations (overhead, duty, etc.).  |
| Ordering Information Screen                       | Use to review additional ordering information (including vendor/item, inventory management and planning, and item balance information) for the item displayed on the Requisition/Purchase Order Item Detail Screen (p. 14-30).   |
| Assign Customer Numbers Display Screen            | Use to review a list of customers (up to 15) waiting for the item displayed on the Requisition/Purchase Order Item Detail Screen (p. 14-30).   |

## Req/PO Inquiry Selection Screen

| REQ/PO INQUIRY SELECTION |       |     |         |
|--------------------------|-------|-----|---------|
| Company?                 | 01    |     |         |

| PO Print Date:           | ..... | To: | .....   |
| Due Date:                | ..... | To: | .....   |
| Vnd Ship Date:           | ..... | To: | .....   |
|                          |       |     | F3=Exit |

This screen displays after selection option 11 - Req/PO Inquiry (MENU POMAIN). Use this screen to select any specific criteria for requisitions, purchase orders, or purchase orders in history. If you leave all of the fields on this screen blank, you may inquire on any requisition, purchase order, or purchase order in history.

If both requisitions and purchase orders have been selected to display on this screen, requisitions will display before purchase orders. Requisitions are displayed in sequence by requisition number, and purchase orders are displayed in sequence by purchase order number.

Refer to the Cross Applications User Guide for an explanation of the rules for entering From/To Ranges.

---

**Req/PO Inquiry Selection Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Company            | <p>To limit the requisitions and purchase orders that display for one company, key the number of the company in this field.</p> <p><i>Default Value:</i> When International Currency is installed, the default company defined in Authority Profile Maintenance (MENU XASCTY) if one has been defined; otherwise, this is the default company defined through System Options Maintenance (MENU XAFILE). When International Currency is not installed, there is no default value.</p> <p><i>Valid Values:</i> A valid company number defined through Company Name Maintenance (MENU XAFILE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(N 2,0) Optional; Required only if International Currency is installed.</p> |
| Buyer              | <p>To limit the requisitions and purchase orders that display for one buyer, key the buyer's three character code in this field.</p> <hr/> <p>NOTE: Buyer codes may be assigned to a vendor (through MENU POFIL), vendor/warehouse (through MENU POFIL), vendor/item (through MENU POFIL), and/or vendor/item/warehouse (also through MENU POFIL).</p> <hr/> <p><i>Valid Values:</i> A buyer code defined through Buyers Maintenance (MENU POFIL).</p> <p>(A 3) Optional</p>  |
| Include Req        | <p>Use this field to specify if requisitions will be included in this inquiry.</p> <p>Key <b>Y</b> if you want requisitions to be included.</p> <p>Key <b>N</b> if you do not want requisitions to be included.</p> <p><i>Default Value:</i> Y</p> <p>(A 1) Required</p>  |
| (Include) PO       | <p>Use this field to specify if this inquiry will include purchase orders which are:</p> <ul style="list-style-type: none"> <li>• open, partially received and fully received for which PO Receipts Register (MENU POMAIN) has not been run</li> <li>• closed for which PO Receipts Register (MENU POMAIN) has been run</li> </ul> <p>Key <b>Y</b> if you want purchase orders to be included.</p> <p>Key <b>N</b> if you do not want purchase orders to be included.</p> <p><i>Default Value:</i> Y</p> <p>(A 1) Required</p>  |

### Req/PO Inquiry Selection Screen Fields and Function Keys

| Field/Function Key   | Description  |
|----------------------|--|
| (Include) History    | <p>Use this field to specify if purchase orders in history [purchase orders that have been closed and updated through Day-End Processing (MENU XAMAST)] will be included in this inquiry.</p> <p>Key <b>Y</b> if you want purchase orders in history to be included.</p> <p>Key <b>N</b> if you do not want purchase orders in history to be included.</p> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p>  |
| Receipt Status       | <p><b>NOTE:</b> This field pertains to purchase orders only. Therefore, you must have keyed <b>Y</b> in the <b>(Include) PO</b> field in order to specify a receipt status in this field.</p> <p>Use this field to display purchase orders with the same receipt status.</p> <p>Key <b>N</b> to display purchase orders that are open, having no items received.</p> <p>Key <b>P</b> to display purchase orders that has been partially received. A purchase order is partially received if any quantity of a single item on the purchase order has been received.</p> <p>Key <b>C</b> to display purchase orders that have been completely received. This means that all items on the purchase order have been received for the ordered quantities.</p> <p>Leave this field blank if you do not wish to display purchase orders with a specific receipt status.</p> <p>(A 1) Optional</p> |
| Req. Approval Status | <p>This field applies to requisitions only; purchase orders will display regardless of your selection in this field.</p> <p>Use this field to display only requisitions that have been approved, only requisitions that have not been approved, or all requisitions regardless of approval status.</p> <p>Key <b>Y</b> to display only those requisitions that have been approved (their status is Approved in the inquiry).</p> <p>Key <b>N</b> to display only those requisitions that have not been approved (their status is Pending in the inquiry).</p> <p>Leave this field blank to display both pending and approved requisitions in the inquiry.</p> <p>(A 1) Optional</p>  |

### Req/PO Inquiry Selection Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Hold Code          | <p>This field applies to requisitions only; purchase orders will display regardless of your selection in this field.</p> <p>To display requisitions with a specific hold code, key the hold code. Only the requisitions that have been held with that hold code will be included in the inquiry.</p> <p>(A 2) Optional</p>   |
| Warehouse          | <p>To limit the requisitions and purchase orders that display for a single warehouse, key the warehouse number. Only the requisitions and purchase orders created for that warehouse will be included in the inquiry.</p> <p>(A 2) Optional</p>  |
| Drop Ship          | <p>Use this field to display only those requisitions and purchase orders that have been designated for drop-shipments, or only those requisitions and purchase orders that have not been designated for drop-shipments.</p> <p>Key <b>Y</b> to display only those requisitions and purchase orders that have not been designated as drop-shipment orders.</p> <p>Key <b>N</b> to display only those requisitions and purchase orders that have been designated as drop-shipment orders.</p> <p>Leave this field blank to display requisitions and purchase that are drop-shipment orders, and those that are not drop-ship orders.</p> <p>(A 1) Optional</p> |
| Req No             | <p>Use these fields to specify the criteria that will determine the range of requisition numbers to display in this inquiry.</p> <p>(2 @ A 6) Optional</p>   |
| PO No              | <p>Use these fields to specify the criteria that will determine the range of purchase order numbers to display in the inquiry.</p> <p>(2 @ A 6) Optional</p>   |
| Vendor             | <p>Use these fields to specify the criteria that will determine the range of vendors for whom requisitions/purchase orders have been created to display in the inquiry.</p> <p>(2 @ A 6) Optional</p>  |
| Order Date         | <p>Use these fields to specify the criteria that will determine the range of order dates of the requisitions/purchase orders to display in the inquiry.</p> <p><i>Valid Values:</i> Key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFIL).</p> <p>(2 @ A 6) Optional</p>  |

F2=Ynd Ship    F10=Mult WH PO    F11=Trading Currency  
F3=Exit    F5=Maintenance    F6=Receipt    F9=In Use    F12=Return

This screen appears when you press **ENTER** on the Req/PO Inquiry Selection Screen (p. 14-4). It displays order information for:

- requisitions
- open purchase orders
- closed purchase orders
- purchase order(s) in history

Use this screen to select the requisition or purchase order for which you are performing maintenance, receiving items, or viewing detail information.

The purchase order numbers for Multi-WH purchase orders are displayed in reverse image for your convenience.

**NOTE:** This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. **Last** appears at the bottom of the last screen of data. To scroll through information on roll screens press:

- \* **PAGE DOWN** or **SHIFT-ROLL FWD** or **F7=PAGE DOWN** to display the next screen
- \* **PAGE UP** or **SHIFT-ROLL BACK** or **F8=PAGE UP** to display the previous screen

### Req/PO Inquiry Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| No                 | <p>This column displays the reference number of the requisition or purchase order. Key this number in the <b>Selection</b> field on this screen to:</p> <ul style="list-style-type: none"> <li>• maintain or display detail information for one of the open requisitions or purchase orders</li> <li>• receive items for a purchase order</li> </ul> <p>Display</p>           |
| T                  | <p>Indicates the type of order:</p> <ul style="list-style-type: none"> <li>• <b>R</b> displays if the displayed order is a requisition</li> <li>• <b>P</b> displays if the displayed order is a purchase order</li> <li>• <b>H</b> displays if the displayed order is a purchase order in history</li> </ul> <p>Display</p>   |
| Co                 | <p>The company number for which the requisition and/or purchase order has been created.</p> <p>Display</p>  |
| Req No             | <p>The number of the requisition assigned when the requisition was created.</p> <p>Display</p>  |
| PO Num             | <p>The purchase order number. When the Purchasing Options (MENU XAFILE) field <b>Use Requisition No. for Purchase Order No.</b> is set to <b>N</b>, this field may display blank. A purchase order number will display only after Purchase Orders have been printed through Purchase Orders (MENU POMAIN) and the purchase order number has been assigned.</p> <p>Display</p> |

**Req/PO Inquiry Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Status             | <p>The current status of the requisition or purchase order. This column will toggle with the <b>In Use</b> status of the requisition or purchase order with the F9=IN USE / F9=STATUS toggle key.</p> <p>When the current status is displayed, it may be one of the following:</p> <ul style="list-style-type: none"> <li>• <b>RQ Pending:</b> The requisition is pending - it has been entered through Enter or Change Requisitions (MENU POMAIN), but has not been approved.</li> <li>• <b>RQ Approved:</b> The requisition is approved -it has been entered and approved through Enter or Change Requisitions (MENU POMAIN), but a purchase order has not been created for the requisition through Purchase Orders (MENU POMAIN)</li> <li>• <b>RQ Held-HC:</b> The requisition has been held with hold code HC. Even if it is approved, a Purchase Order for this requisition may not be printed until it is released from requisition hold.</li> <li>• <b>PO Closed:</b> The Purchase Order has been printed, and all items were received completely through Enter or Change Receivers or PO Receipts (MENU POMAIN) and posted through that same option, for receiver processing, or through PO Receipts Register (MENU POMAIN), for PO processing, or if it is a purchase order in history. [If Warehouse Management is installed, receipts may also be processed for receivers through Warehouse Management (MENU WMMAIN)].</li> </ul> <p>Note that <b>PO Closed</b> also applies if the purchase order has been closed through PO maintenance without receiving any of the items or when only some of the items have been received. PO maintenance is accessed through this menu option or Vendor Order/Shipment Inquiry (MENU POMAIN).</p> <p>You cannot use F5=MAINTENANCE to maintain a purchase order that has been closed.</p> <ul style="list-style-type: none"> <li>• <b>PO Open:</b> The Purchase Order has been printed, and no items have been received or posted.</li> <li>• <b>PO Partial:</b> The purchase order has been printed, and the quantity for at least one item on the PO has been received (either partially or complete) OR at least one line item has been closed.</li> </ul> |

**Req/PO Inquiry Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| In Use             | <p>The in-use status (<b>In Use</b>) indicates if the requisition or purchase order is being used at another workstation. This column will toggle with the <b>Status</b> of the requisition or purchase order with the F9=IN USE / F9=STATUS toggle key.</p> <p>When the in-use status is displayed, it may be:</p> <ul style="list-style-type: none"> <li>• <b>Being chgd</b>: The requisition is being changed through Enter or Change Requisitions (MENU POMAIN), or the purchase order is being changed through the Req/PO Inquiry (MENU POMAIN) or Vendor Order/ Shipment Inquiry (MENU POMAIN).</li> <li>• <b>Printing/Processing</b>: The purchase order for the requisition has been selected through Purchase Orders (MENU POMAIN) and is currently printing or being processed via EDI or FAX. If purchase orders are being processed through EDI or FAX, be sure that these processors are running so that the process can complete and the purchase orders can be released from in-use status.</li> <li>• <b>Rcpts pend</b>: Receipts have been entered for the purchase order through Enter or Change Receivers or PO Receipts (MENU POMAIN) and are pending to be posted through the same option for receiver processing, or through PO Receipts Register (MENU POMAIN) for PO processing. If Warehouse Management is installed, receipts may also be posted for receivers through Warehouse Management (MENU WMMAIN).</li> <li>• <b>Being rcvd</b>: Receipts for this purchase order are being keyed through Enter or Change Receivers or PO Receipts (MENU POMAIN).</li> <li>• <b>Rcpts post</b>: Receipts for the purchase order are being posted through Enter or Change Receivers or PO Receipts (MENU POMAIN) for receiver processing, or through PO Receipts Register (MENU POMAIN) for PO processing. [If Warehouse Management is installed, receipts may also be posted for receivers through Warehouse Management (MENU WMMAIN)].</li> <li>• <b>(Blank)</b>: If the requisition or purchase order is not being updated at another workstation.</li> </ul> <p>If a purchase order is to be sent via EDI and Purchase Orders is selected in the Load All Pending Documents at Day End field in EDI Options Maintenance (MENU EIMAIN), once Day-End is complete, the purchase order will be in-use while the job is queued up in the EDI transaction processor. Once the job completes in the EDI transaction processor, the in-use status will be removed.</p> <p>Display</p> |
| WH                 | <p>The two-character ID of the warehouse specified on the requisition or purchase order.</p> <p>Display</p>   |

### Req/PO Inquiry Screen Fields and Function Keys

| Field/Function Key        | Description   |
|---------------------------|---|
| Vendor                    | <p>The name of the vendor for whom the requisition or purchase order is created.</p> <p>Display</p>   |
| Due Date                  | <p>The date specified on the requisition or purchase order that items should be received. This column will toggle with the <b>Vnd Ship</b> date of the requisition or purchase order with the F2=VND SHIP / F2=DUE DATE toggle key.</p> <p>When International Currency is installed, this field displays only when the F11 toggle key displays as F11=TRADING CURRENCY.</p> <p>Display</p>  |
| Vnd Ship                  | <p>The date by which items will ship from the vendor. This column will toggle with the <b>Due Date</b> of the requisition or purchase order with the F2=VND SHIP / F2=DUE DATE toggle key.</p> <p>When International Currency is installed, this field displays only when the F11 toggle key displays as F11=TRADING CURRENCY.</p> <hr/> <p>NOTE: The vendor ship date for Return Purchase Orders (type R) is not used and will not be assigned.</p> <hr/> <p>Display</p>   |
| Unshipped Value/<br>Value | <p>Authority to see the PO value is determined by the <b>Display PO Cost</b> application action defined through Application Action Authority Maintenance (MENU XASCTY).</p> <p>If <b>History</b> is set to <b>N</b> on the Req/PO Inquiry Selection Screen (p. 14-4), the heading appears as <b>Unshipped Value</b> and this column displays the value, that has not yet been received, of the requisition or purchase order.</p> <p>If <b>History</b> is set to <b>Y</b> on the Req/PO Inquiry Selection Screen (p. 14-4) appears as <b>Value</b> and this column displays the receipt value of the purchase order in history.</p> <p>When International Currency is installed, for foreign currency vendors, this field may be toggled with the F11=LOCAL CURRENCY / F11=TRADING CURRENCY key to display amounts in the vendor's trading currency with the applicable currency symbol displayed to the right of each amount, or in the company's local currency, with the local currency symbol displayed as part of the column heading.</p> <p>Display</p> |
| Selection                 | <p>Key the <b>No</b> of the open requisition or purchase order to display or maintain. You may also key the <b>No</b> of the purchase order to enter receipts. After keying the reference number in this field, press ENTER for the inquiry, F5=MAINTENANCE to make changes, or F6=RECEIPT to begin a group of receipts.</p> <p>(N 2,0) Required</p>  |

## Req/PO Inquiry Screen Fields and Function Keys

| Field/Function Key           | Description  |
|------------------------------|--|
| F2=Vnd Ship/F2=Due Date      | Press <b>F2=VND SHIP</b> / <b>F2=DUE DATE</b> to toggle between displaying the Due Date or Vendor Ship Date on the top portion of this screen.   |
| F3=Exit                      | Press <b>F3=EXIT</b> to exit from this inquiry. MENU POMAIN will display.  |
| F5=Maintenance               | <p>Press <b>F5=MAINTENANCE</b> after keying a reference number (<b>No</b>) in the <b>Selection</b> field to maintain the requisition or purchase order. Screens will display exactly as they do through Enter or Change Requisitions (MENU POMAIN), and the Requisition/Purchase Order Maintenance Header Screen (p. 6-13) will display. Upon completion of any changes to a purchase order, the End Purchase Order Changes Screen (p. 6-92) will display.</p> <p>Any changes made will immediately update your Purchasing files. No posting of changes is required. Also, note that you cannot maintain a purchase order that is closed (the <b>Status</b> is <b>PO Closed</b>), or if a requisition or purchase order is currently in use elsewhere.</p> |
| F6=Receipt                   | <p>Press <b>F6=RECEIPT</b> after keying the reference number (<b>No</b>) in the <b>Selection</b> field to enter or change receipts for one of the displayed purchase orders. Screens will display exactly as they do through Enter or Change Receivers or PO Receipts (MENU POMAIN).</p> <p>You cannot enter or change receipts for a purchase order that is closed (the <b>Status</b> is <b>PO Closed</b>), or if it is currently in use elsewhere.</p>   |
| F7=Page Down /<br>F8=Page Up | <p><b>More...</b> appears at the bottom of a roll screen to indicate that more data is available for viewing. <b>Last</b> appears at the bottom of the last screen of data. On some roll screens, <b>F7=PAGE DOWN</b> and <b>F8=PAGE UP</b> are available for use but do not display.</p> <p>Use the <b>F7=PAGE DOWN</b> to display the next screen of information on a roll screen. The <b>PAGE DOWN</b> or <b>SHIFT-ROLL FWD</b> function keys perform the same task.</p> <p>Use the <b>F8=PAGE UP</b> to display the previous screen of information on a roll screen. The <b>PAGE UP</b> or <b>SHIFT-ROLL BACK</b> function keys perform the same task.</p>   |
| F9=In Use/F9=Status          | <p>Press <b>F9=IN USE</b> / <b>F9=STATUS</b> to toggle between displaying the current status or the in-use status for the requisitions and purchase orders displayed in the <b>In Use / Status</b> field:</p> <p>Press <b>F9=IN USE</b> to display the in-use status of the requisitions or purchase orders displayed on this screen. In-use status indicates how the requisition or purchase order is currently being updated elsewhere.</p> <p>Press <b>F9=STATUS</b> to display the current status of the requisition (being changed, purchase order printing) or purchase order (being received, receipts pending, or receipts posting).</p>   |

---

| F3=Exit            | F6=End PO             | F10=Diff    | F18=Activ F24=More        |                |               |

This screen displays the header information for the requisition or purchase order selected from the Req/PO Inquiry Screen (p. 14-9). This screen appears after selecting a requisition or purchase order and pressing **ENTER** on the Req/PO Inquiry Screen (p. 14-9), or after pressing **F10=HEADER** from the Requisition/Purchase Order Item Review Screen (p. 14-47) or the End Requisition/Purchase Order Screen (p. 14-39).

The information on this screen was originally entered for this requisition on the Requisition Header Screen in Enter or Change Requisitions (MENU POMAIN).

All the fields on this screen are display only and cannot be changed, with the exception of the Header **Due Date** and **Vnd Ship Date**. To change the Header **Due Date** and **Vnd Ship Date**, press **F24=MORE** to display additional function keys. Then press **F13=CHANGE DATE** to display the Req/PO Date Entry Screen (p. 14-44), where you can change (if authorized) the Req/PO Header **Due Date** and **Vnd Ship Date**.

To create a new requisition from an existing purchase order, press **F24=MORE** to display additional function keys. Then press **F17=DUP PO** to create a new requisition from an existing purchase order.

---

**NOTE:** In some situations, the header due date entered may need to be reassigned to a different date. If **Calculate PO Due Dates Based on Lead Times** is set to **Y** in Purchasing Company Options Maintenance (MENU XAFILE), the header due date will be updated with the earliest line item due date. If there is a line item with an earlier date than the new header date entered by the user, the warning message: **“Due Date will be reset to the earliest Item Due Date”** will be displayed.

---

If there are any special order items placed on the current Req/PO, this screen also provides access (via **F14=OPEN SP ORD**) to the Work With Special Orders Screen (p. 10-13).

**Requisition/Purchase Order Header Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Status Information | <p>Information concerning the status of the displayed PO or requisition is provided. The available status messages are:</p> <ul style="list-style-type: none"> <li>• <b>Requisition</b></li> <li>• <b>Purch Order</b></li> <li>• <b>History</b></li> </ul>   |
| Req No / PO No     | <p>This field displays as <b>Req No</b> when viewing requisitions and <b>PO No</b> when viewing purchase orders.</p> <p>The <b>Req No</b> is the unique number of the requisition for the selected company. If you did not specify a requisition number on the Enter/Change Requisitions Start Screen (p. 6-4), the automatically assigned requisition number is displayed.</p> <p>The <b>PO No</b> is the purchase order number automatically assigned or manually keyed for this order. When the requisition number and purchase order number are not the same based on the <b>Use Requisition No. for Purchase Order No.</b> field defined as <b>N</b> through Purchasing Options Maintenance (MENU XAFILE), the purchases order number is generated when the purchase order is printed through Purchase Orders (MENU POMAIN) or through or the <b>F6=PRT/FAX PO</b> function key at the completion of requisition entry.</p> |
| (Order Type)       | <p>Displays the type of order as specified on the Enter/Change Requisitions Start Screen (p. 6-4):</p> <ul style="list-style-type: none"> <li>• <b>ORDER</b> displays for order requisitions.</li> <li>• <b>RETURN</b> displays for return requisitions.</li> </ul>  |
| Co                 | <p>The number and name of the company for which this requisition is created.</p>   |
| Buyer              | <p>This field indicates the code of the buyer who primarily deals with this vendor and is responsible for this requisition. The buyer's name displays on the line below this field.</p>  |
| Comments           | <p>Indicates if any order comments have been entered for this requisition:</p> <ul style="list-style-type: none"> <li>• <b>YES</b> displays if order comments have been keyed for this requisition on the Order Comments/Line Item Comments Entry Screen (p. 6-34).</li> <li>• <b>NO</b> displays if order comments have not been keyed for this requisition.</li> </ul>   |
| Curr               | <p>This field only displays when International Currency is installed.</p> <p>This field displays the currency code and description of the vendor's trading currency, if the vendor's currency differs from the company's local currency.</p>   |

---

**Requisition/Purchase Order Header Screen Fields and Function Keys**

| <b>Field/Function Key</b> | <b>Description</b>   |
|---------------------------|--|
| Foreign Currency Vendor   | This field only displays when International Currency is installed.<br>This message will display, in boldface type, for each foreign currency vendor.   |
| Vendor                    | The vendor number, vendor name, address lines 1, 2, 3 and 4 with the city, state, country code and zip/postal code for this purchase order.  |
| Phone                     | The vendor's country code and phone number with the phone extension to be used to call the vendor regarding this requisition/purchase order.   |
| Fax                       | The vendor's fax country code and phone number with the phone extension to be used to send information by fax to the vendor regarding this requisition/purchase order.   |
| Ship To                   | The ship-to location number, warehouse name, address lines 1, 2, 3 and 4 with the city, state, country code and zip/postal code for this purchase order. If this is a drop-shipment purchase order, this will be the name and address of the customer to whom the goods will be shipped. |
| Order Date                | This is the date that the requisition is created.  |
| Due Date                  | For orders, this field specifies the date by which items should be received from the vendor. For returns, it specifies the date on which items will be shipped from the warehouse.   |
| Vnd Ship Date             | This field does not display for Return Purchase Orders (type R).<br>For orders, use this field to specify the date by which items will be shipped from the vendor.   |
| Last Change               | The last date the purchase order was changed.  |
| Last Rcpt                 | The date of the last receipt posting for an item in this purchase order.   |
| PO Print Date             | The date the purchase order was originally printed.  |
| Req Number                | The requisition number assigned to this requisition.   |
| Warehouse                 | The warehouse into which the items on this requisition/purchase order will be received.  |
| Reprint Date              | The last date the purchase order was re-printed.   |
| Sales Tax %               | The sales tax percentage that is applied to all taxable items on this requisition. The total sales tax for the requisition will display on the End Requisition/Purchase Order Screen (p. 14-39).   |

### Requisition/Purchase Order Header Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Confirming         | Indicates if the purchase order for this requisition will be a confirming purchase order. A confirming purchase order is used to confirm a prior verbal purchase order. <b>YES</b> or <b>NO</b> will display.  |
| Assignee           | The number of the assignee for this purchase order. This field is for informational purposes only.   |
| Disc Pct           | Specifies a discount percentage to be applied to all items on the requisition. This value can be overridden on the Requisition/Purchase Order Item Detail Screen (p. 14-30) for a specific item.   |
| Quote No           | The vendor's quotation number for this requisition; this quotation number will print on the Purchase Order.  |
| Terms              | The vendor's payment terms for this requisition, which are printed on the Purchase Order.  |
| Ship Via           | The standard shipping instructions for the purchase order.   |
| Cmplt Shp          | Determines if purchase orders for this ship-to location must be shipped complete. <b>YES</b> indicates purchase orders for this ship-to location typically must be shipped complete. A message is printed on the Purchase Order to indicate that orders must be shipped complete. <b>NO</b> indicates partial receipts are acceptable for this purchase order.   |
| Drp Shp            | Indicates if the items on this purchase order will be drop-shipped by the vendor. Drop-shipped items are shipped directly from your vendor to your customer.   |
| Misc Notes         | Provides additional information about the requisition with text that is entered in this field and which will print on the Purchase Order.  |
| Update Inv         | Indicates if the items on this purchase order will update the inventory balance when received.<br><br>NOTE: A return requisition will allocate inventory when <b>Y</b> is keyed in this field. Inventory allocated to return PO's is not available to order entry sales orders.  |
| Update Cst         | Indicates if the average cost for the item is updated when receipts are posted for this purchase order. The value in this field affects the following: <ul style="list-style-type: none"> <li>• <b>Y</b> will use the receipt cost (including zero cost) of the item which may include landing costs, and recalculate the average cost.</li> <li>• <b>N</b> indicates regardless the purchase cost of the item, the average cost is not recalculated.</li> </ul> |

This screen displays detail information for one item on the current requisition or purchase order. This screen displays after selecting an individual item for detail inquiry with F13-F20=FOR DETAIL from the Requisition/Purchase Order Item Review Screen (p. 14-47) or after you select an item and press F5=DISPLAY DETAIL from the Multi-WH PO Item Review Screen (p. 14-20).

This screen may also be accessed through Enter or Change Receivers or PO Receipts (MENU POMAIN) or, if Warehouse Management is installed, through Warehouse Management (MENU WMMAIN).

Use this screen to view detail information for the selected item.

All the fields on this screen are display only and cannot be changed, with the exception of the Item **Due Date**. To change the Item **Due Date**, press F13=CHG DATE to display the Req/PO Date Entry Screen (p. 14-44), where you can change (if authorized) the Req/PO Item **Due Date**.

In addition, for special order items, this screen provides access (via F17=CHG RQST) to the special order change request process, where you can request a special order item change.

### Requisition/Purchase Order Detail Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Order Type         | This field indicates if the current order is a requisition or purchase order: <ul style="list-style-type: none"> <li>• <b>PURCH ORDER</b> displays if this inquiry is for a purchase order</li> <li>• <b>REQUISITION</b> displays if this inquiry is for a requisition</li> <li>• <b>HISTORY</b> displays if this inquiry is for a purchase order that has been closed and sent to history</li> </ul>  |
| PO No/Req No       | This field displays as <b>Req No</b> if the purchase order has not been printed and is the number of the requisition.<br>This field displays as <b>PO No</b> if the purchase order has been printed and is the number of the purchase order.   |
| Vendor             | The number and name of the vendor for whom this requisition or purchase order was created.   |
| Comments           | Indicates if any item comments were keyed for this item - <b>Yes</b> or <b>No</b> displays.  |
| Receipt Status     | Status information (if applicable) indicating that the PO is or was in a receiver. The three possible status lines are: <ul style="list-style-type: none"> <li>• <b>In Receiver XXXXXXXX</b> (number of the receiver)</li> <li>• <b>In Multiple Open Receivers</b></li> <li>• <b>Last Receiver XXXXXXXX</b> (number of the closed receiver with the most recent receipt date).</li> </ul>  |
| Status             | The current status of the purchase order; <b>OPEN, PARTIAL, or CLOSED</b> displays.  |
| Item No            | The item number ordered.   |
| Seq No             | The line sequence number for the item in this purchase order.  |

| Cost               | Authority to see cost is determined by the <b>Display PO Cost</b> application action defined through Application Action Authority Maintenance (MENU XASCTY).<br>The expected unit cost of the item when ordered from the vendor. The cost <b>U/M</b> displays on the line below.<br>When International Currency is installed, this field displays the cost of the item in the vendor's trading currency.<br>If the vendor's currency differs from the company's local currency, the local currency equivalent value will display below the trading currency value. |

### Requisition/Purchase Order Detail Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Total              | <p>Authority to see total is determined by the <b>Display PO Cost</b> application action defined through Application Action Authority Maintenance (MENU XASCTY).</p> <p>The extended total monetary amount of this item ordered.</p> <p>When International Currency is installed, this field displays the total cost of the items ordered (the item cost multiplied by quantity ordered) in the vendor's trading currency.</p> <p>If the vendor's currency differs from the company's local currency, the local currency equivalent will display below the trading currency value, and the symbols for the trading and local currency will display to the right of each total amount.</p> |
| (Tax Status)       | The tax status, <b>TAXABLE</b> or <b>NON-TAX</b> , is displayed directly beneath the extended <b>Total</b> field.   |
| Vol Dsc PC         | The vendor volume discount percentage, if any, applied to this item.  |
| PO Dsc             | The description of the item as specified on the requisition or purchase order.  |
| Due Dte            | The date the item is due to be received in the warehouse specified for this item. When the <b>Promised</b> flag is set to <b>Y</b> , this field displays in reverse image.  |
| Dsc PC             | The discount percentage, if any, applied to this item.  |
| Mfg No             | <p>The manufacturer's item number.</p> <p>Manufacturer's item numbers are defined through Item Master Maintenance (MENU IAFILE) and/or Vendor/Item Maintenance (MENU POFILE).</p>   |
| GTIN               | <p>The Global Trade Item Number (GTIN), if one is found for the item number and unit of measure in the Global Trade Item Number Cross Reference File (ITGTIN).</p> <p>GTINs are defined through UPC &amp; GTIN Item/UOM Cross Reference Maintenance (MENU IAFILE).</p>  |
| Non-Stock          | Indicates if the item is a non-stock item or not - <b>YES</b> or <b>NO</b> .  |
| Item Class         | The item class and sub-class of this item.  |
| Weight             | The unit weight of the item in the buying unit of measure.  |
| Drop Shp           | Indicates if the item is a drop-ship item for this order - <b>YES</b> or <b>NO</b> .  |
| Update Inv         | Indicates if inventory counts should be updated when this item is received - <b>YES</b> or <b>NO</b> .  |
| Tot Wgt            | The total weight for the order quantity of this item on this requisition or purchase order.   |

---

**Requisition/Purchase Order Detail Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Requested          | The original requested shipment receipt date for this item.  |
| Update Cost        | Indicates if the average cost of this item should be updated by the cost of the item when received - <b>YES</b> or <b>NO</b> .   |
| Rec to Date        | The quantity of this item that has been received and posted for this purchase order.   |
| Contract           | <p>This field is displayed only if the item cost is based on a contract (i.e., a valid contract was found by Distribution A+ and all contract requirements are met by this order.</p> <p>The number of the contract on which the item cost is based. If the contract is unnumbered, <b>*CONTRACT</b> appears.</p>  |
| Lead Time          | <p>The lead time field default value will display as <b>YES</b> when:</p> <ul style="list-style-type: none"> <li>the Vendor Master File (<b>VENDR</b>) <b>Calculate from Receipts</b> field is set to <b>A</b> or <b>I</b> and</li> <li>when the <b>Calculate from Receipts</b> field is set to <b>I</b>, the Vendor/Item File (<b>VNITM</b>) <b>Calc from Receipts</b> field is set to <b>Y</b>.</li> </ul> <p>If these conditions are not met, the lead time field displays as <b>NO</b>. <b>NO</b> will also be displayed for drop shipments and for non-stock items.</p> |
| Dock Qty           | The quantity of this item that has been pre-received through Warehouse Management but has not yet been posted.   |
| COO                | The country of origin, if one exists for the item. This field displays only if there was a country of origin specified on the requisition or purchase order for this item detail record. Also, if the purchase order is in history, and multiple receipts were entered for the item with different countries of origin, then the country of origin will display as <b>*M</b> in this field.  |
| WH                 | The number of the warehouse for which the corresponding inventory count information applies  |
| On-hand            | The quantity of this item that is currently on-hand, meaning the quantity of this item before considering items ordered by your customers, or ordered from your vendors.   |
| Unposted           | The quantity of items that has been received for this purchase order, but not yet posted through Enter or Change Receivers or PO Receipts (MENU POMAIN) for receiver processing, or through PO Receipts Register (MENU POMAIN) for PO processing. If Warehouse Management is installed, receipts may also be posted for receivers through Warehouse Management (MENU POMAIN).  |

### Requisition/Purchase Order Detail Screen Fields and Function Keys

| Field/Function Key  | Description  |
|---------------------|--|
| Allocated           | The quantity of this item that has been ordered by your customers, but not yet shipped to them.  |
| Available           | The on-hand quantity plus the unposted quantity, minus the quantity allocated is the quantity of this item that is available for sale.   |
| On Order            | The quantity of this item that is on open purchase orders, awaiting receipt.   |
| Net                 | The available quantity plus the quantity on purchase order, yielding the net quantity of this item.  |
| Sales               | The month-to-date and year-to-date sales information for this item.  |
| F2=Review           | Press <b>F2=REVIEW</b> to return to the Requisition/Purchase Order Item Review Screen (p. 14-47).  |
| F3=Exit             | Press <b>F3=EXIT</b> to exit from this option. MENU POMAIN will display.   |
| F4=Contract List    | <p>The <b>F4=CONTRACT LIST</b> function key displays only if the item cost is based on a contract (i.e., a valid contract was found by Distribution A+ and all contract requirements are met by this order).</p> <p>Press <b>F4=CONTRACT LIST</b> to display the Vendor/Item Contract List Screen (p. 55-8), from which you can view information for any of the vendor's contracts that are not currently suspended. Expired contracts are included in the list if they meet the selection criteria at the bottom of the screen.</p> |
| F5=Comments         | <p>The <b>F5=COMMENTS</b> function key displays only if you entered comments for this item during Enter or Change Requisitions (MENU POMAIN) on the Order Comments/Line Item Comments Entry Screen (p. 6-34).</p> <p>Press <b>F5=COMMENTS</b> to display the comments that were keyed for this line item. The item comments that were keyed for this requisition or purchase order will display exactly as they were keyed on the Order Comments/Line Item Comments Entry Screen (p. 6-34) when the requisition was created.</p>     |
| F6=End              | Press <b>F6=END</b> to display summary information for this requisition or purchase order on the End Requisition/Purchase Order Screen (p. 14-39).   |
| F9= Receipt History | <p>The <b>F9= RECEIPT HISTORY</b> function key displays only for partially received POs.</p> <p>Press <b>F9= RECEIPT HISTORY</b> to display the Receipt History Screen (p. 14-78) to review history information for the selected item.</p>   |

---

**Requisition/Purchase Order Detail Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| F10=Item Info      | <p>The F10=ITEM INFO function key displays only if a Vendor/Item File exists for the vendor associated with the purchase order selected on the previous screen. Vendor/Item files are created via Vendor/Item Information Maintenance (MENU POFIELD).</p> <p>Press F10=ITEM INFO to display vendor/item information for this item on the Ordering Information Screen (p. 14-86).</p>   |

The Purchase Order Order Comments Screen displays after pressing F5=COMMENTS from the Requisition/Purchase Order Header Screen (p. 14-23). Use this screen to enter and review comments for a requisition/purchase order. These comments may print on the Purchase Order, Receiving List, or both for this order, and also may be used for internal purposes only. Order comments are general for the entire requisition/purchase order.

The Purchase Order Item Comments Screen displays after pressing **F5=COMNT** from the Requisition/Purchase Order Item Detail Screen (p. 14-30). Use this screen to enter and review comments for an item on a requisition/purchase order. Line Item Comments are specific to the selected item. These comments may print on the Purchase Order, Receiving List, or both for this order.

All the fields on this screen are display only and cannot be changed.

---

**NOTE:** Drop ship special order lines may have duplicate information with regards to carrier codes, FOB codes, customer PO number, and ship via method. If a newly created special order requisition is automatically created, the duplicate line level comments will be converted into one set of order level comments for the respective areas mentioned. This functionality applies when the special order requisition is automatically created via Special Order Automatic Req Creation (MENU POMAST), or by the automatic creation of special order options for drop ship items (for **Create New Requisition** only) via the Special Order Options Automatic Creation Screen in Special Order Options Maintenance (MENU XAFILE).

This screen displays summary information about the requisition or purchase order. It is the last screen that displays for the current requisition or purchase order, and displays after pressing F6=END from the Requisition/Purchase Order Header Screen (p. 14-23), Requisition/Purchase Order Item Review Screen (p. 14-47), Requisition/Purchase Order Item Detail Screen (p. 14-30), and Ordering Information Screen (p. 14-86).

All the fields on this screen are display only and cannot be changed. You do, however, have the option to reprint a Purchase Order from history, via the F9=REPRINT function key, if you are authorized to perform this function.

### End Requisition/Purchase Order Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Ordered            | <p>These fields display the total value of items ordered, special charges, and the subtotal and total for this PO/Req.</p> <p>If the vendor's currency differs from the company's local currency, these values display in the trading currency with the currency symbol displayed to the right of the total value of items ordered. Press the F11=LOCAL CURRENCY / F11=TRADING CURRENCY toggle key to view the local currency equivalent values.</p> |

### End Requisition/Purchase Order Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Balance            | This field displays the balance value of items ordered, special charges, subtotal and total for items not yet received on this PO/req. If the vendor's currency differs from the company's local currency, these values display in the trading currency with the currency symbol displayed to the right of the item balance value. Press the F11=LOCAL CURRENCY / F11=TRADING CURRENCY toggle key to view the local currency equivalent values. |
| Items              | The quantity and total dollar amount of items ordered, and the balance dollar amount which indicates the dollar amount associated with the quantity of items that have not been received for this purchase order.   |
| Spec Chg           | The quantity and total dollar amount of special charges for items, and the balance amount which indicates the dollar amount of the special charges for items that have not yet been received for this purchase order.   |
| Subtotal           | The total quantity of lines keyed on this order (items and special charges), and the total dollar amount ordered for the requisition or purchase order, and the total balance dollar amount for the purchase order. The subtotals are calculated as the total item amounts plus the total special charges amounts.  |
| Sales Tax          | The sales tax amount and balance for the items on the requisition or purchase order. Sales tax is calculated only for items and special charges that are defined as taxable. The sales tax rate used is that specified on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13).   |
| Total              | The total order value and balance value, calculated as the subtotal amount plus the sales tax amount.   |
| Weight             | The sum of the weights of all items ordered, and those that remain to be received. Item weights are defined for each item through Item Master Maintenance (MENU IAFILE).  |
| Approved           | This field indicates whether or not this requisition has been approved: <ul style="list-style-type: none"> <li>• <b>NO</b> if the requisition has not been approved; a Purchase Order cannot be printed for this requisition until it is approved.</li> <li>• <b>YES</b> if the requisition has been approved.</li> </ul>   |
| Approval Code      | If the requisition or Purchase Order is approved, this field displays the three character code used to approve the requisition.   |
| Approval Amount    | If the requisition or Purchase Order is approved, this field displays the amount for which it is approved.<br><br>When International Currency is installed, the value in this field must be keyed in the local currency and will always be presented in the local currency, regardless of which currency you select to display with the F11=LOCAL CURRENCY / F11=TRADING CURRENCY toggle key.   |

REQ/PO DATE ENTRY

Due Date: 12/17/13      Vnd Ship Date: 12/17/13

F10=Update    F12=Return

This pop-up screen displays after pressing **F13=CHANGE DATE** on the Requisition/Purchase Order Header Screen (p. 14-23) or the Requisition/Purchase Order Item Detail Screen (p. 14-30).

You will only be able to access this pop-up screen if you are authorized to make changes to the Req/PO Due Date and Vendor Ship Date that appears on information screens in the Req/PO Inquiry. Authorization is based on the **Allow Date Changes on Req/PO Information Screens** application action in Application Action Authority (MENU XASCTY).

Use this pop-up screen to change the Req/PO header or detail item Due Date and/or Vendor Ship Date without changing other data on the Req/PO.

---

**NOTE:** When the Due Date is changed, and there is a related sales order line with the requested ship date that is earlier than the new Req/PO Due Date, you will receive a warning message that customer sales order might not be shipped on time due to the late vendor shipment. In addition, the Workflow Alert **Purchase Order due date change impact on sales order** will be created and if Workflow is activated, it will send Alert messages to whoever is in charge of maintaining sales orders. Note that this Alert will only be available if the **Track Purchase Order Activity** option is set to **Y** in Purchasing Options Maintenance (MENU XAFILE). Alert tailoring is also only available if Distribution A+ Workflow is installed.

**Requisition/Purchase Order Item Review Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| F13-F20=for Detail | <p>Press the key that corresponds to the reference number (<b>Reference Number</b> field) of an item that you wish to select to display on the Requisition/Purchase Order Item Detail Screen (p. 14-30). This screen allows you to change detailed item receipt information. Use the function keys as follows to select an item to change:</p> <p>F13=REFERENCE NUMBER 1<br/>           F14=REFERENCE NUMBER 2<br/>           F15=REFERENCE NUMBER 3<br/>           F16=REFERENCE NUMBER 4<br/>           F17=REFERENCE NUMBER 5<br/>           F18=REFERENCE NUMBER 6<br/>           F19=REFERENCE NUMBER 7<br/>           F20=REFERENCE NUMBER 8</p> <p>If the function keys on your keyboard are arranged in a single row, then press the shift key and the corresponding reference number.</p> <p><b>EXAMPLE:</b> To change line 8, press <b>SHIFT</b> and <b>F8</b>.</p> <p>-OR-</p> <p>If the function keys on your keyboard are arranged in a two rows, press the key which is directly above the reference number key in the bottom row.</p> <p><b>EXAMPLE:</b> To change line 8, find function key 8 in the bottom row. Press <b>F20</b> in the top row because it is directly above <b>F8</b>.</p> <p>The Requisition/Purchase Order Item Detail Screen (p. 14-30) will display for the selected item.</p> |
| Enter              | <p>Press <b>ENTER</b> after keying a complete or partial item number in the <b>Locate</b> field. The item number closest meeting the characters keyed in that field will display at the top of this screen.</p>  |

## Create Duplicate Requisition Screen

```

CREATE DUPLICATE REQUISITION

Press F5 to create the new requisition.
This requisition will be created
with current costs.

Show item selection:  N,   (Y/N)
Approval Code:      ....
Hold Code?          .....
Report Output Queue: APDEMO,....

Address Selection:
Vendor Address:     C,   (O,C)
Ship-to Address:   O,   (O,C)

F5=Create          F12=Return

```

This screen appears after you press F17=DUP PO on the Requisition/Purchase Order Header Screen (p. 14-23).

Use this screen to create a new requisition from an existing purchase order. The new requisition will be created by copying information from the given purchase order, taking into consideration if specific line items were selected (via the **Show item selection** field) and if there are any changes in order quantity as well as the **Address Selection** field values. Current costs will be used for the new requisition.

If the vendor's address on the purchase order differs from the vendor's current address, then the vendor address fields on the requisition will be filled with either the values from the purchase order or the Vendor Master File (VENDR), depending on the value specified in the **Vendor Address** field.

If the ship-to address on the purchase order differs from the shipping location for the default ship-to for the warehouse, then the ship-to fields on the requisition will be filled with either the values from the purchase order or the Requisition Header File (RQHED), depending on the value specified in the **Ship-to Address** field.

If an approval code was entered on this screen, then this approval code will be used to approve the requisition. If the **Use Approval Code Authorization for Req/PO** is Y in Purchasing Company Options Maintenance (MENU XAFIL), the Maximum Approval Amount for the approval code will be compared against the total requisition amount and if it is less, an error will be issued and the requisition will not be created. If an approval code was not entered on this screen, then the approval code on the requisition will be blank (the approval code from the copied purchase order will not be copied over to the new requisition).

The Copy Purchase Order Errors/Warnings Report (p. 14-64) or Copy Purchase Order Dropped Lines/Warnings Report (p. 14-65) may also be generated during the copy function if header/detail errors are

encountered, header/detail warnings are encountered, or all lines are dropped from the requisition. Refer to these reports for further details.

Note the following:

- For purchase order line items that are special orders, line items will be copied to the new requisition, but no special-order connection will be made (that is, no Special Orders File (SPORD) records will be created).
- For purchase orders that are the main purchase order of a centralized purchase order, the main purchase order can be copied to a new requisition, but no warehouse transfer requisitions will be created and no special-order connection will be made (that is, no Special Orders File (SPORD) records will be created). The resulting requisition will be a non-centralized requisition.

### Create Duplicate Requisition Screen Fields and Function Keys

| Field/Function Key  | Description   |
|---------------------|---|
| Show item selection | <p>This field allows you to select the line items to be included in the copy.</p> <p>Key <b>Y</b> to select line items to be included in the copy. If <b>Y</b>, when you press <b>F5=CREATE</b>, the Select Items for Duplicate Requisition Screen (p. 14-56) will appear, allowing you to select specific line items.</p> <p>Key <b>N</b> if you do not want to select line items to be included in the copy. If <b>N</b> (or if you pressed <b>F12=RETURN</b> from the Select Items for Duplicate Requisition Screen (p. 14-56)), the system will assume that all line items and quantities on the original purchase order will be considered to become line items on the new requisition.</p> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p> |

---

## Create Duplicate Requisition Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Approval Code      | <p>Use this field to select the approval code that will be used to approve the new requisition.</p> <p>Key an approval code. After pressing <b>ENTER</b>, the description of the approval code will appear to the right.</p> <hr/> <p><b>NOTE:</b> If the <b>Use Approval Code Authorization for Req/PO</b> is <b>Y</b> in Purchasing Company Options Maintenance (MENU XAFILE), the Maximum Approval Amount for the approval code you key in this field will be compared against the total requisition amount and if it is less, an error will be issued and the requisition will not be created.</p> <hr/> <p>Leave this field blank if you do not want to specify an approval code to approve the new requisition being created. If this field is left blank, then the approval code on the requisition will be blank (that is, the approval code from the copied purchase order will not be copied over to the new requisition).</p> <p><i>Valid Values:</i> If the <b>Use Approval Code Authorization for Req/PO</b> field is set to <b>Y</b> through Purchasing Company Options Maintenance (MENU XAFILE), your entry, if you key one, must be an approval code defined for your user ID through Approval Codes Maintenance (MENU POFIL2).</p> <p>(A 3) Optional</p> |
| Hold Code          | <p>To prevent a requisition from being approved, or to prevent an approved requisition from being printed, you may hold the requisition by keying a hold code in this field. To release a requisition from hold, remove the hold code from this field.</p> <p>Use this field to enter a hold code that will be used to hold the new requisition. When you create the new requisition, via <b>F5=CREATE</b>, the requisition will indicate that it is being held with this hold code on the New Requisition Information Screen (p. 14-61).</p> <p>Key a hold code. After pressing <b>ENTER</b>, the description of the hold code will appear to the right.</p> <p>Leave this field blank if you keyed an <b>Approval Code</b>, since this field must be blank if the order is approved.</p> <p><i>Valid Values:</i> Any purchasing hold code that has been defined through Hold Codes Maintenance (MENU POFILE/MENU APFILE).</p> <p>(A 2) Optional</p>  |

**Create Duplicate Requisition Screen Fields and Function Keys**

| <b>Field/Function Key</b> | <b>Description</b>   |
|---------------------------|--|
| Report Output Queue       | <p>Use this field to identify the System i output queue where the Copy Purchase Order Errors/Warnings Report (p. 14-64) or Copy Purchase Order Dropped Lines/Warnings Report (p. 14-65) will be generated, if applicable.</p> <p>Key the ID of the System i Output Queue.</p> <p><i>Default Value:</i> Your default output queue defined in your System i user profile.</p> <p><i>Valid Values:</i> Any valid System i output queue.</p> <p>(A 10) Required</p>  |

F6=Mark/Unmark All F10=Continue F12=Return
    
```

This screen appears after you press **F5=CREATE** on the Create Duplicate Requisition Screen (p. 14-51), if **Show item selection** is **Y** on that screen.

Use this screen to review and select which items to include on the new requisition being created from the existing purchase order. You will also be able to change item order quantities for the line items on the new requisition.

When a line(s) is marked on this screen and **F10=CONTINUE** is pressed, or if **F5=CREATE** was pressed from the previous Create Duplicate Requisition Screen (p. 14-51) with the **Show item selection** field set to **N**, the duplicated requisition is created interactively. The New Requisition Information Screen (p. 14-61) will then appear, showing the new duplicate requisition that was created, as well as any hold(s) that may apply. This will mark the completion of the duplicate requisition process.

The records in the PO Marked Lines File (**MRKPDT**) will be updated based on any actions by you to mark/unmark line items or change the order quantity.

---

NOTE: The initial display of this screen defaults into the double line mode. To view this screen in single line mode, press **F24=SINGLE LINE / F24=DOUBLE LINE**.

---

NOTE: This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. **Last** appears at the bottom of the last screen of data. To scroll through information on roll screens press:

- \* **PAGE DOWN** or **SHIFT-ROLL FWD** or **F7=PAGE DOWN** to display the next screen
- \* **PAGE UP** or **SHIFT-ROLL BACK** or **F8=PAGE UP** to display the previous screen.

See the Copy Purchase Order Errors/Warning report for details. **

                                                                    F10=Continue
```

The New Requisition Information screen appears after you press F5=CREATE on the Create Duplicate Requisition Screen (p. 14-51), if **Show item selection** is N on that screen, or F10=CONTINUE on the Select Items for Duplicate Requisition Screen (p. 14-56).

This screen displays to inform you if the requisition was created or not.

If the duplication process was successful and the requisition was created with no warnings or errors, you will view the top screen. Use this screen to review the company number and newly created requisition number. If you entered a **Hold Code** on the Create Duplicate Requisition Screen (p. 14-51), the **Req Held - Hold Code XX** field (where **XX** is the hold code you entered) will also appear, under the **Requisition Created** field, indicating that the newly created requisition is being held.

If the duplication process was successful and the requisition was created but warnings or errors were detected, you will view the middle screen. Refer to the Copy Purchase Order Errors/Warnings Report (p. 14-64) for details and/or the Copy Purchase Order Dropped Lines/Warnings Report (p. 14-65).

If the duplication process was not successful and the requisition was not created, you will view the bottom screen informing you that no requisition was created because errors were detected. Refer to the Copy Purchase Order Errors/Warnings Report (p. 14-64) and/or the Copy Purchase Order Dropped Lines/Warnings Report (p. 14-65).

### New Requisition Information Screen Fields and Function Keys

| Field/Function Key          | Description  |
|-----------------------------|--|
| New Requisition Information | <p>Informs you if the requisition was created or not.</p> <p>If the duplication process was successful without any warnings or errors, the top screen displays, indicating the company number and newly created requisition number for your review.</p> <p>If the duplication process was successful but warnings or errors were detected, you will view the middle screen. This error displays if there were header or detail warnings encountered, or if there were detail errors that resulted in dropped lines. In this situation, the warnings will be listed on the Copy Purchase Order Errors/Warnings Report (p. 14-64) and the Copy Purchase Order Dropped Lines/Warnings Report (p. 14-65), but will not prevent the new requisition from being created.</p> <p>If the duplication process was not successful and the requisition was not created, you will view the bottom screen. This error displays if there were errors encountered that prevented the requisition from being created, or if there were detail errors that would result in all lines being dropped from the new requisition.</p> <p>Display</p> |
| Req Held - Hold Code        | <p>If the duplication process was successful, and the newly created requisition is on hold (as entered in the <b>Hold Code</b> field on the Create Duplicate Requisition Screen (p. 14-51)), the top or the middle screen displays and this field appears under the <b>Requisition Created</b> field. The hold code and its description will appear.</p> <p>Display</p>  |

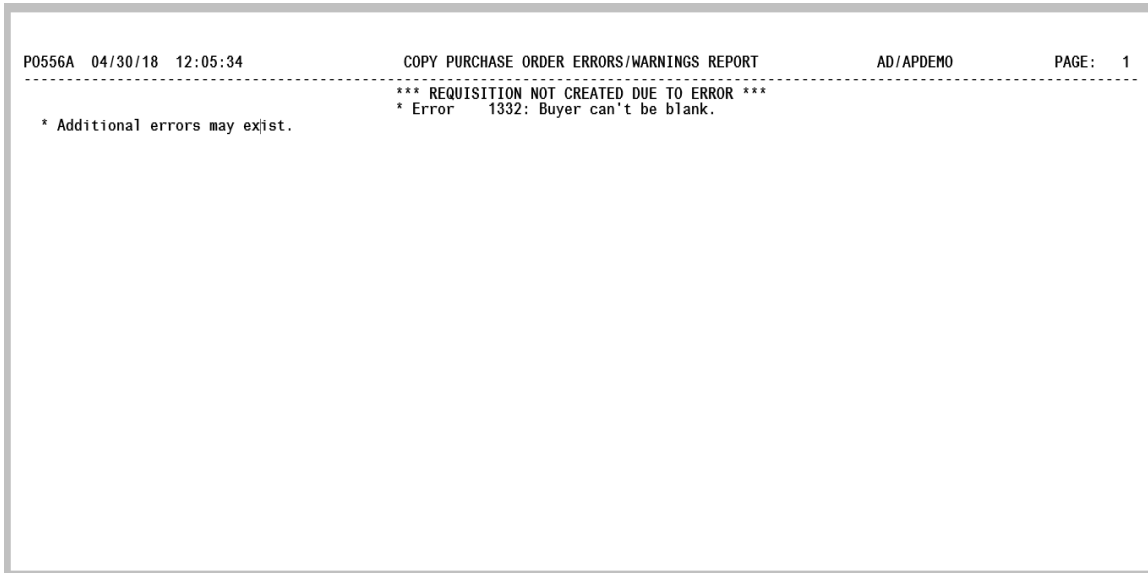

---

**New Requisition Information Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| F10=Continue       | Press F10=CONTINUE to return to the Requisition/Purchase Order Header Screen (p. 14-23). |

---

## Copy Purchase Order Errors/Warnings Report

This report is generated if, during the create duplicate requisition process:

- *header* errors are encountered (preventing the new requisition from being created)
- *header* warnings are encountered (requisition could be created if only warnings), or
- all lines are dropped from the requisition (preventing the new requisition from being created).

The output queue that you specify in the **Report Output Queue** field on the Create Duplicate Requisition Screen (p. 14-51) determines where this report will be generated.

### Copy Purchase Order Errors/Warnings Report

| Report Fields       | Description   |
|---------------------|---|
| *** Req Message *** | Informs you if the requisition was created or not.  |
| Error               | <p>An <b>Error</b> type of edit message prevents the requisition from being created. A requisition will not be created if any errors are detected at the header level, or there are detail errors that would result in all lines being dropped from the new requisition.</p> <p>This field prints the error(s) that occurred, if any. For example, Error 4377: “Purchase Order does not exist”; Error 7169: “User Not Authorized to the selected Company”; etc.</p> |
| Warning             | <p>A <b>Warning</b> type of edit message does not prevent the requisition from being created but will print on the report if there were any header warnings encountered.</p> <p>This field prints the warning(s) that occurred, if any. For example, Warning 3583: “Warning - Buyer Budget does not exist”.</p>   |

## Copy Purchase Order Dropped Lines/Warnings Report

| Item Number | Order Quantity | Vendor Number | Message Type       | Message Text  |
|-------------|----------------|---------------|--------------------|---|
| A170        | 7.000          | 100           | Warning            | 4154: Invalid Item Class for this item. The Item Class has changed. |
|             |                |               | Dropped Lines:     | 0   |
|             |                |               | Warnings:          | 1   |
|             |                |               | Co: 01 Req Number: | 103434  |

This report is generated if, during the create duplicate requisition process:

- *detail* errors are encountered (resulting in the line being dropped from the requisition) or
- *detail* warnings are encountered (the line could be included if only warnings occurred).

This report identifies which lines were not copied to the new requisition and the reason why. This report also identifies any lines that contain warning messages.

If one or more lines get dropped during the duplication process, the requisition will still be created but the lines that were dropped will print on this report.

If all lines get dropped during the duplication process, then the requisition will not be created and that message will be printed on the report.

The output queue that you specify in the **Report Output Queue** field on the Create Duplicate Requisition Screen (p. 14-51) determines where this report will be generated.

### Copy Purchase Order Dropped Lines/Warnings Report

| Report Fields  | Description   |
|----------------|---|
| Item Number    | The item number that triggered a warning message.         |
| Order Quantity | The order quantity of the item.                           |
| Vendor Number  | The number of the vendor associated with the requisition. |

**Copy Purchase Order Dropped Lines/Warnings Report**

| Report Fields | Description  |
|---------------|--|
| Message Type  | The type of message that was triggered: <ul style="list-style-type: none"> <li>• Warning</li> <li>• Error</li> </ul>   |
| Message Text  | The detailed errors/warnings.<br>For example, 4193: “Warning - This item is not stocked in this order’s warehouse”; 4163: “Order Quantity cannot be zero”; 801: “This item is suspended - cannot be ordered”; etc. |
| Dropped Lines | The number of dropped line items, if any. These dropped lines are not copied to the new requisition if one is created.   |
| Warnings      | The number of warnings issued on the report.   |
| Co            | The company associated with the newly created requisition. This field only displays if a requisition was created.  |
| Req Number    | The newly created requisition number. This field only displays if a requisition was created.   |

F2=Actual F5=Print Report F12=Return

This screen appears after you press F18=ACTIV on the Requisition/Purchase Order Header Screen (p. 14-23). This screen lists each action taken on the requisition/purchase order. The **Track Purchase Order Activity** field must be set to Y through Purchasing Options Maintenance (MENU XAFIELD) for this information to be available. The system tracks many activities for each purchase order from its creation until its closed complete.

The following table shows the tracked activities with its unique identifier.

| Purchase Order Activities    |                            |                            |
|------------------------------|----------------------------|----------------------------|
| 01 Req Entered               | 02 Req Approved            | 03 Req Changed             |
| 04 Req Unapproved            | 05 Req Held                | 06 Req Released            |
| 07 PO Changed                | 08 PO Printed              | 09 PO Reprinted            |
| 10 PO Closed                 | 11 Spec Ord-Req Created    | 12 Spec Ord-Req Unapproved |

---

NOTE: Work order activity is not tracked.

---

For each activity listed, this screen displays

- a description of the action.
- the user ID of the person or process that performed this action.
- the date and time the action occurred. You can toggle the display to show the date and time in the time zone where the action occurred by pressing the F2=ACTUAL / F2=USER key.
- notes, which may provide additional detail about the activity. For example, if the entry in the **Activity Description** column is **Req Approved**, this column displays the approval code provided to approve the requisition.

From this screen, you can print a report of the activities or review detailed information for activities with change information displayed in the **Notes** column. Changes are recorded when changes are made to

- requisitions and purchase orders through Enter or Change Requisitions (MENU POMAIN).
- the receipt quantity, received complete code, unit cost, cost code, or weight for a receipt entered through Enter or Change Receivers or PO Receipts (MENU POMAIN) or a receipt generated by receiver in Warehouse Management (MENU WMMAIN).
- the receipt quantity using Radio Frequency receiving. Changes for this activity are recorded only if you are using immediate put-away.

---

NOTE: This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. **Last** appears at the bottom of the last screen of data. To scroll through information on roll screens press:

- \* PAGE DOWN or SHIFT-ROLL FWD or F7=PAGE DOWN to display the next screen
  - \* PAGE UP or SHIFT-ROLL BACK or F8=PAGE UP to display the previous screen.

## Purchase Order Activity Screen Fields and Function Keys

| Field/Function Key           | Description   |
|------------------------------|---|
| Selection                    | <p>Use this field to select an activity to display detailed information. Detailed information is available only for activities with change information displayed in the <b>Notes</b> column.</p> <p>Key the reference number associated with the activity and press <b>ENTER</b>. If the activity is for a Special Order Change Request, the S/O Change Request Activity Detail Screen (p. 20-60) will appear. If the change is not related to the Special Order Change Request process, the Purchase Order Activity Detail Screen (p. 14-73) will appear.</p> <p>(N 2,0) Optional</p>  |
| F2=Actual/User               | <p>Press the <b>F2=ACTUAL</b> / <b>F2=USER</b> function key to toggle between displaying the times and dates of activities in the time zone in which the activity actually occurred and your default time zone.</p> <p>For example, a purchase order was entered at the company's New York office at 2:00 p.m., Eastern Standard Time (EST). You are inquiring on the purchase order from an office in San Diego, California, which uses Pacific Standard Time (PST). PST is 3 hours earlier than EST. When this function key shows as <b>F2=ACTUAL</b>, the time of purchase order entry will display as 11:00 (the time in your time zone) on the Purchase Order Activity Screen. Pressing <b>F2=ACTUAL</b> will display the purchase order entry time as 14:00 (the time in the time zone where the activity occurred) and the time zone code (EST).</p> |
| F5=Print Report              | <p>Press the <b>F5=PRINT REPORT</b> key to print the list of activities for this requisition/purchase order. The Report Options Screen appears. Refer to the Cross Applications User Guide for details about this screen.</p> <p>After you press <b>ENTER</b> on the Report Options Screen, the Purchase Order Activity Report (p. 14-76) is submitted to the specified output queue for printing.</p>  |
| F7=Page Down /<br>F8=Page Up | <p><b>More...</b> appears at the bottom of a roll screen to indicate that more data is available for viewing. <b>Last</b> appears at the bottom of the last screen of data. On some roll screens, <b>F7=PAGE DOWN</b> and <b>F8=PAGE UP</b> are available for use but do not display.</p> <p>Use the <b>F7=PAGE DOWN</b> to display the next screen of information on a roll screen. The <b>PAGE DOWN</b> or <b>SHIFT-ROLL FWD</b> function keys perform the same task.</p> <p>Use the <b>F8=PAGE UP</b> to display the previous screen of information on a roll screen. The <b>PAGE UP</b> or <b>SHIFT-ROLL BACK</b> function keys perform the same task.</p>  |
| F12=Return                   | <p>Press the <b>F12=RETURN</b> key to return to the previous screen.</p>  |

### Purchase Order Activity Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Enter              | After selecting a purchase order activity line in the <b>Selection</b> field, press this key to display the Purchase Order Activity Detail Screen (p. 14-73) or S/O Change Request Activity Detail Screen (p. 20-60). If detailed information is not available, a message will display. |

---

## Purchase Order Activity Detail Screen

| 2/28/16                               |   |                  |                     |
| Due Date                              | A360 - Waste Basket - Gray - 24" tall, 2 gallon | 2/08/16          | 1                   |
| 2/28/16                               |   |                  |                     |
|                                       |   |                  | Last                |
|                                       |   |                  | F12=Return          |

This screen appears after you select a purchase order activity line with changes on the Purchase Order Activity Screen (p. 14-67). This screen displays the field values before and after the change was made, and the number of times the sales order was late.

The top of this screen displays the following information about the requisition/purchase order for which you are reviewing activity details:

- company number associated with the requisition/purchase order.
- requisition/purchase order number, type, and current status.
- number and name of the vendor.
- date and time that this change was made and the ID of the user who made the change.

NOTE: This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. **Last** appears at the bottom of the last screen of data. To scroll through information on roll screens press:

\* PAGE DOWN or SHIFT-ROLL FWD or F7=PAGE DOWN to display the next screen

\* PAGE UP or SHIFT-ROLL BACK or F8=PAGE UP to display the previous screen.

This screen displays history information for the item displayed on the Requisition/Purchase Order Item Detail Screen (p. 14-30). It displays after pressing F9= RECEIPT HISTORY from that screen.

Receipt history includes any item receipts that have been entered through one of the following:

- Enter or Change Receivers or PO Receipts (MENU POMAIN)

- Warehouse Management (MENU WMMAIN)
- the Receiving task in Radio Frequency

And posted through one of the following:

- Enter or Change Receivers or PO Receipts (MENU POMAIN)
- PO Receipts Register (MENU POMAIN)
- Warehouse Management (MENU WMMAIN)

---

NOTE: Landing cost function keys are available on this screen only if you are using Purchasing Landing Costs, as defined through Warehouse Numbers Maintenance (MENU IAFILE).

---

When International Currency is installed, the message **ALL VALUES are displayed in the local currency** will display for all foreign currency vendors' receipt history. Trading currency values will not display on this screen.

---

NOTE: This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. **Last** appears at the bottom of the last screen of data. To scroll through information on roll screens press:  
\* PAGE DOWN or SHIFT-ROLL FWD to display the next screen.

---

### Receipt History Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| PO Status          | <p>This field indicates if the item is still open, or if it has been received complete.</p> <p><b>OPEN</b> displays if the item is open on this purchase. The item may have been partially received, or not received at all.</p> <p><b>COMPLETE</b> displays if the item has been completely received for this purchase order. Either the quantity received equals the order quantity, or the item was marked as received complete during receipt entry.</p> <hr/> <p>NOTE: This field pertains to the individual item on the purchase order, not the entire purchase order. Several items may be received complete on a purchase order that is open.</p> <hr/> <p>Display</p> |
| Item No            | <p>The stocking number of the item.</p> <p>Display</p>   |
| PO Desc            | <p>The description of the item as specified in your organization (our description).</p> <p>Display</p>   |
| Req Date           | <p>The requested due date for this item when it was ordered.</p> <p>Display</p>  |

### Receipt History Screen Fields and Function Keys

| Field/Function Key           | Description   |
|------------------------------|---|
| Order Qty                    | The quantity of the item, in the displayed unit of measure, that was ordered.<br>Display  |
| Cost                         | The unit cost of the item, per the displayed unit of measure.<br>Display  |
| Value                        | The extended value of the items calculated as the cost per item multiplied by the order quantity of items.<br>Display   |
| WH                           | The receiving warehouse for the order.<br>Display   |
| Lot                          | An <b>L</b> indicates this item was purchased by the lot. The cost of lot items remains constant, regardless of the quantity of items ordered. This is a one-time lot charge for the item you are ordering.   |
| Reference Number             | The reference number of the receipt. To select a receipt, key this number in the <b>Sel</b> field.<br>Display   |
| Receipt Date                 | The date on which receipts for this item were accepted in the warehouse.<br>Display   |
| Overdue Days                 | The number of days between the requested due date specified on the purchase order ( <b>Req Date</b> ), and the <b>Receipt Date</b> .<br>Display   |
| Receipt Qty                  | The quantity of the item that is received, in the buying unit of measure.<br>Display  |
| Receipt Value / Receipt Cost | The expected receipt value of the line item, or the receipt cost for the item unit at the time of the receipt transaction. The <b>F2=UNIT / F2=EXTENDED</b> function key is used to toggle between the two displays.<br>Display   |
| Landed Value / Landed Cost   | The extended landed value of the line item, or the landed cost of the item unit, consisting of receipt cost plus any landing costs. The <b>F2=UNIT / F2=EXTENDED</b> function key is used to toggle between the two displays.<br><br>Using the <b>F4=SUB ITM / F4=INV/LND</b> function key will toggle the <b>Landed/ Invoice Values</b> and the <b>Landed/Invoice Costs</b> to display the <b>Substitute Item No</b> field.<br>Display |

### Receipt History Screen Fields and Function Keys

| Field/Function Key                 | Description   |
|------------------------------------|---|
| Invoice Value/No /<br>Invoice Cost | <p>The actual invoice value of the line item, or the actual invoice cost of the item unit from the vendor's invoice. The F2=UNIT / F2=EXTENDED function key is used to toggle between the two displays.</p> <p>Display</p>  |
| Substitute Item No                 | <p>A substitute item number is displayed if a substitute item was received for this item.</p> <p>Using the F4=SUB ITM / F4=INV NBR / F4=INV/LND toggle key changes the <b>Landed Value/Costs / Invoice Values/Costs</b> fields to display the <b>Substitute Item No</b> field and then the <b>Invoice Number / Invoice Values/Costs</b> fields.</p> <p>On the Receipt History Screen Expanded Fields, the <b>Substitute Item No</b> field will display as a second line beneath the <b>Receipt Date</b> field. The F4=SUB ITM / F4=INV NBR / F4=INV/LND function key will not display.</p> <p>Display</p>   |
| Invoice Number                     | <p>Once Accounts Payable Voucher Entry Receipt Validation (MENU APMAIN) has been completed and posted for this item in this purchase order, the invoice number entered for this item's receipt will display.</p> <p>Using the F4=SUB ITM / F4=INV NBR / F4=INV/LND toggle key changes the <b>Landed Value/Costs / Invoice Values/Costs</b> fields to display the <b>Substitute Item No</b> field and then the <b>Invoice Number / Invoice Values/Costs</b> fields.</p> <p>On the Receipt History Screen Expanded Fields, the <b>Invoice Number</b> field will display as a second line beneath the <b>Invoice Value</b> field. The F4=SUB ITM / F4=INV NBR / F4=INV/LND function key will not display.</p> <p>Display</p> |
| C                                  | <p>Indicates if transaction comments have been keyed for the line item.</p> <p>Display</p>  |
| Days                               | <p>For items that are partially received, when the requested receipt date is less than today's date, this is the outstanding receipt number of days overdue.</p> <p>For items that are received complete, when the last receipt date is greater than the requested receipt date, this is the number of days overdue the item was received.</p>  |
| Pending Receipt<br>Information     | <p>The following pending receipt information is displayed:</p> <ul style="list-style-type: none"> <li>• <b>Bal Due:</b> The quantity, in the buying unit of measure, that remains open (ordered, but not yet received).</li> <li>• <b>Balance:</b> The dollar value of items that have not been received, based on the item cost.</li> </ul> <p>Display</p>   |

### Receipt History Screen Fields and Function Keys

| Field/Function Key                         | Description   |
|--|---|

|                            |                         |      |                         |                    |            |
|                            |                         |      |                         |                    | F12=Return |

This screen displays after making a selection and pressing **F9=LND CST DET** on the Receipt History Screen (p. 14-78) or making a selection and pressing **F9=LND CST DET** on the Vendor/Item Receipt History Screen (p. 18-26). Use this screen to review landing cost breakdown information.

Landing costs are those costs incurred due to specific situations (overhead, duty, etc.). Estimates of what the landing costs will be for each item (for each vendor) are keyed and maintained through Vendor/Item Information Maintenance (MENU POFILE).

These estimates are used in calculating the landing costs for each item as that item is added to a requisition or purchase order. Since there may be a difference between landing cost based on the estimates (shown in the **Landing Cost Amt** field) and the actual (invoiced) landing costs (shown in the **Invoice Amt** field), both sets of values are displayed here.

### Landing Cost Detail Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Value              | <p>This field displays the total value of items ordered on this PO.</p> <p>If the vendor's trading currency differs from the company's local currency, this value will display in the trading currency with the trading currency symbol displayed to the right. The local currency equivalent value will display below with the local currency symbol to the right.</p> <p>Display</p> |

**Landing Cost Detail Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Landing Cost Amt   | <p>These are the landing costs defined for the displayed item for the displayed purchase order. These values may be compared to the actual landing costs, as invoiced (shown in the <b>Invoice Amt</b> field). If consistently off, you may update the item's defined landing cost values to more accurately reflect the true situations. An item's landing costs (for each vendor) are keyed and maintained through Vendor/Item Information Maintenance (MENU POFILE).</p> <p>When International Currency is installed, these fields display all landing costs associated with the item. The F11=LOCAL CURRENCY / F11=TRADING CURRENCY function key may be used to toggle to the local currency equivalents of all landing costs in these fields.</p> <p>Display</p> |
| Invoice Amt        | <p>These are the landing costs actually identified on the invoice for the item when it was received.</p> <p>When International Currency is installed, if landing costs are calculated in trading currencies different from the company's local currency, this field may be toggled with the F11=LOCAL CURRENCY / F11=TRADING CURRENCY function key to display these values in the applicable trading currencies with the trading currency symbol displayed to the right of each amount, or in the company's local currency with the local currency symbol displayed to the right of each amount.</p> <p>Display</p>   |
| Totals             | <p>These fields display the total of all landing costs and the invoice amounts.</p> <hr/> <p>NOTE: This field displays for landing costs calculated in trading currencies only if all costs are in the same currency. If the landing costs are in mixed currencies, zeros will display in this field, and you must press F11=LOCAL CURRENCY / F11=TRADING CURRENCY to display local currency equivalents in order to review this total. All landing costs will display the company's local currency symbol to the right and the total will appear in the company's local currency.</p> <hr/> <p>Display</p>   |
| F12=Return         | <p>Press F12=RETURN to return to the previous screen.</p>   |

---

This screen displays additional ordering information (including vendor/item, inventory management and planning, and item balance information) for the item after pressing F10=ITEM INFO on the Requisition/Purchase Order Item Detail Screen (p. 14-30).

All the fields on this screen are display only and cannot be changed.

### Ordering Information Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Our No             | The item number in your organization.   |
| Mfg No             | The item number used by the manufacturer. Manufacturers' item numbers are defined through Item Master Maintenance (MENU IAFILE).  |
| Mfg Description    | Two lines of the manufacturer's description of the item.  |
| Cost               | These fields display the quantity break levels, if any, that are used when ordering this item from this vendor.<br><br>If the vendor's currency differs from the company's local currency, this value displays in the trading currency with the currency symbol displayed to the right. Press the F11=LOCAL CURRENCY / F11=TRADING CURRENCY toggle key to view the local currency equivalent costs. |
| Qty and Cost       | Quantity break levels, if any, that are used when ordering this item from this vendor.  |

### Ordering Information Screen Fields and Function Keys

| Field/Function Key   | Description   |
|----------------------|---|
| Buy U/M              | The buying unit of measure for this item when purchasing from this vendor or this item and vendor as defined through Vendor/Item Information Maintenance (MENU POFILE).   |
| Alt U/M              | The alternate unit of measure, which may be used in place of the buying unit of measure for this vendor or this item and vendor as defined through Vendor/Item Information Maintenance (MENU POFILE).   |
| Cst U/M              | The costing unit of measure for this item when purchasing from this vendor or this item and vendor as defined through Vendor/Item Information Maintenance (MENU POFILE).  |
| Weight               | The weight of the item or this item and vendor as defined through Vendor/Item Information Maintenance (MENU POFILE).  |
| Std Usg              | The standard pack size (i.e., the multiple of the number of units) in which this vendor ships this item or this item and vendor as defined through Vendor/Item Information Maintenance (MENU POFILE).   |
| Taxable              | If the item is taxed when purchased from this vendor, <b>Y</b> displays; <b>N</b> if it is not or this item and vendor as defined through Vendor/Item Information Maintenance (MENU POFILE).  |
| Sfty Stock           | The safety stock quantity of this item. Safety stock is the quantity of an item that is always kept to accommodate sudden changes in customer demand or vendor lead times (i.e., a buffer) for this item and vendor as defined through Vendor/Item Information Maintenance (MENU POFILE). |
| Lead Time            | The average amount of time, in weeks, that it takes for you to receive this item from this vendor or this item and vendor as defined through Vendor/Item Information Maintenance (MENU POFILE).   |
| Min Ord Qty          | The minimum quantity of this item that can be ordered from this vendor.   |
| Ordering Info for WH | The number of the warehouse containing this item is displayed. This is the warehouse where the item will be stored when the item on this requisition or purchase order is received.   |
| Min On-Hand          | The minimum quantity of this item that should remain on-hand as defined through Item Balance Maintenance (MENU IAFILE) and shown for each of the stocking units of measure (up to three).   |
| Max On-Hand          | The maximum quantity of this item that should remain in inventory as defined through Item Balance Maintenance (MENU IAFILE) and shown for each of the stocking units of measure (up to three).  |

**Ordering Information Screen Fields and Function Keys**

| <b>Field/Function Key</b>               | <b>Description</b>  |
|---|---|
| Unit of Measure                         | The unit of measure in which the item described for <b>Min-On-Hand</b> and <b>Max On-Hand</b> should be retained and shown for each of the stocking units of measure (up to three).   |
| F3=Exit                                 | Press F3=EXIT to exit from this option. MENU POMAIN will display.   |
| F6=End                                  | Press F6=END to display summary information for this requisition or purchase order on the End Requisition/Purchase Order Screen (p. 14-39).   |

In the trading currency, the symbol for the trading currency will display to the right of the first cost displayed. In the company's local currency, the symbol for the company's local currency will display to the right of the first cost displayed. |
| Enter                                   | Press ENTER to return to the Requisition/Purchase Order Item Detail Screen (p. 14-30).  |

---

## Assign Customer Numbers Display Screen

| <u>ASSIGNED CUSTOMER ORDER NUMBERS</u> |               |                      |
|--|---------------|----------------------|
| <u>Co</u>                              | <u>Ord No</u> | <u>Customer Name</u> |
| 1                                      | 02016         | Niagara Insurance    |

F3=Exit      F6=End

This screen displays a list of customers (up to 15) waiting for the item displayed on the Requisition/Purchase Order Item Detail Screen (p. 14-30) after pressing F11=ORDER NOS from that screen.

When this purchase order is received, a report will print showing all the customer orders that should be released from backorder hold.

All the fields on this screen are display only and cannot be changed.

### Assign Customer Numbers Display Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Co                 | The number of the company for which the corresponding customer order was keyed.  |
| Ord No             | The order numbers of any orders containing the current item [i.e., the item keyed on the Requisition/Purchase Order Item Detail Review Screen (p. 6-38)]. This indicates that the current item is assigned to this customer order. |
| Customer Name      | This column displays the name of the customer for whom the specified order number was created.   |
| F3=Exit            | Press F3=EXIT to exit from this option. MENU POMAIN will display.  |
| F6=End             | Press F6=END to display summary information for this requisition or purchase order on the End Requisition/Purchase Order Screen (p. 14-39).  |

---

This option allows requisition or purchase order (PO) inquiry for a specific vendor, and other selection criteria. Like the Req/PO Inquiry (MENU POMAIN), this inquiry includes PO history. Once a vendor is selected, you may display or maintain requisition or PO header and detail information, enter receipts for a PO, or maintain a requisition or PO. You will also have the option to create a new requisition from an existing purchase order.

---

NOTE: This inquiry and the Req/PO Inquiry (MENU POMAIN) are the two options that provide access to change to a PO after it has been printed. All change screens are part of CHAPTER 6: *Enter or Change Requisitions*.

---

---

## Vendor Order/Shipment Inquiry

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title  | Purpose  |
|--|--|
| Vendor Order/Shipment Inquiry Selection Screen | Use to select any specific criteria for the requisitions or purchase orders to display in this inquiry for a vendor.   |
| Vendor Order/Shipment Inquiry Screen           | Use to review the requisitions, purchase orders, and/or purchase order history files that meet the criteria specified on the Vendor Order/Shipment Inquiry Selection Screen (p. 15-2). |
|  | The remaining screens that display are part of the Req/PO Inquiry (MENU POMAIN).   |

---

Last

Selection: ... F2=Ynd Ship F11=Local Currency  
F3=Exit F5=Maintenance F6=Receipt F9=In Use F10=Mult WH PO F12=Return

This screen displays the requisitions, purchase orders, and/or purchase order history files that meet the criteria specified on the Vendor Order/Shipment Inquiry Selection Screen (p. 15-2). It is displayed when you press **ENTER** from that screen or from the Vendor Search Screen (p. 43-7) for the specified vendor.

If you are displaying both requisitions and purchase orders, requisitions appear first. Requisitions are displayed in sequence by requisition number, and purchase orders are displayed in sequence by purchase order number.

The PO Numbers for Multi-WH purchase orders are displayed in reverse image.

**NOTE:** This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. **Last** appears at the bottom of the last screen of data. To scroll through information on roll screens press:

\* **PAGE DOWN** or **SHIFT-ROLL FWD** or **F7=PAGE DOWN** to display the next screen

\* **PAGE UP** or **SHIFT-ROLL BACK** or **F8=PAGE UP** to display the previous screen.

**Vendor Order/Shipment Inquiry Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| No                 | <p>The reference number of the requisition or purchase order displayed. Key this number in the <b>Selection</b> field on this screen to do one of the following:</p> <ul style="list-style-type: none"><li>• Maintain detail information for one of the open requisitions or purchase orders with <b>F5=MAINTENANCE</b></li><li>• Display detail information for any requisition or purchase order displayed on this screen with <b>ENTER</b></li><li>• Receive items for an open purchase order with <b>F6=RECEIPT</b></li></ul> <p>Display</p> |
| T                  | <p>Indicates the type of order:</p> <ul style="list-style-type: none"><li>• <b>R</b> displays if the order is a requisition</li><li>• <b>P</b> displays if the order is a purchase order</li><li>• <b>H</b> displays if the order is purchase order history</li></ul> <p>Display</p>   |
| Co                 | <p>The number of the company for which the requisition and/or purchase order was created.</p> <p>Display</p>   |
| Req Number         | <p>The number of the requisition.</p> <p>Display</p>   |
| PO Number          | <p>The number of the purchase order. A purchase order number will display only after Purchase Orders have been printed through.</p> <p>This field is displayed in reverse image if this is a Multi-WH PO.</p> <p>Display</p>   |

---

---

This option allows you to inquire on items that are on open purchase orders (requisitions are not included). An open purchase order is one that has been printed, but has not been received in full.

You may inquire on individual purchase order line items. Therefore, if the same item is ordered on more than one purchase order, or more than once on the same purchase order, you may inquire on a specific item on a specific order. This is necessary since purchase order receipts are entered by purchase order, not by item.

The Open PO's by Item and PO History by Item inquiries (both on MENU POMAIN) are the same program and screens. The screens display messages to indicate **HISTORY** or **OPEN PO** based on what is selected by the user.

Refer to the **CHAPTER 17: PO History by Item** (MENU POMAIN) for a description of the screens for this menu option.

---

---

This option allows you to inquire on items in purchase order history. Purchase order history contains all purchase orders that have been closed (i.e., fully received). Closed purchase orders are moved to purchase order history each day when Day-End Processing (MENU XAMAST) is run. This maintains a constant, detailed record of your purchase order activity.

You can select an individual item to display purchase order information, detail ordering information for the item, or detail receipt information for the item.

The PO History by Item and Open PO's by Item inquiries (both on MENU POMAIN) are the same program and screens. The screens display messages to indicate **HISTORY** or **OPEN PO** based on what is selected by the user.

---

## Open PO's by Item and PO History by Item

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| <b>Title</b>  | <b>Purpose</b>  |
|---|---|
| Purchase Order Inquiry By Item History Selection Screen | Use to select any specific criteria for the open purchase orders to display in this inquiry.  |
| Purchase Order Inquiry By Item Open PO Selection Screen |   |
| Purchase Order Inquiry By Item History Screen           | Use to review items that meet the criteria specified on the Purchase Order Inquiry By Item History Selection Screen (p. 17-3) or the Purchase Order Inquiry By Item Open PO Selection Screen (p. 17-3). |
| Purchase Order Inquiry By Item Open PO Screen           |   |

The Purchase Order Inquiry By Item History Selection Screen displays after selecting option [14](#) - PO History by Item (MENU POMAIN). The Purchase Order Inquiry By Item Open PO Selection Screen displays after selecting option [13](#) - Open PO's by Item (MENU POMAIN).

Use this screen to key ranges of information for purchase order history or for open purchase orders to display in the inquiry. The title of the screen changes to reflect **History** or **Open PO**.

Refer to the Cross Applications User Guide for an explanation of the rules for entering From/To Ranges.

### Purchase Order Inquiry By Item Selection Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Item No (From/To)  | <p>Key the range of your stocking item numbers for which open purchase orders or purchase order history will display in this inquiry. You will be able to inquire on any purchase order that contains an item in this range.</p> <p>(2 @ A 27) Optional</p>  |
| Mfg No (From/To)   | <p>Key the range of item numbers used by the manufacturer for which open purchase orders or purchase order history will display in this inquiry. You will be able to inquire on any purchase order that contains an item in this range. Manufacturers' item numbers are defined through Item Master Maintenance (MENU IAFILE) and/or Vendor/Item Maintenance (MENU POFIL).</p> <p>(2 @ A 27) Optional</p>  |
| Company            | <p>Key the range of company numbers for which open purchase orders or purchase order history will display in this inquiry.</p> <p><i>Default Value:</i> When International Currency is installed, the default company defined in Authority Profile Maintenance (MENU XASCTY) if one has been defined; otherwise, this is the default company defined through System Options Maintenance (MENU XAFIL). When International Currency is not installed, there is no default value.</p> <p><i>Valid Values:</i> A valid company number defined through Company Name Maintenance (MENU XAFIL) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(N 2,0) Optional; Required only if International Currency is installed.</p> |
| Vendor             | <p>Key the range of vendor numbers that open purchase orders or purchase orders in history have been created for, will display in this inquiry.</p> <p>(2 @ A 6) Optional</p>  |
| Due Date           | <p>Key the range of due dates for which the open purchase orders or purchase orders in history will display in this inquiry.</p> <p><i>Valid Values:</i> Key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFIL).</p> <p>(2 @ N 6,0) Optional</p>   |
| Warehouse          | <p>Key the number of the warehouse for which open purchase orders or purchase order history will display in this inquiry. Only purchase orders that have been specified for this warehouse will display.</p> <p>(A 2) Optional</p>   |

---

**Purchase Order Inquiry By Item Selection Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| Overdue            | <p>This field only displays on the Purchase Order Inquiry By Item Open PO Selection Screen.</p> <p>Use this field to determine if only overdue purchase orders will display in the inquiry. An overdue purchase order is any purchase order with a receipt due date before the current date.</p> <p>Key <b>Y</b> to display only those open purchase orders that are overdue.</p> <p>Leave this field blank to display all open purchase orders meeting the criteria selected on this screen. Purchase orders that are not overdue will display in addition to purchase orders that are overdue.</p> <p><i>Valid Values:</i> Y or blank</p> <p>(A 1) Optional</p> |
| Find               | <p>If you do not recall the complete item number that you want to inquire into, key item description search criteria to activate the item search. Items with descriptions matching the search criteria keyed will display on the Item Description Search Screen.</p> <p>For information on entering search criteria, refer to the Cross Applications User Guide. For information on the Item Description Search Screen, refer to the Inventory Accounting User Guide.</p> <p>(A 40) Optional</p>  |
| Item No            | <p>This field may be used in addition to, or in place of, entering search criteria in the <b>Find</b> field to further limit the items to display.</p> <p>Key a partial item number. All items that match the characters of the item number keyed in this field will display. This is helpful if you recall part of an item number, but not the entire number.</p> <p>For information on entering search criteria, refer to the Cross Applications User Guide. For information on the Item Description Search Screen, refer to the Inventory Accounting User Guide.</p> <p>(A 27) Optional</p>  |
| Class              | <p>This field may be used in addition to (not in place of) the search criteria in the <b>Find</b> or <b>Item No</b> fields to further limit the number of items that will display, based on their item class.</p> <p>Key the appropriate item class and sub-class, if any. Only items that have been assigned the item class that is keyed in this field will display on the Item Description Search Screen.</p> <p>For information on entering search criteria, refer to the Cross Applications User Guide. For information on the Item Description Search Screen, refer to the Inventory Accounting User Guide.</p> <p>(A 2/A 2) Optional</p>                   |
| F3=Exit            | <p>Press <b>F3=EXIT</b> to cancel this option. MENU PMAIN will display.</p>   |

---

**Purchase Order Inquiry By Item Selection Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Enter              | <p>Press to confirm your selections.</p> <p><b>Open PO's by Item</b></p> <p>If you did not key any search criteria in the <b>Find/Item No/Class</b> field(s), the Purchase Order Inquiry By Item Open PO Screen (p. 17-7) will display containing the open items selected on this screen.</p> <p>If you did key search criteria in the <b>Find/Item No/Class</b> field(s), the Item Description Search Screen will display. Refer to that screen as described in the Appendix section of the Cross Applications User Guide.</p> <p><b>PO History by Item</b></p> <p>If you did not key any search criteria in the <b>Find/Item No/Class</b> field(s), the Purchase Order Inquiry By Item History Screen (p. 17-7) will display containing the items selected on this screen.</p> <p>If you did key search criteria in the <b>Find/Item No/Class</b> field(s), the Item Description Search Screen will display. Refer to that screen as described in the Appendix section of the Cross Applications User Guide.</p> |

This screen displays the items that meet the criteria specified on the Purchase Order Inquiry By Item History Selection Screen (p. 17-3) or on the Purchase Order Inquiry By Item Open PO Selection Screen (p. 17-3) when you press ENTER from that screen.

Items displayed on this screen are sequenced first by the item number defined in the Item Master File (i.e. our item number), second by the purchase order due date (in descending order), and third by the

purchase order number. One line of information appears for each line item on a purchase order. Therefore, if the same item was ordered on more than one purchase order or more than once on the same purchase order, the item appears on more than one line on this screen.

---

NOTE: All roll screens that show the item number and description will display the item description on a separate line or the item and description on the same line, depending on the system options. This display of single or double line per item can be changed by pressing F24=DOUBLE LINE / F24=SINGLE LINE. F24=DOUBLE LINE will expand a collapsed screen or F24=SINGLE LINE will collapse an expanded screen. Refer to the Cross Applications User Guide for additional information about roll screens.

---

### Purchase Order Inquiry By Item Screen Fields and Function Keys

| Field/Function Key                                  | Description  |
|---|--|
| No  | The reference number of the item displayed. Key this number in the <b>Selection</b> field on this screen to display detail item information.<br>Display  |
| Due Date  | This field displays the due date to the warehouse of the purchase order containing the corresponding item. Due dates appear in descending order (newest to oldest). Items on the most recent purchase order placed in history appear first. This field will display in reverse image if this due date was promised by the vendor, as determined through Enter or Change Requisitions (MENU POMAIN).<br>Display   |
| PO No   | This field displays the purchase order number for the corresponding item. Purchase order numbers for Multi-WH POs are displayed in reverse image.<br>Display   |
| Our Item & PO Description/Mfg Item & PO Description | This field displays the item that is on a purchase order. You may use the following toggle keys to show different item attributes in this column: <ul style="list-style-type: none"> <li>Using the F2=MFG ITEM NO / F2=OUR ITEM NO toggle key, you can change the display of the item number between the stocking item number (<b>Our Item</b>) and the manufacturer's number (<b>Mfg Item</b>).</li> <li>Using the F9=DESC LEFT / F9=DESC RIGHT / F9=ITEM &amp; DESC toggle key you can change the display of the item number and description.</li> </ul> Display |
| U/M   | This field displays the unit of measure used to express the item quantity ordered. This is the buying unit of measure selected for the item when it was ordered through Enter or Change Requisitions (MENU POMAIN).<br>Display   |

### Purchase Order Inquiry By Item Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Qty Ord            | <p>This field only displays when you are viewing purchase order history.</p> <p>The quantity ordered for this item in this PO expressed in the buying unit of measure.</p> <p>When International Currency is installed, this field also will only display when the <b>Value</b> field is showing the company's local currency amounts. When viewing trading currency amounts, the <b>Qty Ord</b> is not displayed.</p> <p>Display</p>   |
| Qty Due            | <p>This field only displays when you are viewing open purchase orders.</p> <p>This field displays the quantity of this item that remains to be received for the open purchase order.</p> <p>If the letter <b>R</b> is displayed to the right of this field, this means that receipts have been keyed for this item, but have not yet been posted. If this is the case, you will not be able to show receipts on the Receipt History - Open Purchase Order Screen (p. 17-17).</p> <hr/> <p>NOTE: If this is a special order, this field is highlighted.</p> <hr/> <p>When International Currency is installed, this field also will only display when the <b>Value</b> field is showing the company's local currency amounts. When viewing trading currency amounts, the <b>Qty Due</b> is not displayed.</p> <p>Display</p> |
| Value              | <p>Authority to see the PO value is determined by the <b>Display PO Cost</b> application action defined through Application Action Authority Maintenance (MENU XASCTY).</p> <p>When International Currency is installed, for foreign currency vendors, this field may be toggled with the F11=LOCAL CURRENCY / F11=TRADING CURRENCY key to display trading currency values or local currency equivalents.</p> <p>Open PO's by Item</p> <p>This field displays the value of the items that remain to be received for the open purchase order.</p> <p>PO History by Item</p> <p>This field displays the total value of the items ordered on this purchase order.</p> <p>Display</p>   |
| Selection          | <p>Key the desired reference number from the <b>No</b> column, of the item to display for further detail.</p> <p>(N 2,0) Required</p>   |

### Purchase Order Inquiry By Item Screen Fields and Function Keys

| Field/Function Key                           | Description   |

This screen displays detail information for the item selected on the Purchase Order Inquiry By Item Open PO Screen (p. 17-7) or the Purchase Order Inquiry By Item History Screen (p. 17-7).

All the fields on this screen are display only and cannot be changed.

### History or Open Purchase Order Item Detail Screen Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Order Type         | <p>This field indicates if the current order is an open purchase order or a purchase order in history:</p> <ul style="list-style-type: none"> <li>• <b>OPEN PO</b> displays if this inquiry is for an open purchase order</li> <li>• <b>HISTORY</b> displays if this inquiry is for a purchase order that has been closed and sent to history.</li> </ul>  |
| Purchase Order No  | The number of the purchase order assigned when the PO was created.   |
| Vendor             | The number and name of the vendor for whom this requisition or purchase order was created  |
| Status             | <p>The current status of the purchase order:</p> <ul style="list-style-type: none"> <li>• <b>OPEN</b> displays if the item has no receipts posted against it</li> <li>• <b>PARTIAL</b> displays when the item has some receipts posted against it</li> <li>• <b>CLOSED</b> displays when the item has been received complete</li> </ul>  |
| Item No            | The stocking item number ordered from the vendor.  |
| Qty Ord            | The quantity of the item that was ordered, in the buying or alternate unit of measure ( <b>U/M</b> ).  |
| Cost               | <p>The unit cost of the item when it was ordered.</p> <p>When International Currency is installed, this field displays the cost of the item in the vendor's trading currency. If the vendor's currency differs from the company's local currency, the local currency equivalent value will display below the trading currency value.</p>   |
| Total              | <p>The extended net total monetary amount of this item (item cost multiplied by quantity ordered less discount).</p> <p>When International Currency is installed, this field displays the total cost of the items ordered in the vendor's trading currency.</p> <p>If the vendor's currency differs from the company's local currency, the local currency equivalent will display below the trading currency value, and the symbols for the trading and local currency will display to the right of each total amount.</p> |
| U/M                | <p>The unit of measure in which the item was purchased (either the buying or alternate unit of measure for this vendor and item).</p> <p>The cost U/M displays beneath the item cost amount.</p>   |
| (Tax Status)       | The tax status, <b>Taxable</b> or <b>Non-Tax</b> is displayed directly beneath the <b>Total</b> field.   |

### History or Open Purchase Order Item Detail Screen Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| GTIN               | <p>The Global Trade Item Number (GTIN), if one is found for the item number and unit of measure in the Global Trade Item Number Cross Reference File (ITGTIN).</p> <p>GTINs are defined through UPC &amp; GTIN Item/UOM Cross Reference Maintenance (MENU IAFILE).</p>                             |
| PO Dsc             | The description of the item as specified on the purchase order.  |
| Mfg No             | <p>The manufacturer's item number and description.</p> <p>Manufacturer's item numbers and descriptions are defined through Item Master Maintenance (MENU IAFILE) and/or Vendor/Item Maintenance (MENU POFILE).</p>   |
| Dsc PC             | The discount percentage, if any, applied to this item.   |
| Vol Dsc Pc         | <p>The vendor volume discount percent applied to this item in this PO.</p> <p>Vendor volume discounts are defined through Vendor Volume Discount Maintenance (MENU POFIL2).</p>  |
| Due Dte            | The date the item is due to be received in the warehouse specified for this item. When the <b>Promised</b> flag is set to <b>Y</b> , this field displays in reverse image.   |
| Non-Stock          | Indicates if the item is a non-stock item or not - <b>YES</b> or <b>NO</b> .   |
| Item Class         | The item class and item sub-class of this item.  |
| Weight             | The unit weight of the item for the U/M selected.  |
| Drop Shp           | Indicates if the item is a drop-ship item for this order - <b>YES</b> or <b>NO</b> .   |
| Update Inv         | Indicates if inventory balances should be updated when this item is received - <b>YES</b> or <b>NO</b> .   |
| Tot Wgt:           | The total weight for the purchase quantity on this requisition or purchase order.  |
| Requested          | The original requested shipment receipt date for this item.  |
| Update Cost        | Indicates if the average cost of this item should be updated by the cost of the item when received - <b>YES</b> or <b>NO</b> .   |
| Rec to Date        | The quantity of this item that has been received and posted for this purchase order  |
| Contract           | <p>The number of the contract on which the item cost is based. If the contract is unnumbered, *<b>CONTRACT</b> appears.</p> <p>This field is displayed only if the item cost is based on a contract (i.e., a valid contract was found by and all contract requirements are met by this order).</p> |

| F3=Exit  |                     | F5=Trans Hst           |                         |                     |                      |            |  |

This screen displays receipt history information for the item displayed after pressing F5=SHOW RECEIPTS on the History Purchase Order Item Detail Screen (p. 17-12) or the Open Purchase Order Item Detail Screen (p. 17-12).

Receipt history includes any item receipts that have been entered through one of the following:

- Enter or Change Receivers or PO Receipts (MENU POMAIN)

- Warehouse Management (MENU WMMAIN)
- the Receiving task in Radio Frequency

And posted through one of the following:

- Enter or Change Receivers or PO Receipts (MENU POMAIN)
- PO Receipts Register (MENU POMAIN)
- Warehouse Management (MENU WMMAIN)

---

NOTE: Landing cost function keys are available on this screen only if you are using Landing Factors, as defined through Warehouse Numbers Maintenance (MENU IAFILE).

---

When International Currency is installed, the message **All Values are displayed in the local currency** will display for all foreign currency vendors' receipt history. Trading currency values will not display on this screen.

### Receipt History Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| PO Status          | <p>This field indicates if the item is still open, or if it has been received complete.</p> <p><b>OPEN</b> displays if the item is open on this purchase. The item may have been partially received, or not received at all.</p> <p><b>COMPLETE</b> displays if the item has been completely received for this purchase order. Either the quantity received equals the order quantity, or the item was marked as received complete during receipt entry.</p> <hr/> <p>NOTE: This field pertains to the individual item on the purchase order, not the entire purchase order. Several items may be received complete on a purchase order that is open.</p> <hr/> <p>Display</p> |
| Item No            | <p>The stocking number of the item.</p> <p>Display</p>   |
| PO Desc            | <p>The description of the item as specified on this purchase order.</p> <p>Display</p>   |
| Req Date           | <p>The original requested due date for this item when it was ordered.</p> <p>Display</p>   |
| Order Qty          | <p>The quantity of the item, in the displayed unit of measure, that was ordered.</p> <p>Display</p>  |
| Cost               | <p>The unit cost of the item, per the displayed unit of measure.</p> <p>Display</p>  |

---

This option allows you to display summary information about a single vendor, and detail receipt history of that vendor's ability to deliver a single item. Use the information in this inquiry to determine how accurately and efficiently a vendor has performed, how often and when the expected PO Receipt Date (Due Date) was changed, and if sales orders were impacted by any Due Date changes.

---

## Vendor Performance Inquiry

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title  | Purpose   |
|--|---|
| Vendor Performance Inquiry Selection Screen    | Use to select the item and/or vendor to display in the vendor performance inquiry.  |
| Vendor Performance Inquiry Screen              | Use to review the vendors and items that meet the criteria specified on the Vendor Performance Inquiry Selection Screen (p. 18-2) or the Vendor/Item Receipt History Screen (p. 18-26). |
| Vendor Performance Inquiry Screen 1            | Use to review summary information for the vendor and item selected.   |
| Purchase Order Due Date Changes Screen         | Use to inquire on Req/PO due date changes for the vendor and item selected.   |
| Purchase Order Due Date Activity Detail Screen | Use to review information related to due date changes on the Purchase Order Due Date Changes Screen (p. 18-19).   |
| Vendor/Item Receipt History Screen             | Use to review receipt history for the selected item and vendor.   |

---

## Vendor Performance Inquiry Selection Screen

```

                                VENDOR PERFORMANCE INQUIRY

Item Number From: .....
                  To: .....

Vendor Number: ..... To: .....

Limits:
    Overdue:   YTD: ..   Total: ..
    Early:     YTD: ..   Total: ..

    Due Date Changes: YTD: ..   Total: ..
    Sales Order Late: YTD: ..   Total: ..

                                                                F3=Exit
    
```

This screen displays after selecting option 15 - Vendor Performance Inquiry (MENU POMAIN). Use this screen to select the item(s) and/or vendor(s) to display in the vendor performance inquiry.

You can enter criteria that limits the vendor performance information to display in the inquiry. This can help you evaluate vendor performance and determine if adjustments need to be made. For example, the vendor/item's lead time might need to be lengthened (or shortened) if a vendor is often overdue (or early) in delivering this item. A **Y** in the **Early** limits and **N** in the **Overdue** limits would show only those items that are always early; whereas, an **N** in the **Early** limits and **Y** in the **Overdue** limits would show only those items that are always late.

Refer to the Cross Applications User Guide for the rules of keying FROM/TO ranges.

### Vendor Performance Inquiry Selection Screen Fields and Function Keys

| Field/Function Key      | Description   |
|-------------------------|---|
| Item Number (From/To)   | If you key a range of item numbers and leave the <b>Vendor Number</b> field blank, all vendors that carry the specified items will display on the Vendor Performance Inquiry Screen (p. 18-7), if they also match the other limits entered on this screen, if any.<br>(2 @ A 27) Optional |
| Vendor Number (From/To) | If you key a range of vendor numbers and leave the <b>Item Number</b> field blank, all items assigned to the specified vendors will display on the Vendor Performance Inquiry Screen (p. 18-7), if they also match the other limits entered on this screen, if any.<br>(2 @ A 6) Optional |

This screen displays the vendors and items that meet the criteria specified on the Vendor Performance Inquiry Selection Screen (p. 18-2) or the Vendor/Item Receipt History Screen (p. 18-26). Up to eight items are displayed on this screen in sequence by the item number. If an item is assigned to more than one vendor through Vendor/Item Information Maintenance (MENU POFILE), vendors for each item are displayed in vendor number sequence.

You can change the vendors and items to display by entering new limits on the lower portion of this screen. This can help you evaluate vendor performance and determine if adjustments need to be made. For example, the vendor/item's lead time might need to be lengthened (or shortened) if a vendor is often overdue (or early) in delivering this item. A **Y** in the **Early** limits and **N** in the **Overdue** limits would show only those items that are always early, whereas, an **N** in the **Early** limits and **Y** in the **Overdue** limits would show only those items that are always late.

If Distribution A+ International Currency is installed, applicable values on this screen can be toggled in the Benchmark or Vendor Currency via the F11=BENCHMARK CURRENCY / F11=VENDOR CURRENCY toggle function key. The applicable fields on this screen will change accordingly.

NOTE: This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. **Last** appears at the bottom of the last screen of data. To scroll through information on roll screens press:

\* PAGE DOWN or SHIFT-ROLL FWD or F7=PAGE DOWN to display the next screen

\* PAGE UP or SHIFT-ROLL BACK or F8=PAGE UP to display the previous screen.

### Vendor Performance Inquiry Screen Fields and Function Keys

| Field/Function Key          | Description   |
|-----------------------------|---|
| Primary Benchmark Currency  | <p>This field only displays when International Currency is installed.</p> <p>This field displays when you have toggled the F11=BENCHMARK CURRENCY / F11=VENDOR CURRENCY function key to show values on this screen in the system benchmark currency. The system benchmark currency will appear and the values on this screen will be in that currency. Refer to the International Currency User Guide for more information on the system benchmark currency.</p> <p>Display</p>   |
| Ref No                      | <p>The reference number of the item displayed on this screen. Use this number in the <b>Selection</b> field to select a vendor and item for more detailed vendor performance information.</p> <p>Display</p>  |
| Vendor                      | <p>The number of the vendor who carries the corresponding item.</p> <p>When International Currency is installed, this vendor's currency code will display opposite the <b>Primary Benchmark Currency</b> field as toggled with the F11=BENCHMARK CURRENCY / F11=VENDOR CURRENCY function key to show <b>Last Cost</b> values on this screen in the benchmark currency or the vendors trading currency.</p> <p>Display</p>   |
| Our Item No/<br>Description | <p>The stocking item number and its description. The item description displays below the item number.</p> <p>Display</p>  |
| Rec YTD                     | <p>The quantity of the item in the <b>Our Item No/Description</b> field that was received from the vendor in the <b>Vendor</b> field. This quantity is in the buying U/M for the vendor and item [defined through Vendor/Item Information Maintenance (MENU POFILE)].</p> <p>Display</p>  |
| Avg Ovr Days                | <p>The average number of days that the vendor was overdue in delivering this item. This average is determined by adding the number of overdue days (the number of days between the requested due date and the receipt date), and then dividing the total by the number of orders involved. To see detail receipts (including overdue days), display the Vendor/Item Receipt History Screen (p. 18-26) for this vendor and item.</p> <p>The display of this field is toggled with the F2=EARLY / F2=OVERDUE function key to the <b>Av Early Days</b> field.</p> <p>Display</p> |

---

**Vendor Performance Inquiry Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Av Erly Days       | <p>The average early days that the vendor delivered this item. This average is determined by adding the number of days the item was delivered earlier (the number of days between the requested due date and the receipt date), and then dividing the total by the number of orders involved.</p> <p>The display of this field is toggled with the <b>F2=EARLY / F2=OVERDUE</b> function key to the <b>Av Ovr Days</b> field.</p> <p>Display</p>  |
| Last Tran          | <p>The month and year that this item was received from this vendor.</p> <p>Display</p>  |
| Last Cost          | <p>The last unit cost receipt value that you received for the item.</p> <p>Authority to see the last cost is determined by the <b>Display PO Cost</b> application action defined through Application Action Authority Maintenance (MENU XASCTY).</p> <p>When International Currency is installed, this field will toggle with the <b>F11=BENCHMARK CURRENCY / F11=VENDOR CURRENCY</b> function key to show <b>Last Cost</b> values on this screen in the Benchmark Currency or the vendors trading currency.</p> <p>Display</p> |
| U/M                | <p>The buying unit of measure for this item from this vendor.</p> <p>Display</p>  |
| Due Dt Chg         | <p>This field displays only if YTD Due Date changes are less than or greater than zero.</p> <p>The YTD number of due date changes for this vendor and item.</p> <p>Display</p>  |

This screen displays after pressing F6=DUE DT CHG INQ on the Vendor Performance Inquiry Screen 1 (p. 18-15).

Use this screen to inquire on Req/PO due date changes for the vendor and item selected. PO activity records with Req/PO due date changes that match the vendor and item number will appear. The records can be limited by the date range when changes were made, and how many days late the sales orders were. The data displayed is automatically filtered to the companies and warehouses that you are authorized to view through Authority Profile Maintenance (MENU XASCTY). When all data is not displayed, message \* **Data may have been omitted due to security concerns.** \* displays to the user.

NOTE: This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. **Last** appears at the bottom of the last screen of data. To scroll through information on roll screens press:

\* PAGE DOWN or SHIFT-ROLL FWD or F7=PAGE DOWN to display the next screen

\* PAGE UP or SHIFT-ROLL BACK or F8=PAGE UP to display the previous screen.

### Purchase Order Due Date Changes Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|

### Purchase Order Due Date Changes Screen Fields and Function Keys

| Field/Function Key           | Description   |
|------------------------------|---|
| F7=Page Down /<br>F8=Page Up | <p><b>More...</b> appears at the bottom of a roll screen to indicate that more data is available for viewing. Last appears at the bottom of the last screen of data. On some roll screens, F7=PAGE DOWN and F8=PAGE UP are available for use but do not display.</p> <p>Use the F7=PAGE DOWN to display the next screen of information on a roll screen. The PAGE DOWN or SHIFT-ROLL FWD function keys perform the same task.</p> <p>Use the F8=PAGE UP to display the previous screen of information on a roll screen. The PAGE UP or SHIFT-ROLL BACK function keys perform the same task.</p> |
| F12=Return                   | <p>Press F12=RETURN to return to the Vendor Performance Inquiry Screen 1 (p. 18-15).</p>  |
| Enter                        | <p>Press ENTER after keying a reference number in the <b>Selection</b> field to display additional activity details. The Purchase Order Due Date Activity Detail Screen (p. 18-23) will appear.</p> <p>Press ENTER after entering limits to refresh the screen and display those records that match your criteria.</p>  |

## Purchase Order Due Date Activity Detail Screen

| <u>PURCHASE ORDER DUE DATE ACTIVITY DETAIL</u> |  |                  |                           |
|--|--|------------------|---------------------------|
| Co: 1  | PO No: S00091  | Type: Order      | Status: PO Partial        |
| Vendor: 100                                    | SHARP INTERNATIONAL  |                  | User: APDEMO              |
|  |  |                  | Changed: 5/04/16 14:59:39 |
| <u>Field/Change</u>                            | <u>Item Number/Description</u>                             | <u>New Value</u> | <u>Old Value</u>          |
| Due Date                                       | A120 - Color Copy / Photo Paper 28# - Hammermill 500 sheet | 12/18/13         | 12/17/13                  |
|  |  |                  | Sls Ord Late              |
|  |  |                  | Last                      |
|  |  |                  | F12=Return                |

This screen displays after making a selection and pressing **ENTER** on the Purchase Order Due Date Changes Screen (p. 18-19).

Use this screen to review information related to due date changes on the Purchase Order Due Date Changes Screen (p. 18-19). Field values before and after the due date changes were made are provided.

This screen displays after pressing **F6=DUE DT CHG INQ** on the Vendor Performance Inquiry Screen 1 (p. 18-15).

Use this screen to inquire on Req/PO due date changes for the vendor and item selected. PO activity records with Req/PO due date changes that match the vendor and item number will appear. The records can be limited by the date range when changes were made, and how many days late the sales orders were.

All the fields on this screen are display only and cannot be changed.

NOTE: This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. **Last** appears at the bottom of the last screen of data. To scroll through information on roll screens press:

\* **PAGE DOWN** or **SHIFT-ROLL FWD** or **F7=PAGE DOWN** to display the next screen

\* **PAGE UP** or **SHIFT-ROLL BACK** or **F8=PAGE UP** to display the previous screen.

| Enter   | Press <b>ENTER</b> after making a selection to display the Vendor Performance Inquiry Screen (p. 18-7).   |

---

This option allows you to display vendor/item information for a vendor and item. Vendor/item information is set up and maintained through Vendor/Item Information Maintenance (MENU PROFILE). With this inquiry, you can access that information immediately when determining from which vendors a specific item should be ordered, or in determining which items are carried by a specific vendor.

Additional vendor/item descriptions regarding this item also may be accessed through this inquiry, allowing you to review standard comments that have been setup for a vendor/item through Standard Comments Maintenance (MENU PROFILE).

## Vendor/Item Information

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title  | Purpose  |
|--|--|
| Vendor/Item Information Selection Screen     | Use to select the item and/or vendor to display in the vendor/item inquiry.  |
| Vendor/Item Information Summary Screen       | Use to review information for items that are assigned to specific vendors. Up to eight items are displayed in sequence by the item number. |
| Vendor/Item Information Detail Screen        | Use to review detail information for the vendor/item selected.   |
| Vendor/Item Information Landing Costs Screen | Use to review or recalculate (for review) the landing costs for the item and vendor identified on that screen.                             |
| Vendor/Item Standard Comments Screen         | Use to review standard comments that have been setup for a vendor/item through Standard Comments Maintenance (MENU PROFILE).               |

## Vendor/Item Information Selection Screen

VENDOR/ITEM INFORMATION

Item Number From: .....  
 To: .....

Vendor Number: ..... To: .....

F3=Exit

This screen displays after selecting option 16 - Vendor/Item Information (MENU POMAIN). Use this screen to select the item and/or vendor to display in the vendor/item inquiry. You may specify a range of items and/or a range of vendors to display in the inquiry.

NOTE: The information in this inquiry reflects the values in the Vendor/Item file at the last revaluation which occurs either when you maintain the item or when you run the Revalue Vendor Master Files option (MENU ICRVAL).

### Vendor/Item Information Selection Screen Fields and Function Keys

| Field/Function Key    | Description  |
|-----------------------|--|
| Item Number (From/To) | If you key a range of item numbers in this field, and leave the <b>Vendor Number</b> field on this screen blank, all vendors that carry the specified items will display on the Vendor/Item Information Summary Screen (p. 19-3).<br>(2 @ A 27) Optional |
| Vendor Number         | If you key a range of vends and leave the <b>Item Number</b> field blank; items assigned to those vendors will display on the Vendor/Item Information Summary Screen (p. 19-3).<br>(2 @ N 6,0) Optional  |
| F3=Exit               | Press F3=EXIT to cancel this option. MENU POMAIN will display.   |
| Enter                 | Press ENTER to confirm your selections. The Vendor/Item Information Summary Screen (p. 19-3) will display.   |

This screen appears when you press **ENTER** from the Vendor/Item Information Selection Screen (p. 19-2). You can also access this screen from the following options:

- Enter, Change, Delete Bids (MENU BQMAIN)
- Maintain Special Orders (MENU POMAIN)
- Return to Vendor Processing (MENU POMAIN)
- Suggested Order Maintenance (MENU POREPT)

This screen displays information for items that are assigned to specific vendors. Up to eight items are displayed in sequence by the item number. If an item is assigned to more than one vendor through Vendor/Item Information Maintenance (MENU POFILE), vendors for each item are displayed in vendor number sequence.

**NOTE:** This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. **Last** appears at the bottom of the last screen of data. To scroll through information on roll screens press:

\* **PAGE DOWN** or **SHIFT-ROLL FWD** or **F7=PAGE DOWN** to display the next screen

\* **PAGE UP** or **SHIFT-ROLL BACK** or **F8=PAGE UP** to display the previous screen.

**NOTE:** Many roll screens that show the item number and description will display the item description on a separate line or the item and description on the same line, depending on the system options. This display of single or double line per item can be changed by pressing **F24=DOUBLE LINE / F24=SINGLE LINE**. **F24=DOUBLE LINE** will expand a collapsed screen or **F24=SINGLE LINE** will collapse an expanded screen.

**Vendor/Item Information Summary Screen Fields and Function Keys**

| <b>Field/Function Key</b> | <b>Description</b>   |
|---------------------------|--|
| (Reference Number)        | <p>The reference number of the vendor/item displayed on this screen. Use this number in the <b>Selection</b> field to select a vendor and item for detailed vendor/item information.</p> <p>Display</p>  |
| Vendor                    | <p>The number of the vendor who carries the corresponding item.</p> <p>You can display the <b>Vendor Cost, U/M, and Cur</b> fields instead of the vendor number and name via the <b>F2=VENDOR COST/F2=VENDOR NAME</b> toggle function key.</p> <p>Display</p>  |
| Name                      | <p>The name of the vendor who carries the corresponding item.</p> <p>You can display the <b>Vendor Cost, U/M, and Cur</b> fields instead of the vendor number and name via the <b>F2=VENDOR COST/F2=VENDOR NAME</b> toggle function key.</p> <p>Display</p>  |
| Vendor Cost               | <p>This field appears via the <b>F2=VENDOR COST/F2=VENDOR NAME</b> toggle function key, in place of the vendor name and number.</p> <p>The vendor's cost of the corresponding item.</p> <p>When International Currency is installed, if the trading currency differs from the company's local currency, using <b>F13=TRD CUR / F13=LOC CUR</b>, costs can be displayed in the trading currency with the trading currency symbol displayed to the right, or in the company's local currency with the company's local currency symbol displayed to the right.</p> <p>Display</p> |
| U/M                       | <p>This field appears via the <b>F2=VENDOR COST/F2=VENDOR NAME</b> toggle function key, in place of the vendor name and number.</p> <p>The unit of measure of the corresponding item.</p> <p>Display</p>   |

```

This screen displays after pressing **F6=LANDING CST** from the Vendor/Item Information Detail Screen (p. 19-8) or the Vendor/Item Price File Screen (p. 44-26) and is used to display or recalculate (for review) the landing costs for the vendor, item, and warehouse identified on that screen.

Vendor/Item information displayed on the screen is extracted from the Vendor/Item File and the Vendor/Item/Price File. Landing costs displayed are those defined through Warehouse Numbers Maintenance (MENU IAFILE), with account information defined through G/L Transfer Definition (MENU GLXFER). Landing costs are assigned to an item for a vendor:

- Individually, via the **Landing Cd** field on the Vendor/Item Price File Screen (p. 44-26), or
- Globally, to more than one item, via Global Landing Code Update (MENU POMAST).

An item's landing costs are those costs incurred due to specific situations (overhead, duty, etc.), whereas an item's landed cost is the total cost of that line item calculated as the vendor's price plus all individual landing costs.

---

NOTE: If specific landing cost factors are not specified, but landing costs are used [as determined through Warehouse Numbers Maintenance (MENU IAFILE)], the display on this screen will show all zeros for the landing costs.

---

### Vendor/Item Information Landing Costs Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Qty                | <p>This field is used to identify the quantity of the item for which landing costs will be recalculated/viewed. The ability to recalculate the landing costs allows the user to exercise “what if” scenarios.</p> <p>Key the quantity of the item for which you wish to recalculate and view landing costs. The quantity must be in the purchasing unit of measure.</p> <p>(N 10,3) Required</p>  |
| WH                 | <p>This field displays the number of warehouse from which the landing cost values were retrieved for this item.</p> <p>Display</p>  |
| U/M                | <p>This field is used to identify the purchasing unit of measure of the item for which landing costs will be recalculated/viewed.</p> <p>Key the purchasing unit of measure for the identified item.</p> <p>(A 3) Required</p>  |
| Cost Currency      | <p>This field only displays when International Currency is installed and the selected vendor is a foreign currency vendor.</p> <p>This field displays the currency code and description for the currency in which landing costs are shown.</p> <p>This field may be toggled with the F11=LOCAL CURRENCY / F11=TRADING CURRENCY function key to display the symbol and description of the trading currency used for the item, or the description and symbol for the company’s local currency.</p> <p>Display</p> |
| (Landing Costs)    | <p>These fields display the landing costs for each landing factor applicable to this order. If landing costs are calculated in both local and trading currencies, the symbols for the type of currency used for each landing factor will display next to the cost. To view local currency equivalents of foreign currency landing costs, press F11=LOCAL CURRENCY.</p> <p>Display</p>   |

**Vendor/Item Information Landing Costs Screen Fields and Function Keys**

---

| Field/Function Key                      | Description  |
|---|--|
| Total landing costs                     | <p>This field displays the total amount of all landing costs that will be added to the items/purchase order receipt group during the receiving process. When you key overrides to group-level landing costs, the total landing cost will be recalculated and redisplayed when you press <b>ENTER</b>.</p> <p>When International Currency is installed, this field displays for landing costs calculated in trading currencies only if all costs are in the same currency. If the landing costs are in mixed currencies, zeros will display in this field, and you must press the <b>F11=LOCAL CURRENCY</b> key to display local currency equivalents in order to review this total. The company's local currency symbol will display to the right of all landing costs, and the total will appear in the company's local currency. Overrides are keyed in the trading currency view and will be display-only in the local currency view.</p> <p>Display</p>  |
| F11=Local Currency/<br>Trading Currency | <p>Press <b>F11=LOCAL CURRENCY / F11=TRADING CURRENCY</b> this key to toggle between a display of landing costs in the applicable trading currency and a display of all landing costs in the company's local currency.</p> <p>Press <b>F11=LOCAL CURRENCY</b> to display all landing costs in the company's local currency. The symbol for the company's local currency will display to the right of each cost, and the <b>Total landing costs</b> field will display the total. The symbol and description for the company's local currency will display in the <b>Cost Currency</b> field.</p> <p>Press <b>F11=TRADING CURRENCY</b> to display landing costs in the currencies used for each landing factor. The symbol for each type of currency will appear to the right of each cost. Note that if the landing costs are calculated in mixed currencies, the <b>Total landing costs</b> value will not display. The symbol and description for the trading currency will display in the <b>Cost Currency</b> field.</p> |
| F12=Return                              | Press <b>F12=RETURN</b> to return to the previous screen.  |
| Enter                                   | Press <b>ENTER</b> to update this screen with any values keyed. Recalculations will be performed, if applicable, displaying the updated landing costs.   |

**Vendor/Item Standard Comments Screen Fields and Function Keys**

| Field/Function Key   | Description   |
|--|---|
| Mfg No   | <p>The item number and description that are used by the item's manufacturer. Manufacturers' item numbers are defined through Item Master Maintenance (MENU IAFILE).</p> <p>Display</p>  |
| Comments   | <p>Up to fifteen lines of sixty-two characters each are provided for the standard comment you are viewing.</p> <p>Display</p>   |
| Print  | <p>The Print code associated with the standard comment:</p> <ul style="list-style-type: none"> <li>• <b>P</b> indicates the comment is to print on the Purchase Order only.</li> <li>• <b>R</b> indicates the comment is to print on the Receiving List only.</li> <li>• <b>I</b> indicates the comment is to display in inquiries only and print on the Requisition Edit List (POMAIN), for internal use.</li> <li>• If blank, it indicates the comment is to print on both the Purchase Order and Receiving List, and display in all inquiries.</li> </ul> <p>Display</p> |
| F4=Item Comments /<br>F4=Vendor Comments<br>/ F4=Vendor/Item<br>Comments | <p>Press the <b>F4=ITEM COMMENTS / F4=VENDOR COMMENTS / F4=VENDOR/ITEM COMMENTS</b> toggle function key to quickly view all types of comments. The function key description and fields on the screen will change accordingly depending on the type of comments you are viewing.</p>   |
| Enter  | <p>Press <b>ENTER</b> to return to the Vendor/Item Information Detail Screen (p. 19-8).</p>   |

This option allows you to review and maintain change requests for a company that have occurred through Order Entry and Purchasing and that have not yet been sent to history (if you are retaining history based on company-level options defined through Special Order Options (MENU XAFILE)). You can limit the requests you want to maintain, view all change requests that have been made against a particular special order line item, and view the number of change requests requested by a particular user or all users. You can also view which group the user is in (Order Entry, Purchasing, or both) and statistics about the group (new change, pending change, approved change, rejected change, and canceled change).

## S/O Change Request Inquiry

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title   | Purpose  |
|---|--|
| Special Order Change Request Selection Screen | Use to select specific criteria for the company and warehouse for which special order change requests will display in this inquiry.  |
| Special Order Change Request Summary Screen   | Use to review the number of change requests that have been requested or that require action by a particular user or all users.   |
| Special Order Change Requests Screen          | Depending on where you accessed this screen from, use to review all special order change requests that match the selection criteria you entered on the Special Order Change Request Selection Screen (p. 20-3), or all special order change requests that have been made against the particular special order line item that you selected. |

| Title   | Purpose  |
|---|--|
| PO Special Order Change Request Screen          | Use to review existing or potential order, requisition, or purchase order information that has been changed or to which you can request a change. The top portion displays the values that are on or are to be placed on a requisition or purchase order and the lower portion is available if you want to make changes to this information. |
| OE Special Order Change Request Screen          | Use to review existing special order, requisition, and purchase order information. The top portion displays the existing order information and the lower portion is available if you want to make changes to the item information for the order, requisition, and purchase order.  |
| S/O Change Request Status Screen                | Use to review the current status of an existing change request, including order header information.  |
| S/O Change Request Status Warning Prompt Screen | Use to delete the remaining sales or transfer order or retain the order, when only comments and/or charges remain on the order.  |
| Change Drop Ship Request Screen                 | Use to review existing order information. The top portion displays the existing order information and the lower portion is available if you want to make changes to the address information and/or the order's drop-ship status.   |
| S/O Change Request Activity Screen              | Use to review each action made to the change request.  |
| S/O Change Request Activity Detail Screen       | Use to review specific change request information for the activity you selected.   |

F2=Group    F12=Return

This screen displays from the F10=SUMMARY function key on the Special Order Change Requests Screen (p. 20-13). Use this screen to review the number of change requests that have been requested or that require action by a particular user or all users (depending on the selection criteria you entered through this inquiry). Information displayed on this screen is based on the company number and warehouse entered on the Special Order Change Request Selection Screen (p. 20-3).

All the fields on this screen are display only and cannot be changed.

Statistics are available for new, pending, approved, rejected, and canceled change requests. If you selected a particular user, you will see statistics for that users group (OE or PO), or both group's statistics if the user resides in both groups. You will also be able to toggle the display of the screen to view statistics for a particular user or all users in the groups (OE and PO) with the F2=GROUP / F2=USER function key. If you did not select a user on the Special Order Change Request Selection Screen (p. 20-3), information for both groups displays.

---

**Special Order Change Request Summary Screen Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| New                | <p>Statistics are available for new change requests.</p> <p>A new change request is a request that is created and since an approval is required the request is created as a new. The group of the user that created the request is marked as the Request group. The opposite group is marked as the Approval group and that Approval group is also flagged as the next action group.</p> <p>If the requester chooses to change the request, the request is updated with the new values and the status remains as new. The last action is marked as changed.</p> <p>When the status of the request is new (never touched by the Approval group) then the original requester can choose to cancel or change the request.</p> |
| Pending            | <p>Statistics are available for pending change requests.</p> <p>If the Approval group simply reviews the request, the status of the request is changed from new to pending, all other values remain unchanged.</p>   |
| Approved           | <p>Statistics are available for approved change requests.</p> <p>If the Approval group chooses to approve the request only, the next action group becomes the Requesting group, the status of the request remains open and the last action is marked as approved.</p> <p>If the Approval group chooses to approve and update the request then the status of the request is changed to closed, the last action is marked as approved and the Special Order, Customer Order and Purchase Order or Requisition (if it exists) is updated with the requested and approved changes.</p>   |
| Rejected           | <p>Statistics are available for rejected change requests.</p> <p>If the Approval group chooses to reject the request the next action group becomes the Request group, the status of the request remains open and the last action is marked as rejected.</p> <p>At receipt time, if a change request exists for an order that has pending receipts, the open change request will be rejected and will need to be closed out.</p>  |
| Canceled           | <p>Statistics are available for canceled change requests.</p> <p>If the requester chooses to cancel the request, then the request is closed and the last action is marked as canceled.</p>   |

This screen is displayed by pressing **ENTER** on the Special Order Change Request Selection Screen (p. 20-3).

If you accessed this screen from the S/O Change Request Inquiry, this screen displays all special order change requests that match the selection criteria you entered on the Special Order Change Request Selection Screen (p. 20-3). You will be able to select a change request to work with, and/or key further selection criteria to limit the requests displayed.

If you accessed this screen from the Work With Special Orders Change Screen (p. 10-30), this screen displays all special order change requests that have been made against the particular special order line item that you selected. The selection criteria at the bottom of the screen used to limit the requests displayed, will be unavailable.

| F4=Customer Search | <p>Press the <b>F4=CUSTOMER SEARCH</b> function key to access the Customer Search, where you can search for and select a customer associated with the special order change requests you want to review/maintain in this inquiry. For an explanation of the Customer/Ship-To Search - Customer Search Screen, refer to the Accounts Receivable User Guide.</p> <p>NOTE: This key is not available if you accessed the Special Order Change Requests Screen (p. 20-13) through Work with Special Orders (MENU POMAIN).</p>  |
| F5=Vendor Search   | <p>Press the <b>F5=VENDOR SEARCH</b> function key to access the Vendor Search Screen (p. 43-7), where you can search for and select a vendor associated with the special order change requests you want to review/maintain in this inquiry.</p> <p>NOTE: This key is not available if you accessed the Special Order Change Requests Screen (p. 20-13) through Work with Special Orders (MENU POMAIN).</p>  |
| F10=Summary        | <p>Press the <b>F10=SUMMARY</b> function key to access the Special Order Change Request Summary Screen (p. 20-10), where you can review statistics associated with special order change requests. The requests that display will be based on the limiting criteria you entered on the Special Order Change Request Selection Screen (p. 20-3). If you accessed this screen from within Work with Special Orders (MENU POMAIN), the requests that display will be based on the special order line item you selected.</p> <p>NOTE: The <b>F10=SUMMARY</b> function key is only available if you are using the change request process as determined through Special Order Options (MENU XAFILE).</p> |
| F12=Return         | Press the <b>F12=RETURN</b> function key to return to the previous screen.  |
| Enter              | After keying the <b>Reference Number</b> of the special order change request you want to review/maintain, press <b>ENTER</b> to access the S/O Change Request Status Screen (p. 20-42).   |

This screen displays existing or potential order, requisition, or purchase order information that has been changed or to which you can request a change. The top portion displays the values that are on or are to be placed on a requisition or purchase order and the lower portion is available if you want to make changes to this information.

Fields are provided to allow you to change values for particular requisition/purchase order values. These values work in conjunction with one another and if you change one value, other values will be impacted. For example, if you change the vendor from Vendor 100 to Vendor 200, data associated with Vendor 200 will then be presented on the screen. The exception to this is the descriptions. If you change the vendor, the descriptions will *not* be changed. Also, the cost will change only if it was *not* overridden in the special order.

## PO Special Order Change Request Screen Fields and Function Keys

| Field/Function Key | Description   |

This screen displays existing special order, requisition, and purchase order information. The top portion displays the existing order information and the lower portion is available if you want to make changes to the item information for the order, requisition, and purchase order. For the selected special order, the following information displays:

NOTE: If the item has been discontinued through Item Master Maintenance (MENU IAFILE), **Discontinued** appears in reverse image to the right of the **Drop Ship** field.

Fields are provided to allow you to change values for particular requisition/purchase order values. These values work in conjunction with one another and if you change one value, other values will be impacted. For example, if you change the vendor from Vendor 100 to Vendor 200, data associated with Vendor 200 will then be presented on the screen. The exception to this is the descriptions. If you change the vendor, the descriptions will *not* be changed. Also, the cost will change only if it was *not* overridden in the special order.

## OE Special Order Change Request Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Ord Qty, U/M       | <p>Use this field to request a change to the quantity of the special order line item for the customer. Once you store an order quantity adjustment, a request will be created to adjust the requisition/purchase order quantity. If the Special Order Options (MENU XAFILE) are set to increase to a multiple of the standard pack and the requisition/PO quantity has not been manually changed, the requisition/PO quantity will be increased to a multiple of the standard pack.</p> <p>Key the quantity of the item for the customer's order in the unit of measure displayed in the <b>U/M</b> field.</p>  |
|                    | <hr/> <p>NOTE: Manual changes to the purchase order quantity will not affect the order quantity. Also, once a change has been made on the PO Special Order Change Request Screen (p. 20-21), for this current change request, to cause an adjustment to the purchase order quantity or purchasing unit of measure, any future changes to the order quantity on the OE Special Order Change Request Screen (p. 20-32), for this current change request, will not overwrite these purchase order changes. However, changes to the item number (on the PO Special Order Change Request Screen (p. 20-21) or OE Special Order Change Request Screen (p. 20-32)) or changes to the vendor (on the PO Special Order Change Request Screen (p. 20-21)) will cause a re-evaluation of the details provided and the purchase order quantity and unit of measure will be recalculated and presented based on the new information.</p> <hr/> |

### Important

If you are requesting to change the order quantity for a warehouse transfer order, the associated ship quantity will not be changed. You can adjust the ship quantity on the warehouse transfer order before you print the pick list, ship it, and invoice it.

---

*Default Value:* The quantity of the item ordered in the Special Orders File (SPORD).

(N 10,3) Optional

**OE Special Order Change Request Screen Fields and Function Keys**

---

| Field/Function Key     | Description  |
|------------------------|--|
| Delete S/O line        | <p>Use this field to request to delete this special order line item from the order.</p> <p>Key <b>Y</b> if you want to delete the special order line item from the order. If you choose to delete the item, when this change request is completed, any related line comments will also be deleted from the order. If this item and its line comments are the only lines in the order (i.e. items, comments, other charges), at the time of the deletion, the entire order will be deleted. The associated requisition/purchase order for this special order, and any comments associated with them, will be marked for deletion/closure when the special order item is deleted. The requisition/purchase order will be deleted/closed unless you choose not to delete/close the requisition/purchase order on the PO Special Order Change Request Screen (p. 20-21).</p> <p>Key <b>N</b> if you do not want to delete the special order line item from the order.</p> <hr/> <p>NOTE: If you request to change any other values for this special order line item and then choose to delete the item from the customer order, the other changes will be superseded.</p> <hr/> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p> |
| Reason                 | <p>If you keyed <b>Y</b> in the <b>Delete S/O Line</b> field, and Order Entry Options Maintenance (MENU XAFILE) is set up <b>Use Delete Reason Code (End Order)</b>, this field is required; otherwise, leave this field blank.</p> <p>Use this field to specify the delete reason code that indicates why the line item should be deleted. Even if you have <b>Save Deleted Orders</b> set to <b>Y</b> as defined through Order Entry Options Maintenance (MENU XAFILE), deleted order history will be retained only if a delete reason code is entered.</p> <p>Key the appropriate reason code.</p> <p><i>Valid Values:</i> A delete reason code defined through Order Delete Reason Codes Maintenance (MENU OEFILE).</p> <p>(A 2) Required/Blank</p>  |
| (New Item Description) | <p>The description of the special order item as it will appear on the requisition/purchase order.</p> <p>Key the item description information or accept the default.</p> <p><i>Default Value:</i> The item number in the Special Orders File (SPORD).</p> <p>(2 @ A 31) Required</p>   |

---

**OE Special Order Change Request Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Rq Shp             | <p>Use this field to request a change to the order's requested ship date for this special order line item.</p> <hr/> <p><b>NOTE:</b> If you make a change to this date, the carrier for this item's order will be checked for valid carrier schedule delivery dates and the requested ship date may be recalculated. If the date is adjusted, you will be notified of the change. Also note that since this field is the order's requested ship date for this item, changes here will update both the special order (SPORD) and the order detail (ORDET) records but will not automatically update any requisition/purchase order (RQDET/PODET) record dates so as not to interfere with any buyer processes.</p> <hr/> <p><i>Default Value:</i> The requested ship date in the Special Orders File (SPORD).<br/> <i>Valid Values:</i> Key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFILE).<br/>                     (N 6,0) Optional</p> |
| Drop Ship          | <p>This field appears only if the <b>Use Drop Ships</b> field is set to <b>Y</b> in System Options Maintenance (MENU XAFILE).</p> <p>Use this field to request to make this special order line item a drop-ship; or to change this special order line item from being a drop-ship (making it a regular special order item.)</p> <hr/> <p style="text-align: center;"><b>Important</b></p> <p>Only this line item will be affected by your selection in this field. Also, if this line item is on a requisition or purchase order that contains other line items, you will not be able to change this field.</p> <hr/> <p>Key <b>Y</b> if you want this special order line item to be a drop-ship item.<br/>                     Key <b>N</b> if you do not want this special order line item to be a drop-ship item.<br/> <i>Default Value:</i> The value specified for this item in the Special Orders File (SPORD).<br/>                     (A 1) Required</p>   |

## OE Special Order Change Request Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Next Owner         | <p>Key the ID of the user you want to assign to this change request. This user (and the group to which this user belongs) can use the S/O Change Request Inquiry (MENU POMAIN/MENU OEINQY) to filter on change requests to which they are assigned.</p> <p>If you leave this field blank, the group opposite to your group will be used as the default value. For example, if you are in the Order Entry group, the Purchasing group will be used as the default opposite group.</p> <hr/> <p>NOTE: The names of the groups defined through User Groups (MENU XASCTY) for the Purchasing and Order Entry groups are identified in Special Order Options (MENU XAFIL). Once groups are defined, users are assigned to the groups through User Groups (MENU XASCTY).</p> <hr/> <p><i>Valid Values:</i> A valid user ID defined through Register User IDs (MENU XACFIG).</p> <p>(A 10) Optional</p> |
| Urgent             | <p>Use this field to flag the change request as urgent.</p> <p>Key <b>Y</b> to flag this change request as an urgent request. You can filter on urgent change requests through the S/O Change Request Inquiry (MENU POMAIN/MENU OEINQY).</p> <p>Key <b>N</b> to flag this change request as a normal request.</p> <p><i>Default Value:</i> N</p> <p>(A 1) Optional</p>   |
| Last User          | <p>The user ID of the last user who made a change to this change request, if you are working with an existing change request.</p> <p>Display</p>   |
| Notes              | <p>If you are creating a change request or have pressed the F6=ADD NOTE function key to add a new note, this field is optional; otherwise, this field is display-only.</p> <p>If this field is available for entry, use this field to key order entry notes that will apply to this screen only.</p> <hr/> <p>NOTE: This field will always display the <i>last</i> notes keyed on this screen. To review all notes for change requests, access the change request activity inquiry with F18=CHG RQST ACT.</p> <hr/> <p>(A 312) Optional/Display</p>  |

## OE Special Order Change Request Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| F2=D/S Chg         | <p>The F2=D/S CHG function key appears only if you are using drop-ships as determined through System Options Maintenance (MENU XAFIL2).</p> <p>Press the F2=D/S CHG function key to access the Change Drop Ship Request Screen (p. 20-50), which displays existing order information that you can optionally change. You can make changes to the order's address information and/or the order's drop-ship status.</p> <hr/> <p>NOTE: If an outstanding change request exists for this item or for another item on the same order as this item and that change request is a request to change the item number, you cannot change ship-to information. Also, if your customer/item has a restriction and if the <b>Allow Ship to Overrides</b> field is set to <b>N</b> in Product Restriction Codes Maintenance (MENU OEFIL2) for that restriction, you cannot change ship-to information.</p> |
| F5=Prc Inq         | <p>Press the F5=PRC INQ function key to inquire into and/or determine the pricing information for customer/item relationships. Refer to the Item Price Inquiry (MENU OEINQY) in the Order Entry User Guide for details.</p>   |
| F6=Add Note        | <p>The F6=ADD NOTE function key appears only if you are reviewing (not creating) a change request that includes notes.</p> <p>Press the F6=ADD NOTE function key to add order entry notes. The <b>Notes</b> field will become available for entry.</p>  |
| F10=Store          | <p>Press the F10=STORE function key to save/create this change request.</p>   |
| F12=Return         | <p>Press the F12=RETURN function key to return to the previous screen.</p>  |
| F14=PO Change      | <p>The F14=PO CHANGE function key appears only if you are defined as a user in the Purchasing group and are reviewing an open change request.</p> <p>Press the F14=PO CHANGE function key to display existing order information that you can optionally request to change. The PO Special Order Change Request Screen (p. 20-21) appears. If a change request has previously been made to the order, those requested values will be shown and you will be requesting to change those values. If no change request has previously been made for the order, you will be requesting to change original values on the order.</p>  |
| F17=V/I Inq        | <p>Press the F17=V/I INQ function key to display vendor/item information for the vendor and item. Refer to the Vendor/Item Inquiry (MENU POMAIN) for details.</p>   |
| F18=Chg Rqst Act   | <p>Press the F18=CHG RQST ACT function key to review activity, if any, associated with this change request. The S/O Change Request Activity Screen (p. 20-55) appears.</p>  |

---

**OE Special Order Change Request Screen Fields and Function Keys**

| <b>Field/Function Key</b> | <b>Description</b>   |
|---------------------------|--|
| F21=Order Inq             | Press the <b>F21=ORDER INQ</b> function key to access summary information about this order. Refer to the Open Orders Inquiry (MENU OEMAIN) in the Order Entry User Guide for details.                                      |
| F22=Item Inq              | Press the <b>F22=ITEM INQ</b> function key to access the Item Inquiry, where you can review the inventory status of this item. Refer to the Item Inquiry (MENU IAMAIN) in the Inventory Accounting User Guide for details. |

| Notes:                    | .....                                   |                                |                   |                          |
| .....                     |   |                                |                   |                          |
| .....                     |   |                                |                   |                          |
| .....                     |   |                                |                   |                          |
| F2=D/S Chg                | F9=Approve                              | F11=Approve/Close              | F13=OE Chg        | F18=Chg Rqst Act         |
|                           |   | F12=Return                     | F14=PO Chg        | F24=Cancel               |

This screen displays after selecting a change request and pressing **ENTER** on the Special Order Change Requests Screen (p. 20-13), and displays the current status of an existing change request, including order header information. Both open and closed change requests can display on this screen. For each field that was requested to be changed or has been changed, the field's name, previous value of the field and new value of the field is displayed.

Use this screen to review closed requests or, for open requests, to:

- select the user ID of the next owner you want to assign to the change request
- key any notes you want associated with the change request (see the **Notes** field on this screen for further details)
- flag whether or not the request is urgent
- change drop-ship information
- approve the change request, if you are authorized
- approve and close/update the change request, if you are authorized
- reject the change request, if you are authorized
- access purchasing or order entry change request information, if you are authorized
- access special order change request activity, for requests in history

**NOTE:** Functions that you can perform on this screen are based on company-level options defined through Special Order Options (MENU XAFILE), and the status of the change request. Certain functions are only available with a particular status type.

---

To review all notes for change requests, access the change request activity inquiry with F18=CHG RQST ACT.</p> <hr/> <p>(A 312) Optional</p>   |
| F2=D/S Chg         | <p>The F2=D/S CHG key appears only if you are using drop-ships as determined through System Options Maintenance (MENU XAFIL2), and the change request is open.</p> <p>Press the F2=D/S CHG function key to access the Change Drop Ship Request Screen (p. 20-50), which displays existing order information that you can optionally change. You can make changes to the order's address information and/or the order's drop-ship status.</p> <hr/> <p>NOTE: If an outstanding change request exists for this item or for another item on the same order as this item and that change request is a request to change the item number, you cannot change ship-to information. Also, if the <b>Allow Ship to Overrides</b> field is set to N in Product Restriction Codes Maintenance (MENU OEFIL2), you cannot change ship-to information.</p> |
| F6=Add Note        | <p>The F6=ADD NOTE key appears only if you are reviewing (not creating) a change request that includes notes and that is open.</p> <p>Press the F6=ADD NOTE key to add notes that will apply to this screen only. The <b>Notes</b> field will become available for entry.</p>  |
| F9=Approve         | <p>The F9=APPROVE key appears based on how your company-level options are defined through Special Order Options (MENU XAFIL2). If approval is not required, this function key appears for both the group requesting the change and the opposite group while the status is New or Pending. If approval is required, this function key appears only to the group opposite of the group requesting the change while the status is Pending. The F9=APPROVE function key does not appear if the change request has been approved, the change request is in history, or the change request has been rejected or closed.</p> <p>Press the F9=APPROVE key to approve the current change request. The request is approved only; special order components are not updated.</p>   |

## S/O Change Request Status Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| F10=Close          | <p>The F10=CLOSE key appears only for the group requesting the change when the status is New, Approved or Rejected. The F10=CLOSE key appears only for the group opposite of the requesting group when the status is Canceled. The F10=CLOSE function key does not appear for change requests in history.</p> <p>Press the F10=CLOSE key to close an open change request. All special order components (order, special order, and requisition/purchase order, if one exists) will get updated (if you approved the request) and the change request will have the status of closed.</p> <hr/> <p>NOTE: In the situation where you are deleting the last line item from an order that still has comments and/or charges, after pressing this key to close the change request, the S/O Change Request Status Warning Prompt Screen (p. 20-48) will appear.</p>  |
| F11=Approve/Close  | <p>The F11=APPROVE/CLOSE key appears based on how your company-level options are defined through Special Order Options (MENU XAFILE). If approval is not required, the F11=APPROVE/CLOSE function key appears for both the group requesting the change and the opposite group while the status is New or Pending. The F11=APPROVE/CLOSE function key does not appear for change requests in history.</p> <p>Press the F11=APPROVE/CLOSE key to approve and close an open change request. All special order components (order, special order, and requisition/purchase order, if one exists) will get updated and the change request will have the status of closed.</p> <hr/> <p>NOTE: In the situation where you are deleting the last line item from an order that still has comments and/or charges, after pressing this key to close the change request, the S/O Change Request Status Warning Prompt Screen (p. 20-48) will appear.</p> |
| F12=Return         | <p>Press the F12=RETURN key to return to the previous screen without saving your entries.</p>  |
| F13=OE Chg         | <p>The F13=OE CHG key appears only if you are defined as a user in the Order Entry group and are reviewing an open change request, or if you are defined as a user in the Purchasing group.</p> <p>Press the F13=OE CHG key to display existing order information that you can optionally change for the change request. The OE Special Order Change Request Screen (p. 20-32) appears. If changes have previously been made, those changes will be shown and you will be maintaining an existing request. If no changes have previously been made, you will be entering a new request.</p>  |

---

**S/O Change Request Status Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| F14=PO Chg         | <p>The F14=PO CHG key appears only if you are defined as a user in the Purchasing group and are reviewing an open change request.</p> <p>Press the F14=PO CHG key to display existing purchasing information that you can request to change. The PO Special Order Change Request Screen (p. 20-21) appears.</p>  |
| F18=Chg Rqst Act   | <p>Press the F18=CHG RQST ACT key to review activity, if any, associated with this change request. The S/O Change Request Activity Screen (p. 20-55) appears.</p>  |
| F23=Reject         | <p>The F23=REJECT key appears only if you are in the group opposite of the group requesting the change while the request status is Pending or Approved.</p> <p>Press the F23=REJECT key to reject an open change request. The request will be rejected, but not closed.</p>  |
| F24=Cancel         | <p>The F24=CANCEL function key appears only if you are in the group that created the request while the request is Open and the status is New, Pending or Approved.</p> <p>Press the F24=CANCEL function key to cancel an open change request. If the status is New, when you press F24=CANCEL, the request will be canceled and closed. If the status is not New and approval is required, as determined through Special Order Options (MENU XAFILE), the opposite group will need to close the request.</p> |
| Enter              | <p>Press the ENTER key to confirm your entries.</p>  |

```

A “Sales Order” warning pop-up window displays after selecting to close a change request on the S/O Change Request Status Screen (p. 20-42), if a request was made to delete the last line item of the sales order leaving only comments and/or charges remaining. Additionally, if a change request is performed on a warehouse transfer sales order, functionality will also check to see if the associated transfer order contains comment(s) only but no other line items. If so, then a “Transfer Order” warning pop-up window will appear.

### Sales Order Warning

When viewing the OE side of the special order change request status, if a request was made to delete the last line item of the sales order leaving only comments and/or charges remaining, the order would remain open with no actual line items. Instead of stranding the order that might not be readdressed, a warning pop-up will appear upon “closing” the change request, to prompt you as to whether to delete the remaining sales order or retain the order.

There are 3 variations of a warning pop-up that may appear notifying you of the actual type of lines remaining on the sales order to help you determine whether the remaining order should be deleted or retained. The 3 variations of the WARNING! - SALES ORDER WITH NO LINE ITEMS are explained in the field explanations below.

### Transfer Order Warning

If applicable, you will also be warned if a warehouse transfer order exists with no line items and only comment(s) reside on the order. This WARNING! - TRANSFER ORDER WITH NO LINE ITEMS is explained in the field explanations below.

### S/O Change Request Status Warning Prompt Screen Fields/Function Keys

| Field/Function Key   | Description  |
|--|--|
| <p><i>Sales Order</i></p> <p>The remaining sales order contains <b>comment(s) only</b></p> <p>or</p> <p><b>charge(s) only</b></p> <p>or</p> <p><b>comment(s) and charge(s)</b></p> | <p>One of these warnings may appear if the remaining sales order contains comment(s) only, charge(s) only, or comment(s) and charge(s).</p> <p>Use this field to select to delete the remaining sales order or retain the order if one of these conditions exist.</p> <p>Key <b>Y</b> to delete this entire sales order. If <b>Y</b> is keyed, the entire sales order containing comments and/or charges will be deleted from the Order Header File (ORHED) and Order Detail File (ORDET).</p> <hr/> <p>NOTE: When the <b>Save Deleted Orders</b> setting is <b>Y</b> in Order Entry Options Maintenance (MENU XAFILE), and the remaining sales order is deleted, the remaining order information will be saved to the Deleted Orders Header/Detail files (DLHED/DLDET), as well as IC files (ICDLHD/ICDLDT), if applicable. This will enable you to view the details of that order via the Deleted Orders Inquiry (MENU OEINQY).</p> <hr/> <p>Key <b>N</b> to retain this entire sales order. If <b>N</b> is keyed, the line requested for deletion will still occur, but the sales order will remain for the comments and/or charges.</p> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p> |
| <p><i>Transfer Order</i></p> <p>The related transfer order contains <b>comment(s) only</b></p>   | <p>If a change request is performed on a warehouse transfer sales order, then a transfer sales order must exist. If the associated transfer order also contains no other line items, this warning message will pop-up so that you can select to remove or retain this transfer order as well. Note that this transfer order prompt may still display even if the sales order prompt does not appear first.</p> <p>Use this field to select to delete or retain this warehouse transfer order.</p> <p>Key <b>Y</b> to delete this warehouse transfer order.</p> <p>Key <b>N</b> to retain this warehouse transfer order.</p> <hr/> <p>NOTE: On warehouse transfer orders, any order/line comments associated with line items on the initial sales order are not brought into the generated transfer order. Therefore, any comments that exist on the transfer order have been added manually.</p> <hr/> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p>  |
| Enter  | Press <b>ENTER</b> to confirm your entry.  |

```

This screen displays by pressing **F2=D/S CHG** on the S/O Change Request Status Screen (p. 20-42) and is only available if the **Use Drop Ships** field is set to **Y** in System Options Maintenance (MENU XAFIL2). This screen displays existing order information. The top portion displays the existing order information and the lower portion is available if you want to make changes to the address information and/or the order's drop-ship status.

For the selected item's order, the ship-to information specified in Order Entry displays. Fields are provided to allow you to specify new values for the order. The changes made on this screen are just a request, and actual updates will occur later when the special order change request is approved and updated.

From the screen, you have the ability to request sales order ship-to changes which can affect sales order's pricing fields when the update is later completed. When a different ship-to is selected via the **F4=SHIP-TO** and then the **F10=STORE** is pressed to save the changes, if any of the current pricing fields values of this sales order will be changed when this special order change request is approved and updated, the warning message: "Warning - Price Discount Code, Price List or Contract Code changed" will also appear.

Note the following:

- When the S/O item exists on a requisition or purchase order for multiple sales orders, the ship-to address and drop ship fields cannot be maintained. To change that information, the items must be on a unique requisition/purchase order per sales order.
- If an outstanding change request exists for this item or for another item on the same order as this item and that change request is a request to change the item number, you cannot change ship-to information.
- If the **Allow Ship to Overrides** field is set to **N** in Product Restriction Codes Maintenance (MENU OEFIL2), you cannot change ship-to information.

---

**Change Drop Ship Request Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Co/Customer        | The company/customer number and name for whom the special order was created.<br>Display   |
| Order              | The sales order/generation number for the special order item.<br>Display  |
| Ship To            | The ship-to name for whom the special order was created.<br>Display   |
| Drop Ship          | Indicates if the special order item will be drop shipped from the vendor to the customer.<br>Display  |
| (Original Address) | The next 6 lines display the shipping address, telephone country code, telephone number, and extension, and contact information for the sales order.<br>Display   |
| Ship To            | Use this field to request a change to the name of the customer/ship-to on the order.<br>Key the customer/ship-to's name or accept the default.<br><i>Default Value:</i> The number/name of the ship-to specified in Order Entry.<br>(A 30) Required |
| Drop Ship          | Use this field to request to make this entire order a drop-ship order; or to change this entire order from being a drop-ship order (making it a regular special order).   |

---

**Important**

All line items on the order will be affected by your selection in this field. Also, if the line items on this order are on a requisition or purchase order, you cannot change the order to a drop-ship order.

---

Key **Y** if you want this entire order to be a drop-ship order.

Key **N** if you do not want this entire order to be a drop-ship order.

*Default Value:* The value specified for this field on the Order Header Screen in Enter, Change & Ship Orders (MENU OEMAIN).

(A 1) Required

---

## Change Drop Ship Request Screen Fields and Function Keys

For example, <b>OE</b> will display if a member of both groups performed an activity in Order Entry.</p> <p>Display</p>   |
| Status             | <p>This field displays the status of the activity of the change request for the special order line item. One of the following status types will display:</p> <ul style="list-style-type: none"><li>• <b>Add</b>: the change request has been added.</li><li>• <b>Change</b>: the change request has been changed.</li><li>• <b>Reject</b>: the change request has been rejected.</li><li>• <b>Close</b>: the change request has been closed.</li><li>• <b>Cancel</b>: the change request has been canceled.</li><li>• <b>Approved</b>: the change request has been approved.</li></ul> <p>Display</p> |
| User               | <p>This field displays the user ID of the person who performed the activity on the change request.</p> <p>Display</p>   |

---

**S/O Change Request Activity Screen Fields and Function Keys**

---

| Field/Function Key | Description  |
|--------------------|--|
| Date               | <p>This field displays the date, in your default date format specified through Register A+ User IDs (MENU XACFIG), on which the activity was performed on the change request. The display of this field may change depending on the corresponding <b>Time</b> field and what time is shown via the F2=ACTUAL / F2=USER / F2=SYSTEM TIME toggle key.</p> <p>The <b>User Date</b> is the date on which the activity occurred in relation to your default time zone. Your default user time zone is set up through Register A+ User IDs (MENU XACFIG).</p> <p>The <b>Actual Date</b> is the date on which the activity occurred shown in relation to the time zone of the user who performed the activity.</p> <p>The <b>System Date</b> is the date on which the activity occurred shown in relation to the system's default time zone. The system's default time zone is set up through Time Zone Codes Maintenance (MENU OEFIL3).</p> <p><b>Example:</b> A change was made to an item at your company's New York office at 7:00 p.m., Eastern Standard Time (EST) on March 24th. You are inquiring on the activity from an office in Paris, France, which is 6 hours ahead of New York. The <b>User Time</b> and <b>User Date</b> will display as 1:00 a.m., March 25th. The <b>Actual Time</b> and <b>Actual Date</b> will display as 2:00 p.m., March 24th. The time zone difference caused the variance between the <b>User Date</b> and <b>Actual Date</b>. Additionally, you can view the activity in the <b>System Date</b>, which is in relation to the system's time zone.</p> |
|                    | Display  |

## S/O Change Request Activity Screen Fields and Function Keys

| Field/Function Key                   | Description   |
|--------------------------------------|---|
| User/Actual/System Time              | <p>This field displays the time on which the activity was performed on the change request. The display of this field can be toggled with the <b>F2=ACTUAL / F2=USER / F2=SYSTEM TIME</b> function key to show the time in the <b>User Time</b>, <b>Actual Time</b>, or <b>System Time</b>, including the time zone. When this field is toggled, the corresponding <b>Date</b> field also changes accordingly.</p> <p>The <b>User Time</b> is the time in which the activity occurred shown in your default time zone. Your default user time zone is set up through Register A+ User IDs (MENU XACFIG).</p> <p>The <b>Actual Time</b> is the time in which the activity occurred shown in the time zone of the user who performed the activity.</p> <p>The <b>System Time</b> is the time in which the activity occurred shown in the system's default time zone. The system's default time zone is set up through Time Zone Codes Maintenance (MENU OEFIL3).</p> <p><b>Example:</b> A change was made to a special order item at your company's New York office at 2:00 p.m., Eastern Standard Time (EST). You are inquiring on the activity from an office in San Diego, California, which uses Pacific Standard Time (PST). PST is 3 hours earlier than EST. The <b>User Time</b> will display as 11:00 PST (your time zone), and the <b>Actual Time</b> will display as 14:00 EST (the time zone in which the user performed the activity). Additionally, you can view the activity in the system's time zone.</p> <p>Display</p> |
| Field/Change                         | <p>This field displays the field for which a change request has occurred for the special order line item.</p> <hr/> <p>NOTE: If there are multiple fields for which a change request has occurred, a '+' sign will appear to the right of this field indicating that there are additional fields. You can review all fields affected by the selected change request activity by keying the line number of that activity in the <b>Selection</b> field and pressing ENTER.</p> <hr/> <p>Display</p>  |
| Notes                                | <p>This field indicates if any notes were added for the activity. If notes were entered for the activity, <b>Y</b> displays in this field; otherwise, <b>N</b> displays.</p> <p>Display</p>   |
| Selection                            | <p>Use this field to select the line of the activity you want to review in detail. Key the line number shown in the <b>Sel</b> column of the activity you want to select and press ENTER to review detailed information.</p> <p>(N 2,0) Optional</p>  |
| F2=Actual/F2=User/<br>F2=System Time | <p>Use the <b>F2=ACTUAL / F2=USER / F2=SYSTEM TIME</b> toggle function key to display the <b>User Time</b>, <b>Actual Time</b>, or <b>System Time</b>, including the time zone.</p>   |

## S/O Change Request Activity Detail Screen

| S/O CHANGE REQUEST DETAIL                              |                                |           | New             |
|--|--------------------------------|-----------|-----------------|
| Co/Cust: 01/0000000050                                 | Shelton School Department      |           | Order: 02723/00 |
| Ship To: A   | Shelton School Department Annx |           |                 |
| Co/Req: 01/100173                                      | Status: Pending                |           |                 |
| Field/Change   | New Value                      | Old Value |                 |
| Quantity Ordered                                       | 2.00000                        | 1.00000   |                 |
| Syst Chg - PO Qty                                      | 2.00000                        | 1.00000   |                 |
| <u>Notes:</u>  |                                |           | Last            |
| F5=Previous Activity    F6=Next Activity    F12=Return |                                |           |                 |

Use this screen to review specific change request information for the activity you selected. All changes requested during the activity will display on this screen, including the field name, the previous value of the field, and the new value of the field. Any notes associated with the activity are also shown.

All the fields on this screen are display only and cannot be changed.

### S/O Change Request Detail Screen Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| (Status)           | The status of the change request may be <b>Approved</b> , <b>Canceled</b> , <b>New</b> , <b>Pending</b> , or <b>Rejected</b> . |
| Co/Cust            | The company/customer number and name for whom the special order was created.   |
| Order              | The sales order/generation number for the special order item.  |
| Ship To            | The ship-to number and name for whom the special order was created.  |
| Co/Req             | The company number and the requisition/purchase order number on which the special order item resides (if any).                 |
| Status             | The status of the requisition/purchase order on which the special order item resides (if any).                                 |
| Field/Change       | The description of the field that was changed.   |

---

**S/O Change Request Detail Screen Function Keys**

| <b>Field/Function Key</b> | <b>Description</b>  |
|---------------------------|---|
| New Value                 | The new value of the field data as a result of this change.   |
| Old Value                 | The original value of the field data before this change.  |
| Notes                     | This field displays any notes that were added for the activity.<br>Display                                    |
| F5=Previous Activity      | Press the F5=PREVIOUS ACTIVITY function key to review activity detail for the previous record, if any exists. |
| F6=Next Activity          | Press the F6=NEXT ACTIVITY function key to review activity detail for the next record, if any exists.         |
| F12=Return                | Press the F12=RETURN function key to return to the previous screen.   |

---

---

After creating return requisitions in Return to Vendor Processing (MENU POMAIN), use this option to print the Return Requisition Pick List or the Return Requisition Pack List. These documents are the same except for the title, which you choose on the Return to Vendor Pick/Pack List Screen (p. 21-2).

You can choose to include the following information on the Return Requisition Pick/Pack List (p. 21-7):

- Line item comments
- Order Entry return order information
- Quantity of items being shipped
- Warehouse reservation locations if Warehouse Management is installed

In addition, you can specify the unit of measure in which quantities will be expressed.

---

## Return Req Pick/Pack

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                                  | Purpose  |
|--|--|
| Return to Vendor Pick/Pack List Screen | Use to specify which orders to include on the Return Requisition Pick/Pack List and the type of information to be printed on it. |
| Return Requisition Pick/Pack List      | Prints pick/pack information for all orders ready to be returned to the vendor that match the selection criteria.                |

---

## Return to Vendor Pick/Pack List Screen

This list is produced following your responses on the Return to Vendor Pick/Pack List Screen (p. 21-2) and the Report Options Screen.

NOTE: All dates will print in the **Default Date Format** for the user that generated the report, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, the dates print using the system's **Default Date Format** specified through System Options Maintenance (MENU XAFIILE).

Return Requisition Pick/Pack Lists will print using **Form Type 1** or **Form Type 2**, depending on your selection in System Options Maintenance (MENU XAFIILE).

## Return Requisition Pick/Pack List

| Report/Listing Fields | Description  |
|-----------------------|--|
| (Title)               | The title that appears here is determined by your response to the <b>Heading Option</b> field on the Return to Vendor Pick/Pack List Screen (p. 21-2).               |
| Ship To               | This section of the document contains the <b>Vendor</b> name and address specified on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13).            |
| Ship From             | This section of the document contains the warehouse <b>Ship To</b> name and address specified on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13). |
| Order                 | This field contains the date on which the requisition was created.   |

**Return Requisition Pick/Pack List**

| Report/Listing Fields | Description  |
|-----------------------|--|
| Due to Ship           | This field contains the date on which the items are due to be shipped from the warehouse. This date is specified in the <b>Due Date</b> field on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13).   |
| Buyer                 | This field contains the buyer responsible for this return requisition as specified on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13).  |
| Req No                | This field contains the requisition number specified on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13).  |
| Return PO No.         | This field contains the PO number assigned to the return Purchase Order when it was printed. If the <b>Use Requisition No. for Purchase Order No.</b> field is set to <b>Y</b> through Purchasing Options Maintenance (MENU XAFILE), then the requisition number will be printed here even if the return purchase order has not been printed yet.    |
| Ship Instructions     | This field contains the shipping instructions specified on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13).   |
| WH                    | This field contains the warehouse from which the items will be picked.   |
| Item No/Description   | The item number and description. Depending on your selection in the Item to Print on Return Requisition Pick/Pack field through Purchasing Company options Maintenance (MENU XAFILE), our item number, the manufacturer's item number, or both item numbers will print.  |
| Return Qty            | Quantity to be returned to the customer as specified on the return requisition. This quantity is expressed in the unit of measure specified in the U/M column. If two lines of information appear, the first line is expressed in our stocking unit of measure and the second is expressed in the purchasing unit of measure defined for the vendor. |
| Ship Qty              | If you entered <b>Y</b> in the <b>Ship Qty</b> field on the Return to Vendor Pick/Pack List Screen (p. 21-2), this field contains the quantity being shipped. This quantity is expressed in the unit of measure specified in the <b>U/M</b> column. If you keyed <b>N</b> in the <b>Ship Qty</b> field, this column will be blank.                   |
| U/M                   | Unit of measure for the <b>Return</b> and <b>Ship</b> quantities. This unit of measure is determined by the Express Qty in field on the Return to Vendor Pick/Pack List Screen (p. 21-2).  |

---

**Return Requisition Pick/Pack List**

| Report/Listing Fields          | Description   |
|--------------------------------|---|
| Loc                            | <p>If Warehouse Management is not installed, this column contains the location from which the item will be picked if specified in Item Balance Maintenance (MENU IAFILE).</p> <p>If Warehouse Management is installed, <b>BELOW</b> appears in this column and the warehouse location from which the item will be picked appears beneath the item description.</p>  |
| Seq                            | Sequence number assigned to this line item on the Requisition Item Summary Screen in Enter or Change Requisitions (MENU POMAIN).  |
| LOC/Comments/RTV<br>Logging No | The information that appears here depends on your responses to the <b>WM Locations, Comments</b> , and the <b>Sales Order Info</b> fields on the Return to Vendor Pick/Pack List Screen (p. 21-2).  |
| COO                            | <p>This field contains the country of origin of the reservation from the WM Locations Reservations File (<b>WMRSV</b>), if applicable.</p> <ul style="list-style-type: none"> <li>• For regular items, the country of origin will print before the quantity reserved.</li> <li>• For serial items (type S), the country of origin will print after the location.</li> <li>• For serial items (type T), the country of origin will print after the serial number.</li> <li>• For lot items (not case quantity), the country of origin will print after the lot number.</li> <li>• For lot items (case quantity), the country of origin will print after the quantity and before the location.</li> </ul> |

---

---

This option is used to print the Receiving List which prints the open items (i.e., items that have not yet been received) for up to 20 purchase orders. Use the report to write in quantities of items as they are received. The report can then be forwarded to the data entry workstation where they will be keyed through Enter or Change Receivers or PO Receipts (MENU POMAIN).

---

## Receiving List

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| <b>Title</b>                                       | <b>Purpose</b>  |
|--|---|
| PO Receipt Processing Selection Screen             | Use to determine the type of PO processing to be performed: either manual receipt group processing, or receiver processing.   |
| Receiving List by PO Number Selection Screen       | Use to select the purchase orders for which open items will print on the Receiving List (p. 22-18).   |
| Receiving List by Receiver Number Selection Screen | Use to select the receivers for which open items will print on the Receiving List (p. 22-18).   |
| Receiver List Selection Screen                     | Use to review a list of existing receivers.   |
| Receiving List                                     | Prints items that have not yet been received for the purchase order(s) selected on the Receiving List by PO Number Selection Screen (p. 22-3) or on the Receiving List by Receiver Number Selection Screen (p. 22-6). |

---

## PO Receipt Processing Selection Screen

```

PO RECEIPT PROCESSING

Type of Receipt Processing: - 1 = by Purchase Order
                             2 = by Receiver

F3=Exit
  
```

This screen displays after selecting option 19 - Receiving List from MENU POMAIN. This screen is used to determine the type of PO processing to be performed: either manual receipt group processing, or receiver processing.

### PO Receipt Processing Selection Screen Fields and Function Keys

| Field/Function Key         | Description  |
|----------------------------|--|
| Type of Receipt Processing | Key the number of the desired processing; purchase order (manual receipt group processing) or receiver.<br>(N 1,0) Required  |
| F3=Exit                    | Press F3=EXIT to exit from this option. MENU POMAIN will display.  |
| Enter                      | Press ENTER to confirm your selections. If you select purchase order processing, the Receiving List by PO Number Selection Screen (p. 22-3). If you select receiver processing, the Receiving List by PO Number Selection Screen (p. 22-3) will display. |

## Receiving List by PO Number Selection Screen

```

RECEIVING LIST BY PO NUMBER

Company No?      01
PO Numbers:      .....
                 .....
                 .....
                 .....

Sort Sequence:   .. (P,M)
Item Information: .. (O,M,B)
Include Comments: .. (N,R, )
Show Customer Orders: .. (Y/N)
Show WH Locations: Y (Y/N)
No. of Avail Locs: 1 (0-4)

F3=Cancel
    
```

This screen is used to select the purchase orders for which open items will print on the Receiving List (p. 22-18). This screen displays after selecting to process receipts by purchase orders from the PO Receipt Processing Selection Screen (p. 22-2).

### Receiving List by PO Number Selection Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Company No         | <p>This field is display only if the <b>Multi Company</b> field is set to <b>N</b> through System Options Maintenance (MENU XAFILE).</p> <p>Key the number of the company for which open items will print on the report.</p> <p><i>Default Value:</i> The default company defined in Authority Profile Maintenance (MENU XASCTY) if one has been defined; otherwise, this is the default company defined through System Options Maintenance (MENU XAFILE)</p> <p><i>Valid Values:</i> A valid company number defined through Company Name Maintenance (MENU XAFILE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(N 2,0) Display/Required</p> |
| PO Numbers         | <p>Key up to 20 open purchase order numbers for which the Receiving List (p. 22-18) will print.</p> <p><i>Valid Values:</i> You must key at least one open purchase order number (20 @ A 6) Required</p>  |

### Receiving List by PO Number Selection Screen Fields and Function Keys

| Field/Function Key   | Description  |
|----------------------|--|
| Sort Sequence        | <p>Indicates if the Receiving List (p. 22-18) will print in purchase order Number order (<b>P</b>), or manufacturer's item number order (<b>M</b>). Key the one of the two displayed codes to indicate the desired order.</p> <p>(A 1) Required</p>  |
| Item Information     | <p>Indicates if the item number and description printed on the Receiving List is the stocking (our) item number, the manufacturer's item, or both.</p> <p>Key <b>O</b> to print our stocking item number for the items on the report.</p> <p>Key <b>M</b> to print the manufacturer's item number for the items on the report.</p> <p>Key <b>B</b> to print both our stocking item number and the manufacturer's item number on the report.</p> <p>(A 1) Required</p>  |
| Include Comments     | <p>Use this field to indicate that you want to print order comments that have been keyed for the selected purchase order(s) during Enter or Change Requisitions (MENU POMAIN).</p> <p>Key <b>N</b> if you do not want any comments for this purchase order to print on the Receiving List.</p> <p>Key <b>R</b> to print only those comments that were specified with a <b>Print</b> code of <b>R</b> (Receiving List only) on the Order Comments/Line Item Comments Entry Screen (p. 6-34) to print on the Receiving List.</p> <p>Leave blank to include in the Receiving List all comments that were specified with a print code of <b>R</b> (Receiving List only) or left blank on the Order Comments/Line Item Comments Entry Screen (p. 6-34).</p> <p>(A 2) Optional</p> |
| Show Customer Orders | <p>Use this field to indicate if you want order information for this item to print on the Receiving List for the selected purchase order(s). Order information will print if an item is special ordered, or is assigned to a specific order during Enter or Change Requisitions (MENU POMAIN).</p> <p>Key <b>Y</b> if you want the customer name, order number, and order quantity to print on the Receiving List for any items.</p> <p>Key <b>N</b> if you do not want the customer name, order number, and order quantity to print on the Receiving List for any items.</p> <p>(A 1) Required</p>  |

---

**Receiving List by PO Number Selection Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Show WH Locations  | <p>This field displays only if the Warehouse Management module is installed.</p> <p>Use this field to indicate if you want the warehouse locations where each item may be stored to print on the Receiving List.</p> <p>Key <b>Y</b> to print warehouse locations for each item that has been pre-received in Warehouse Management.</p> <p>Key <b>N</b> if you do not want to print warehouse locations for any item on the Receiving List.</p> <p>(A 1) Required</p> |
| No. of Avail Loc   | <p>This field displays only if the Warehouse Management module is installed.</p> <p>Use this field to limit the number of available warehouse locations that will print. Key the maximum number of available warehouse locations that you want to print on the Receiving List.</p> <p>(A 1) Required</p>  |
| F3=Cancel          | <p>Press <b>F3=CANCEL</b> to cancel this option. MENU POMAIN will display.</p>  |
| Enter              | <p>Press <b>ENTER</b> to confirm your selections of the purchase orders and options to print on the Receiving List. The Report Options Screen will display, then the Receiving List (p. 22-18) will print. For details about the Report Options Screen, refer to the Appendix section of the Cross Applications User Guide.</p>   |

Selection: \_ . Vendor: . . . . . WH? 1 . Co? 01 Receiver: . . . . .  
 PO: . . . . .

F6=In-Use                      F12=Return                      F13=Nt Pad

This screen displays:

- in Purchasing, after pressing F4=LIST from the Receiving List by Receiver Number Selection Screen (p. 22-6).
- in Purchasing, after you select 2 = By Receivers on the PO Receipt Processing Selection Screen (p. 22-2).
- in Warehouse Management, after pressing F18=RECEIVERS on the Warehouse Management Selection Screen within Warehouse Management (MENU WMMAIN).
- in Warehouse Management, after pressing F18=RECEIVERS on the PO Selection Screen within Warehouse Management (MENU WMMAIN).

This screen displays a list of existing receivers. Limiting criteria can be entered on this screen (including specifying a particular purchase order number for which you wish to display related receivers) to limit the display to particular receivers.

Additional function keys display on this screen only if it is accessed through Warehouse Management (MENU WMMAIN). Also note that some of the function keys displayed on this screen do not appear when accessing this screen through Enter or Change Receivers or PO Receipts (MENU POMAIN).

It also provides access to receiver maintenance screens (F10=ADD/MAINT) through which receivers can be created or modified. Limiting criteria can be entered on this screen to limit the display to particular receivers, such as specifying a particular purchase order number or receiver for which you want to display related receivers.

The body of the screen displays the receivers that meet the selection criteria in the fields at the bottom of the screen. To limit which receivers are listed, enter selection criteria in the fields at the bottom of the screen and press ENTER. To expand the list of receivers, blank out the entry in one or more of those fields and press ENTER again.

The default list of receivers displayed are those that are currently open. Use the F2=COMPLETE / F2=OPEN toggle key to change the display to receivers that are received and closed.

From this screen, you can:

- print the Receiver Edit List for a receiver
- access the screens required to add, change, or delete a receiver
- access the Receiver Approval Selection Screen, where you can approve or unapprove specific line items on the receiver
- access the PO Receiver Note Pad Screen, where you may review, maintain or delete dated events associated with the selected receiver, as well as add new PO receiver events
- post a receiver

If you displayed this screen by pressing F18=RECEIVERS on the Warehouse Management Selection Screen within Warehouse Management (MENU WMMAIN), the warehouse number for the receiver defaults to the warehouse number you entered on that screen. Additionally, the **Stage Back Orders** and **Auto Put-Away** fields for the receiver default to the values set in Warehouse Options Maintenance (MENU WMFILE) for the warehouse. To change any of these fields, press the F12=RETURN function key to display the PO Selection Screen within Warehouse Management (MENU WMMAIN).

**Receiver List Selection Screen Fields and Function Keys**

| Field/Function Key   | Description  |
|----------------------|--|
| (Receiver List Type) | Identifies if the receiver list currently displayed contains open receivers or completed receivers. You can toggle the display from one to the other by pressing F2=COMPLETE / F2=OPEN.<br>Display   |
| Reference Number     | Use this number in the <b>Selection</b> field to select the associated receiver.<br>Display  |
| Vendor               | The vendor associated with the receiver when it was originally created on the Receiver Entry/Maintenance Selection Screen (p. 8-81) through Enter or Change Receivers or PO Receipts (MENU POMAIN).<br><br>The vendor associated with the receiver when it was originally created on the Receiver Entry/Maintenance Selection Screen within Enter or Change Receivers or PO Receipts (MENU POMAIN).<br><br>From within Warehouse Management (MENU WMMAIN), that screen is accessed by pressing F10=ADD/MAINTAIN on this screen.<br><br>Receivers are also often created in Purchasing due to the receipt of an Advance Shipping Notice (ASN) through EDI.<br>Display |

### Receiver List Selection Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| WH                 | <p>The warehouse associated with the receiver when it was originally created on the Receiver Entry/Maintenance Selection Screen (p. 8-81) through Enter or Change Receivers or PO Receipts (MENU POMAIN).</p> <p>Display</p>  |
| Co                 | <p>The company associated with the receiver when it was originally created on the Receiver Entry/Maintenance Selection Screen (p. 8-81) through Enter or Change Receivers or PO Receipts (POMAIN).</p> <p>Display</p>   |

| Field/Function Key | Description  |
|--------------------|--|
| F4=Put-Away        | <p>The F4=PUT-AWAY function key displays only when Warehouse Management is installed.</p> <p>The F4=PUT-AWAY function key displays only if the list on this screen currently displays OPEN receivers. Select a receiver and press this key to access the Put-Away Complete Screen within Warehouse Management (MENU WMMAIN). From this screen, you can put away approved receiver line items.</p>  |
| F5=P/A List        | <p>The F5=P/A LIST function key displays only when Warehouse Management is installed.</p> <p>The F5=P/A LIST function key displays only if the list on this screen currently displays OPEN receivers.</p> <p>Press F5=P/A LIST to print the Put-Away List (MENU WMMAIN) for the selected receiver. The quantities of the pre-received items, and the locations into which the items will be placed when received will be printed. If you have not pre-received any items for the specified receiver, the Put-Away List will not print.</p> <p>Note that depending on the selections made through Warehouse Management Options Maintenance (MENU WMFILE), Put-Away Labels and Item Labels may or may not print when the Put-Away List is printed. Refer to Put-Away Labels (MENU WMMAIN) for details about Put-Away Labels; refer to Item Labels (MENU WMREPT) for details about Item Labels.</p> |
|                    | <hr/> <p>NOTE: If you have already printed the Put-Away List and Put-Away Labels/Item Labels for this Purchase Order, the following pop-up window will display:</p> <pre> PUT-AWAY LIST REPRINT Reprint Existing Labels _ (Y,N) F24=Cancel </pre> <hr/>  |
|                    | <p>You have the option to reprint existing Put-Away Labels/Item Labels for the Purchase Order as well as any new labels (by keying <b>Y</b> in this field); or you have the option to print only new labels for this Purchase Order (by keying <b>N</b> in this field).</p> <hr/>  |

---

**Receiver List Selection Screen Fields and Function Keys**

| Field/Function Key            | Description   |
|-------------------------------|---|
| F5=P/A List w/Radio Frequency | <p>If Radio Frequency is installed, and depending on the selection made through Warehouse Management Options Maintenance (MENU WMFILE), all items in the receiver may be automatically posted to the “receiving dock” immediately following the printing of the Put-Away List. This receiving dock is defined as all 4’s (e.g., 44.444.44). If you have selected the option to prompt for a response as to whether or not this posting to the receiver dock should occur, the following pop-up window will display:</p> <p style="text-align: center;">POST RECEIVER OPTION<br/>Post Items To Receiving Dock _ (Y,N)<br/>F24=Cancel</p> <p>By keying a <b>Y</b> in response, one transaction processor job will post all items to the receiving dock automatically at the completion of the Put-Away List print. Then, as each item is physically put-away by keying or scanning the location and using the Store function key, an immediate behind-the-scene “move” occurs from location 44.444.44 to the originally selected location. Since the time consuming transaction processor posting job has already occurred, the inventory becomes immediately available. For details about posting items to the receiving dock, refer to the related description provided for Warehouse Management Options Maintenance (MENU WMFILE).</p> <p>By keying an <b>N</b> in response, items will not be posted to the receiving dock at the completion of the Put-Away List print. Instead, normal posting of items is to occur, at the completion of the put-away process for all the items in the receiver.</p> |
| F6=In-Use/Status              | <p>This key is functional only if the screen currently displays OPEN receivers. Press <b>F6=IN-USE / F6=STATUS</b> to toggle the between displaying the status of each receiver in the <b>Stat / WS</b> field and displaying the workstation ID of any receiver that is currently being used elsewhere. If an <b>*R</b> appears next to the workstation ID, the receiver is contained in a receipt group (i.e., it is currently in the process of being posted).</p> <p>Press <b>F6=STATUS</b> to display the status of each receiver.</p> <p>Press <b>F6=IN-USE</b> to display the workstation ID where the receiver is currently being used.</p>  |

---

## Receiver List Selection Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| F9=Edit List       | <p>Key a reference number in the <b>Selection</b> field and press F9=EDIT LIST to print the Receiver Edit List for the indicated receiver. The Report Options Screen appears to allow you to submit your request for processing (refer to the Cross Applications User Guide for details about this screen). You can use the edit list to review details about the receiver, including cost information. Refer to the Receiver Edit List as described for Enter or Change Receivers or PO Receipts (MENU POMAIN) for a description of the data contained on the list.</p> <p>Key a reference number in the <b>Selection</b> field and press F9=EDIT LIST to run the Receiver Edit List (p. 8-79) for the indicated receiver. The Report Options Screen (refer to the Appendix section of the Cross Applications User Guide for details about this screen) will be presented to submit the request for processing. This list can be utilized to review details about the receiver, including cost information. Refer to the Receiver Edit List (p. 8-79) for a description of the data contained on the list</p> |
| F10=Add/Maint      | <p>To add a new receiver, leave the <b>Selection</b> field blank and press F10=ADD/MAINT. The Receiver Entry/Maintenance Selection Screen within Enter or Change Receivers or PO Receipts (MENU POMAIN) appears where you can create a new receiver.</p> <p>To work with a receiver from the list on the screen, key a <b>Reference Number</b> in the <b>Selection</b> field and press F10=ADD/MAINT. The Receiver Header Information Screen within Enter or Change Receivers or PO Receipts (MENU POMAIN) appears.</p>  |
| F11=Approve        | <p>F11=APPROVE is available only if you are displaying open receivers.</p> <p>Key a reference number in the <b>Selection</b> field and press F11=APPROVE to access the Receiver Approval Selection Screen within Warehouse Management (MENU WMMAIN). From that screen, you can approve or unapprove specific line items in the receiver. Prior to the posting of receipts for any items in a receiver, those items must be approved as having been actually received.</p>  |
| F12=Return         | <p>Press F12=RETURN to return to the previous screen without making any selections from this screen.</p>   |
| F13=Nt Pad         | <p>F13=NT PAD is available only if the list on this screen currently displays open receivers.</p> <p>Key a reference number in the <b>Selection</b> field and press F13=NT PAD to access the PO Receiver Note Pad Screen within Enter or Change Receivers or PO Receipts (MENU POMAIN), where you may review, maintain or delete dated events associated with this receiver, as well as add new events.</p>  |

---

**Receiver List Selection Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| F15=Post           | <p>F15=POST is available only if the list on this screen currently displays open receivers.</p> <p>When Warehouse Management is installed, approved receiver items will be checked to ensure warehouse locations have been assigned for each, before posting can occur. If errors are found because locations have not been assigned to all items in the receiver, the within Receipt Post Errors Screen (p. 8-144) within Enter or Change Receivers or PO Receipts (MENU PMAIN) will display. If no errors are found, the Post Received Items Screen (p. 8-146) will display.</p> <p>Key a reference number in the <b>Selection</b> field and press F15=POST to post the receiver. Each approved item in the receiver will be checked for errors, and if none are found, will be included in a system-generated receipt group and submitted to the Transaction Processor for immediate posting. For details about the Transaction Processor, refer to the Cross Applications User Guide.</p> |
| F17=P/A Status     | <p>The F17=P/A STATUS function key displays only if Warehouse Management and Radio Frequency are installed and is being used for putting away inventory [as determined through Radio Frequency Options Maintenance (MENU RFFILE)].</p> <p>Select an item and press F17=P/A STATUS to display the status of the put-away. The Put-Away Status Selection Screen within Warehouse Management (MENU WMMAIN) will display.</p>   |
| F18=R/F Receipts   | <p>The F18=R/F RECEIPTS function key displays only if Warehouse Management and Radio Frequency are installed and is being used for receiving inventory [as determined through Radio Frequency Options Maintenance (MENU RFFILE)].</p> <p>Press F18=R/F RECEIPTS to display the receipts that have been entered through Radio Frequency, but not yet put away. These receipts may be reviewed for accuracy against any previously created receivers (entered through Warehouse Management or Purchasing). The R/F Receipts List Screen within Warehouse Management (MENU WMMAIN) will display.</p>   |
| Enter              | <p>This key performs 2 functions:</p> <ul style="list-style-type: none"> <li>• To limit the receivers on the list, key limiting criteria in the <b>Vendor, WH, Co, Receiver, or PO</b> fields and press ENTER. The display will include only those receivers that meet the criteria you entered.</li> <li>• To review a receiver, key a reference number in the <b>Selection</b> field and press ENTER. The Receiver Header Review Screen within Enter or Change Receivers or PO Receipts (MENU PMAIN) will display for the selected receiver.</li> </ul>   |

This report prints items that have not yet been received for the purchase order(s) selected on the Receiving List by PO Number Selection Screen (p. 22-3) or on the Receiving List by Receiver Number Selection Screen (p. 22-6).

A separate report is printed for each purchase order/receiver selected. Blank spaces are provided on this report to write in the quantity received, unit costs and total amount of items received. Use this information when keying receipts through Enter or Change Receivers or PO Receipts (MENU POMAIN).

---

## Important

Depending upon which selection screen was utilized to generate the Receiving List, the report will reflect different information (e.g., purchase order number versus receiver number), and thus the fields presented and described herein would be different. Also, the selection criteria utilized on either of those selection screens will determine what types of data are included in this list.

---

## Receiving List

| Report/Listing Fields | Description   |
|-----------------------|---|
| Headings              | <p>Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.</p> <p>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings.</p> |
| CO/PO Number          | The number of the company and purchase order for which items that have not yet been received are printed on this report when printed by PO Number.  |
| Req Number            | The number of the requisition from which the purchase order was created are printed on this report when printed by PO Number.   |
| CO/Receiver           | The number of the company and receiver number with receiver description for which items that have not yet been received are printed on this report when printed by Receiver Number.   |
| Vendor                | <p>The vendor number, name with whom the purchase order is placed.</p> <p>When the report is printed by PO Number, the address of the vendor will also print.</p>   |
| Ship VIA              | The shipping instructions, if any, for the PO is printed on this report when printed by PO Number.  |
| Order Date            | The order date specified on the PO is printed on this report when printed by PO Number.   |
| Buyer                 | The buyer responsible for creating the PO are printed on this report when printed by PO Number.   |
| Misc Notes            | The miscellaneous notes, if any, for the PO is printed on this report when printed by PO Number.  |

---

**Receiving List**

| Report/Listing Fields | Description  |
|-----------------------|--|
| Last Rec Date         | The most recent date which any item on this PO was received and posted via PO Receipts Register (MENU POMAIN) are printed on this report when printed by PO Number.  |
| Apprvd                | The approval code used when the requisition was approved are printed on this report when printed by PO Number.   |
| Terms                 | The payment terms of the PO, if any, is printed on this report when printed by PO Number.  |
| Warehouse             | The ID of the warehouse to receive the items on the PO.  |
| Quote No              | The quote number, if any, provided by the vendor for this PO is printed on this report when printed by PO Number.  |
| FOB                   | The F.O.B. (Freight on Board) terms of the PO, if any, is printed on this report when printed by PO Number.  |
| Seq<br>PO/Seq         | The sequence number of each item on the purchase order. Sequence numbers are assigned to each item when the requisition is created through Enter or Change Requisitions (MENU POMAIN).<br><br>When the report is printed by Receiver Number, the purchase order for which items that have not yet been received are listed in this column. |
| Our/Mfg Number        | The item number and description of the item. Based on your selection in the <b>Item Information</b> field on the Receiving List by PO Number Selection Screen (p. 22-3), the manufacturer's item number will print on this report instead of, or in addition to, your stocking item number.  |
| Item Description      | The item description (ours and/or manufacturer's) as keyed on the purchase order.  |
| Due Date              | The due date of the item, as specified on the purchase order.  |
| Qty Due               | The quantity of the items ordered, as specified on the purchase order.   |
| U/M                   | The unit of measure in which the quantity due ( <b>Qty Due</b> ) was ordered; the buying unit of measure.  |
| Qty Rcvd              | A blank line is printed for each item so you can write in the quantity of items that are received.   |
| Unit Cost             | A blank line is printed for each item so you can write in the unit cost of an item as it is received.  |
| Total Amount          | A blank line is printed for each item so you can write in the total dollar value of an item that is received.  |

---

**Receiving List**

| Report/Listing Fields | Description   |
|-----------------------|---|
| Order No              | <p>This field prints if you keyed <b>Y</b> in the <b>Show Customer Orders</b> field on the Receiving List by PO Number Selection Screen (p. 22-3).</p> <p>The company and order number of all unshipped customer orders assigned to this purchase order that contain this item.</p>   |
| Customer Name         | <p>This field prints if you keyed <b>Y</b> in the <b>Show Customer Orders</b> field on the Receiving List by PO Number Selection Screen (p. 22-3).</p> <p>The name of the customer assigned to this purchase order for whom the unshipped orders have been created.</p>   |
| Qty                   | <p>This field prints if you keyed <b>Y</b> in the <b>Show Customer Orders</b> field on the Receiving List by PO Number Selection Screen (p. 22-3).</p> <p>The quantity of this item ordered for each unshipped customer order.</p>  |
| Used Locs             | <p>This field only prints if you have the Warehouse Management module installed and if you selected to print warehouse locations by keying <b>Y</b> in the <b>Show WH Locations</b> field on the Receiving List by PO Number Selection Screen (p. 22-3).</p> <p>If any locations currently contain this item, they are printed here. Write in the quantity stored in this location, if any, on the blank line following the word <b>Qty</b>. You must specify this quantity when keying receipts through Receiver Entry/Maintenance (MENU POMAIN) or Enter or Change PO Receipts (MENU POMAIN) or Warehouse Management (MENU WMMAIN).</p> <p>To the right of the location, the number shown in parenthesis is the total capacity size of that location.</p>   |
| Avail Locs            | <p>This field only prints if you have the Warehouse Management module installed and if you selected to print warehouse locations by keying <b>Y</b> in the <b>Show WH Locations</b> field on the Receiving List by PO Number Selection Screen (p. 22-3).</p> <p>Up to four locations that are available to store this item are printed. You may specify 1 through 4 on the Receiving List by PO Number Selection Screen (p. 22-3). Write in the quantities stored in each location on the blank line following the word <b>Qty</b>. You must specify this quantity when keying receipts through Receiver Entry/Maintenance (MENU POMAIN) or Enter or Change PO Receipts (MENU POMAIN).</p> <p>To the right of the location, the number shown in parenthesis is the total capacity size of that location.</p> <p>When the item being received is a serial item, one <b>Serial:</b> line prints below the available locations to identify the serial numbers of the items received.</p> |

### Receiving List

| Report/Listing Fields | Description   |
|-----------------------|---|
| Lot No., Serials      | When the item being received is a lot control item, one <b>Lot:</b> field prints to the right of the available locations with a line to record the lot numbers received in this shipment.<br><br>When the item being received is a serial item, one <b>Serial:</b> line prints below the available locations to identify the serial numbers of the items received in this shipment. |
| (Order Comments)      | Any order comments keyed during Order Entry are printed, aligned beneath the <b>Our/Mfg Number</b> field.   |

---

---

Use this option to print Purchase Orders, that are approved and not on hold, for any requisitions created through:

- Enter or Change Requisitions (MENU POMAIN)
- Special Order Automatic Req Creation (MENU POMAST)
- Enter, Change & Ship Orders (MENU OEMAIN), if the auto-creation process is being used for special orders based on company-level special order options defined through Special Order Options Maintenance (MENU XAFILE) or vendor-level special order options defined through Vendors Maintenance (MENU POFILE)

As you print Purchase Orders through this option, the selected POs are posted through the Transaction Processor and inventory is updated appropriately. This causes inventory update reports to print.

If you use this option to print a Purchase Order that is to be sent via EDI or fax, the jobs to perform these tasks are submitted when running this option. Refer to the EDI User Guide and FAX User Guide for EDI and FAX processing, respectively.

If Mail Server is installed, this option can be used to e-mail Purchase Orders in addition to printing, faxing or sending them through EDI. Refer to “Vendors Maintenance” on page 43-1 (MENU POFILE) for information about e-mailing Purchase Orders.

If you use this option to print Purchase Order returns, the print process that occurs when this option runs updates the Receipts History File (RCPT), and the PO Returns Account changes accordingly. In other words, PO returns post to General Ledger at print process time as opposed to when PO Receipts Register (MENU POMAIN) is run. This allows you to perform receipt validation against the PO return.

---

**NOTE:** This same process occurs if you press **F6=PRT/FAX PO** on the End Requisition Screen (p. 6-92) available through Enter or Change Requisitions (MENU POMAIN).

---

Additionally, you may use this option to reprint Purchase Orders, if needed. For example, if you change a PO through the Req/PO Inquiry (MENU POMAIN) or the Vendor Order/Shipment Inquiry (MENU POMAIN), you may need a new hard-copy of that Purchase Order to reflect the updates. The option to reprint Purchase Orders from history is also provided when selecting to reprint Purchase Orders. Purchase Orders from history are those that have been closed and updated through Day-End Processing (MENU XAMAST).

---

NOTE: If you originally transmitted a Purchase Order using EDI or FAX, you may still produce a hard-copy reprint of that Purchase Order through this option. A message will print at the top of the hard-copy identifying the original method of transmission.

---

## Purchase Orders

---

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| <b>Title</b>  | <b>Purpose</b>   |
|---|--|
| Print Purchase Order Selection Screen                 | Use to select the approved requisitions for which Purchase Orders will print.                                      |
| Reprint History Purchase Order List Screen            | Use to select a list of Purchase Orders in history for reprinting.   |
| Reprint History Purchase Orders Output Options Screen | Use to select output options for the Purchase Orders in history you are reprinting.                                |
| G/L Posting Date Selection Screen                     | Use to select the date for which transactions will be posted.  |
| Purchase Order Print Exceptions Listing               | Prints immediately before Purchase Orders to indicate the number of Purchase Orders that will print.               |
| Purchase Order  | Prints the Purchase Order for the requisition that was entered through Enter or Change Requisitions (MENU POMAIN). |
| Multi-WH Summary Purchase Order                       | If there are any Multi-WH purchase orders, this summary prints after all purchase orders have been printed.        |

---

## Print Purchase Order Selection Screen

```

          PRINT PURCHASE ORDER
Company?   01      A & C Office Supply

Entry Date: .....      To: .....
PO No.:    .....      To: 999999
PO Date:   .....
Order Type: .....      (O,R, )
Number of History Purchase Orders Selected: 123      Confirm: _ (Y,N)
F2=Hist PO List                                     F3=Cancel

```

This screen is displayed when you select option 20 - Purchase Orders on MENU POMAIN. Use this screen to select the approved requisitions for which Purchase Orders will print. To print Purchase Orders for all approved requisitions, leave all of the fields on this screen blank (except **Reprint**).

Refer to the Cross Applications User Guide for an explanation of the rules for entering From/To Ranges.

---

NOTE: If the Reprint History Purchase Order List Screen (p. 23-9) is used to select a list of Purchase Orders in history for printing, that list will override the selection criteria on this screen and the fields on this screen will be cleared and protected.

---

---

**Print Purchase Order Selection Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Company            | <p>This field is display only if the <b>Multi Company</b> field is set to <b>N</b> through System Options Maintenance (MENU XAFILE).</p> <p>Key the company number associated with the Purchase Orders that you want to print.</p> <p><i>Default Value:</i> The default company defined in Authority Profile Maintenance (MENU XASCTY) if one has been defined; otherwise, this is the default company defined through System Options Maintenance (MENU XAFILE)</p> <p><i>Valid Values:</i> A valid company number defined through Company Name Maintenance (MENU XAFILE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(N 2,0) Display/Optional</p>  |
| Reprint            | <p>Use this field to indicate if you want to reprint Purchase Orders. Purchase Orders can be reprinted if, for example, they have been changed through Req/PO Inquiry (MENU POMAIN) or Vendor Order/Shipment Inquiry (MENU POMAIN).</p> <p>Key <b>Y</b> in this field to reprint Purchase Orders that previously printed. When you select to reprint Purchase Orders, inventory is not updated. Therefore, the inventory update reports are not printed, and the purchase order displays a message in the center of the document indicating that the reports are not printed.</p> <hr/> <p>NOTE: You may reprint open, partially received, or closed Purchase Orders. You may also reprint Purchase Orders from history [purchase orders that have been closed and updated through Day-End Processing (MENU XAMAST)] if you are authorized through Application Action Authority (MENU XASCTY).</p> <hr/> <p>Leave this field as <b>N</b> if you are not reprinting Purchase Orders.</p> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p> |

---

**Print Purchase Order Selection Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| From History       | <p>This field displays only if you are authorized through Application Action Authority (MENU XASCTY) to reprint Purchase Orders from history.</p> <p>Use this field to indicate if you want to reprint only Purchase Orders from history.</p> <p>Key <b>Y</b> in this field to reprint Purchase Orders from history.</p> <p>When you select to reprint Purchase Orders from history, you can use the selection criteria on this screen or, alternatively, use the Reprint History Purchase Order List Screen (p. 23-9) to enter a list of specific Purchase Orders from history to be reprinted (see F2=HIST PO LIST).</p> <hr/> <p>NOTE: This field can only be <b>Y</b> if the <b>Reprint</b> field is <b>Y</b>.</p> <hr/> <p>Leave this field as <b>N</b> if you are not reprinting Purchase Orders from history.</p> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p> |
| Buyer              | <p>Use this field to print Purchase Orders for a specific buyer.</p> <p>Key the desired buyer code. Purchase Orders will print only for requisitions created for this buyer.</p> <p><i>Valid Values:</i> a buyer codes are defined through Buyers Maintenance (MENU POFIE). Buyer codes may be assigned to a vendor (through MENU POFIE), vendor/warehouse (through MENU POFIE), vendor/item (through MENU POFIE), and/or vendor/item/warehouse (also through MENU POFIE).</p> <p>(A 3) Optional</p>  |
| Warehouse          | <p>Use this field to print Purchase Orders for a specific warehouse.</p> <p>Key the Warehouse ID code in this field. Purchase Orders will print only for this warehouse's requisitions.</p> <p><i>Valid Values:</i> A valid warehouse number defined through Warehouse Numbers Maintenance (MENU IAFIE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(A 2) Optional</p>   |
| Req No             | <p>Use to select the requisition number(s) for which to print purchase orders.</p> <p>Key the range of requisition numbers or leave blank to include all.</p> <p>Optional</p>   |
| Vendor             | <p>Use to select the vendor number(s) for which to print purchase orders.</p> <p>Key the range of vendor numbers or leave blank to include all.</p> <p><i>Valid Values:</i> Any existing vendor(s) specified in Vendors Maintenance (MENU POFIE/MENU APFILE).</p> <p>Optional</p>   |

### Print Purchase Order Selection Screen Fields and Function Keys

| Field/Function Key                         | Description  |
|--|--|
| Entry Date                                 | <p>Use to select the range of entry dates for which to print purchase orders.</p> <p>Key the range of entry dates or leave blank to include all.</p> <p><i>Valid Values:</i> Key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFILE).</p> <p>Optional</p>                    |
| PO No                                      | <p>Use to select the purchase order number(s) for which to print purchase orders.</p> <p>Key the range of purchase order numbers or leave blank to include all.</p> <p>If you are reprinting Purchase Orders from history (i.e., the <b>From History</b> field is <b>Y</b>), you can, alternatively, select a list of Purchase Orders to reprint using the <b>F2=HIST PO LIST</b> key.</p> <p>Optional</p>   |
| PO Date                                    | <p>Use to select the range of purchase order dates for which to print purchase orders.</p> <p>Key the range of purchases order dates or leave blank to include all.</p> <p><i>Valid Values:</i> Key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFILE).</p> <p>Optional</p> |
| Order Type                                 | <p>Use this field to select the type of Purchase Order to print.</p> <p>Key <b>O</b> to print only order requisitions.</p> <p>Key <b>R</b> to print only return requisitions.</p> <p>Leave this field blank to print both order requisitions and return requisitions.</p> <p><i>Valid Values:</i> O, R, blank</p> <p>(A 1) Optional</p>  |
| Number of History Purchase Orders Selected | <p>When you select to reprint Purchase Orders from history (i.e., the <b>From History</b> field is <b>Y</b>) and press <b>ENTER</b>, this field will appear and display the number of Purchase Orders from history that will be reprinted based on your selection criteria. You will be able to confirm or cancel your selection using the corresponding <b>Confirm</b> field. This helps avoid accidental reprinting of huge numbers of Purchase Orders in history.</p> <p>Display</p>      |

---

**Print Purchase Order Selection Screen Fields and Function Keys**

---

| Field/Function Key | Description  |
|--------------------|--|
| Confirm            | <p>When you select to reprint Purchase Orders from history (i.e., the <b>From History</b> field is <b>Y</b>) and press <b>ENTER</b>, this field will appear and allow you to confirm or cancel the reprint of Purchase Orders from history. The number to be reprinted from history is indicated in the <b>Number of History Purchase Orders Selected</b> field.</p> <p>Key <b>Y</b> to reprint the indicated number of Purchase Orders from history.<br/>Key <b>N</b> to cancel the reprint of the Purchase Orders from history.</p> <hr/> <p>NOTE: If the number to be reprinted from history is zero (as indicated in the <b>Number of History Purchase Orders Selected</b> field), this field is protected and displays <b>N</b> since there are no Purchase Orders from history to reprint.</p> <hr/> <p>(A 1) Required</p>   |
| F2=Hist PO List    | <p>The <b>F2=HIST PO LIST</b> key displays only if you are authorized through Application Action Authority (MENU XASCTY) to reprint Purchase Orders from history. This key is also only allowed when a valid company number is entered in the <b>Company</b> field, and the <b>From History</b> field is <b>Y</b>, indicating that you are reprinting Purchase Orders from history.</p> <p>Press <b>F2=HIST PO LIST</b> to enter a list of Purchase Orders in history for reprinting. The Reprint History Purchase Order List Screen (p. 23-9) will appear.</p> <hr/> <p>NOTE: The <b>F2=HIST PO LIST</b> key can be used as an alternative way to reprint a selected list of Purchase Orders instead of the selection criteria on this screen. If you select a list of Purchase Orders using this key, this list will replace/override the criteria entered on this screen.</p> <hr/> |
| F3=Cancel          | Press <b>F3=CANCEL</b> to cancel this option. MENU POMAIN will display.  |

## Print Purchase Order Selection Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Enter              | <p>Press <b>ENTER</b> to confirm your selections of the requisitions to print. The Report Options Screen will display (refer to the Appendix section of the Cross Applications User Guide for details about this screen). However, you will not be able to change the <b>Submit to Batch</b> field on that screen since this job is submitted to the Transaction Processor.</p> <p>After your selections on the Report Options Screen, the job is submitted to the Transaction Processor. If the interface is on between General Ledger and Inventory and a PO return is detected when extracting POs for this print process, the G/L Posting Date Selection Screen (p. 23-15) displays before the job is submitted to the Transaction Processor.</p> <p>Once the job completes, the Purchase Order Print Exceptions Listing (p. 23-17), Purchase Order (p. 23-18), and inventory update reports print.</p> <p>When reprinting changed Purchase Orders (i.e., <b>Y</b> in the <b>Reprint</b> field), the inventory update reports are not printed since inventory has already been updated.</p> <hr/> <p><b>NOTE:</b> The Purchase Orders must print on a special forms type. The default in the <b>Forms type</b> field is <b>POxx</b>, where <b>xx</b> is the number of the company (if purchase orders were selected for all companies, <b>00</b> is used as the company number).</p> <hr/> <p>When reprinting Purchase Orders from history (i.e., the <b>From History</b> field is <b>Y</b>), when you press <b>ENTER</b>, the number of history Purchase Orders selected will appear at the bottom of the screen, and you will be able to confirm or cancel your selection. If you do not enter any selection criteria (except company), a warning message will first appear informing you that the History file will be searched and there is a potential for a huge number of Purchase Orders to be reprinted. Once you confirm the reprint (i.e., the <b>Confirm</b> field is <b>Y</b>) and press <b>ENTER</b>, the Reprint History Purchase Orders Output Options Screen (p. 23-11) will appear.</p> |

## Reprint History Purchase Order List Screen

REPRINT HISTORY PURCHASE ORDER LIST

Company No: 1 A & C Office Supply

PO Numbers: .....

.....

.....

.....

.....

F12=Return

This screen displays after pressing F2=HIST PO LIST from the Print Purchase Order Selection Screen (p. 23-3). Use this screen to enter a list of Purchase Orders in history for reprinting. Up to 25 Purchase Orders can be entered. This list can be used as an alternative way to reprint a selected group of Purchase Orders in history. This list will replace/override the selection criteria on the Print Purchase Order Selection Screen (p. 23-3).

### Reprint History Purchase Order List Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Company No         | This field displays the company number selected on the Print Purchase Order Selection Screen (p. 23-3) for which you are selecting a list of Purchase Orders from history to reprint.<br>Display  |
| PO Numbers         | Use this field to enter up to 25 Purchase Order numbers that you want to reprint from history. This list will replace/override the selection criteria on the Print Purchase Order Selection Screen (p. 23-3).<br><i>Valid Values:</i> A valid Purchase Order number in history, and you must be authorized to this Purchase Order warehouse.<br>(25 @ A 6) Optional |
| F12=Return         | Press F12=RETURN to return to the Print Purchase Order Selection Screen (p. 23-3) without saving the Purchase Order list.   |

### Reprint History Purchase Order List Screen Fields and Function Keys

---

| Field/Function Key | Description  |
|--------------------|--|
| Enter              | Press <b>ENTER</b> to confirm the Purchase Order list and return to the Print Purchase Order Selection Screen (p. 23-3).   |
|                    | <hr/> <p>NOTE: The list of Purchase Orders entered on this screen will replace/override the selection criteria on the Print Purchase Order Selection Screen (p. 23-3) and the values on the Print Purchase Order Selection Screen (p. 23-3) will therefore be cleared and protected.</p> <hr/> |

---

## Reprint History Purchase Orders Output Options Screen

```
REPRINT HISTORY PURCHASE ORDERS OUTPUT OPTIONS

Output Method:  Y = Vendor PO Output Method
                 C = Custom Output Method
                 Print:  N
                 Fax:    N
                 Email:  N

F3=Cancel                      F12=Return
```

This screen displays after confirming to reprint Purchase Orders from history and pressing **ENTER** from the Print Purchase Order Selection Screen (p. 23-3). This screen can also be displayed from the Req/PO Inquiry option (MENU PMAIN) after displaying a PO in history and pressing **F9=REPRINT** on the End Requisition/Purchase Order Screen (p. 14-39).

Use this screen to select an output option appropriate to the purpose of the Purchase Orders in history reprint. For example, when the reason for the reprint is to provide a hard-copy (copies) of Purchase Order(s) in history for an internal audit, then **Custom Output Method = C** with **Print = Y** should be selected to have all Purchase Order(s) printed (regardless of the output method that was used originally for each Purchase Order or Purchase Order vendor's output options). Or, for example, selecting to fax or email a copy of the Purchase Order might be the best option if reprinting is needed due to a request from an outside auditor or supplier that has this preference.

## Reprint History Purchase Orders Output Options Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Output Method      | <p>This field specifies the output characteristics for this reprint of Purchase Orders from history.</p> <p>Key <b>V</b> if you want the current vendor's PO output options to be used for each reprinted Purchase Order in history.</p> <hr/> <p>NOTE: EDI output will not be available since this is not a re-order. If no other options (besides EDI) are assigned to this vendor, this history PO will be printed. Also, when a PO vendor's option is <b>Email = Y</b>, but the vendor's email address is blank, this PO will be emailed to your email address. If your email address is blank, then this PO will be printed. When the PO vendor's option is <b>Fax = Y</b> but the vendor's fax number is blank, then this PO will be printed.</p> <hr/> <p>Key <b>C</b> if you want the custom output method to be used for each reprinted Purchase Order in history, regardless of each PO's original output options or PO vendor's output options. If this option is selected, at least one of the output means for this reprint must be defined as <b>Y</b> (print, fax or email).</p> <p>(A 1) Required</p> |
| Print              | <p>This field is displayed only if the Fax module or Mail Server module is installed.</p> <p>This option is available only when the <b>Output Method</b> field is <b>C</b> (for custom output method).</p> <p>Key <b>Y</b> to have a printed copy of all reprinted history Purchase Orders generated, regardless of each Purchase Order's original output options or Purchase Order vendor's output options.</p> <p>Key <b>N</b> if you do not want to have a printed copy of all reprinted history Purchase Orders generated, regardless of each Purchase Order's original output options or Purchase Order vendor's output options.</p> <hr/> <p>NOTE: If the <b>Output Method</b> field is <b>C</b> at least one of the output means for this reprint must be defined as <b>Y</b> (print, fax or email).</p> <hr/> <p><i>Valid Values:</i> Y or N</p> <p>(A 1) Required</p>  |

## G/L Posting Date Selection Screen

Purchase Order Receipt Post

G/L Posting Date:    \_8/18/09

**NOTE:** This screen displays only if the interface is on between General Ledger and Inventory [as determined by entering **Y** in the **Interfaces: I/A to G/L** field through Company Name Maintenance (MENU XAFILE)] and a PO return was detected when extracting POs for this print process.

This screen displays after pressing **ENTER** from the Report Options Screen; refer to the Appendix section of the Cross Applications User Guide for details about this screen. Use this screen to select the date for which transactions will be posted.

### G/L Posting Date Selection Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| PO Print Post      | This header information indicates the function being performed.<br>Display  |
| G/L Posting Date   | Key a date for which the selected transactions will be posted. This date will be used instead of the default current system date.<br><i>Default Value:</i> The current system date<br><i>Valid Values:</i> Key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFILE).<br>(N 6,0) Required |

### G/L Posting Date Selection Screen Fields and Function Keys

---

| Field/Function Key | Description   |
|--------------------|---|
| Enter              | Press <b>ENTER</b> to confirm your selection and submit the job to the Transaction Processor. A message displays informing you that the job has been submitted and the system prompts you to press <b>ENTER</b> to continue. After you press <b>ENTER</b> , the job starts processing in the Transaction Processor and <b>MENU POMAIN</b> displays. For more information about the Transaction Processor, refer to the Cross Applications User Guide. |

This is the Purchase Order printed for the requisition that was entered through Enter or Change Requisitions (MENU POMAIN). Only those Purchase Orders that meet the criteria selected on the Print Purchase Order Selection Screen (p. 23-3) are printed.

If there are any Multi-WH purchase orders, a Multi-WH Summary Purchase Order (p. 23-21) is printed after all purchase orders have been printed. Refer to the next section for an explanation of the item summary.

### NOTES:

- If you originally printed a PO using EDI or FAX, you may still produce a hardcopy reprint of that PO through this option. A message will print at the top of the hardcopy identifying the original method of printing.
- **\*\*RETURN\*\*** is printed on the Purchase Order if the requisition is for a return order.
- Purchase Orders will print using form type 1 or form type 2, depending on your selection in System Options Maintenance (MENU XAFIL2).
- The date will print using the **Date Format** specified for the vendor's country through Country Name Maintenance (MENU ARFIL2), or if that field is blank, the date will print using the system's **Default Date Format** specified through System Options Maintenance (MENU XAFIL2).
- When printing in batch, requisition(s) will not meet the selection criteria to print on the Purchase Order if they contain a line(s) whereby a held special order is set to not allow PO printing when under one of the restricted Credit or Slow Pay hold codes specified in Purchasing Options Maintenance (MENU XAFIL2). The Purchase Order printing will simply be bypassed for the particular requisition(s).

---

**Purchase Order**

| Report/Listing Fields             | Description   |
|-----------------------------------|---|
| PO Number/<br>Transmission Method | <p>The number of the Purchase Order and the method used for printing the PO (EDI or FAX, if applicable). The purchase order number is the same as the requisition number if the <b>Use Requisition No. for Purchase Order No.</b> field in Purchasing Options Maintenance (MENU XAFILE) is set to <b>Y</b>. If it is set to <b>N</b>, purchase order numbers are assigned independently of requisition numbers.</p> <p>If this is a Multi-WH PO, the PO number consists of two numbers separated by a hyphen. The first number is the Multi-WH PO number, which links all of the vendor's individual POs together. This number is sequentially assigned and appears at the top of the Multi-WH Summary Purchase Order (p. 23-21).</p> <p>The second part of the PO number is the individual PO number, which will be used for receiving in the individual warehouses.</p> |
| Vendor                            | The number, name, and address of the vendor with whom the Purchase Order is placed.   |
| Ship-To                           | The warehouse ship-to address or the customer's shipping address for drop shipment purchase orders.   |
| Company Number                    | The number of the company for which the Purchase Order was created.   |
| Warehouse                         | The ID of the warehouse to receive the items on the Purchase Order.   |
| Order Date                        | The date that the Purchase Order was printed.   |
| Shipping Instructions             | The shipping instructions, if any, for the Purchase Order.  |
| Misc. Notes                       | The text in the <b>Misc Notes</b> field on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13), if any.  |
| Payment Terms                     | The payment terms of the Purchase Order, if any.  |
| Requisition Number                | The number of the requisition from which this Purchase Order was created.   |
| Buyer Number                      | The number of the buyer responsible for creating the Purchase Order.  |
| FOB Code Description              | The description for the FOB code on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13), if any.   |
| Quote Number                      | The quote number, if any, provided by the vendor for this Purchase Order.   |
| Approval Code                     | The approval code used when the requisition was approved to become a Purchase Order.  |

## Purchase Order

| Report/Listing Fields  | Description   |
|--|---|
| Reprint Message  | <p>For an Open Purchase order, this is the message that indicates this is a reprint - discard original, if applicable.</p> <p>For a Purchase Order in history, this is the message that indicates this is a closed purchase order - do not reorder.</p>   |
| Item Number<br><br>(Manufacturer's, Stocking, GTIN, if applicable) | <p>The number of the item. The manufacturer's item number, the stocking item number, or both, depending on your specification for this vendor.</p> <p>The Global Trade Item Number (GTIN) may also print if the vendor is set up as such, as defined through Vendors Maintenance (MENU POFILE), and if one exists for the item and Buying U/M on the purchase order.</p>  |
| Due Date   | The date by which this item should be received.   |
| Order Quantity   | The quantity of this item being ordered.  |
| Buying U/M   | The unit of measure in which the item is purchased; the buying unit of measure.   |
| Cost   | The unit cost of the item, after any discounts.   |
| Costing U/M  | The unit of measure for which the item cost is applied; the costing unit of measure.  |
| Taxable code   | The tax code for the item: <b>Y</b> if the item is taxable; <b>N</b> if it is not.  |
| Item Total   | The total dollar value of the ordered item.   |
| Item Description/<br>Comments                                      | The description of the item as specified on the requisition. If any item comments were keyed for this item, they are printed below the item description.  |
| Contract   | If the item cost is based on a numbered contract, the contract number is printed here. Otherwise, this field does not appear.   |
| Contract Information   | If the item cost is based on a contract consisting of a buy/get special, the buy/get specifications are printed here.   |
| Order Comments   | Any order comments for the Purchase Order are printed here.   |
| Purchase Order Totals  | <p>The following total values for the Purchase Orders are printed:</p> <ul style="list-style-type: none"> <li>• <b>SUBTOTAL:</b> The subtotal of the Purchase Order, before tax.</li> <li>• <b>TAX:</b> The total amount of the tax applied to this Purchase Order. Tax is calculated only for this item with a <b>Taxable Code</b> of <b>Y</b>. The tax rate is specified on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13).</li> <li>• <b>TOTAL:</b> The total value of the Purchase Order: the sum of the subtotal and tax.</li> </ul> |

## Multi-WH Summary Purchase Order

| Atlanta                     | GA     | 30339 |                  |        |
| A900                        |        |       |                  |        |
| 4 Drawer Steel File Cabinet |        |       |                  |        |
| Black                       |        |       |                  |        |
| 1 Hartford, CT              | 5.000  | EA    | PO:01/S00114     |        |
| 3 Dallas, TX                | 4.000  | EA    | PO:01/S00115     |        |
| Total                       | 9.000  |       | 71.87000         | 646.83 |
| Total PO Value              | 646.83 |       |                  |        |

If there are any Multi-WH purchase orders, this summary is printed after all purchase orders have been printed. If a Multi-WH PO exists, the PO number consists of two numbers separated by a hyphen. The first number is the Multi-WH PO number, which links all of the vendor's individual POs together. This number is sequentially assigned and appears at the top of this summary. See the Purchase Order (p. 23-18).

## Multi-WH Summary Purchase Order

| Report/Listing Fields   | Description  |
|-------------------------|--|
| (Multi-WH PO Number)    | The Multi-WH purchase order number is printed here.  |
| (Vendor)                | The name and address of the vendor with which the Purchase Order is placed.  |
| (Item information)      | The number and description of the ordered item. The item number can be expressed as our item number, the manufacturer's item number, or both, depending on your specification for this vendor. |
| (Warehouse Information) | The ID and description of the warehouse for which the item is ordered.   |
| (Order Quantity)        | The quantity and unit of measure ordered for the corresponding warehouse.  |
| PO                      | The company number and individual PO number for the corresponding warehouse.   |
| Total                   | The total quantity of the item ordered for all warehouses.   |
| (Unit Cost)             | The item's unit cost.  |

### Multi-WH Summary Purchase Order

| Report/Listing Fields | Description  |
|-----------------------|--|
| (Extended Cost)       | The total cost of the item ( <b>Total</b> quantity x <b>Unit Cost</b> ).   |
| Total PO Value        | The total value of all Multi-WH purchase orders printed. This is the total of all of the <b>Extended Cost</b> lines on the report. |

1 errors occurred during revaluation.  
 If you were printing Purchase Orders for approved requisitions, they will not be printed.  
 To correct this, the requisitions in error will need to be split into multiple orders to allow a normal revaluation to occur.

## Revaluation Error Report

This report prints if any revaluation errors occur when you attempt to print Purchase Orders through Purchase Orders (MENU POMAIN). For example, assume that you entered a requisition for a foreign currency vendor. Subsequently, the exchange rate for a currency used on that requisition gets changed through Exchange Rate Inquiry (MENU ICMAN). If the change in this exchange rate causes the requisition's order value to exceed \$9,999,999, and you attempt to print the Purchase Order for the requisition through Purchase Orders (MENU POMAIN), a revaluation error will occur and this report will print. A break message is issued to the user: **Some Purchase Orders were not printed due to Revaluation Errors. A report has been printed.**

This report displays the requisition's order value prior to the exchange rate change and after the exchange rate change. Instructions on how to resolve this error also display on the report.

---

Use this option to post the purchase order receipts that were keyed through Enter or Change Receivers or PO Receipts (POMAIN). This option is NOT used to post receipts that were keyed into Receivers via Enter or Change Receivers or PO Receipts (MENU POMAIN). For information concerning the posting of receipts using receiver processing, refer to Enter or Change Receivers or PO Receipts (MENU POMAIN).

Posting purchase order receipts means that inventory and purchasing files are updated to reflect the change in inventory, and the new status of the purchase order. Since inventory and purchasing master files are updated, this job is sent to the Transaction Processor. For more information about the Transaction Processor, see the Cross Applications User Guide.

When Warehouse Management is installed and the transaction is for a Lot Item, if the transaction is a receipt or an adjustment and the Lot Aging Date was entered on the Lot Assignments Screen, this overridden date will be used as the Lot Aging Date to update the WM Location Balance File (WMBAL). If the Lot Item already exists in the selected put-away location, the earliest of the two aging dates will be used for the receipt transaction. The WM Lot Date History File (WMLDH) will track the lot aging date and will store both the original and new aging date for audit purposes. If a Lot Aging Date was not entered on the Lot Assignments Screen, the Receipt Date will be used as the Log Aging Date to update the WM Location Balance File (WMBAL).

---

### Important

These inventory postings will update the Item Balance File, any quantities on-hand, etc. Related general ledger updates do not occur, however, until Day-End Processing (MENU XAMAST) or Post IA Transactions to G/L (MENU IAMAST) is run. Once these general ledger postings occur, general ledger information will be incorporated into all applicable item files.

---

## PO Receipts Register

---

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| <b>Title</b>   | <b>Purpose</b>   |
|--|--|
| PO Receipt Group Post Screen                           | Use to select the receipt group in which purchase order receipts were keyed.                                   |
| Post Purchase Order Receipts Exception Report          | Prints those order items that are not updated in Inventory Accounting through this option.                     |
| Backorder Release Report                               | Prints customer order information, and item information.   |
| Receipt Post Special Order Exception Report            | Prints those special order items that are not updated in Inventory through this option (PO Receipts Register). |
| Orders Split Due To Special Orders Receipt Post Report | Prints those orders split because of special order line items being posted.                                    |

---

Job Template:  _.....      Modify Selections:  N

Group ID:  AH...

F3=Exit      F4=Group List      F5=New Group      F9=Job Template List
```

This screen displays by selecting option **22** - PO Receipts Register (MENU POMAIN). This screen is used to select the receipt group in which purchase order receipts were keyed. You also have the option to select the job template to be used for the Purchase Order Receipt Post job.

The receipts in the specified receipt groups will be posted and the open purchase order will be assigned a new status, if applicable. Once a receipt group has been submitted for posting, this screen will reappear for posting of another receipt group, if desired.

The status of the receipt group also will change to indicate its state. When the receipt group has been selected for posting but has not yet been submitted to the Transaction Processor, the status will be **P** (for posting). Once the job has been submitted to the Transaction Processor, the status will be changed to **T** (for Transaction Processor).

**PO Receipt Group Post Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Job Template       | <p>Job templates are defined through Job Template Maintenance (MENU XAFILE) to allow parameter selections to be pre-defined for a particular process (such as, GL Year End) ahead of time. Once defined, this template can be used repeatedly, eliminating the need to manually provide these parameters for every submission of this job process.</p> <p>For the current job submission, you can enter a pre-defined job template in this field to use the established parameters (with or without any modifications), or you can leave this field blank and the system will prompt you to provide your own parameters.</p> <p>If you enter a pre-defined job template in this field, and do not want to make any changes to the established parameter selections for this current job submission, key <b>N</b> in the <b>Modify Selections</b> field. You will then bypass all the output parameter screens.</p> <p>If you enter a pre-defined job template in this field, but want to review and/or make modifications to the established parameter selections for this current job submission, key <b>Y</b> in the <b>Modify Selections</b> field. You will be presented with the established parameters for that job template and can review/make changes as needed for this job.</p> <p>If you leave this field blank, you will be presented with a series of prompts for you to provide the desired parameters for this current job submission.</p> |
|                    | <hr/> <p>NOTE: To review a list of existing job templates that have been created for the Purchase Order Receipt Post job, press <b>F9=JOB TEMPLATE LIST</b>.</p> <hr/>   |
|                    | <p><i>Valid Values:</i> A job template defined for Purchase Order Receipt Post jobs (that is, PO605P) through Job Template Maintenance (MENU XAFILE).<br/>(A 10) Optional</p>  |

---

**PO Receipt Group Post Screen Fields and Function Keys**

---

| Field/Function Key   | Description  |
|----------------------|--|
| Modify Selections    | <p>If using a job template (you keyed a job template name in the <b>Job Template</b> field on this screen or select one via F9=JOB TEMPLATE LIST), this field determines if you will be presented with that template's parameters for review and/or modification for this current job submission.</p> <p>Key <b>Y</b> if you want to be able to review and/or modify the selections of the indicated job template. Any changes you make to the template through this post run will not impact the actual predefined template. The changes apply for this run of the job only. If you key <b>Y</b>, a series of selection screens will display allowing you to review and/or make changes. For details about the screens that display, refer to Job Template Maintenance (MENU XAFILE) in the Cross Applications User Guide.</p> <p>Key <b>N</b> if you want to use the template as-is and you do not want to make any modifications. If you key <b>N</b>, a series of selections screens will not be displayed.</p> <p><i>Valid Values:</i> Y or N; cannot be Y if the <b>Job Template</b> field is blank.</p> <p>(A 1) Optional</p> |
| Group ID             | <p>Key the one to five character Group ID (or leave the default) of the receipt group to be included in the report. (The F5=NEW GROUP function key is available to clear the field prior to keying a group ID, if desired).</p> <p>Refer to F4=GROUP LIST to display a list of existing receipt groups.</p> <p><i>Default Value:</i> The <b>Workstation ID</b> of the physical workstation.</p> <p>(A 5) Required</p>  |
| F3=Exit              | Press F3=EXIT to exit from this option. MENU POMAIN will display.  |
| F4=Group List        | Press F4=GROUP LIST to display a list of existing receipt groups. The PO Receipt Processing Group Selection Screen (p. 8-10) will display.   |
| F5=New Group         | Press F5=NEW GROUP to clear the <b>Group ID</b> field on this screen prior to keying a different receipt group ID.   |
| F9=Job Template List | <p>Press F9=JOB TEMPLATE LIST to display the Job Template List Screen, where you can review a list of existing job templates that have been created for Purchase Order Receipt Posts.</p> <p>Refer to Job Template Maintenance (MENU XAFILE) in the Cross Applications User Guide for further details.</p>   |

---

### PO Receipt Group Post Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Enter              | <p>Press <b>ENTER</b> to confirm your group selection. The PO Receipt Processing Screen (p. 8-14) displays. Refer to this screen as presented and explained in Enter or Change Receivers or PO Receipts (POMAIN).</p> <p>Additionally, depending on your selections in the <b>Job Template</b> and <b>Modify Selections</b> fields on this screen, various job template screens may or may not display once you press <b>ENTER</b>. For details about job template screens, refer to Job Template Maintenance (MENU XAFILE) in the Cross Applications User Guide.</p> <p>If there are any order items that cannot be posted, the Post Purchase Order Receipts Exception Report (p. 24-7) will print. If any of the items that could not be posted are special order items, a message will display (Some PO Receipts not posted) at the terminal and the Receipt Post Special Order Exception Report (p. 24-11) will print. For more information concerning orders not posted, see the Post Purchase Order Receipts Exception Report (p. 24-7) and the Receipt Post Special Order Exception Report (p. 24-11).</p> |

---

## Post Purchase Order Receipts Exception Report

| ITEM NUMBER   | SUBSTITUTE ITEM NUMBER | REC DATE | ORD QTY | REC'D QTY | REC'D CMPLT | RECEIPT VALUE | ASSGN  |
|---|------------------------|----------|---------|-----------|-------------|---------------|--------|
| PO NO: 100007 VENDOR: 10 J&F INDUSTRIAL TOOL SUPPLY |                        |          |         |           |             |               |        |
| I1500   | I99                    | 10/18/11 | 10.000  | CAS       | 5.000       | 540.00        | NO     |
|   |                        |          |         |           | PO TOTAL:   | 5             | 540.00 |

This report indicates those order items that are not updated in Inventory Accounting through this option. An order item is not updated in Inventory Accounting if:

- It has not been assigned to a warehouse location, and/or the lot or serial number has not been recorded (applicable only if Warehouse Management is installed.)
- If the purchase order no longer exists.

NOTE: For additional posting exception information particular to special order items, see the Receipt Post Special Order Exception Report (p. 24-11).

If Warehouse Management is installed, all items on a purchase order must be assigned before any receipts for the purchase order are posted.

### Post Purchase Order Receipts Exception Report

| Report/Listing Fields  | Description  |
|------------------------|--|
| PO No                  | The number of the purchase order prints if a purchase order is in use by another workstation.  |
| Vendor                 | The number and name of the vendor for whom the purchase order was created will print if a purchase order is in use by another workstation.   |
| Item Number            | The number of the item that was originally ordered, but was not updated through this option.   |
| Substitute Item Number | The number of substitute item, if any, that was shipped in place of the item printed in the <b>Item Number</b> column. The substitute item number is specified during Enter or Change Receivers or PO Receipts (MENU POMAIN) on the PO Enter Item Detail Screen (p. 8-46). |
| Rec Date               | The date on which receipts were entered for this item.   |
| Ord Qty                | The quantity, and unit of measure, originally ordered of this item.  |
| Rec'd Qty              | The quantity, and unit of measure of this item that was received.  |

### Post Purchase Order Receipts Exception Report

| Report/Listing Fields | Description   |
|-----------------------|---|
| Rec'd Cmpl            | Indicates if the item was received complete, as specified on the PO Enter Receipts Screen (p. 8-41) or the PO Enter Item Detail Screen (p. 8-46).                                       |
| Receipt Value         | The value of the items received, based on the cost of the item when it was received.  |
| Asgn                  | This information only appears if Warehouse Management is installed to indicate if an item has not been assigned to a warehouse location and or lot/serial number has not been recorded. |

---

## Backorder Release Report

| Seq<br>No   | Item Number | Description | Req<br>Ship Dt | Received<br>Complete | Quantities<br>Received | On B/O | PO<br>Number |
|---|-------------|-------------|----------------|----------------------|------------------------|--------|--------------|

This report prints for any item that is assigned to a customer order during Enter or Change Requisitions (MENU POMAIN) on the Assign Customer Order Numbers Screen (p. 6-85). Customer order information, and item information is printed.

This report prints for any PO line item received that had been assigned to a customer order either manually, during Enter or Change Requisitions (MENU POMAIN) on the Assign Customer Order Numbers Screen (p. 6-85), or via any of the available special order/drop ship functions available in the application. For any of these backordered customer order items received either through the PO Receipts Register process or Accounts Payable Drop Ship Receipt Validation process, the customer order number/generation is provided along with the PO number on which the item was received.

### Backorder Release Report

| Report/Listing Fields | Description   |
|-----------------------|---|
| Company               | The company name for which the customer order was created.  |
| Order                 | The order/generation number for the purchase order receipt.   |
| Type                  | The order type. The order type is one of the following: <ul style="list-style-type: none"> <li>• <b>Ord</b> - Order</li> <li>• <b>Inv</b> - Invoice</li> <li>• <b>Ret</b> - Invoice return</li> <li>• <b>Fut</b> - Future order</li> <li>• <b>Mst</b> - Master order</li> <li>• <b>B/O</b> - Backorder</li> <li>• <b>Qte</b> - Quote</li> <li>• <b>Blk</b> - Blanket order</li> </ul> |

**Backorder Release Report**

| <b>Report/Listing Fields</b> | <b>Description</b>  |
|------------------------------|---|
| Status                       | The order status: <ul style="list-style-type: none"><li>• <b>Rdy for PS</b> - Ready for Pick List print</li><li>• <b>PS Printed</b> - Pick List printed</li><li>• <b>Rdy to INV</b> - Ready to invoice</li><li>• <b>Held</b> - Order held</li></ul> |
| Warehouse                    | The warehouse specified on the customer order.  |
| Ship-To                      | The company name of the ship-to address specified on the customer order.  |
| Seq No                       | The sequence number assigned to an item on a Purchase Order.  |
| Item Number                  | Item Number being received  |
| Description                  | The item description from the purchase order.   |
| Req Ship Dt                  | The requested ship date of the item.  |
| Received Complete            | <b>Yes</b> if the item was received complete during Enter or Change Receivers or PO Receipts (MENU POMAIN); <b>No</b> if it was not   |
| Quantities                   | The quantity of this item received to date ( <b>Received</b> ), and the quantity of the item that was on backorder ( <b>On B/O</b> ) before a quantity of the item was received.  |

## Receipt Post Special Order Exception Report

| P0620   | 03/17/09 | 13:09:08      | RECEIPT POST SPECIAL ORDER EXCEPTION REPORT<br>RECEIPT GROUP - MB |             |                                 | BM/APDEMO   | PAGE: 1 |                |
|---|----------|---------------|---|-------------|---------------------------------|-------------|---------|----------------|
| CO  | Order    | In Use<br>W/S | P/O<br>Number   | Item Number | Description                     | Receipt Qty | U/M     | Reason         |
| 01  | 01975/00 | A1            | 100045  | A130        | Sharp Extra Sensitive Fax Paper | 4.000       | CAS     | Ship Confirmed |
| <p>The above orders could not be processed. The items listed above have been placed back into the receipt group. Either the order was currently in use or it was in ship confirm status and partially received. Please run the PO Receipts Register again after these customer orders are no longer in use or invoiced and B/O created.</p> |          |               |   |             |                                 |             |         |                |

This report indicates those special order items that are not updated in Inventory Accounting through this option (PO Receipts Register). When a special order receipt is posted, and the order it is to update has had its Pick List printed and is currently in use, the receipt transaction is written back to the Receipt Entry File and removed from the Receipt Posting File. If this occurs, this report prints.

### Receipt Post Special Order Exception Report

| Report/Listing Fields | Description  |
|-----------------------|--|
| Headings              | <p>Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.</p> <p>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings.</p>  |
| Co                    | The number of the company for which the purchase order was created.  |
| Order                 | The order/generation number (# of times backordered).  |
| In Use W/S            | The two character ID of the workstation using the order.   |
| PO Number             | The number of the purchase order.  |
| Item Number           | The number of the special ordered item.  |
| Description           | The description of the special ordered item.   |
| Receipt Qty           | The quantity of the special ordered item.  |
| U/M                   | The special ordered item's unit of measure.  |
| Reason                | <p>The reason the order could not be processed, if applicable. Either the order was currently in use (<b>In Use</b> prints in this column), or it was in ship confirm status and partially received (<b>Ship Confirmed</b> prints in this column). Please run the PO Receipts Register again after these customer orders are no longer in use or invoiced and B/O created.</p> |

## Orders Split Due To Special Orders Receipt Post Report

| CO | Original Order No | New Order No | Customer Name                 | Requested Ship Date | Customer P/O |
|----|-------------------|--------------|-------------------------------|---------------------|--------------|
| 01 | 02019/00          | 02020/00     | Financial Management Services | 4/23/94             | 12882        |

This report indicates those orders split because of special order line items being posted. Note that both the original and the new order number are printed. When posting special order line items through this option (PO Receipts Register) and the order entry order is at a status of Pick Slip Printed or Ready for Invoicing, this report will be generated.

### Orders Split Due To Special Orders Receipt Post Report

| Report/Listing Fields | Description  |
|-----------------------|--|
| Co                    | The number of the company for which the order was created.   |
| Original Order No     | The order number and the generation number (# of times backordered) of the order which was split due to the special order line item receipt posting.                                   |
| New Order No          | The order number and the generation number (# of times backordered) of the order created due to the original order being split because of the special order line item receipt posting. |
| Customer Name         | The name of the customer for which the original order (and new order) was created.   |
| Requested Ship Date   | The date copied from the original order now included on the new order as the requested shipping date.  |
| Customer P/O          | The number of the customer's purchase order copied from the original order to the new order.   |

---

Use this option to print the Open Purchase Order Summary Report. This report prints a summary of all or a portion of open purchase orders and/or open requisitions.

An open purchase order is one that:

- Has been printed through Purchase Orders (MENU POMAIN), and
- Has not been received in full (i.e., “closed”) through Enter or Change Receivers or PO Receipts (MENU POMAIN) or, if applicable, Warehouse Management (MENU WMMAIN).

And has not been posted through:

- Enter or Change Receivers or PO Receipts (MENU POMAIN),
- PO Receipts Register (MENU POMAIN), or
- Warehouse Management (MENU WMMAIN).

An open requisition is one that has been entered through Enter or Change Requisitions (MENU POMAIN) but has not had a Purchase Order printed.

One line will print for each open purchase order. To print each item on each open purchase order, use the Open Purchase Order Detail Report Screen (p. 26-3).

---

**NOTE:** The Open Purchase Order Summary Report can be exported to Microsoft Excel using a Tab Separated Value (.tsv) format. Make that appropriate selection on the PC File Export Selection Screen that displays from the Report Options Screen when **Export Report** is set to **Y**. Refer to the Cross Applications User Guide for more information about exporting reports. Only those fields so noted in the report descriptions will be included in the export.

---

## Open Purchase Order Summary Report

---

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| <b>Title</b>                        | <b>Purpose</b>   |
|-------------------------------------|--|
| Open Purchase Order Summary Screen  | Use to select the criteria that will print on the Open Purchase Order Summary Report.                                  |
| Open Purchase Order Summary Reports | Prints a summary by vendor or PO number of all or a portion of existing open purchase orders and/or open requisitions. |

---

## Open Purchase Order Summary Screen

These reports prints following your selections on the Open Purchase Order Summary Screen (p. 25-3), and the Report Options Screen (refer to the Cross Applications User Guide for details about this screen). This report prints a summary by vendor (Report Sequence of 1) or Purchase Order (Report Sequence of 2) and all or a portion of existing open purchase orders and/or open requisitions.

NOTE: All dates will display in the **Default Date Format** for this user that generated the report, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's **Default Date Format** specified through System Options Maintenance (MENU XAFILE).

---

NOTE: The detail provided below will include all the fields that print on both reports. Based on the report you are viewing, the fields may not be in the exact sequence that they are printed on your report; and there will be fields in this list that may not be on your report.

---

### Open Purchase Order Summary Reports

| Report Field | Description  |
|--------------|--|
| Headings     | <p>Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.</p> <p>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings.</p> <p>The company number and name are also printed and the <b>Company Number</b> field will be exported to Excel .tsv reports.</p>  |
| Req/PO       | <p>The unique number used to identify this requisition or purchase order. If an "S" is the first character of this number, it was created from a Suggested Order. This field prints the requisition number if the order is a requisition and the purchase order number if the order is a PO.</p> <p>These fields will be exported to Excel .tsv reports: <b>Requisition Number, Purchase Order Number</b>.</p>   |
| WH           | <p>The Warehouse ID associated with this order. The items will be shipped to this warehouse.</p> <p>The <b>Warehouse</b> field will be exported to Excel .tsv reports.</p>   |
| Ord Typ      | <p>Identifies the order as being a Requisition (R) or Purchase Order (P).</p> <p>The <b>Order Type</b> field will be exported to Excel .tsv reports.</p>   |
| Status       | <p>Identifies the status of the order; one of the following will be displayed:</p> <ul style="list-style-type: none"> <li>• <b>Held</b> - the order is being held; the hold code will also display, indicating the reason the order is held</li> <li>• <b>Pending</b> - requisition awaiting approval</li> <li>• <b>Closed</b> - Purchase Order printed and received in full</li> <li>• <b>Partial</b> - partially closed</li> <li>• <b>Open</b> - Purchase Order printed but not received in full</li> <li>• <b>Approved</b> - requisition approved</li> </ul> <p>The <b>Order Status</b> field will be exported to Excel .tsv reports.</p> |

---

### Open Purchase Order Summary Reports

| Report Field   | Description  |
|----------------|--|
| Vendor No/Name | The purchase order was created for this vendor number and name.  |
| Vendor         | <p>NOTE: This field displays only if you selected to sequence the report by purchase order number.</p> <p>When International Currency is installed and you selected to <b>Y</b> to the <b>Display Trading Currency</b> prompt field, the vendor's currency code symbol and the currency description will print.</p> <p>These fields will be exported to Excel .tsv reports: <b>Vendor Number, Vendor Name, Vendor Currency Code, Vendor Currency Code Description.</b></p>         |
| Shp To         | <p>The shipping location where the vendor will deliver the order as specified on the requisition.</p> <p>The <b>Ship To Number</b> field will be exported to Excel .tsv reports.</p>   |
| Buyr           | <p>The code of the buyer who purchased the order.</p> <p>The <b>Buyer</b> field will be exported to Excel .tsv reports.</p>  |
| Appv By        | <p>The approval code assigned to the person that created and/or approved the requisition to become a purchase order.</p> <p>The <b>Approval Code</b> field will be exported to Excel .tsv reports.</p>   |
| Appv Amount    | <p>The amount for which the requisition was approved.</p> <p>NOTE: This field prints only if <b>Use Approval Code Authorization for Req/PO</b> is set to <b>Y</b> through Purchasing Company Options Maintenance (MENU XAFIELD).</p> <p>If International Currency is installed, the currency code for the approval amount prints to the right of the value.</p> <p>These fields will be exported to Excel .tsv reports: <b>Approval Amount, Approval Amount Currency Code.</b></p> |
| Vnd Shp Dt     | <p>The date the vendor shipped the item.</p> <p>NOTE: The vendor ship date for Return Purchase Orders (type <b>R</b>) is not used and this field will display as zero.</p>   |
| Order Dt       | <p>The date the requisition was created.</p> <p>The <b>Order Date</b> field will be exported to Excel .tsv reports.</p>  |
| Due Dt         | <p>The date you expect to receive the items on this order.</p> <p>The <b>Due Date</b> field will be exported to Excel .tsv reports.</p>  |

### Open Purchase Order Summary Reports

| Report Field        | Description  |
|---------------------|--|
| Count - Item Sp Chg | The <b>Item Count</b> is the number of items in the order.   |
| Count - Itm Spc     | The <b>Sp Chg Count</b> is the number of special charges (non-product charges, such as freight and handling charges) in the order.<br>These fields will be exported to Excel .tsv reports: <b>Item Count, Special Charge Count.</b>  |
| Order Value         | The monetary amount of the items on the order.<br>If International Currency is installed, the trading currency order value prints beneath the local currency order value. Each field also has it's appropriate currency symbol printed to the right of the amount.<br>These fields will be exported to Excel .tsv reports: <b>Order Value, Order Value Currency Symbol, Trading Currency Order Value, Trading Currency Order Value Currency Symbol.</b>  |
| Unshipped Value     | The monetary amount of the portion of the items that have not been received.<br>If International Currency is installed, the trading currency unshipped order value prints beneath the local currency unshipped value. Each field also has it's appropriate currency symbol printed to the right of the amount<br>These fields will be exported to Excel .tsv reports: <b>Unshipped Order Value, Unshipped Order Value Currency Symbol, Trading Currency Unshipped Order Value, Trading Currency Unshipped Order Value Currency Symbol.</b> |
| Lst Rec Dt          | The last date that any items were received for this purchase order.<br>The <b>Last Receipt Date</b> field will be exported to Excel .tsv reports.  |
| Lst Chg Dt          | The last date that any changes, if any, were made to this purchase order.<br>The <b>Last Change Date</b> field will be exported to Excel .tsv reports.   |

|--------------|--|
| Totals       | <p data-bbox="574 310 1414 380">When printing the report by vendor (1 is keyed in the <b>Report Sequence</b> field), there are 4 levels of vendor totals:</p> <ul data-bbox="574 390 1414 772" style="list-style-type: none"><li data-bbox="574 390 1414 464">• the total number of requisitions; including the local currency order value and the local currency unshipped value for requisitions only</li><li data-bbox="574 474 1414 548">• the total number of purchase orders; including the local currency order value and the local currency unshipped value for purchase orders only</li><li data-bbox="574 558 1414 632">• the vendor total prints the local currency order value and local currency unshipped value for both requisitions and purchase orders</li><li data-bbox="574 642 1414 772">• the company total prints the local currency order value and local currency unshipped value for both requisitions and purchase orders for all vendors.</li></ul> <p data-bbox="574 783 1414 852">When printing the report by PO number (2 is keyed in the <b>Report Sequence</b> field), there are 3 levels of company totals:</p> <ul data-bbox="574 863 1414 1167" style="list-style-type: none"><li data-bbox="574 863 1414 936">• the total number of requisitions; including the local currency order value and the local currency unshipped value for requisitions only</li><li data-bbox="574 947 1414 1020">• the total number of purchase orders; including the local currency order value and the local currency unshipped value for purchase orders only</li><li data-bbox="574 1031 1414 1167">• the company total prints the local currency order value and local currency unshipped value for both requisitions and purchase orders for all vendors.</li></ul> |

---

---

Use this option to print the Open Purchase Order Detail Report which prints PO data by vendor, purchase order, or item. This report may be run in detail or summary format.

---

**NOTE:** The Open Purchase Order Detail Report can be exported to Microsoft Excel using a Tab Separated Value (.tsv) format. Make that appropriate selection on the PC File Export Selection Screen that displays from the Report Options Screen when **Export Report** is set to **Y**. Refer to the Cross Applications User Guide for more information about exporting reports. Only those fields so noted in the report descriptions will be included in the export.

---

---

## Open Purchase Order Detail Report

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                                    | Purpose  |
|--|--|
| Open Purchase Order Detail Report Screen | Use to select the criteria that will print on the Open Purchase Order Detail Report. |

---

| Title                              | Purpose  |
|------------------------------------|--|
| Open Purchase Order Detail Reports | <p data-bbox="768 275 1344 302">Prints the 5 Open Purchase Order Detail Reports:</p> <ul data-bbox="768 327 1422 989" style="list-style-type: none"><li data-bbox="768 327 1422 457">• Detail by Vendor: Prints detailed purchase order information (individual items that have been ordered on a purchase order that are open, closed, or partially received) for each vendor.</li><li data-bbox="768 478 1422 609">• Detail by Purchase Order: Prints detailed purchase order information (individual items that have been ordered on a purchase order that are open, closed, or partially received), regardless of the vendor.</li><li data-bbox="768 630 1422 722">• Detail by Item: Prints detailed purchase order information for both our item number and the manufacturer's item number.</li><li data-bbox="768 743 1422 842">• Detail - Summary by Vendor: Prints summary purchase order information (one line for each item on an open purchase order) for each vendor.</li><li data-bbox="768 863 1422 989">• Detail - Summary by Purchase Order: Prints summary purchase order information (one line for every item on each open purchase order), regardless of the vendor</li></ul> |

This screen displays after selecting option **2** - Open Purchase Order Detail Report (MENU POREPT) and is used to select the criteria that will print on the Open Purchase Order Detail Report.

Use this screen to determine the type of format for this report: detail by vendor, detail by purchase order number, summary by vendor, summary by purchase order number, or detail by item.

Refer to the Cross Applications User Guide for an explanation of the rules for entering From/To Ranges.

### Open Purchase Order Detail Report Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Detail/Summary     | <p>You have the option to print the report in detail or summary.</p> <p>Key <b>D</b> to print the report in detail. Detailed item information for open purchase orders (each item on each open purchase order) will print.</p> <p>Key <b>S</b> to print the report in summary. Summary information displaying only one line for each open purchase order will print.</p> <p><i>Valid Values:</i> <b>D</b> or <b>S</b></p> <hr/> <p>NOTE: <b>D</b> must be keyed if you select to run this report by item (<b>Report Sequence</b> is <b>3</b>).</p> <hr/> <p>(A 1) Required</p> |

### Open Purchase Order Detail Report Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Report Sequence    | <p>This field determines the report sequence.</p> <p>Key <b>1</b> to print the report by vendor. Open Purchase Orders will print for each vendor, sequenced by vendor number.</p> <p>Key <b>2</b> to print the report by PO number. Open Purchase Orders will print by purchase order number, regardless of the vendor.</p> <p>Key <b>3</b> to print the report by item (our item number and the manufacturer's item number, regardless of your response in the <i>Item Number</i> field). Open Purchase Orders will print by item number, regardless of the vendor.</p> <p><i>Valid Values:</i> Cannot be <b>3</b> if <b>Detail/Summary</b> is <b>S</b></p> <p>(A 1) Required</p> |
| Item Number        | <p>This field determines which item number to print on the reports sequenced by vendor and by purchase order number. Both numbers will always print on the report sequenced by item.</p> <p>Key <b>O</b> to print our item numbers.</p> <p>Key <b>M</b> to print the manufacturer's item numbers.</p> <p><i>Valid Values:</i> O, M</p> <p>(A 1) Required</p>   |
| Item No            | <p>Key the range of item numbers to limit the purchase orders that print on your report.</p> <p>(2 @ A 27) Optional</p>  |
| Company No         | <p>Key the range of company numbers to limit the purchase orders that print on your report. If you do not have multiple companies, this field is display-only.</p> <p>(2 @ N 2,0) Optional</p>   |
| Vendor No          | <p>Key the range of vendor numbers to limit the purchase orders that print on your report.</p> <p>(2 @ A 6) Optional</p>   |
| Item Class         | <p>Key range of item classes to limit the purchase orders that print on your report to items that are categorized with these item classes.</p> <p>(2 @ A 2 / A 2) Optional</p>   |
| Req No             | <p>Key the range of open requisitions to print, or leave blank to print all open requisitions.</p> <p>(2 @ A 6) Optional</p>   |
| PO No              | <p>Key the range of open purchase orders to print, or leave blank to print all purchase orders.</p> <p>(2 @ A 6) Optional</p>  |

These reports print following your selections on the Open Purchase Order Detail Report Screen (p. 26-3), and the Report Options Screen (refer to the Cross Applications User Guide for details about this screen).

The Open Purchase Order Detail by Vendor Report prints detailed purchase order information (individual items that have been ordered on a purchase order that are open, closed, or partially received) for each vendor.

The Open Purchase Order Detail by Purchase Order Report prints purchase order detail and is sequenced by purchase order. You will view detailed purchase order information (individual items that have been ordered on a purchase order that are open, closed, or partially received), regardless of the vendor.

The Open Purchase Order Detail by Item Report prints detailed purchase order item information for both our item number and the manufacturer's item number, regardless of your response in the *Item Number* field on the Open Purchase Order Detail Report Screen (p. 26-3). Only open items (items that are not received in full) are printed.

The Open Purchase Order Detail - Summary by Vendor Report is printed in summary and sequenced by vendor. Summary purchase order information (one line for each item on an open purchase order) for each vendor will print.

The Open Purchase Order Detail - Summary by Purchase Order Report prints summary data only and is and sequenced by purchase order. Summary purchase order information (one line for every item on each open purchase order), regardless of the vendor, will print.

---

NOTE: All dates will display in the **Default Date Format** for this user that generated the report, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's **Default Date Format** specified through System Options Maintenance (MENU XAFIELD).

---

NOTE: The detail provided below will include the fields that print on all the reports. Based on the report you are viewing, the fields may not be in the exact sequence that they are printed on your report; and there will be fields in this list that may not be on your report.

---

### Open Purchase Order Detail Reports

| Report Field | Description   |
|--------------|---|
| Headings     | <p>Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.</p> <p>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings.</p> <p>The company number and warehouse ID may also print and the <b>Company Number</b> and <b>Warehouse</b> fields will be exported to Excel .tsv reports.</p> |

## Open Purchase Order Detail Reports

| Report Field   | Description   |
|--|---|
| Due Date   | <p>The date you expect to receive the items on this order.</p> <p>The <b>Due Date</b> field will be exported to Excel .tsv reports.</p>   |
| Line Stat  | <p>Indicates the status of this line item: OPEN, CLSD (Closed), or PART (Partially Received).</p> <p>The <b>Line Status</b> field will be exported to Excel .tsv reports.</p>   |
| Our Item No / Description<br>Mfg Item No/Description<br>Item                   | <p>If the prompt field <b>Item Number</b> is <b>O</b>, our item number and description from the purchase order is displayed. The item description initially defaults into the purchase order from the Vendor/Item Master File if it exists.</p> <p>If the <b>Item Number</b> is <b>M</b>, the manufacturer's item number and description from the purchase order is displayed. The item description initially defaults into the purchase order from the Vendor/Item Master File if it exists.</p> <p>The Detail by Item Report always prints both the item number and mfg. item number field.</p> <p>These fields will be exported to Excel .tsv reports: <b>Item Number, Item Description 1, Item Description 2, Mfg. Item Number.</b></p> |
| Class  | <p>Identifies the product category for this item as defined in Item Master Maintenance (MENU IAFILE).</p> <p>These fields will be exported to Excel .tsv reports: <b>Item Class, Item Subclass.</b></p>   |
| Bal Due / U/M<br>Balance Due / U/M<br>Open Qty / U/M<br>Quantity Bal Due / U/M | <p>The quantity of this item still due to be received for this line in the purchase order per this unit of measure. The U/M prints to the right of the quantity.</p> <p>These fields will be exported to Excel .tsv reports: <b>Balance Due, Balance Due U/M.</b></p>   |
| Unit Cost / U/M  | <p>The unit cost of this item per the cost unit of measure.</p> <p>The unit cost initially defaults into the purchase order from the Vendor/Item Master File if it exists, but can be overridden for each purchase order as necessary. The cost U/M prints to the right of the cost.</p> <p>When International Currency is installed, the local cost currency symbol prints next to the unit cost. Also, the trading unit cost and trading unit cost currency symbol print beneath the local values.</p> <p>These fields will be exported to Excel .tsv reports: <b>Unit Cost, Unit Cost U/M, Unit Cost Currency Symbol, Trading Currency Unit Cost, Trading Currency Unit Cost Currency Symbol.</b></p>                                    |

---

**Open Purchase Order Detail Reports**

| Report Field                   | Description   |
|--------------------------------|---|
| LC                             | <p>The lot charge flag keyed during requisition entry.</p> <p>An <b>L</b> indicates that the unit cost is a lot charge for the entire quantity that was ordered. Lot charge cost will not be multiplied by the quantity during the receipt of the item, it is the cost for the total quantity ordered. A <b>blank</b> indicates the unit cost is a true unit cost.</p> <p>The <b>Lot Charge</b> field will be exported to Excel .tsv reports.</p>   |
| Unshipped Value                | <p>The monetary amount of the portion of the items that have not been received.</p> <p>When International Currency is installed, the local currency symbol prints next to the unshipped value. Also, the trading unshipped value and trading unshipped value currency symbol print beneath the local values.</p> <p>These fields will be exported to Excel .tsv reports: <b>Unshipped Value, Unshipped Value Currency Symbol, Trading Currency Unshipped Value, Trading Currency Unshipped Value Currency Symbol.</b></p> |
| Lst Rec Date                   | <p>The last date that any items were received for this purchase order.</p> <p>The <b>Last Receipt Date</b> field will be exported to Excel .tsv reports.</p>  |
| Quantity On Ord                | <p>The total quantity of this item ordered.</p> <p>The <b>Quantity on Order</b> field will be exported to Excel .tsv reports.</p>   |
| Quantity Rec'd                 | <p>The total quantity of this item received.</p> <p>The <b>Quantity Received</b> field will be exported to Excel .tsv reports.</p>  |
| Co/PO No<br>PO                 | <p>The company and purchase order number or just the purchase order number created for this vendor.</p> <p>These fields will be exported to Excel .tsv reports: <b>Company Number, Purchase Order Number.</b></p>   |
| NS                             | <p>This field represents whether or not this item is a non-stocking item or not. If <b>'*</b> prints in this column, this item is a non-stocking item and inventory is not updated. If this column is blank, this item updates inventory.</p> <p>The <b>Non-Stock Item Code</b> field will be exported to Excel .tsv reports.</p>   |
| Vendor<br>Vendor / Vendor Name | <p>The purchase order was created for this vendor number/name.</p> <p>When International Currency is installed, the vendor currency code and currency code description will also print.</p> <p>These fields will be exported to Excel .tsv reports: <b>Vendor Number, Vendor Name, Vendor Currency Code, Vendor Currency Code Description.</b></p>  |

### Open Purchase Order Detail Reports

| Report Field | Description   |
|--------------|---|
| WH           | <p>The warehouse ID where the purchase order will be received in, and usually where stock shipments are sent from the vendor.</p> <p>The <b>Warehouse ID</b> field will be exported to Excel .tsv reports.</p>  |
| Req          | <p>The requisition number of the purchase order.</p> <p>The <b>Requisition Number</b> field will be exported to Excel .tsv reports.</p>   |
| Totals       | <p>Each report has totals that are specific to that report format.</p> <ul style="list-style-type: none"> <li>• Open Purchase Order Detail by Vendor: Unshipped Values for both local and trading currency totals are provided at 3 levels; Purchase Order, Warehouse, and Vendor.</li> <li>• Open Purchase Order Detail by PO: Unshipped values for both local and trading currency totals provided at 3 levels; Purchase Order, Company, and Report.</li> <li>• Open Purchase Order Detail by Item: Open quantity totals are provided for each item.</li> <li>• Open Purchase Order Detail - Summary by Vendor: Unshipped Values for both local and trading currency totals are provided at 2 levels; Warehouse, and Vendor.</li> <li>• Open Purchase Order Detail - Summary by PO: Unshipped values for both local and trading currency totals provided at 2 levels; Purchase Order, and Company.</li> </ul> |

---

Use this option to print the Purchase Order History Summary Reports. This report prints a summary of purchase order history - a record of all Purchase Orders that have been printed and received in Purchasing.

Since this is a summary report, only one line will print for each purchase order.

---

**NOTE:** The Purchase Order History Summary Report can be exported to Microsoft Excel using a Tab Separated Value (.tsv) format. Make that appropriate selection on the PC File Export Selection Screen that displays from the Report Options Screen when **Export Report** is set to **Y**. Refer to the Cross Applications User Guide for more information about exporting reports. Only those fields so noted in the report descriptions will be included in the export.

---

---

## Purchase Order History Summary Report

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                                  | Purpose  |
|--|--|
| Purchase Order History Summary Screen  | Use to select the criteria that will print on the Purchase Order History Summary Report. |
| Purchase Order History Summary Reports | Prints a summary of all purchase order history, in vendor or purchase order sequence.    |

---

## Purchase Order History Summary Screen

```

These reports print following your selections on the Purchase Order History Detail Report Screen (p. 28-2), and the Report Options Screen (refer to the Cross Applications User Guide for details about this screen).

The Purchase Order History Detail by Vendor Report is sequenced by vendor and prints detailed purchase order history including items, quantities and costs.

The Purchase Order History Detail by Purchase Order Report is sequenced by purchase order and prints detailed purchase order history, regardless of the vendor.

The Purchase Order History Detail - Summary by Vendor Report is sequenced by vendor and prints a summary of all purchase orders/items.

The Purchase Order History Detail - Summary by Purchase Order Report is sequenced by purchase order and prints summary purchase order history (one line for every item on a purchase order) is printed, regardless of the vendor.

---

NOTE: All dates will display in the **Default Date Format** for this user that generated the report, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's **Default Date Format** specified through System Options Maintenance (MENU XAFIL).

---

NOTE: The detail provided below will include all the fields that print on both reports. Based on the report you are viewing, the fields may not be in the exact sequence that they are printed on your report; and there will be fields in this list that may not be on your report

---

**Purchase Order History Detail Reports**

| Report/Listing Fields  | Description   |
|--|---|
| Headings   | <p>Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.</p> <p>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings.</p> <p>The company number may also print and the <b>Company Number</b> field will be exported to Excel .tsv reports.</p>  |
| Vendor   | <p>The purchase order was created for this vendor number/name.</p> <p>When International Currency is installed, the vendor currency code and currency code description will also print.</p> <p>These fields will be exported to Excel .tsv reports: <b>Vendor Number, Vendor Name, Vendor Currency Code, Currency Code Description.</b></p>   |
| WH   | <p>The warehouse ID where the purchase order will be received in, and usually where stock shipments are sent from the vendor.</p> <p>The <b>Warehouse ID</b> field will be exported to Excel .tsv reports.</p>  |
| Req  | <p>The requisition number of the purchase order.</p> <p>The <b>Requisition Number</b> field will be exported to Excel .tsv reports.</p>   |
| Due Date   | <p>The date that the receipt of the items on this order was requested.</p> <p>The <b>Due Date</b> field will be exported to Excel .tsv reports.</p>   |
| Line Stat  | <p>Indicates the status of this line item: CLSD (Closed).</p> <p>The <b>Line Status</b> field will be exported to Excel .tsv reports.</p>   |
| Our Item No / Description<br>Mfg Item No/Description<br>Item | <p>If the prompt field <b>Item Number</b> is <b>O</b>, our item number and description from the purchase order is displayed. The item description initially defaults into the purchase order from the Vendor/Item Master File if it exists.</p> <p>If the <b>Item Number</b> is <b>M</b>, the manufacturer's item number and description from the purchase order is displayed. The item description initially defaults into the purchase order from the Vendor/Item Master File if it exists.</p> <p>These fields will be exported to Excel .tsv reports: <b>Item Number, Item Description 1, Item Description 2, Mfg. Item Number.</b></p> |

---

---

Use this option to print the Purchasing Cash Requirements Report. This report prints all open Purchase Orders with items that match the report limits (company number, vendor number, buyer, warehouse, and ship-to number). In addition, future cash requirements (cash required by a vendor) for a specific aging period are printed.

---

## Cash Requirements Report

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| <b>Title</b>                               | <b>Purpose</b>   |
|--|--|
| Purchasing Cash Requirements Report Screen | Use to select the criteria that will print on the Purchasing Cash Requirements Report. |
| Purchasing Cash Requirements Report        | Prints cash requirements for the indicated aging periods.                              |

---

## Purchasing Cash Requirements Report Screen

```

PURCHASING CASH REQUIREMENTS REPORT

Cash Requirements:
  Ending:      101209
  Ending:      .....
  Ending:      .....
  Ending:      .....

Include:
  Company No? ... to? ...
  Vendor No:  ..... to .....
  Buyer?     .... to? .....
  Warehouse? ... to? ...
  Ship-To No: .... to  ....

F3=Cancel
    
```

This screen displays after selecting option 5 - Cash Requirements Report (MENU POREPT). Use this screen to select the criteria that will print on the Purchasing Cash Requirements Report.

Among this criteria are four aging periods. Cash required by a vendor is placed in a specific aging period based on the line item's due date and the number of days in which a vendor is paid, called **Pay Days**. The **Pay Days** field is maintained through Vendors Maintenance (MENU POFIELD / MENU APFILE).

Refer to the Cross Applications User Guide for an explanation of the rules for entering From/To Ranges.

**Purchasing Cash Requirements Report Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Cash Requirements  | <p>Key the four ending dates by which cash is required for payments. Note that these dates define the aging periods for the report. The dates keyed here and the appropriate cash requirements are printed on the Purchasing Cash Requirements Report (p. 29-5). Key the aging dates in ascending date order. The number of cash requirement periods is one greater than the number of aging dates keyed. Therefore, you may have up to five cash requirement periods.</p> <p><b>Example:</b> : If you key the aging dates January 31, February 28, March 31, and April 30, the following cash requirement periods will print on the report:</p> <ul style="list-style-type: none"> <li>• Cash required through January 31</li> <li>• Cash required from February 1 through February 28</li> <li>• Cash required from March 1 through March 31</li> <li>• Cash required from April 1 through April 30</li> <li>• Cash required after April 30</li> </ul> <p><i>Default Value:</i> The first <b>Cash Requirements: Ending</b> date defaults to the system date</p> <p><i>Valid Values:</i> Key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFILE).</p> <p>(4 @ N 6,0) Required</p> |
| Company No         | <p>Use the <b>Company No</b> field to limit this report to only those companies selected.</p> <p>Key the company number(s) for which you which you choose to limit this report. Leave blank to include all companies.</p> <p><i>Valid Values:</i> A valid company number defined through Company Name Maintenance (MENU XAFILE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(2 @ N 2,0)/Optional</p>  |
| Vendor No          | <p>Use the <b>Vendor No</b> field to limit this report to only those vendors selected.</p> <p>Key the vendor number(s) for which you which you choose to limit this report. Leave blank to include all vendors.</p> <p>Optional</p>  |

**Purchasing Cash Requirements Report Screen Fields and Function Keys**

| <b>Field/Function Key</b> | <b>Description</b>   |
|---------------------------|--|
| Buyer                     | Use the <b>Buyer</b> field to limit this report to only those buyers selected.<br>Key the buyer(s) for which you which you choose to limit this report. Leave blank to include all buyers.<br>Optional   |
| Warehouse                 | Use the <b>Warehouse</b> field to limit this report to only those buyers selected.<br>Key the warehouse(s) for which you which you choose to limit this report. Leave blank to include all warehouses.<br>Optional   |
| Ship-To No                | Use the <b>Ship-To No</b> field to limit this report to only those locations identified by the ship-to number.<br>Key the ship-to location(s) for which you which you choose to limit this report. Leave blank to include all ship-to location(s).<br>Optional |
| F3=Cancel                 | Press F3=CANCEL to cancel this option. MENU POREPT will display.   |
| Enter                     | Press ENTER to confirm your selections. The Report Options Screen will display. The reference section for this screen is in the Appendix section of the Cross Applications User Guide.   |

| <b>COMPANY 1 TOTAL:</b>         |                        |                                     |              |                |               |           |        |
|                                 |                        | 1,731,858.52                        | 1,128,137.81 | 452,560.62     | 150,699.12    | 460.90    |        |

This report prints following your selections on the Purchasing Cash Requirements Report Screen (p. 29-2), and the Report Options Screen (refer to the Cross Applications User Guide for details about this screen.)

Your cash requirements for the indicated aging periods are printed. Cash requirements are summarized for each vendor; based on the calculated the expected payment date, hence your cash requirement date, using the vendor’s number of pay days [from the Vendor Master File maintained through Vendors Maintenance (MENU POFIL)] to each line item’s due date.

### Purchasing Cash Requirements Report

| Report/Listing Fields | Description   |
|-----------------------|---|
| Headings              | <p>Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.</p> <p>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings.</p>                     |
| Vendor Information    | <p>The number and name of the vendor to whom cash will be required. The vendor totals for each aging period, and the total of all aging periods, are printed for this vendor.</p> <p>The cash requirements that will be due to this vendor are printed on the lines that follow the vendor information.</p> |
| CASH REQUIREMENTS     | <p>The aging periods specified for this report. For each aging period, the cash requirements for each vendor are printed; for each aging period, the vendor total, and company total cash requirements are printed.</p>   |

---

Use this option to print the Vendor Performance Report. This report prints its order/receipt information for a vendor/item stored in the Vendor Performance File.

Vendor performance information consists of shipping history of a vendor and item. The ability of a vendor to ship a given item in the quantity ordered, and by the due date ordered, indicates that vendor's relative performance.

---

## Vendor Performance Report

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                            | Purpose  |
|----------------------------------|--|
| Vendor Performance Report Screen | Use to select the items and vendor for which vendor payment information is printed.                                    |
| Vendor Performance Report        | Prints the vendor/item information that was captured during receipt posting and stored in the Vendor Performance File. |

This report prints following your responses on the Vendor Performance Report Screen (p. 30-2), and the Report Options Screen.

The vendor/item information that was captured during receipt posting and stored in the Vendor Performance File is printed.

### Vendor Performance Report

| Report/Listing Fields     | Description  |
|---------------------------|--|
| Headings                  | Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.<br><br>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings. |
| Vendor Number/Vendor Name | The number and name of the vendor for whom shipment performance is printed.  |
| Item Number/Description:  | The item number and description (shown below the item number) associated with the vendor.  |

---

**Vendor Performance Report**

| Report/Listing Fields    | Description  |
|--------------------------|--|
| Mfg Item Number          | <p>The manufacturers' item numbers print on this report only if you keyed <b>Y</b> in the <b>Print Mfg Number</b> field on the Vendor Performance Report Screen (p. 30-2). If you entered a manufacturer's item number through Vendor/Item Information Maintenance (MENU POFILE), that number will print on this report; otherwise, the number you entered through Item Master Maintenance (MENU IAFILE) will print.</p> <p>This column contains the manufacturer's item number defined for the item through Vendor/Item Information Maintenance (MENU POFILE) and/or Item Master Maintenance (MENU IAFILE).</p> |
| Last Cost/Receipt Date   | The last cost (dollar amount) that you received for the item and the date that you received the cost.  |
| YTD/TOT Units Received   | The number of units received from the vendor during this year.   |
| YTD/TOT Dollars Received | The total dollar amount of orders received this year.  |
| No. Rcpts                | The number of times you received from the vendor during this year.   |
| Avg Days                 | The average number of days it took to receive the items from the time the order was placed.  |

---

Use this option to print the Item Receipt Forecast Report in summary or detail. This report prints the expected item quantities, or item dollar amounts, to be received within the specified due dates based on open purchase orders.

---

## Item Receipt Forecast Report

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                        | Purpose  |
|------------------------------|--|
| Item Receipt Forecast Screen | Use to select the criteria that will print on the Item Receipt Forecast Report.  |
| Item Receipt Forecast Report | Prints item quantities, or item currency amounts, to be received from open purchase orders within the specified due dates. |

This screen displays after selection option 7 - Item Receipt Forecast Report (MENU POREPT) and is used to select the criteria that will print on the Item Receipt Forecast Report.

Refer to the Cross Applications User Guide for an explanation of the rules for entering From/To Ranges.

### Item Receipt Forecast Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Report Content     | <p>This field determines the content of your report.</p> <p>Key <b>C</b> to print expected currency values of items based on open purchase orders.</p> <p>Key <b>Q</b> to print expected item quantities based on open purchase orders.</p> <p>(A 1) Required</p> |
| Items to Print     | <p>This field determines the items to print.</p> <p>Key <b>A</b> to print all items.</p> <p>Key <b>O</b> to print overdue items only. An overdue item is any item that has not been received by its due date on the purchase order.</p> <p>(A 1) Required</p>     |

---

**Item Receipt Forecast Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| Detail/Summary     | <p>You have the option to print a detailed or summary report.</p> <p>Key <b>D</b> to print the report in detail. The detail report prints one line for each item on each purchase order, indicating the purchase order number and due date.</p> <p>Key <b>S</b> to print the report in summary. The summary report prints one line for each item ordered. Therefore, the quantity or dollar value of the item for all purchase orders is accumulated and printed on this report.</p> <p>(A 1) Required</p>  |
| AGING DATES        | <p>Key the desired ending item due date for the three aging periods. Aging dates must be in ascending order; must key all three.</p> <p>The dates keyed here and the appropriate quantity, or dollar information, are printed on the Item Receipt Forecast Report (p. 31-6).</p> <p>The number of periods is one greater than the number of aging dates keyed. Therefore, you may have up to four item receipt periods.</p> <p><b>Example:</b> : If you key the aging dates of January 31, February 28, and March 31, the following receipt forecast periods will print on the report:</p> <ul style="list-style-type: none"> <li>• Item quantities/dollar amounts to be received through January 31</li> <li>• Item receipts from February 1,through February 28</li> <li>• Item receipts from March 1, through March 31</li> <li>• Item receipts after March 31</li> </ul> <p><i>Valid Values:</i> Key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFILE).</p> <p>(3 @ N 6,0) Required</p> |
| Company No         | <p>Key the ranges of company numbers for which to limit the purchase item information is to be printed on the report. Only items from purchase orders meeting the range of company numbers keyed here will print on the report.</p> <p><i>Valid Values:</i> A valid company number defined through Company Name Maintenance (MENU XAFILE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(2 @ N 2,0) Required</p>   |

---

### Item Receipt Forecast Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Vendor No          | <p>Key the ranges of vendor numbers for which to limit the purchase item information is to be printed on the report for the item listed below. Only items from purchase orders meeting the range of vendor numbers keyed here will print on the report.</p> <p><i>Valid Values:</i> any vendor defined through Vendors Maintenance (MENU POFIELD / MENU APFILE)</p> <p>(2 @ A 6) Required</p>   |
| Due Dates          | <p>Key the ranges of PO due dates for which purchase item information is to be printed on the report for the item listed below. Only items from purchase orders meeting the range of PO due dates keyed here will print on the report. Aging dates must be in ascending order; must key all three.</p> <p><i>Valid Values:</i> Key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFIELD)</p> <p>(2 @ N 6,0) Required</p> |
| Warehouse          | <p>Key the ranges of warehouse numbers for which item information is to be printed on the report for the item listed below. Only items from purchase orders meeting the range of warehouse keyed here will print on the report.</p> <p><i>Valid Values:</i> A valid warehouse number defined through Warehouse Numbers Maintenance (MENU IAFIELD) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(2 @ A 2) Required</p>   |
| Print Mfg Number   | <p>This field determines whether or not manufacturers' item numbers will print on the Item Receipt Forecast Report. The manufacturers' item numbers that print on this report are defined through Item Master Maintenance (MENU IAFIELD).</p> <p>Accept the default or key <b>Y</b> if you want manufacturers' item numbers to print on the report.</p> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p>  |
| Item No            | <p>Key the ranges of item numbers for which purchase item information is to be printed on the report for the item listed below. Only items from purchase orders meeting the range of criteria keyed here will print on the report.</p> <p><i>Valid Values:</i> A valid item number defined through Item Master Maintenance (MENU IAFIELD).</p> <p>(2 @ A 27) Required</p>   |

---

**Item Receipt Forecast Screen Fields and Function Keys**

| Field/Function Key          | Description   |
|-----------------------------|---|
| Mfg No                      | <p>Key the ranges of purchase item information to be printed on the report for the item listed below. Only items from purchase orders meeting the range of criteria keyed here will print on the report.</p> <p>(2 @ A 27) Required</p>   |
| Display Trading<br>Currency | <p>Use this field to specify whether amounts on the related report will print in the company's local currency, or in both the company's local currency and the trading currency (local equivalent amounts will print below the trading currency amounts).</p> <p>Key <b>Y</b> if you want amounts to print in the trading currency as well as the company's local currency.</p> <p>Key <b>N</b> if you want amounts to print only in the company's local currency. this value must be <b>N</b> if you selected <b>S</b> for the <b>Detail/Summary</b> field.</p> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p> |
| F3=Cancel                   | <p>Press <b>F3=CANCEL</b> to cancel this option. MENU POREPT will display.</p>  |
| Enter                       | <p>Press <b>ENTER</b> to confirm your selections. The Report Options Screen will display. The reference section for this screen is in the Appendix section of the Cross Applications User Guide.</p>  |

This report prints following your responses on the Item Receipt Forecast Screen (p. 31-2), and the Report Options Screen (refer to the Cross Applications User Guide for details about this screen).

The item quantities, or item currency amounts, to be received from open purchase orders within the specified due dates are printed. Item totals (total items to be received or item currency amounts) will print for each item. If you selected to print the report in detail, each item on each purchase order will

print. If you selected to print the report in summary, one line will print the accumulated receipts for one item on all selected purchase orders.

### Item Receipt Forecast Report

| Report/Listing Fields      | Description   |
|----------------------------|---|
| Headings                   | <p>Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.</p> <p>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings.</p>               |
| WH                         | The Warehouse ID associated with this order. This is the warehouse where the item will be stored.   |
| Item No/Description        | The unique stocking item number used to identify the item followed by the description of the item.  |
| Manufacturer's Item Number | <p>Manufacturers' item numbers print on this report only if you keyed <b>Y</b> in the <b>Print Mfg Number</b> field on the Item Receipt Forecast Screen (p. 31-2).</p> <p>This column contains the manufacturer's item number defined for the item through Item Master Maintenance (MENU IAFILE).</p> |
| PO No                      | <p>This field only displays for the Detail Report format.</p> <p>The unique number used to identify this purchase order.</p>  |
| Due Date                   | <p>This field only displays for the Detail Report format.</p> <p>The date this item is expected to arrive.</p>  |
| Receipt Forecast           | <p>The expected item quantities, or item monetary amounts, to be received within the specified due date ranges.</p> <p>For items that are ordered in multiple units of measure, this value is a hash total of the order quantity field.</p>   |
| U/M                        | <p>This field only displays for the <b>Quantity</b> report format.</p> <p>The unit of measure in which the item was ordered for the specific purchase order. *** will display when the item has been ordered in multiple units of measure.</p>  |

---

Use this option to print the Item In-Transit Report. This report prints those items that are in transit from inter-warehouse transfers.

---

## Item In-Transit Report

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                         | Purpose  |
|-------------------------------|--|
| Item In-Transit Report Screen | Use to enter criteria that limits the information printed on the report.                           |
| Item In-Transit Report        | Prints items that are in transit from inter-warehouse transfers are printed in warehouse sequence. |

---

This report prints following your responses on the Item In-Transit Report Screen (p. 32-2), and the Report Options Screen (refer to the Cross Applications User Guide for details about this screen). The items that are in transit from inter-warehouse transfers are printed in warehouse sequence.

### Item In-Transit Report

| Report/Listing Fields | Description   |
|-----------------------|---|
| Headings              | Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.<br><br>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings.                    |
| Item Number           | The stocking item number of the item that is in transit.  |
| Mfg Item Number       | The manufacturers' item numbers print on this report only if you keyed <b>Y</b> in the <b>Print Mfg Number</b> field on the Item In-Transit Report Screen (p. 32-2).<br><br>This column contains the manufacturer's item number defined for the item through Item Master Maintenance (MENU IAFILE). |
| Description           | The description of the item that is in transit.   |
| Open Qty              | The total quantity of this item that is to be transferred.  |
| In-Trans:             | The quantity of this item that has been shipped but has not yet been received.  |

---

**Item In-Transit Report**

| <b>Report/Listing Fields</b> | <b>Description</b>  |
|------------------------------|---|
| U/M                          | The item in transit is in this unit of measure.   |
| PO No                        | The unique number used to identify this purchase order. An “S” preceding this number means that this requisition was created from a suggested order.                  |
| Ship WH                      | The Warehouse ID from which the shipment of this item originated (the Warehouse ID to which this item is being shipped is displayed below the report title).          |
| Cost                         | The unit cost of the item in transit. This cost is determined by the response keyed in the Base Price Code field during Purchasing Options Maintenance (MENU XAFILE). |
| U/M                          | The cost of the item is per this unit of measure.   |

---

---

Use this option to print the Open Receivers By Item Report. This report prints those open line items that are included in receivers to determine the value of inventory that is expected.

---

## Open Receivers by Item Report

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title  | Purpose  |
|--|--|
| Open Receivers By Item Report Selection Screen | Use to enter criteria to limit the information printed on the Open Receivers By Item Report. |
| Open Receivers By Item Report                  | Prints those items included in receivers.  |

---

## Open Receivers By Item Report Selection Screen

This report prints following your responses on the Open Receivers By Item Report Selection Screen (p. 33-2), and the Report Options Screen. The items included in receivers that meet any specified criteria will print, by item number.

The report presents a quick look at those items included in receivers. Receivers are usually generated when notice has been received [e.g., an Advance Shipping Notice (ASN)] that the indicated items are definitely to be delivered, and on which date. Therefore, a look at those items in open receivers usually reflects a fairly accurate picture of the up-coming receiving activity.

For a detailed description of all data included in this report, refer to the receiver processing screens, as described in Enter or Change Receivers or PO Receipts (MENU POMAIN).

NOTE: Manufacturers' item numbers will print on this report only if you selected **Y** in the **Print Mfg Number** field on the Open Receivers By Item Report Selection Screen (p. 33-2). If you entered a manufacturer's item number through Vendor/Item Information Maintenance (MENU POFILE), that number will print on this report; otherwise the manufacturer's number you entered through Item Master Maintenance (MENU IAFILE) will print.

---

Use this option to print the Suggested Orders Report. The Suggested Orders Report prints those items that fall below their minimum stocking level in a warehouse. Suggested order quantities are also included. The quantity suggested for the order is the value of items that should be ordered to reach the maximum stocking level.

In addition, when processing this report, you have the option to create (or add to) the Suggested Orders Quantity File. This file contains the information printed on the report so that requisitions can be automatically created from the suggested orders.

The Customer Inventory Reservations Exception Report will automatically print all customer inventory reservation exceptions, when they exist.

If you have Inventory Management & Planning (IM&P) and/or Advanced Inventory Management (AIM), the first time each day that you run this menu option, Distribution A+ will reevaluate your minimum and maximum stocking levels for both IM&P and/or AIM, as applicable. AIM planned items will only be evaluated if an item's key factors, such as lead time, order frequency, usage or hits was changed. Day-End Processing (MENU XAMAST) deletes the work files (MIMAX and MIMAX\_AIM) used to identify that the stocking levels were updated. The first time Suggested Orders Report (MENU POREPT) is run after Day-End Processing, the work files do not exist and therefore the stocking levels are updated and the work files are built. Successive suggested order runs will see the existence of the work files and skip the recalculation of the minimum and maximum stocking levels.

The Buyers Workbench (BWB) option (MENU POREPT) also incorporates existing suggested order functionality, providing a single point of access to help automate the buying process. Therefore, when working in BWB, you will be able to include special order items as part of a suggested run. The option to automatically add/link all qualifying special order items for a particular run's warehouse and vendor to the suggested order run is available directly from within this single BWB menu option.

To add/link special order item to suggested orders, run the Suggested Order Report with the **Add Special Order Items** field defined as **Y** on the Suggested Orders Report Screen (p. 34-3); the **Add Special Order Items** field only appears on the Suggested Orders Report Screen (p. 34-3) when this screen is accessed via the BWB option (MENU POREPT). Setting this field to **Y** automatically adds/links all qualified special order items when a suggested order is created.

---

## When To Run This Option

Run this option when you are ready to purchase items from vendors.

---

## Suggested Orders Report

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title   | Purpose   |
|---|---|
| Suggested Orders Report Screen                | Use to select items and information to be printed on the Suggested Orders Report.   |
| Vendor List Screen                            | Use as an alternative to entering vendor ranges in the <b>Vendor No</b> field on the Suggested Orders Report Screen.  |
| Purchasing Line List Screen                   | Use as an alternative to entering purchasing line ranges in the <b>Purchasing Line</b> field on the Suggested Orders Report Screen.                                       |
| Buyer List Screen                             | Use as an alternative to entering buyer ranges in the <b>Buyer</b> field on the Suggested Orders Report Screen.   |
| Suggested Orders Report Warehouse List Screen | Use as an alternative to entering a warehouse or ** for all warehouses in the <b>Warehouse</b> field on the Suggested Orders Report Screen.                               |
| Suggested Orders Report                       | Prints the items that fall below the minimum stocking level in the selected warehouse(s) (or within the minimum balance percentage) and their suggested order quantities. |

This screen displays by selecting option 10 - Suggested Orders Report (MENU POREPT). Other places that access this screen are from Buyers Workbench (MENU POREPT) when creating a new run (refer to the Suggested Orders Report Template Settings Screen (p. 38-95) for further details), and Automate Suggested Orders (MENU POFIL2) when creating an Automated Run (refer to that menu option for further details).

Use this screen to select items and information to be printed on the Suggested Orders Report.

In addition to selecting items and information, you determine whether or not to do the following:

- Print the report
- Create or add to the Suggested Orders Quantity File, which can be used to automatically create requisitions from suggested orders
- Allow this suggested order run to create multi ship-to purchase orders
- Allow this suggested order run to create centralized purchase orders

The criteria entered in the from and to fields determines what items to print on the report. Refer to the Cross Applications User Guide for an explanation of the rules for entering From/To Ranges.

---

NOTE: Items that are marked as discontinued through Item Master Maintenance (MENU IAFILE) will be excluded from the report, even if they match your selection criteria.

---

### Suggested Orders Report Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Warehouse          | <p>The warehouse or warehouses in which the items to be included on the report are stored.</p> <p>Key the ID of the non-customer consignment warehouse in which the items to print are stored.</p> <p>Key <b>**</b> for all non-customer consignment warehouses.</p> <hr/> <p>NOTE: You cannot utilize the warehouse list feature if a value is entered in this field (see F6=WAREHOUSE LIST).</p> <hr/> <p><i>Valid Values:</i> A non-customer consignment warehouse defined through Warehouse Numbers Maintenance (MENU IAFILE) or <b>**</b> for all non-customer consignment warehouses.</p> <p>(A 2) Required</p>   |
| Vendor No          | <p>Suggested orders will be printed for the vendor or range of vendors keyed in this field (leave blank to include all vendors). Any item with a primary vendor in this range will print on the report. The primary vendor is assigned to items for a warehouse through Item Balance Maintenance (MENU IAFILE). Each page of the Suggested Orders Report prints for a single vendor.</p> <p>To print suggested work orders, enter the work order vendor in this field.</p> <hr/> <p>NOTE: You cannot utilize the vendor list feature if a value is entered in this field (see F2=VENDOR LIST).</p> <hr/> <p><i>Valid Values:</i> Vendors with the <b>Allow POs</b> field set to <b>N</b> in Vendors Maintenance (MENU POFILE/MENU APFILE) are excluded from the report.</p> <p>(2 @ A 6) Optional</p> |
| Item Class         | <p>Key the range of item classes and sub-classes containing the items to print. If the sub-class is left blank, all sub-classes within the item class range indicated will print. Item classes are defined through Item Class/Sub Class Maintenance (MENU IAFILE) and assigned to items through Item Master Maintenance (MENU IAFILE).</p> <p>(2 @ 2 A / 2 A)@ Optional</p>   |
| Order Cycle        | <p>Key the range of order cycle codes for the indicated vendors. An order cycle is the frequency in which you place orders with vendor(s). Order cycles are assigned to vendors through Vendors Maintenance (MENU POFILE).</p> <p>For example: Vendors that have a weekly order cycle may have an order cycle code of WK or a monthly cycle code could be MN for vendors with whom orders are placed less frequently.</p> <p>(2 @ 2 A) Optional</p>   |

---

**Suggested Orders Report Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Buyer              | <p>Key the range of buyer codes (usually the buyer's initials) assigned to the items that you want to print. Only items to which this buyer or buyers have been assigned will be extracted to print on the listing.</p> <p>Buyers are defined through Buyers Maintenance (MENU POFILE) and may be assigned to a vendor, vendor/warehouse, vendor/item, and/or vendor/item/warehouse through MENU POFILE.</p> <hr/> <p>NOTE: If you are using the Buyer List Screen to enter up to 20 buyers, this field must be left blank. See F5=BUYER LIST for details.</p> <hr/> <p>(2 @ A 3) Optional</p>  |
| Our Item Number    | <p>Key the from and to range of item numbers to print, or leave blank to print all item numbers.</p> <p>(2 @ A 27) Optional</p>   |
| Purchasing Line    | <p>Purchasing lines can be assigned to a vendor and optional warehouse through Purchasing Line Maintenance (MENU POFIL2). Purchasing lines provide you with a way to group like items together.</p> <p>Key the from and to range of purchasing lines to print, or leave blank to print all purchasing lines.</p> <hr/> <p>NOTE: If you are using the Purchasing Line List Screen (p. 34-17) to enter up to 20 purchasing lines, this field must be left blank.</p> <hr/> <p>(2 @ A 10) Optional/Blank</p>   |
| Line Hit Rank      | <p>This field displays only if Advanced Inventory Management (AIM) has been activated through Activate AIM (MENU AIMAST).</p> <p>Line Hits for items is the number of times a product appears on a sales order, warehouse transfer, or lost business transaction, regardless of quantity. By tracking a product's Line Hits, items can then be ranked based on these 'hits' (or the volume of transactions the item appears on) and categorized by the use of a rank code.</p> <p>Key the from and to range of rank codes that have been assigned to the items to print, or leave blank to print all line hit rank codes.</p> <p>(2 @ A 1) Optional</p> |

### Suggested Orders Report Screen Fields and Function Keys

| Field/Function Key         | Description   |
|----------------------------|---|
| Standard Pack Round Down % | <p>This field allows for a round down/round up percentage when the suggested order amount is calculated.</p> <p>The suggested order amount will consider this field when determining whether to round the item quantities down or up in multiples of the vendor/item standard pack.</p> <p>If the number of standard packs to order is greater than one, and the (remainder quantity/standard usage) *100 is less than the specified round down percentage you key in this field, the system will round down to multiples of the standard pack. In all other cases, the system will round up to multiples of the standard usage.</p> <p>Key the standard pack round down percentage.</p> <hr/> <p>NOTE: This field is used only for non-AIM planned items (so, applies to IM&amp;P planned or simply unplanned items only).</p> <hr/> <p>Calculation: :<br/>Suggested Order Amount / Standard Usage from the Vendor Item File = the number of Standard Packs to order</p> <p><i>Default Value:</i> 0</p> <p><i>Valid Values:</i> 0 - 99</p> <p>(N 2,0) Optional</p> |
| Minimum Balance %          | <p>Key the percentage for which you want to temporarily increase your minimum balance to create this Suggested Orders Report. This does not permanently increase the minimum balance. If you leave the minimum balance percent zero, all items below the minimum balance will print. If you key a percent, the report will print all items below this percentage of their minimum balance.</p> <p>For Example: If an item has a minimum stocking level of 100 units, and you leave this field blank, the Suggested Orders Report will print suggested orders for that item when its on-hand quantity falls below 100. If you keyed 10 (10 percent) in this field, this item will print on the Suggested Orders Report when the item's on-hand quantity is below 110 (100 + (100 * .10) = 110).</p> <p><i>Valid Values:</i> 0 - 100</p> <p>(N 3,0) Optional</p>  |

---

**Suggested Orders Report Screen Fields and Function Keys**

| Field/Function Key        | Description  |
|---------------------------|--|
| Create Sugg Ord File      | <p>Use this field to specify whether or not you want to create (or add to) the Suggested Orders Quantity File. This file is used to automatically create requisitions from suggested orders.</p> <p>Key <b>Y</b> to create (or add to) the Suggested Orders Quantity File.</p> <p>Key <b>N</b> if you do not want to create the file (or add to an existing one).</p> <hr/> <p>NOTE: If this field is <b>N</b>, the <b>Add Special Order Items</b> field must also be <b>N</b> because a run must be successfully created/stored in the suggested order file first, in order for a special order item to be linked to it. Special orders alone will not create a suggested order run.</p> <hr/> <p><i>Default Value:</i> Y</p> <p>(A 1) Required</p> |
| Show Special Order Detail | <p>This field allows you to view special order information (drop shipments, non-stocks, etc.) if any items have been special ordered.</p> <p>Key <b>Y</b> to show detailed special order information. If you key <b>Y</b> in this field, special order information will print on the report. It is not transferred to the Suggested Orders Quantity File even if you keyed <b>Y</b> in the <b>Create Sugg Ord File</b> field.</p> <p>Key <b>N</b> to prohibit the printing of special order information.</p> <p><i>Default Value:</i> Y</p> <p>(A 1) Required</p>  |
| Ignore Future P/Os        | <p>Use this field to indicate if you want future purchase orders ignored.</p> <p>Key <b>Y</b> to ignore the quantities of open purchase orders that are due in after the lead time associated with the item (or vendor, if Inventory Management &amp; Planning or Advanced Inventory Management is not installed.)</p> <p>Key <b>N</b> to include all open purchase orders' quantities when calculating suggested order quantities.</p> <p><i>Default Value:</i> Y</p> <p>(A 1) Required</p>   |

### Suggested Orders Report Screen Fields and Function Keys

| Field/Function Key       | Description  |
|--------------------------|--|
| Create Mult Ship-To P/Os | <p>Use this field to specify whether orders created during this run can be shipped from the vendor to more than one warehouse. If you allow these Multi-WH purchase orders, item quantity discounts will be based on the sum of the quantities for all warehouses. Warehouse specific discounts will not be used.</p> <p>Key <b>Y</b> to allow this run to create purchase orders with more than one ship-to address.</p> <p>Key <b>N</b> to prevent this run from creating purchase orders with more than one ship-to address.</p> <p>For more information on multiple ship-to purchase orders, refer to Multi-WH Purchase Orders in the Purchasing Overview section of this user guide.</p> <hr/> <p>NOTE: This field applies only if the selected vendor(s) and warehouse(s) allow multiple ship-to purchase orders, as specified through Vendor Master Maintenance (MENU POFILE) and Warehouse Numbers Maintenance (MENU IAFILE).</p> <hr/> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p> |
| Use Returns as Available | <p>Use this field to designate whether or not you want to include allocated returns as being available when running the report.</p> <p>Key <b>Y</b> to have the return quantity on allocated orders added to the on-hand quantity when calculating the net quantity. This will reduce or eliminate the amount of inventory that is suggested to be purchased for an item on the report.</p> <p>Key <b>N</b> if you do not want allocated returns included in the on-hand quantity when calculating the net quantity.</p> <p>(A 1) Required</p>   |
| Assign Owner by Buyer    | <p>Use this field to determine how you want to assign the <b>Owner</b> field when running the report.</p> <p>Key <b>Y</b> to assign the <b>Owner</b> field by Buyer. When running the report and creating a suggested order run, the User ID of the Buyer will display as the owner.</p> <p>Key <b>N</b> if you do not want to assign the <b>Owner</b> field by Buyer. When running the report and creating a suggested order run, the User ID of the person who created the suggested order run will display as the owner.</p> <p>(A 1) Required</p>  |

---

**Suggested Orders Report Screen Fields and Function Keys**

| Field/Function Key         | Description  |
|----------------------------|--|
| Vendor Type                | <p>This field determines the type of vendors to be included on the report. Leave this field blank to include all vendors within the range entered in the <b>Vendor No</b> field, or Vendor List (see F2=VENDOR LIST).</p> <p>Key <b>V</b> to select outside vendors (regular vendors).</p> <p>Key <b>W</b> to select vendors whom represent your other warehouses only (transfer vendors).</p> <p><i>Valid Values:</i> blank, V or W</p> <p>(A 1) Optional</p>   |
| Print Report               | <p>Use this field to specify whether or not you want to print the Suggested Orders Report (p. 34-23).</p> <p>Key <b>Y</b> to print the report. If you choose to print the report only (<b>Create Sugg Ord File</b> is <b>N</b>), you will not need to use options 11 through 13 on this menu.</p> <p>Key <b>N</b> if you do not want to print the report.</p> <p><i>Default Value:</i> Y</p> <p>(A 1) Required</p>   |
| Show Alternate Vendor Info | <p>This field allows you to view information pertaining to other vendors who sell a given item, if appropriate.</p> <p>If an item displays on the Suggested Orders Report and more than one vendor supplies this item (i.e., Vendor/Item record exists), then cost information for vendors other than the primary vendor will print.</p> <p>Key <b>Y</b> to print alternate vendor information for each item.</p> <p>Key <b>N</b> to prohibit the printing of alternate vendor information. The report will print only the primary vendors.</p> <p><i>Default Value:</i> Y</p> <p>(A 1) Required</p> |

---

**Suggested Orders Report Screen Fields and Function Keys**

| Field/Function Key       | Description   |
|--------------------------|---|
| Show Other WHs as Source | <p>This field determines if warehouses with potential sources of the item will be shown.</p> <p>Key <b>0</b> if you do not want to include warehouses that might be potential sources of the item(s).</p> <p>Key <b>1</b> to include warehouses in which their items' availability quantity is equal to or exceeds their maximum quantity.</p> <p>Key <b>2</b> to include warehouses in which their items' availability quantity is equal to or exceeds their minimum quantity.</p> <p>Key <b>3</b> to include warehouses in which their items' availability quantity exceeds zero.</p> <hr/> <p>NOTE: Regardless of your entry in this field, only non-customer consignment warehouses will appear on the report.</p> <hr/> <p><i>Default Value:</i> 0</p> <p><i>Valid Values:</i> 0 - 3</p> <p>(A 1) Required</p> |
| Print Mfg Number         | <p>Use this field to indicate if you want the manufacturer's item number to print as an additional field on the report.</p> <p>Key <b>Y</b> to print the manufacturer's item number in addition to our item number.</p> <p>Key <b>N</b> to print only our item number. No manufacturer's item numbers will print on the report.</p> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p>  |

---

**Suggested Orders Report Screen Fields and Function Keys**

| Field/Function Key     | Description   |
|------------------------|---|
| Allow Centralized P/Os | <p>Use this field to specify whether orders created during this run can be received at one warehouse (i.e., a warehouse transfer vendor) and then shipped to other warehouses (i.e., warehouse transfer customers).</p> <p>If you allow Centralized purchase orders, suggested order quantities are not increased to the vendor minimum, since you may prefer to meet vendor minimums by combining orders for multiple warehouses.</p> <p>Key <b>Y</b> to allow this run to create centralized purchase orders.</p> <p>Key <b>N</b> to prevent this run from creating centralized purchase orders.</p> <p>For more information on centralized purchase orders, refer to Centralized Purchase Orders in the Purchasing Overview section.</p> <hr/> <p>NOTE: This field applies only if the selected warehouse allows centralized purchase orders, as specified through Warehouse Numbers Maintenance (MENU IAFILE), and the Purchasing Warehouse Transfer feature has been defined.</p> <hr/> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p> |
| Print Sales Usage      | <p>Use this field to select to print additional fields on the Suggested Orders Report: average monthly usage, and 6 months of sales usage (month-to-date and the last 5 months).</p> <p>Key <b>Y</b> to include and print the Sales Usage data.</p> <p>Key <b>N</b> if you do not want the Sales Usage data included in Suggested Orders Maintenance or printed on the Suggested Orders report.</p> <p>(A 1) Required</p>   |

---

**Suggested Orders Report Screen Fields and Function Keys**

| Field/Function Key      | Description  |
|-------------------------|--|
| Add Special Order Items | <p>This field only displays when accessed from Buyers Workbench (MENU POREPT).</p> <p>Use this field to indicate if qualifying special order items (including drop ships) should be automatically linked to the suggested order run(s) created during this option. Linking them during this step saves the buyer from later having to take the additional step to either manually link them to the run(s) or add them directly to the eventually created requisition(s)/Purchase Orders(s). Once special order items are linked to a suggested order run, Buyers Workbench (BWB) can be used to maintain/delete those links for the suggested order run at any time.</p> <p>Special order items qualify for linking to a suggested order run if they are for the appropriate company/vendor/warehouse, and if they are not already selected for inclusion (or have not yet already been included) on another suggested order run, requisition, or PO. Note that linking special order items to a suggested order run does not duplicate/perform all the same edits that will eventually be done by the create requisition/PO process for the suggested order run.</p> <p>Key <b>Y</b> to link qualifying special order items to the suggested order run(s) being created. If selected, the resulting Suggested Orders Report (p. 34-23) will include <b>Add Special Order Items</b> in the header, along with the other criteria used for the run(s). Also, in the SPECIAL ORDERS section of the report output, any linked special orders will indicate, in the Req/PO column, the run number to which it was linked.</p> <p>Key <b>N</b> to not link qualifying special order items to the suggested order run(s) being created. Note that special order linking may be done later in BWB or, as always, special orders can manually be added to the eventually created req(s)/PO(s).</p> |
|                         | <p>NOTE: This field must be <b>N</b> if <b>Create Sugg Ord File</b> is <b>N</b> because a run must be successfully created/stored in the suggested order file first, in order for a special order item to be linked to it. Special orders alone will not create a suggested order run.</p>   |
|                         | <p><i>Default Value:</i> N<br/>(A 1) Required</p>  |
| F2=Vendor List          | <p>NOTE: If using this feature, you cannot enter ranges in the <b>Vendor No</b> field on this screen.</p> <p>Press <b>F2=VENDOR LIST</b> as an alternative to entering ranges in the <b>Vendor No</b> field to select a list of up to 20 vendors to be included on the report. The Vendor List Screen (p. 34-15) will display.</p>   |

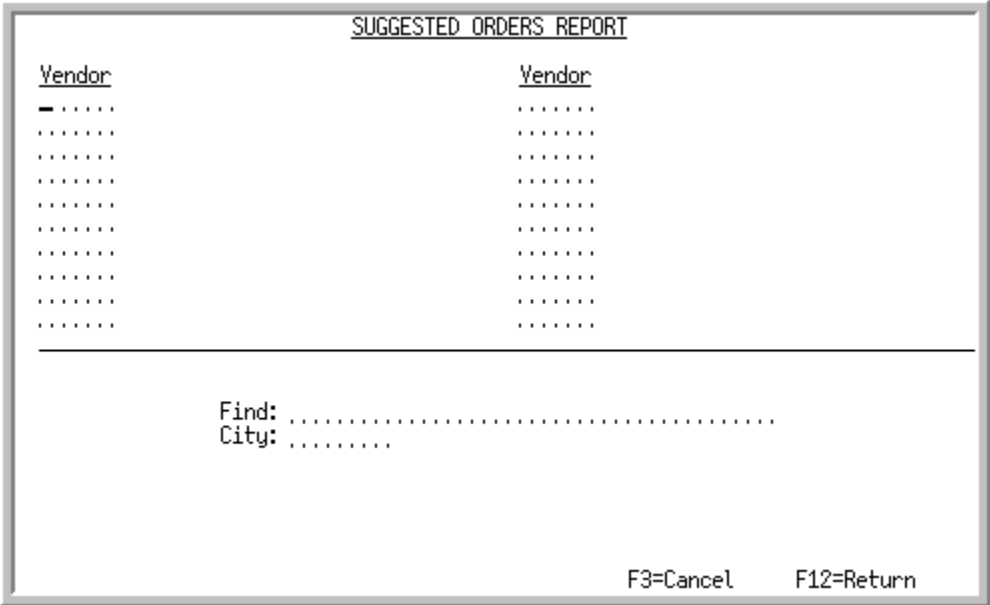

### Suggested Orders Report Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| F3=Cancel          | <p>Press F3=CANCEL to cancel this option.</p> <p>If this screen was accessed from this menu option, you will be returned to the main menu.</p> <p>If this screen was accessed from Buyers Workbench (MENU POREPT) via the Suggested Orders Report Template Load Screen (p. 38-89), you will be returned to the Workbench Suggested Orders List Screen (p. 38-5).</p> <p>If this screen was accessed from Buyers Workbench (MENU POREPT) via the Suggested Orders Report Template Maintenance Screen (p. 38-93), you will be returned to the Suggested Orders Report Template Settings Screen (p. 38-95).</p> <p>If this screen was accessed from Automate Suggested Orders (MENU POFIL2), you will be returned to the Auto Suggested Order Job Name Maintenance Screen (p. 65-5).</p> |
| F4=PLine List      | <p>NOTE: If using this feature, you cannot enter ranges in the <b>Purchasing Line</b> field on this screen.</p> <p>Press F4=PLINE LIST as an alternative to entering ranges in the <b>Purchasing Line</b> field to select a list of up to 20 purchasing lines to be included on the report. The Purchasing Line List Screen (p. 34-17) will display.</p>  |
| F5=Buyer List      | <p>NOTE: If using this feature, you cannot enter ranges in the <b>Buyer</b> field on this screen.</p> <p>The F5=BUYER LIST function key appears only if this screen is accessed from Buyers Workbench (MENU POREPT).</p> <p>Press F5=BUYER LIST as an alternative to entering ranges in the <b>Buyer</b> field to select a list of up to 20 buyers to be included on the report. The Buyer List Screen (p. 34-19) will display.</p>   |
| F6=Warehouse List  | <p>NOTE: If using this feature, you cannot enter a warehouse or ** for all warehouses in the <b>Warehouse</b> field.</p> <p>Press F6=WAREHOUSE LIST as an alternative to entering a value in the <b>Warehouse</b> field to select a list of up to 20 warehouses to be included on the report. The Suggested Orders Report Warehouse List Screen (p. 34-21) will display.</p>  |
| Enter              | <p>Press ENTER to confirm your selections.</p> <p>If this screen was displayed from Automate Suggested Orders (MENU POFIL2), the Suggested Order Report Additional Information Screen (p. 65-7) will appear. Otherwise, the Report Options Screen will display. The reference section for this screen is in the Appendix section of the Cross Applications User Guide.</p>  |

### Vendor List Screen

This screen displays after pressing F2=VENDOR LIST on the Suggested Orders Report Screen (p. 34-3). Other places that access this screen are from Buyers Workbench (MENU POREPT) and Automate Suggested Orders (MENU POFIL2).

Use this screen as an alternative to entering vendor ranges in the **Vendor No** field on the Suggested Orders Report Screen. A list of up to 20 vendors may be selected to print on the report. This is useful if you have multiple vendors to select that are not in a sequential range.

#### Vendor List Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Vendor             | Use this field to enter a list of up to 20 vendors to be included on the report. Suggested orders for the vendors entered in this field will be included on the report.<br>(20 @ A 6) Optional |

**Vendor List Screen Fields and Function Keys**

| Field/Function Key  | Description  |
|---|--|
| Find  | <p>Use this field to activate the Vendor Search feature when you do not know the vendor's number.</p> <p>Key the vendor's name or up to 10 characters (the first 10) of one or more words in the vendor's name and press <b>ENTER</b> to display the Vendor Search Screen.</p> <p>To limit the vendor search by city (i.e., search for the specified vendor name within a particular city), key a city in the <b>City</b> field as well.</p> <p>For more information on using searches and for a description of the search screens, refer to the Cross Applications User Guide.</p> <p>(A 40) Optional</p>   |
| City  | <p>When using the <b>Find</b> field to search for a vendor, you can limit the search to a particular city by keying a partial or complete city name in this field.</p> <p>If you enter characters in this field, the Vendor Search Screen displays only vendors that meet the criteria specified here and in the <b>Find</b> field.</p> <p>For more information on using searches and for a description of the search screens, refer to the Cross Applications User Guide.</p> <p>(A 8) Optional</p>   |
| F3=Cancel   | <p>Press <b>F3=CANCEL</b> to cancel this option.</p> <p>If this screen was accessed from this menu option, you will be returned to the main menu.</p> <p>If this screen was accessed from BuyerBuyers Workbenchs Workbench (MENU POREPT) via the Suggested Orders Report Template Load Screen (p. 38-89), you will be returned to the Workbench Suggested Orders List Screen (p. 38-5).</p> <p>If this screen was accessed from Buyers Workbench (MENU POREPT) via the Suggested Orders Report Template Maintenance Screen (p. 38-93), you will be returned to the Suggested Orders Report Template Settings Screen (p. 38-95).</p> <p>If this screen was accessed from Automate Suggested Orders (MENU POFIL2), you will be returned to the Auto Suggested Order Job Name Maintenance Screen (p. 65-5).</p> |
| F12=Return  | <p>Press <b>F12=RETURN</b> to return to the previous screen.</p>   |
| Enter   | <p>When completed selecting a list of vendors, press <b>ENTER</b> to confirm your selections. The vendor list will be saved and you will be returned to the Suggested Orders Report Screen (p. 34-3).</p>  |
| <p><b>NOTE:</b> Since you are using the vendor list, the <b>Vendor No</b> field must be left blank on the Suggested Orders Report Screen.</p> |  |

F3=Cancel    F12=Return

This screen displays after pressing F4=PLINE LIST on the Suggested Orders Report Screen (p. 34-3). Other places that access this screen are from Buyers Workbench (MENU POREPT) and Automate Suggested Orders (MENU POFIL2).

Use this screen as an alternative to entering purchasing line ranges in the **Purchasing Line** field on the Suggested Orders Report Screen (p. 34-3). A list of up to 20 purchasing lines may be selected to print on the report. This is useful if you have multiple purchasing lines to select that are not in a sequential range.

### Purchasing Line List Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Purchasing Line(s) | <p>Use this field to enter a list of up to 20 purchasing lines to be included on the report.</p> <p>Suggested orders for the purchasing lines entered in this field will be included on the report.</p> <p><i>Valid Values:</i> a purchasing line defined through Purchasing Line Maintenance (MENU POFIL2)</p> <p>(20 @ A 10) Optional</p> |

### Purchasing Line List Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| F3=Cancel          | <p>Press <b>F3=CANCEL</b> to cancel this option.</p> <p>If this screen was accessed from this menu option, you will be returned to the main menu.</p> <p>If this screen was accessed from Buyers Workbench (MENU POREPT) via the Suggested Orders Report Template Load Screen (p. 38-89), you will be returned to the Workbench Suggested Orders List Screen (p. 38-5).</p> <p>If this screen was accessed from Buyers Workbench (MENU POREPT) via the Suggested Orders Report Template Maintenance Screen (p. 38-93), you will be returned to the Suggested Orders Report Template Settings Screen (p. 38-95).</p> <p>If this screen was accessed from Automate Suggested Orders (MENU POFIL2), you will be returned to the Auto Suggested Order Job Name Maintenance Screen (p. 65-5).</p> |
| F12=Return         | <p>Press <b>F12=RETURN</b> to return to the previous screen.</p>   |
| Enter              | <p>When completed selecting a list of purchasing lines, press <b>ENTER</b> to confirm your selections. The purchasing line list will be saved and you will be returned to the Suggested Orders Report Screen (p. 34-3).</p> <hr/> <p><b>NOTE:</b> Since you are using the purchasing line list, the <b>Purchasing Line</b> field must be left blank on the Suggested Orders Report Screen (p. 34-3).</p>   |

### Buyer List Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Enter              | When completed selecting a list of buyers, press <b>ENTER</b> to confirm your selections. The buyer list will be saved and you will be returned to the Suggested Orders Report Screen (p. 34-3). |
|                    | <hr/> <b>NOTE:</b> Since you are using the buyer list, the <b>Buyer</b> field must be left blank on the Suggested Orders Report Screen (p. 34-3). <hr/>  |

## Suggested Orders Report Warehouse List Screen

This screen displays after pressing F6=WAREHOUSE LIST on the Suggested Orders Report Screen (p. 34-3). Other places that access this screen are from Buyers Workbench (MENU POREPT) and Automate Suggested Orders (MENU POFIL2).

Use this screen as an alternative to entering a warehouse or \*\* for all warehouses in the **Warehouse** field on the Suggested Orders Report Screen.

A list of up to 20 warehouses may be selected to print on the report. This is useful if you have multiple warehouses to select that are not in a sequential range.

### Suggested Orders Report Warehouse List Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Warehouse(s)       | Use this field to enter a list of up to 20 warehouses to be included on the report.<br>Key the Warehouse ID(s) to print.<br><i>Valid Values:</i> A valid warehouse number defined through Warehouse Numbers Maintenance (MENU IAFILE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).<br>(20 @ A 2) Optional |

This report prints following your responses on the Report Options Screen, which displays after pressing **ENTER** on the Suggested Orders Report Screen (p. 34-3).

The items that fall below the minimum stocking level in the selected warehouse(s) and their suggested order quantities are printed. Refer to Create the Suggested Orders Report (p. 5-8) for the calculations used to determine the quantities on this report. Special orders will also print for items within the indicated ranges.

This report is sequenced by buyer, then primary vendor. Each primary vendor for the items selected will print on a new page by warehouse. If items are suggested for vendors who have been assigned more than one buyer, items for each buyer will print on a new page. Suggested ordered items are printed in item number sequence.

**NOTE:** A warning message will print on this report if an item tracks country of origin (as defined through Item Master Maintenance), and if there are country of origin restrictions that exist at the time of ordering. The warning message will print below the item number and description lines, but prior to any alternate vendors.

Special orders for a vendor are not included unless at least one item appears as a suggested order for that vendor.

If this report was submitted with **Add Special Order Items = Y** on the Suggested Orders Report Screen (p. 34-3), when suggested order(s) are created, all qualifying special order items for the suggested order run's warehouse and vendor will automatically be added/linked to the suggested order run. Qualifying special order items means not already added to a requisition, purchase order or suggested order run that passed regular Distribution A+ validation used in adding to a requisition in the Distribution A+ Enter or Change Requisitions, Add Special Orders option. Also, note that if the report was submitted with **Add Special Order Items = Y**, only after a suggested order is created for regular

stocking items that fall below their minimum stocking level in a warehouse can all qualifying special order items (if any) be added/linked to this suggested order.

In addition to the report printing, the Suggested Orders Quantity File is created (or added to) if **Y** was keyed in the **Create Sugg Ord File** field on the Suggested Orders Report Screen (p. 34-3). You can use this file to create requisitions through Create Req From Suggested Orders.

### Suggested Orders Report

| Report/Listing Fields | Description  |
|-----------------------|--|
| Headings              | <p>Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.</p> <p>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings.</p> <p>The message “* <b>Data may have been omitted due to security considerations</b> *” will print when the user that generated this report/ listing is not authorized to all the [company -or- warehouse -or -company and warehouse] selected data as determined through Authority Profile Maintenance (MENU XASCTY).</p> <p>The company number and name are also printed and the <b>Company Number</b> field will be exported to Excel .tsv reports.</p> |
| RUN #                 | <hr/> <p>NOTE: This number will not display on this report if you responded with an <b>N</b> to the Create Sugg Ord File field on the Suggested Orders Report Screen (p. 34-3).</p> <hr/> <p>This is the number associated with this specific run of the Suggested Orders Report; each run of the report is automatically assigned a new run number.</p> <p>This number, which is automatically generated, allows you to match suggested orders in the Suggested Orders Quantity File with its corresponding Suggested Orders Report. Use this number to maintain suggested orders or create requisitions from suggested orders.</p>   |
| Report Only           | <p>This field indicates whether or not a file was created in addition to this report.</p> <p><b>Y</b> displays if this report was produced only. Requisitions cannot currently be created for the suggested orders.</p> <p><b>N</b> displays if this report was produced and the Suggested Orders Quantity File was created (or added to if one already existed). If <b>N</b> displays, the <b>RUN #</b> (system assigned number) will also print above this field. You must key this number if you are maintaining suggested orders, or when creating requisitions from suggested orders.</p>   |

---

**Suggested Orders Report**

| <b>Report/Listing Fields</b>      | <b>Description</b>   |
|-----------------------------------|--|
| Vendor                            | The vendor number, name, contact person, and phone number associated with the items that are suggested for order.  |
| Lead Time                         | The number of weeks this vendor requires to deliver the items on the purchase order.   |
| Safety %                          | The percentage of stock kept in inventory to compensate for variations in customer demand and vendor lead time. This specific value is assigned in the Vendor Master File (VENDR). |
| Min Order                         | The minimum dollar amount that can be ordered from this vendor.  |
| Min Wgt                           | The minimum weight that this vendor requires to place orders.  |
| Min Size                          | The minimum size (in cubes) of an item that this vendor requires to place orders.  |
| Order Cycle                       | The frequency in which you order from vendors.   |
| Std Disc %                        | The discount percent associated with this vendor.  |
| Item Number                       | The unique number used to identify this item. The item description is printed below this number.   |
| Suggested Order Qty / PCH U/M     | The suggested quantity of this item that you should purchase in the provided purchasing unit of measure.   |
| Unit Cost/Extended Cost / CST U/M | The unit cost of the item per this unit of measure, and the extended cost (or unit cost multiplied by quantity) of the item.   |
| Net Qty                           | The quantity of the item above (positive) or below (negative) the maximum stocking level. A positive value will print only if you specify a minimum balance percent.               |
| Needed                            | The quantity of this item that needs to be purchased to reach the maximum stocking level.  |
| Min Bal / STK U/M                 | The stocking minimum balance level per this unit of measure (the quantity of this item stocked should not be below this number).   |
| Sales This Yr / Sales Last Yr     | The quantity of this item sold this year and last year.  |

---

### Suggested Orders Report

| Report/Listing Fields      | Description   |
|----------------------------|---|
| Special Orders Information | <ul style="list-style-type: none"> <li>• <b>Typ:</b> The type of special order:                             <ul style="list-style-type: none"> <li>• <b>D/S:</b> Drop-Ship - shipped directly from your vendor to your customer</li> <li>• <b>N/S:</b> Non-Stock - an item defined through Item Master Maintenance with an <b>N</b> keyed in the <b>Update Inventory</b> field indicating that the item is a non-stock item</li> <li>• <b>S/O:</b> Special Order - any special order other than a drop-ship or non-stock</li> </ul> </li> <li>• <b>Item No:</b> The special order item number from the customer's order.</li> <li>• <b>Ord Qty:</b> The quantity ordered of this item per this unit of measure.</li> <li>• <b>Ord Date:</b> The date on which the customer order was placed.</li> <li>• <b>Req Ship:</b> The date the item is requested to be shipped to the customer.</li> <li>• <b>Mfg No:</b> The manufacturer's item number associated with the item being ordered, if any. Manufacturers' item numbers are defined through Item Master Maintenance (MENU IAFILE).</li> <li>• <b>Order No:</b> The company and order number of the customer's order.</li> <li>• <b>Req No:</b> The company and the number assigned to the requisition that contains this special ordered item. If a suggested order item has not been selected on a requisition, this column is blank. Note that for an unordered order item added (linked) to a suggested order run, this field will be filled with # and the run number (e.g., #2038) indicating the suggested order that the special order item is linked to.</li> </ul> |

---

---

Before creating requisitions or work orders (if Value Added Services is installed on your system) for suggested orders through option 12 - Create Req from Suggested Orders, it may be necessary to maintain certain suggested orders. Use this option to select those suggested orders (created by option 10 - Suggested Orders Report) that you wish to maintain. You will be allowed to change the vendor number and/or the suggested order quantity. You may also delete line items in the order.

---

NOTE: The Suggested Orders Quantity File must exist prior to accessing this option. This file is created after running the Suggested Orders Report through option 10, if Y was entered in the **Create Sugg Ord File** field.

---

---

## Suggested Order Maintenance

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title   | Purpose   |
|---|---|
| Suggested Order Maintenance Selection Screen      | Use to select the suggested order you wish to change.                             |
| Suggested Order List Screen                       | Use to view and/or select from a list of open suggested orders.                   |
| Suggested Order Maintenance Review Screen         | Use to review and maintain the existing line items on the suggested order.        |
| Suggested Order Item Review All Warehouses Screen | Use to review the existing line items on the suggested orders for all warehouses. |

---

| Title  | Purpose  |
|--|--|
| Suggested Order Maintenance End Order Screen | Use to: <ul style="list-style-type: none"><li>• View suggested order totals for each warehouse</li><li>• View vendor volume discounts and vendor minimums</li><li>• Override vendor minimums</li><li>• Automatically add other items to a regular purchase order to meet vendor minimums (i.e., auto-round)</li><li>• Combine orders (i.e., centralize) to meet vendor volume discount minimums</li></ul>  |
| Auto Round to Vendor Min Max Levels Screen   | Use to view vendor minimums and maximums and override values, if needed.   |
| Suggested Order Maintenance Screen           | Use to: <ul style="list-style-type: none"><li>• Select the vendor from whom you will be ordering this item</li><li>• Change the order quantity for Regular and Multi Ship-To purchase orders</li><li>• Override the unit cost of the item</li><li>• Compare total quantity demanded from all warehouses with the vendor's minimum order quantity to determine whether you need to create a Centralized PO or order extra quantities and distribute them to other warehouses</li><li>• Delete line items from the suggested order</li></ul> |
| Centralized Warehouse Receipts Screen        | Use to centralize orders for the selected item by combining the order quantity from two or more warehouses into one receiving warehouse.   |
| Distribute PO Quantity to Warehouses Screen  | Use to: <ul style="list-style-type: none"><li>• Change order quantities</li><li>• Add an order quantity for a warehouse that currently does not have a quantity for this purchase order</li><li>• Distribute order quantities across warehouses when you need to order more than the suggested PO quantity</li></ul>   |
| Warehouse Stock Display Screen               | Use to review the inventory availability in other warehouses before ordering from the vendor.  |

## Suggested Order Maintenance Selection Screen

SUGGESTED ORDER MAINTENANCE

Owner:      APDEMO . . . .

Warehouse?  1 .

Run No:     - . . . .

Vendor:     . . . . .

F3=Exit    F4=Suggested Order List    F24=Delete Order

This screen displays after selecting option 11 - Suggested Order Maintenance (MENU POREPT). Use this screen to select the suggested order you wish to change. You may also delete an order through the use of the F24=DELETE ORDER.

### Suggested Order Maintenance Selection Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Owner              | <p>Key the owner (user ID) of the suggested order you wish to maintain.</p> <p><i>Default Value:</i> Your user ID (System i user profile)</p> <p>(A 10) Required</p>  |
| Warehouse          | <p>This is the warehouse containing the suggested order that you wish to maintain.</p> <p>Key the appropriate warehouse ID.</p> <p><i>Default Value:</i> The default warehouse defined in Authority Profile Maintenance (MENU XASCTY) if one has been defined; otherwise, this is the <b>Default Warehouse</b> defined through Company Name Maintenance (MENU XAFIELD).</p> <p><i>Valid Values:</i> A valid warehouse number defined through Warehouse Numbers Maintenance (MENU IAFIELD) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(A 2) Required</p> |

### Suggested Order Maintenance Selection Screen Fields and Function Keys

| Field/Function Key      | Description   |
|-------------------------|---|
| Run No                  | <p>This is the number associated with a specific run of the Suggested Orders Report, which identifies this group of suggested orders. This number allows you to match suggested orders in the Suggested Orders Quantity File with its corresponding Suggested Orders Report.</p> <p>This number is found on the top right hand corner of the Suggested Orders Report.</p> <hr/> <p>NOTE: This number will not display on the report if you responded with an <b>N</b> to the <b>Create Sugg Ord File</b> field on the Suggested Orders Report Screen (p. 34-3).</p> <hr/> <p>Key the run number of the Suggested Order Report containing the suggested orders you want to maintain.</p> <p>(N 5,0) Required</p> |
| Vendor                  | <p>Key the vendor number associated with the suggested order you wish to maintain.</p> <p>If Value Added Services is installed on your system and you wish to maintain a suggested order for a work order, key the work order vendor that you defined through Work Order Options Maintenance (MENU WOFIELD).</p> <p><i>Valid Values:</i></p> <ul style="list-style-type: none"> <li>• A valid vendor defined in the Vendor Master File.</li> <li>• If Value Added Services is installed on your system, a valid vendor defined as your Work Order vendor in the Vendor Master File and designated as such through Work Order Options Maintenance (MENU WOFIELD).</li> </ul> <p>(A 6) Required</p>               |
| F3=Exit                 | Press <b>F3=EXIT</b> to cancel this option and return to the menu.  |
| F4=Suggested Order List | Press <b>F4=SUGGESTED ORDER LIST</b> to display all or a limited list of the open suggested orders. This display will be limited by an <b>Owner</b> if an <b>Owner</b> is entered, by a <b>Warehouse</b> if a <b>Warehouse</b> is entered, and so on. The Suggested Order List Screen (p. 35-5) will display.   |
| F24=Delete Order        | <p>Press <b>F24=DELETE ORDER</b> to delete the individual suggested order. You will be prompted to press the <b>F24=DELETE ORDER</b> key twice to confirm deletion.</p> <hr/> <p>NOTE: To delete an entire run of suggested orders, use Delete Suggested Orders (MENU POREPT).</p>  |
| Enter                   | Press <b>ENTER</b> to confirm your selections. The Suggested Order Maintenance Review Screen (p. 35-11) will display.   |

More...

Select: \_ , Owner: ..... WH? ... Run No: ..... Vendor? PO Type: \* (\*,M,C)

F2=Below Vnd Minimum F5=Not Reviewed F6=Add Vendor F12=Return

This screen displays after pressing F4=SUGGESTED ORDER LIST on the:

- Suggested Order Maintenance Selection Screen (p. 35-3)
- Create Requisitions From Suggested Orders Screen (p. 36-3)
- Create Requisitions or WO's From Suggested Orders Screen (p. 36-3)
- Delete Suggested Orders Screen (p. 37-2)
- Create Requisitions and Purchase Orders Screen (p. 38-59)

Use this screen to view and/or select from a list of open suggested orders.

Within Suggested Order Maintenance, the list is limited to the criteria entered on the Suggested Order Maintenance Selection Screen (p. 35-3). If no criteria was entered, this list displays all open suggested orders.

If this screen was accessed from other screens, the list is limited by the information entered on the calling screen (for example, the list on this screen will be limited to the owner and warehouse entered on the Create Requisitions and Purchase Orders Screen (p. 38-59)).

With the use of the F2=BELOW VND MINIMUM, you can toggle between displaying all orders or only those orders below vendor minimum. You can also toggle between displaying all orders or only those orders not reviewed through the use of the F5=NOT REVIEWED / F5=ALL ORDERS.

**Suggested Order List Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| (Reference)        | The reference number corresponding to the suggested order. Key this number in the <b>Select</b> field on the lower portion of the screen to select the suggested order.<br>Display  |
| Owner              | The owner (user ID) of the suggested order.<br>Display  |
| Rcv WH             | The number of the warehouse that will receive the goods from the vendor.<br>Display   |
| Dmd WH             | The number of the warehouse that requires the goods for its inventory. For centralized purchase orders, you can change this warehouse on the Suggested Order Maintenance End Order Screen (p. 35-22) or the Centralized Warehouse Receipts Screen (p. 35-47). For multi ship-to purchase orders or regular purchase orders, this warehouse is the same as the receiving warehouse ( <b>Rcv WH</b> ).<br>Display |
| T                  | The type of purchase order is indicated by one of the following: <ul style="list-style-type: none"><li>• <b>M</b> - multi ship-to</li><li>• <b>C</b> - centralized</li><li>• <b>Blank</b> - standard (neither multi ship-to nor centralized)</li></ul> Display  |
| Run No             | The specific run of the Suggested Orders Report containing this item. This number allows you to match the suggested order in the Suggested Orders Quantity File with its corresponding Suggested Order Report.<br>Display   |
| Vendor             | The vendor from whom this item is ordered.<br>Display   |
| Name               | The name of the vendor.<br>Display  |

### Suggested Order List Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Min                | <p>These two columns indicate whether specific order minimums have been met by this order. If order minimums have not been met, you should check the inventory in other warehouses to determine if you can increase the size of this order to meet the required minimums.</p> <hr/> <p>NOTE: Order quantities on multi ship-to orders are not directly compared to order minimums. Instead, if a vendor has more than one multi ship-to order (i.e., the <b>T</b> column contains <b>M</b>), the total order quantity of all multi ship-to orders is compared to the order minimums.</p> <hr/> <ul style="list-style-type: none"> <li>• <b>V</b> represents the vendor minimums (units, value, weight and size) specified through Vendor Master Maintenance (MENU POFILE).<br/>The units, value, weight, and size of all items on the PO are added together and the totals are compared with the required vendor minimums. If all minimums have been met by this order, <b>Y</b> appears. If one or more minimum has not been met, <b>N</b> appears.</li> </ul> <hr/> <p>NOTE: When totaling the units for all items on the PO, the unit of measure is irrelevant. For example, 5 eaches of one item are added to 10 cases of another item to total 15 units.</p> <hr/> <ul style="list-style-type: none"> <li>• <b>I</b> represents the minimum order quantity for this item as specified through Vendor/Item Master Maintenance (MENU POFILE). The order quantity of each item is compared with its minimum order quantity. If all items on the PO meet their minimum order quantity, <b>Y</b> appears. If one or more items does not meet its minimum order quantity, <b>N</b> appears.</li> </ul> <p>Both of these columns are considered when you use the <b>F2=BELOW VND MINIMUM / F2=ALL ORDERS</b>.</p> <p>When you use the <b>F2=BELOW VND MINIMUM</b> toggle key, both the vendor minimums and the minimum order quantity are considered in determining which items to display.</p> <p>Display</p> |
| Mx                 | <p>A <b>Y</b> in this column indicates that all of the vendor master order maximum values (units, weight, and size) specified through Vendor Master Maintenance (MENU POFILE) have been met as part of the suggested order creation or maintenance process. If one or more of the maximum values is not met, an <b>N</b> appears.</p> <p>Display</p>   |
| Select             | <p>Use this field to select the suggested order.</p> <p>Key the <b>Reference</b> number of the suggested order you want to maintain.</p> <p>(N 2,0) Required</p>   |

### Suggested Order List Screen Fields and Function Keys

F2=Not Reviewed F5=ALL WHs F6=Locate F4=Avail/On PO/Usage F10=End Ord F12=Return F22=V/I Lst

This screen is displayed when you press **ENTER** on the Suggested Order Maintenance Selection Screen (p. 35-3).

Use this screen to review and maintain the existing line items on the suggested order.

You can toggle between displaying all items or only those not reviewed through the use of the **F2=NOT REVIEWED / F2=ALL ITEMS** function key. An order is considered reviewed once all of the line items have been reviewed on the Suggested Order Maintenance Screen (p. 35-36) initiated by selecting an item for review by entering their corresponding reference number in the **Sel** field.

**NOTE:** Many roll screens that show the item number and description will display the item description on a separate line or the item and description on the same line, depending on the system options. This display of single or double line per item can be changed by pressing **F24=DOUBLE LINE / F24=SINGLE LINE**. **F24=DOUBLE LINE** will expand a collapsed screen or **F24=SINGLE LINE** will collapse an expanded screen.

**NOTE:** This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. Last appears at the bottom of the last screen of data. To scroll through information on roll screens press:

\* **PAGE DOWN** or **SHIFT-ROLL FWD** or **F7=PAGE DOWN** to display the next screen

\* **PAGE UP** or **SHIFT-ROLL BACK** or **F8=PAGE UP** to display the previous screen.

### Suggested Order Maintenance Review Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Vendor             | The number and name of the vendor with which the suggested order will be placed.<br>Display  |
| Rcv WH             | The number of the warehouse that will receive the goods from the vendor.<br>Display  |
| Vendor Mins Met    | This field indicates whether all vendor minimums (units, value, weight and size) have been met by this order. Vendor minimums are specified in Vendor Master Maintenance (MENU POFILE).<br><br>For more information on meeting vendor minimums, refer to the documentation for the Suggested Order List Screen (p. 35-5) in this section.<br>Display   |
| Reference No       | The line number used to select the item for maintenance. Key this number in the <b>Sel</b> field on the lower portion of the screen to select the item.<br>Display   |
| Item/Description   | The number and description of the item.<br>Display   |
| M                  | This field indicates (using <b>Y</b> and <b>N</b> ) whether the minimum order quantity for this item has been met by this order. The minimum order quantity is specified through Vendor/Item Master Maintenance (MENU POFILE).<br><br>For more information on meeting an item's minimum order quantity, refer to the documentation for the Suggested Order List Screen (p. 35-5) in this section.<br>Display   |
| PO Qty             | The quantity of the item that is suggested for order appears in this field. For centralized POs, this quantity includes demand from all warehouses.<br><br><b>Calculation: PO Quantity</b> = Quantity On-hand - Allocated + + Unavailable Locations - Unposted Allocated Returns + In-process Warehouse Transfers + Allocated Special Orders + On Purchase Order + Inventory Unposted Transactions<br><br>The Quantity On-hand (listed in the above calculation) will take into consideration the <b>Qty Avail ATS/PO</b> flag (in Location Master Maintenance (MENU WMFILE)) that is specified on each location defined as unavailable when determining if the quantities in the location should be counted as on hand or not.<br>Display |
| U/M                | The suggested unit of measure in which to order this item.<br>Display  |

| Vndr Min:  |              |                  | 10000.00         |
| Ovr Min:   |              |                  | 10000.00         |
| WH: 1  |              | 32048.26         | Dsc: 8012.06     |
| Dmd WH: ...  | Rcv WH: ...  |                  | PO Amt: 24036.20 |
|  |              |                  | Ovr: .. ( ,0)    |
| F9=Round Min   | F11=Lcl Cur  | F13=Refresh Disc | F15=Create Reqs  |
|  | F12=Return   |                  | F17=Auto Rnd     |

This screen is displayed when you press F10=END ORD from the Suggested Order Maintenance Review Screen (p. 35-11) or Suggested Order Maintenance Screen (p. 35-36). It also appears (without the function keys) when you press F13=REFRESH DISC from the End Requisition Screen (p. 6-92), or after pressing F10=END ORD on the Workbench Suggested Lines List Screen (p. 38-27) or Workbench Suggested Line Maintenance Screen (p. 38-35) in Buyers Workbench.

Use this screen to do the following:

- View suggested order totals for each warehouse
- View vendor volume discounts and vendor minimums
- Override vendor minimums
- Override vendor maximums using the F17=AUTO RND key
- Automatically add other items to a regular purchase order to meet vendor minimums (i.e., Round Min)
- Combine orders (i.e., centralize) to meet vendor volume discount minimums

If there are Special Order Items linked to this suggested order, **Warning: Document Ties exist** will appear on this screen to indicate that there are Special Order Items in the suggested order run. Also, once a Special Order Item is linked to a suggested order, suggested order totals will change and the totals will include all linked Special Order Items, except Drop-Ship Items (since these are directly shipped to the customer). Note that Special Order Items that are added (linked) to a suggested order can be viewed, maintained or deleted only in Buyers Workbench.

### Suggested Order Maintenance End Order Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Vendor             | The number and name of the vendor who's currently being reviewed.<br>Display  |
| Cur                | The <b>Cur</b> field only displays when International Currency is installed.<br>The <b>Cur</b> field indicates the vendor's currency currently being used to express the values on the screen. You can press F11=LCL CUR / F11=TRAD CUR to toggle between displaying values in the vendor's trading currency and company's local currency.<br>Display |
| Run Number         | The run number is the unique identifier for the selected group of suggested orders.<br>Display  |
| Discount Type      | This field displays the vendor volume discount type specified for this vendor through Vendor Master Maintenance (MENU POFILE).<br>Display   |

#### Vendor Volume Discount Information

|                  |  |
|------------------|--|
| Qualifies for WH | The number of the warehouse for which you are viewing information is displayed next to WH. ** indicates that information for all warehouses is displayed.<br><br>The <b>Y</b> or <b>N</b> values beneath this field indicate whether or not the warehouse qualifies for the corresponding discount.<br><br>On a Multi Ship-To order ( <b>WH</b> is **), the <b>Y</b> or <b>N</b> is based on the total order from all warehouses. The <b>M</b> field in the ( <b>Order Information</b> ) section of the screen shows whether the order from each individual warehouse qualifies on its own.<br>Display |
| Cube Minimum     | The minimum number of cubes required for the discount. The total cubic size of the entire purchase order must be equal to or greater than this amount to meet the discount requirements.<br>Display  |
| Unit Minimum     | The minimum number of units required for the discount. The sum of all ordered quantities of the items on the purchase order must be equal to or greater than this amount to meet the discount requirements.<br>Display   |

**Suggested Order Maintenance End Order Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Weight Minimum     | The minimum weight required for the discount. The total weight of all items on the purchase order must be equal to or greater than this amount to meet the discount requirements.<br>Display   |
| Min. Amount        | The minimum purchase order amount required for the discount. The total purchase order amount must be equal to or greater than this amount to meet the discount requirements.<br>Display  |
| Disc%              | The discount percent applied when all corresponding minimums (i.e., cubes, amount, units and weight) for this discount are met.<br>Display   |
| C                  | This field displays the cost liability for the FOB code for this vendor volume discount. An <b>S</b> in this field indicates that the shipper is responsible for freight charges; an <b>R</b> indicates that the recipient is responsible for freight charges.<br><br>NOTE: When you print the Purchase Order for this requisition, the FOB code on the Purchase Order will be the FOB code from the Requisition/Purchase Order Maintenance Header Screen (p. 6-13), not the FOB code for the vendor volume discount. If you want the Purchase Order to show the FOB code for the discount, you must return to the Requisition Header Screen and change the entry in the <b>FOB Cd</b> field.<br><br>Display |

**Suggested Order Information**

|    |  |
|----|--|
| WH | Warehouse number. <b>*M</b> indicates that this line is displaying total order values for a Multi Ship-To order.<br>Display  |
| LC | The <b>LC</b> field only displays when International Currency is installed.<br><b>LC</b> displays the local currency of the company/warehouse as defined through Company Name Maintenance (MENU XAFILE) when you press F11=LCL CUR.<br>Display |
| M  | Whether or not the order meets all vendor minimums (cubes, units, weight and value) for the specific warehouse.<br>Display   |
| T  | Type of order: <b>M</b> for Multi Ship-to, <b>C</b> for Centralized, blank for Regular.<br>Display   |

| F9=Round Min    F11=Round Max    F12=Return |                 |                |                |

This screen is displayed when you press F17=AUTO RND from the Suggested Order Maintenance End Order Screen (p. 35-22).

Use this screen to view the minimum/maximum values for the vendor, and if needed, enter override values to be used to round to minimum or maximum.

Vendor minimum/maximum values are specified through Vendor Master Maintenance (MENU PROFILE). The system will look at the cube, unit, weight, and value fields entered to determine item ratios for those items that already exist on this suggested order, to ensure that the correct ratio remains based on the weight and size. The system will round up to or round down to the maximum appropriately, while keeping the ratios on the suggested order.

For example, if using vendor maximums, and the vendor tells you the delivery truck holds 30,000 pounds and you have 40,000 pounds of items, the round to maximum calculation will round down to the maximum of 30,000 pounds. If you have 30,000 pounds of items and a delivery truck that holds 40,000 pounds, the system will round up to the maximum of 40,000 pounds proportionally.

---

NOTE: If more than one override field is entered (that is, a unit and weight), the system will look at all overrides keyed to determine the maximum without going over any one of these values (the greatest amount of any one of the overrides will be used to round to the maximum).

---

### Auto Round to Vendor Min Max Levels Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Demand WH          | <p>When auto rounding an order, use this field to specify the warehouse for which you want to automatically order other items to meet vendor minimums (F9=ROUND MIN) or increase/decrease existing order quantities for items to the vendor maximums (F11=ROUND MAX).</p> <p>Key the warehouse number.</p> <p><i>Valid Values:</i> A warehouse number listed in the order information section of the Suggested Order Maintenance End Order Screen (p. 35-22). The warehouse cannot be for a Multi Ship-To or Centralized Purchase Order, it must exist in the list of warehouses shown on the Suggested Order Maintenance End Order Screen (p. 35-22), and not be combined from or into another warehouse.</p> <p>(A 2) Required/Optional</p>  |
| Cube Override      | <p>Vendor minimum/maximum values are specified through Vendor Master Maintenance (MENU POFILE) and are displayed in the columns to the right of this field.</p> <p>Use this field to override the vendor minimum or maximum cube defaults, displayed in <b>Minimum</b> or <b>Maximum</b> column, for the selected warehouse. The vendor minimum or maximum will be overridden for this order only.</p> <p>Key the minimum cube override allowed by the vendor, and press F9=ROUND MIN to round to the minimum.</p> <p>Key the maximum cube override allowed by the vendor, and press F11=ROUND MAX to round to the maximum.</p> <p>If you do not key an override in this field, the system will use the defaults in the Vendor Master File (as displayed to the right of this field). However, if only one of the override cube, unit, or weight fields are entered on this screen, the system will only use that number when determining maximum rounding and will not default in the other fields for the vendor maximum. That is, if only the <b>Weight Override</b> field is keyed, the system will not use the <b>Cubes</b> and the <b>Units</b> from the Vendor Master File.</p> <p><i>Valid Values:</i> a number greater than zero</p> <p>(N 13,5) Optional</p> |

This screen is displayed after you select an item from the Suggested Order Maintenance Review Screen (Suggested Order Maintenance Review Screen (p. 35-11)).

Use this screen to do the following:

- Select the vendor from whom you will be ordering this item
- Change the order quantity for Regular and Multi Ship-To purchase orders
- Override the unit cost of the item
- Compare total quantity demanded from all warehouses with the vendor’s minimum order quantity to determine whether you need to create a Centralized PO or order extra quantities and distribute them to other warehouses
- Delete line items from the suggested order

If Value Added Services is installed on your system and you are maintaining a suggested order for a work order vendor, you may use this screen to maintain a suggested order for an item made by an outside service vendor or a suggested work order for a parent item manufactured in-house. Note that fields on this screen differ for a suggested work order and are identified in the Work Order Fields that are described before the function key definitions.

### Suggested Order Maintenance Screen Fields and Function Keys

| Field/Function Key | Description   |

**Suggested Order Maintenance Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| F11=Buy Info       | <p>The F11=BUY INFO key is applicable if Inventory Management &amp; Planning (IM&amp;P) or Advanced Inventory Management (AIM) is installed and activated on your system.</p> <p>Press F11=BUY INFO to display the item's previous 12 months of demand and current forecast, along with IM&amp;P/AIM variables. The Buying Information Screen will display. For an explanation of this screen, and all screens that may be accessed through this screen, refer to this screen as described in Interactive Forecasting (MENU IMMMAIN), in the Inventory Management &amp; Planning User Guide.</p> |
| F12=Return         | <p>Press F12=RETURN to return to the Suggested Order Maintenance Review Screen (p. 35-11). Any changes keyed for the item on the order will not be saved.</p>  |
| F16=Contracts      | <p>F16=CONTRACTS is displayed only when <b>Use Vendor Contracts</b> is set to <b>Y</b> in the Purchasing Options Maintenance (MENU XAFILE).</p> <p>Press F16=CONTRACTS to display the Vendor Contract List Screen, from which you can view information for any of the vendor's contracts that are not currently suspended. Expired contracts are included in the list if they meet the selection criteria at the bottom of the screen.</p> <p>The Vendor/Item Contract List Screen (p. 55-8) appears.</p>  |
| F18=Oth WHs        | <p>Press F18=OTH WHS to display minimum, maximum, and available quantities for this item in all of the other warehouses. The Warehouse Stock Display Screen (p. 35-55) will display.</p> <p>The F18=OTH WHS key will display in reverse image if any of the other warehouses has a quantity available in excess of the maximum quantity.</p>   |
| F22=Item Inq       | <p>Press F22=ITEM INQ to access the item inquiry and inquire on detailed information about the item. The Inventory Status Screen will display. For details about this and other screens accessed through this screen, refer to this screen as described in Item Inquiry (MENU IAMAIN) of the Inventory Accounting User Guide.</p>  |
| F24=Delete         | <p>Press F24=DELETE to delete the item from the suggested order. You will not be prompted to confirm deletion; upon pressing F24=DELETE the item is immediately removed and the next item, if there is one, is displayed on the screen. This item will display on the next suggested order run for this vendor unless its minimum quantity is changed. The Suggested Order Maintenance Selection Screen (p. 35-3) will display.</p>  |

### Suggested Order Maintenance Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Enter              | <p>Press <b>ENTER</b> to edit the changes made on this screen and when accepted, flag the item as being reviewed in the Suggested Orders File (<b>POSUG</b>). The <b>F2=NOT REVIEWED / F2=ALL ITEMS</b> key on the Suggested Order Maintenance Review Screen (p. 35-11) and the Suggested Order Item Review All Warehouses Screen (p. 35-18) use this reviewed flag for that toggle.</p> <p>The screen will be refreshed and the next item will be displayed. When all items on the order have been displayed, you will be returned to the Suggested Order Maintenance Review Screen (p. 35-11).</p> |

```

This screen appears after you press **F5=CENTRALIZE** from the Suggested Order Maintenance Screen (p. 35-36). The Centralized Warehouse Receipts Screen displays one line of order information for each warehouse in which the selected item falls below its minimum stocking level.

Use this screen to centralize orders for the selected item by combining the order quantity from two or more warehouses into one receiving warehouse. After the items are received from the vendor, they are distributed to the other warehouses through a warehouse transfer.

---

**NOTE:** This screen displays orders for warehouses that do not allow centralized POs. If you try to centralize one of these orders, a message appears.

---

You can also change the demand order quantity for any warehouse from this screen, and increase the demand order quantity to the vendor's order minimum.

When active contracts exist for the item, the message **Contracts Exist** display for the user.

### Centralized Warehouse Receipts Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|

This screen is displayed after you press F6=DIST DEMAND from the Suggested Order Maintenance Screen (p. 35-36) or Workbench Suggested Line Maintenance Screen (p. 38-35).

The Distribute PO Quantity to Warehouses Screen provides inventory and purchase order information for every warehouse that stocks the item.

Use this screen to do the following:

- Change order quantities
- Add an order quantity for a warehouse that currently does not have a quantity for this purchase order
- Distribute order quantities across warehouses when you need to order more than the suggested PO quantity

| Avail              | <p>The quantity available of this item in the corresponding warehouse. If a negative sign (-) is displayed to the right of this quantity, you have more of this item allocated than stocked in the warehouse. Those warehouses that have a quantity available greater than the maximum on hand for that warehouse, will be displayed in reverse image. This represents excess inventory.</p> <p>Display</p>  |
| Max                | <p>The maximum balance, or highest desired inventory level, of the item in the corresponding warehouse.</p> <p>Display</p>   |
| Min                | <p>The minimum balance, or ordering point, of the item in the corresponding warehouse.</p> <p>Display</p>  |
| ABC                | <p>The ABC code used to categorize (or rank) this item. This code was manually assigned to the item through Item Master Maintenance (MENU IAFILE), or optionally, it was automatically generated and assigned via the ABC Analysis Report (MENU IAREPT).</p> <p>Display</p>  |
| Current WH         | <p>This field displays the current warehouse of the item. If you do not change this field, the other warehouses which stock the item are displayed on this screen. You may change the current warehouse by overriding this field; the warehouse display will change on the top portion of this screen.</p> <p>For example, if the item is stocked in warehouses AA, AB, and AC, and the current warehouse is AA, then AB and AC are displayed on this screen. If you change the current warehouse to AB, then AA and AC will display on this screen, and so on.</p> <p>If you change the current warehouse, when you press F12=RETURN, the <b>WH</b> field on the Suggested Order Maintenance Screen (p. 35-36) will be updated with the warehouse you selected in this field.</p> <p>(N 2,0) Optional</p> |
| Csgn WH            | <p>This field appears only if Customer Consignment is installed and the item you are working with is set up in a customer consignment warehouse.</p> <p>Key <b>Y</b> in this field if you want customer consignment warehouses to display in the list.</p> <p>Key <b>N</b> in this field if you do not want customer consignment warehouses to display in the list.</p> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p>   |

**Warehouse Stock Display Screen Fields and Function Keys**

---

| <b>Field/Function Key</b> | <b>Description</b>   |
|---------------------------|--|
| F12=Return                | Press F12=RETURN to return to the Suggested Order Maintenance Screen (p. 35-36). If you changed the current warehouse, the <b>WH</b> field on the Buying Information Screen will be updated with the warehouse you selected. |

---

---

This option allows you to selectively create requisitions or work orders (if Value Added Services is installed on your system) from an existing Suggested Orders Quantity File. This file is created after running the Suggested Orders Report (MENU POMAIN) if you responded with a **Y** to the **Create Sugg Ord File** field on the Suggested Orders Report Screen (p. 34-3).

The vendor used is the item's primary vendor, as defined through Item Balance Maintenance (MENU IAFILE), unless you change the vendor through Suggested Orders Maintenance (MENU POREPT).

---

**NOTE:** One requisition is created for each vendor that has selected items. Requisitions will not be created for items not assigned a vendor number.

---

Once an item is used on a requisition, that information is deleted from the Suggested Orders Quantity File. The new vendor PO requisition number will begin with "S" to identify it as being created from a suggested order. The order will be placed on Suggested Order (**SO**) hold if the vendor minimums specified through Vendors Maintenance (MENU POFILE) are not met. The requisition may next be reviewed through Enter or Change Requisitions (MENU POMAIN), and approved for purchase order printing.

For work orders, if applicable, the vendor used is the work order vendor, as defined through Work Order Options Maintenance (MENU WOFILE). This vendor number must be the primary vendor in the Item Balance File for the items you designate to manufacture instead of purchasing. You may optionally assign whether or not each work order will be placed on Suggested Order (**SG**) hold.

---

**NOTE:** When International Currency is installed, for foreign currency vendors, requisitions will be created in the trading currency. Local currency equivalent amounts will be recalculated before the requisition is created and will be based on the most recent exchange rate in effect for the vendor's currency.

---

## Restart Instructions

This job is submitted to the Transaction Processor.

Once you have completed making selections on the Create Requisitions From Suggested Orders Screen (p. 36-3) or the Create Requisitions or WO's From Suggested Orders Screen (p. 36-3), if Value Added Services is installed and you are creating a work order, the job is submitted to the processor. If the job is interrupted before it is submitted to the processor, restart by selecting this option. If the job is

---

already submitted to the processor, refer to MENU XAMAST in the Cross Applications User Guide for instructions on restarting the Processor, if needed.

---

## Create Req from Suggested Orders

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title   | Purpose   |
|---|---|
| Create Requisitions From Suggested Orders Screen                | Use to create requisitions or work orders (if Value Added Services is installed) from information stored in the Suggested Orders Quantity File. |
| Suggested Order List Screen                                     | Use to view and/or select from a list of open suggested orders. This screen is described in CHAPTER 35: <i>Suggested Order Maintenance</i> .    |
| Create Requisitions or WO's From Suggested Orders Screen        | Use to create work orders from suggested orders information stored in the Suggested Orders Quantity File.                                       |
| Suggested Orders Requisition Creation Due Date Exception Report | Prints the requisitions that are created.   |
| Create Suggested Work Orders Report                             | Prints the work orders that were created for the suggested parent orders.   |

### Create Requisitions From Suggested Orders Screen

```

The Create Requisitions From Suggested Orders Screen is screen displays after selecting option 12 - Create Req from Suggested Orders from MENU POREPT, or after pressing F15=CREATE REQS, if applicable, on the Suggested Order Maintenance End Order Screen (p. 35-22) in Suggested Order Maintenance (MENU POREPT).

NOTE: If Value Added Services is installed on your system, the title of this screen changes to Create Requisitions or WO's From Suggested Orders Screen.

---

Use this screen to create requisitions or work orders (if Value Added Services is installed) from information stored in the Suggested Orders Quantity File.

The Create Requisitions or WO's From Suggested Orders Screen displays after entering the work order vendor in the **Vendor** field and pressing **ENTER** on the Create Requisitions From Suggested Orders Screen (p. 36-3). Use this screen to create work orders from suggested orders information stored in the Suggested Orders Quantity File.

You also have the option to select the job template to be used for the Create Requisitions from Suggested Orders job.

### Create Requisitions From Suggested Orders Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Job Template       | <p>Job templates are defined through Job Template Maintenance (MENU XAFILE) to allow parameter selections to be pre-defined for a particular process (such as, GL Year End) ahead of time. Once defined, this template can be used repeatedly, eliminating the need to manually provide these parameters for every submission of this job process.</p> <p>For the current job submission, you can enter a pre-defined job template in this field to use the established parameters (with or without any modifications), or you can leave this field blank and the system will prompt you to provide your own parameters.</p> <p>If you enter a pre-defined job template in this field, and do not want to make any changes to the established parameter selections for this current job submission, key <b>N</b> in the <b>Modify Selections</b> field. You will then bypass all the output parameter screens.</p> <p>If you enter a pre-defined job template in this field, but want to review and/or make modifications to the established parameter selections for this current job submission, key <b>Y</b> in the <b>Modify Selections</b> field. You will be presented with the established parameters for that job template and can review/make changes as needed for this job.</p> <p>If you leave this field blank, you will be presented with a series of prompts for you to provide the desired parameters for this current job submission.</p> <hr/> <p>NOTE: To review a list of existing job templates that have been created for the Create Requisitions from Suggested Orders job, press <b>F9=JOB TEMPLATE LIST</b>.</p> <hr/> <p><i>Valid Values:</i> A job template defined for Create Requisitions from Suggested Orders jobs (that is, PO397P) through Job Template Maintenance (MENU XAFILE).</p> <p>(A 10) Optional</p> |

---

**Create Requisitions From Suggested Orders Screen Fields and Function Keys**

---

| Field/Function Key | Description  |
|--------------------|--|
| Modify Selections  | <p>If using a job template (you keyed a job template name in the <b>Job Template</b> field on this screen or select one with F9=JOB TEMPLATE LIST), this field determines if you will be presented with that template's parameters for review and/or modification for this current job submission.</p> <p>Key <b>Y</b> if you want to be able to review and/or modify the selections of the indicated job template. Any changes you make to the template through this post run will not impact the actual predefined template. The changes apply for this run of the job only. If you key <b>Y</b>, a series of selection screens will display allowing you to review and/or make changes. For details about the screens that display, refer to Job Template Maintenance (MENU XAFIELD) in the Cross Applications User Guide.</p> <p>Key <b>N</b> if you want to use the template as-is and you do not want to make any modifications. If you key <b>N</b>, a series of selections screens will not be displayed.</p> <p><i>Valid Values:</i> Y or N; cannot be Y if the <b>Job Template</b> field is blank.</p> <p>(A 1) Optional</p> |
| Owner              | <p>This field is used to enter the owner of the suggested orders that you want to turn into requisitions.</p> <p>Key the owner (user ID) of the suggested orders from which requisitions will be created.</p> <p><i>Default Value:</i> Current User Sign On</p> <p>(A 10) Required</p>   |
| Warehouse          | <p>Key the Warehouse ID that contains the suggested orders from which requisitions will be created, or key <b>**</b> for all warehouses.</p> <hr/> <p>NOTE: If you want to create work orders from suggested orders (see the <b>Vendor</b> field), you cannot key <b>**</b> in this field for all warehouses. This field (which represents the receiving warehouse for a work order vendor) and the picking warehouse in the <b>Component WH</b> field on the Create Requisitions or WO's From Suggested Orders Screen (p. 36-3) must be from the same company.</p> <hr/> <p>(A 2) Required</p>  |
| Run No             | <p>This is the system assigned number printed on the top right side of the Suggested Orders Report; this number displays on the report only if you responded with a <b>Y</b> to the <b>Create Sugg Ord File</b> field on the Suggested Orders Report Screen (p. 34-3).</p> <p>Requisitions will be created for the run number (the number that contains the suggested purchase orders from which requisitions will be created) you enter in this field.</p> <p>(N 5,0) Required</p>  |

---

### Create Requisitions From Suggested Orders Screen Fields and Function Keys

---

| Field/Function Key | Description  |
|--------------------|--|
| Vendor             | <p>Use this field to identify the vendor for which you want to create requisitions OR work orders, if applicable, from suggested orders.</p> <p>Key the appropriate vendor number. Requisitions will be created from suggested orders for the vendor you select in this field.</p> <p>Key *ALL for all vendors. Requisitions will be created from suggested orders for all vendors.</p> <p>Key the work order vendor that you defined in Work Order Options Maintenance (MENU WOFILE), if you wish to instead create work orders from suggested orders. If *ALL is keyed, work orders will not be created.</p> |

---

#### Important

To create a work order from suggested orders, Value Added Services must be installed on your system and you MUST enter the work order vendor in this field.

---

(A 6) Required

---

**Create Requisitions From Suggested Orders Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Approval Code      | <p>Use this field to approve the requisitions you selected to print through this option. If you key an approval code to approve the requisition, a Purchase Order can be printed for this requisition the next time Purchase Orders are printed. If you do not key an approval code at this time, the requisition(s) will remain a requisition until it is approved.</p> <p>If the <b>Use Approval Code Authorization for Req/PO</b> field is set to <b>Y</b> through Purchasing Company Options Maintenance (MENU XAFILE), authority to approve a requisition will be checked. Approval is based on the following requirements:</p> <ul style="list-style-type: none"><li>• The user logged onto Distribution A+ must be the user ID assigned to the approval code through Approval Codes Maintenance (MENU POFIL2). If the user IDs do not match, the requisition will not be approved.</li><li>• The total requisition value cannot be greater than the <b>Maximum Approval Amount</b> assigned to the approval code through Approval Codes Maintenance (MENU POFIL2). If the total requisition value exceeds the <b>Maximum Approval Amount</b>, defined for the approval code, the requisition will not be approved.</li></ul> <p>Requisitions that are not approved must be accessed through Enter or Change Requisitions (MENU POMAIN) or Open Req/PO's Inquiry (MENU POMAIN) and given an approval code before Purchase Orders can be produced.</p> <p>If the <b>Use Approval Code Authorization for Req/PO</b> field is set to <b>N</b> through Purchasing Company Options Maintenance (MENU XAFILE), no authorization check will be performed.</p> <p>Key an approval code.</p> <p><i>Valid Values:</i> If the <b>Use Approval Code Authorization for Req/PO</b> field is set to <b>Y</b> through Purchasing Company Options Maintenance (MENU XAFILE), your entry must be an approval code defined for your user ID through Approval Codes Maintenance (MENU POFIL2).</p> <p>(A 3) Optional</p> |

### Create Requisitions From Suggested Orders Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Override Due Date  | <p>Use this field to override the due date (the date the order is expected to arrive). If you do not override the due date, Distribution A+ calculates the due date from the items' lead time; first checking the IM&amp;P Balance File (IMBAL) or the AIM Balance File (AIBAL) if those modules are installed, then the Vendor/Item File (VNITM) followed by the Vendor Master File (VENDR). When the items for a suggested order have different lead times, the lowest date from all the item detail is used to create the order's due date.</p> <p>Warehouse transfer suggested orders and work order suggested orders will use today's date for the due date if there is no override due date keyed.</p> <p>Key the date that you expect to receive the ordered items (the system automatically inserts the slashes (/) for you).</p> <p><i>Valid Values:</i> Key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFILE).</p> <p>(N 6,0) Optional</p> |
| Promised           | <p>This field is used to indicate if the vendor promised delivery of this item on or before the expected due date.</p> <p>Key <b>Y</b> if the vendor promised delivery by the indicated due date. The Purchasing Reports indicate if an item was promised.</p> <p>Key <b>N</b> if the vendor did not promise delivery of this item.</p> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p>   |
| Allocate           | <p>Use this field to create either a planned work order that does not immediately allocate inventory, or a production work order that immediately allocates inventory.</p> <p>Key <b>Y</b> to create a production work order that immediately allocates inventory.</p> <p>Key <b>N</b> to create a planned work order that will not allocate inventory.</p> <p>(A 1) Required</p>  |
| WO Hold Code       | <p>Use this field to designate whether or not you want this work order to be automatically put on suggested order (<b>SG</b>) hold.</p> <p>Key <b>Y</b> to put this work order on <b>SG</b> hold.</p> <p>Key <b>N</b> if you do not want this work order held with hold code <b>SG</b>.</p> <hr/> <p>NOTE: If the hold code <b>SG</b> has not been defined as a valid hold code through Work Order Hold Codes Maintenance (MENU WOFIELD), and you key <b>Y</b> in this field, Distribution A+ will automatically create the <b>SG</b> hold code for you.</p> <hr/> <p>(A 1) Required</p>   |

---

## Create Requisitions From Suggested Orders Screen Fields and Function Keys

| Field/Function Key  | Description  |
|---|--|
| Component WH  | <p>Use this field to identify the warehouse where all of your inventory for this work order will be picked (i.e., the “issuing” warehouse).</p> <p>Key the appropriate warehouse.</p>  |
| <hr/> <h3>Important</h3>  |  |
| <p>If a suggested order is made for a parent and the component(s) for that parent do not exist in the component warehouse specified, the work order will still be created but the component(s) which do not exist in the component warehouse will be dropped from the work order. If none of the component(s) on the suggested order exist in the component warehouse specified, the work order for that suggested order will not be created.</p> |  |
| <hr/> <p><i>Valid Values:</i> A valid warehouse defined through Warehouse Numbers Maintenance (MENU IAFILE) and designated as the warehouse from which goods are picked.</p> <p>(A 2) Required</p>  |  |
| F3=Exit   | <hr/> <p>Press F3=EXIT to cancel this option and return to the menu.</p>   |
| F4=Suggested Order List   | <hr/> <p>NOTE: F4=SUGGESTED ORDER LIST does not display on this screen if this screen is accessed from Suggested Orders Maintenance (MENU POREPT).</p> <hr/> <p>Press F4=SUGGESTED ORDER LIST to display all or a limited list of the open suggested orders. This display will be limited by an owner if an <b>Owner</b> is entered, by a warehouse if a <b>Warehouse</b> is entered, and so on. The Suggested Order List Screen (p. 35-5) will display.</p> |
| F9=Job Template List  | <hr/> <p>Press F9=JOB TEMPLATE LIST to display the Job Template List Screen, where you can review a list of existing job templates that have been created for Create Requisitions from Suggested Orders.</p> <p>Refer to Job Template Maintenance (MENU XAFILE) in the Cross Applications User Guide for further details.</p>  |

| 03  | S00007     | 200           | A240  | 7.000          | 29/04/11   | 29/04/11 | 1.0       | 06/05/11                   |        |

After pressing **ENTER** on the Create Requisitions From Suggested Orders Screen (p. 36-3), requisitions are created. You may maintain requisitions through Enter or Change Requisitions (MENU POMAIN).

**NOTE:** Records are removed from the Suggested Orders Quantity File once requisitions are created.

This report prints only if the **Override Due Date** entered on the initial screen is before the **Earliest Possible Due Date** field.

**NOTE:** All dates will print in the **Default Date Format** for the user that generated the report, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, the dates print using the system's **Default Date Format** specified through System Options Maintenance (MENU XAFIELD).

### Suggested Orders Requisition Creation Due Date Exception Report

| Report/Listing Fields | Description  |
|-----------------------|--|
| Headings              | Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.<br><br>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings. |
| Company Number        | The company number associated with the created requisition.  |
| Req Number            | The number of the requisition that has been created through this option. This new number begins with "S" to identify it as being created from a suggested order.   |
| Vendor Number         | The number of the vendor that will receive the requisition/purchase order.   |
| Item Number           | The stocking item number being ordered that has a due date conflict.   |

**Suggested Orders Requisition Creation Due Date Exception Report**

| <b>Report/Listing Fields</b> | <b>Description</b>  |
|------------------------------|---|
| Order Quantity               | Quantity of the item being ordered expressed in the buying unit of measure.   |
| Order Date                   | Date that the requisition/purchase order was created.   |
| Due Date                     | <p>Date that the requisition/purchase order is due to be received from the vendor calculated from the items' lead time. If there is no lead time available, this date will default to the order date. The earliest possible due date is used if an override date was not entered.</p> <p>If an <b>Override Due Date</b> was keyed on the Create Requisitions From Suggested Orders Screen (p. 36-3) or the Create Requisitions or WO's From Suggested Orders Screen (p. 36-3), this is the <b>Override Due Date</b>.</p>  |
| Lead Time                    | <p>The number of weeks required for this vendor to make a shipment from the time the Purchase Order is printed.</p> <p>If Inventory Management &amp; Planning (IM&amp;P) or Advanced Inventory Management (AIM) is installed, this is the lead time in the Item Balance File (IMBAL) or AIM Balance File (AIBAL). That is, if the item is planned by IM&amp;P, the lead time will come from IMBAL. If the item is planned by AIM, the lead time will come from AIBAL.</p> <p>If IM&amp;P or AIM is not installed, then this is the lead time from the Vendor/Item File (VNITM).</p> |
| Earliest Possible Due Date   | Based on the vendor's lead time, this is the earliest possible date on which the item can be expected to arrive at the warehouse.   |

# Create Suggested Work Orders Report

| Company | Work Order | Parent Item Number | Order Quantity |                               |
|---------|------------|--------------------|----------------|-------------------------------|
| 01      | W0627      | MEPAR              | 52.000         |                               |
| 01      | W0628      | NOCOM              | 13.000         | Component Not In Component WH |
| 01      | W0629      | PAR10              | 4.000          |                               |
| 01      | W0631      | PAR200             | 12.000         |                               |
| 01      | W0632      | PAR300             | 12.000         |                               |

| 01      | W0634      | PAR600             | 11.000         |                               |
| 01      | W0635      | SOPAR1             | 12.000         |                               |
| 01      | W0636      | SOPAR2             | 19.000         |                               |
| 01      | W0637      | TPAR               | 40.000         |                               |

After pressing ENTER on the Create Requisitions or WO's From Suggested Orders Screen (p. 36-3), work orders are created and this report prints. This report prints the work orders that were created for the suggested parent orders. If a work order was not created for the suggested parent order, \*\*\*\*\* will appear in the work order column and an explanation will display to the right.

### Create Suggested Work Orders Report

| Report/Listing Fields | Description  |
|-----------------------|--|
| Company               | The company associated with the created work order.    |
| Work Order            | The work order created for the suggested parent order. |
| Parent Item Number    | The parent item associated with the work order.        |
| Order Quantity        | The quantity of items ordered for the work order.      |

---

After running the Suggested Orders Report, suggested orders are provided informing you of those items that fall below the minimum stocking level in a warehouse or all warehouses. This option allows you to delete those suggested orders or an individual suggested order for a specific run (the **Run #** associated with a specific run of the Suggested Orders Report allowing you to match suggested orders in the Suggested Orders Quantity File). The Suggested Orders Quantity File is created after running the Suggested Orders Report only if you responded with a **Y** to the **Create Sugg Ord File** field on the Suggested Orders Report Screen (p. 34-3); this file must exist in order to execute this option.

Run this option prior to creating requisitions from suggested orders (since information is deleted from the Suggested Orders Quantity File when requisitions are created) and prior to creating a new Suggested Orders Quantity File if:

- You do not want to add to an existing file
- The information in an existing file is not what you desire (after deleting suggested order(s), you may re-run the Suggested Orders Report to create a file that meets your needs)

---

## Delete Suggested Orders

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                          | Purpose   |
|--------------------------------|---|
| Delete Suggested Orders Screen | Use to select the run for which suggested orders will be deleted. |

---

## Delete Suggested Orders Screen

DELETE SUGGESTED ORDERS

Owner:      APDEMO,....

Warehouse? 1, .

Run No:     -....

Vendor:     ..... (\*ALL for All Vendors)

F3=Exit      F4=Suggested Order List

This screen displays after selecting option **13** - Delete Suggested Orders (MENU POREPT). Use this screen to select the run for which suggested orders will be deleted. You may also display suggested orders through the use of the **F4=SUGGESTED ORDER LIST** function key.

### Delete Suggested Orders Screen fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Owner              | <p>This is the owner of the suggested order(s) that you want to delete.</p> <p>Key the user ID (or accept the default) of the suggested order(s) to be deleted.</p> <p><i>Default Value:</i> Your user ID (AS/400 user profile)</p> <p>(A 10) Required</p>   |
| Warehouse          | <p>This is the warehouse that contains the suggested order(s) that you want to delete.</p> <p>Key the Warehouse ID of the suggested order(s) to be deleted.</p> <p><i>Default Value:</i> The default warehouse defined in Authority Profile Maintenance (MENU XASCTY) if one has been defined; otherwise, this is the <b>Default Warehouse</b> defined through Company Name Maintenance (MENU XAFILE)</p> <p><i>Valid Values:</i> A valid warehouse number defined through Warehouse Numbers Maintenance (MENU IAFILE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(A 2) Required</p> |

---

**Delete Suggested Orders Screen fields and Function Keys**

| Field/Function Key      | Description   |
|-------------------------|---|
| Run No                  | <p>This is the number which identifies the group of suggested orders to be deleted. This number is associated with a specific run of the Suggested Orders Report, allowing you to match suggested orders in the Suggested Orders Quantity File with its corresponding Suggested Orders Report.</p> <p>This Run number is found on the top right hand corner of the Suggested Orders Report and only displays on the report if you responded with a <b>Y</b> to the <b>Create Sugg Ord File</b> field on the Suggested Orders Report Screen (p. 34-3).</p> <p>Key the run number of the Suggested Order Report containing the suggested orders you want to delete.</p> <p>(N 5,0) Required</p> |
| Vendor                  | <p>Key the vendor number associated with the suggested order(s) to be deleted, or key <b>*ALL</b> to delete all orders in this warehouse run.</p> <p>(A 6) Required</p>   |
| F3=Exit                 | <p>Press F3=EXIT to cancel this option and return to the menu.</p>  |
| F4=Suggested Order List | <p>Press F4=SUGGESTED ORDER LIST to display all or a limited list of the open suggested orders. This display will be limited by an owner if an <b>Owner</b> is entered, by a warehouse if a <b>Warehouse</b> is entered, and so on. The Suggested Order List Screen (p. 35-5) will display.</p>   |
| Enter                   | <p>Press ENTER once to delete the requested suggested order(s). A message will display indicating that the suggested orders have been deleted.</p>  |

---

Buyers Workbench (BWB) provides a single point of access to help automate the suggested order buying process. It was designed to incorporate existing suggested order functionality, which would be familiar to the buyer already practiced with Distribution A+ Suggested Orders Processing (and thus allow it to be used immediately), and also to include new features and functions to be more expedient.

Providing relevant data, such as purchasing priorities, and Advanced Inventory Management (AIM) exceptions, as well as providing finger-tip access to the important tasks of creating and maintaining suggested orders, managing special orders, and creating requisitions and POs, all without having to utilize other menu options, is intended to reduce the time spent on these critical replenishment tasks.

In addition to having all the same functionality currently provided via the multiple, existing MENU POREPT Suggested Order options, additional features and functions available directly within this single BWB menu option (if authorized) include:

- Easy identification of the highest priority assigned to each of the existing suggested order runs via the use of color-coded indicators.
  - Multiple views over the list of existing suggested orders to show toggled summary information consisting of line priority totals and the totals for each run (for cubes, units, weights, and values) as related to current ordered quantity, any overrides assigned, as well as any associated minimums and maximums.
    - And, quick inquiry access to see, for any specific run, this relevant summary information all on one screen.
  - The ability to create new suggested order runs on the fly either manually, one at a time, or via the suggested order report (which is available directly from within the BWB).
    - When creating a new run manually, the buyer will create an empty run and then can easily ‘fill’ that run with items, aided by quick access to the applicable vendor/item list.
    - If creating the runs via the Suggested Order Report from within BWB, template functionality is available to allow the buyer to setup default parameters to be used for the run(s) and, as with all templates, those parameters can be saved and used again as is, or can, any time be modified.
  - Special Order linking, allowing for the selection of special order items to become part of the suggested order, and then to be added directly to the requisition or purchase order created from the suggested order, reducing production time having to do this later. Direct special order maintenance is also available.
-

- Access to the AIM Exception Center which allows the buyer to quickly view and manage exceptions regarding pertinent order control information.
- Direct requisition and purchase order creation options for one or multiple runs, including having the ability to provide override information to be used (e.g., address changes, FOB and/or miscellaneous note specifications, etc.).
- Suggested order maintenance, including the ability to add/maintain/delete specific items for any run. Note that during this maintenance, order level/line level suggested order comments and even standard comments can be maintained, while Extended Item Comments (EICs), if applicable, will be available for viewing.

---

NOTE: You can continue to use existing Distribution A+ Purchasing to maintain suggested orders, select to work with the features and tools available in Buyers Workbench, or use both Distribution A+ Purchasing and Buyers Workbench for your purchasing needs.

---

---

## Buyers Workbench

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| <b>Title</b>   | <b>Purpose</b>   |
|--|--|
| Workbench Suggested Orders List Screen   | Use to view/select from the list of suggested orders.  |
| Exception Center Screen  | Refer to the Advanced Inventory Management User Guide for details about the Exception Center.  |
| Add Vendor To Suggested Order Screen   | Use to create new vendors and/or warehouses for an existing run that will be empty for the new one created.  |
| Add/Remove All Qualifying Special Ordered Items To/From Suggested Order Screen | Use to add all applicable, non-linked qualifying special ordered items (including drop ships) to the selected suggested order, remove all applicable special orders currently linked to the selected suggested order, or to maintain the special order links or the special orders themselves. |
| Work With Special Orders Screen  | Refer to Work with Special Orders (MENU POMAIN) for details.   |
| Delete Run Screen  | Use to delete the suggested order run you selected on the Workbench Suggested Orders List Screen (p. 38-5).  |
| Workbench Suggested Lines List Screen  | Use to review and maintain the existing line items on the suggested order.   |

---

| Title  | Purpose  |
|--|--|
| Suggested Order Maintenance End Order Screen           | Refer to Suggested Order Maintenance (MENU POREPT) for details.  |
| Standard Comment Maintenance Screen                    | Refer to Standard Comments Maintenance (MENU POFIL2) for details.  |
| Vendor/Item Information Summary Screen                 | Refer to Vendor/Item Information Inquiry (MENU POMAIN) for details.  |
| Workbench Suggested Line Maintenance Screen            | Use to select the vendor from whom you will be ordering this item; change the order quantity for Regular and Multi Ship-To POs; override the unit cost of the item; compare total quantity demanded from all warehouses with the vendor's minimum order quantity to determine whether you need to create a Centralized PO or order extra quantities and distribute them to other warehouses; delete line items from the suggested order. |
| Parent Item Detail Screen                              | Refer to Maintain Work Orders (MENU WOMAIN) in the Value Added Services User Guide for details.  |
| Centralized Warehouse Receipts Screen                  | Refer to Suggested Order Maintenance (MENU POREPT) for details.  |
| Distribute PO Quantity to Warehouses Screen            | Refer to Suggested Order Maintenance (MENU POREPT) for details.  |
| Buying Information Screen                              | Refer to Interactive Forecasting (MENU IMMAIN) in the Inventory Management & Planning User Guide for details.  |
| Workbench Extended Item Comments Screen                | Use to review extended item comments (EICs) for the current suggested order item.  |
| Vendor Contract List Screen                            | Refer to Vendor Contracts Maintenance (MENU POFIL2) for details.   |
| Warehouse Stock Display Screen                         | Refer to Suggested Order Maintenance (MENU POREPT) for details.  |
| Inventory Status Screen                                | Refer to Item Inquiry (MENU IAMAIN) in the Inventory Accounting User Guide for details.  |
| Workbench Suggested Lines List - All Warehouses Screen | Use to review suggested order items for all warehouses for this vendor and run. Suggested order items are displayed in order by Priority, Item, and then Demand Warehouse.   |

| <b>Title</b>   | <b>Purpose</b>   |
|--|--|
| Order Comments/Line Item Comments Screen                   | Use to view, add, change or delete comments (suggested order level or suggested item level) for a specified suggested order/item.  |
| Create Requisitions and Purchase Orders Screen             | Use to create requisitions and purchase orders from selected suggested order, if you are authorized to the Create Req From Suggested Orders menu option (MENU POREPT).                     |
| Suggested Order List Screen                                | Refer to Suggested Order Maintenance (MENU POREPT) for details.  |
| Buyers Workbench Req/PO Created Information Screen         | Use to display a list of requisitions/purchase orders that were created during the creation process.   |
| Buyers Workbench Req/PO Created Information Report         | This report prints the information displayed on the Buyers Workbench Req/PO Created Information Screen (p. 38-67), so that you can retain a record for future purposes.                    |
| Create Requisitions and Purchase Orders - Overrides Screen | Use to override various vendor and ship-to information for the selected vendor and warehouse (if one warehouse and one vendor has been selected).  |
| Suggested Order Run Detail Screen                          | Use to view, in one single place, a summarized snapshot of the information available from the multiple views on the Workbench Suggested Orders List Screen (p. 38-5) for the selected run. |
| Create New Suggested Order Run Screen                      | Use to create a new/empty suggested order run for vendors which may not already exist in the suggested order list.   |
| Suggested Orders Report Template Load Screen               | Use to create suggested order runs for vendors, like the Suggested Orders Report option would do.  |
| Suggested Orders Report Template Listing Screen            | Use to view a list of existing suggested order templates that have been created for the Suggested Orders Report.   |
| Suggested Orders Report Template Maintenance Screen        | Use to add, change, or delete suggested order report template process formats.   |
| Suggested Orders Report Template Settings Screen           | Use to enter a description for the suggested order report template you are adding or maintaining.  |
| Suggested Orders Report Screen                             | Refer to Suggested Orders Report (MENU POREPT) for details.  |

The Workbench Suggested Orders List Screen displays after selecting option 14 - Buyers Workbench (MENU POREPT). There are three different views of this screen, as toggled with the F7 function key. The Suggested Order Run Detail Screen (p. 38-81) shows all three views of information in one place.

This screen displays suggested orders for demand warehouses you are authorized to view. Initially, suggested orders are pre-filtered to display only suggested orders where you are the 'owner'. A different owner can be selected for which suggested orders will display. To change the owner, key the new owner in the **Owner** field on the lower portion of this screen or clear out the owner to see all authorized runs.

Suggested orders are also initially sorted by Purchase Priority (ascending), as defined through Purchasing System Options Maintenance (MENU XAFIELD). The priorities are color-coded to provide an easy visual classification by priority. Within a Purchase Priority, suggested orders are then sorted, in ascending order unless otherwise noted, by:

- Highest number of lines (descending)
- The owner
- Warehouse
- Run number
- Vendor number

NOTE: If you are working in Buyers Workbench and Purchase Priorities are changed in Distribution A+ through Purchasing System Options Maintenance (MENU XAFIELD), you will need to close the current Buyers Workbench session and then sign in again to correctly refresh the priorities in Buyers Workbench.

Use this screen to view and/or select from the list of suggested orders.

There are multiple toggled views available for this screen. For example, F7 can be used to toggle the view to show, for the list of suggested runs:

- details such as the run number, vendor name, and warehouse (F7=VND/RUN/WH), to
- details such as total number of lines for each priority, total number of special order items, as well as what the next closest vendor minimum target percent is (F7=LINE TYPES), to
- details about the run's targets of value, cubes, units, and weights (F7=TARGETS).

Once F7 has been used to bring up the targets view, then F8 can be used to toggle to show those targets in terms of any vendor minimums (F8=MINIMUM), vendor maximums (F8=MAXIMUM), and any override targets currently specified for the suggested order(s) (F8=OVERRIDE).

When displaying either of those minimum, maximum, or override targets (based on the current F8 toggle selected), the F9 can be used to toggle from those selected targets (F9=SETTINGS) to see how that data compares against the current ordered data (F9=ORDERED), and even to present calculated 'percent met' data (F9=PCT MET), so you can see how close your current suggested order is to reaching those targets.

**Example:** You can toggle with F7 to bring up the targets view to see the currently identified override values for the suggested order's value, cubes, units, weight. You could then use the F8 key to toggle to present the vendor minimum values for those targets, and finally use the F9 toggle to see how close your current suggested order values are to meeting those vendor minimums (i.e., to see what is the percent met).

With the use of the F2=BLW VND MIN function key, you can toggle between displaying all orders or only those orders below vendor minimum. The header of the screen will display **All Orders** or **Below Minimum Orders** in reverse image, so you know what type of suggested orders you are viewing. You can also toggle between displaying all orders or only those orders not reviewed through the use of the F5=NOT RVWD / F5=ALL ORDERS function key.

From this screen, you can:

- Add a vendor/warehouse to an existing run; see option **V** in the **O** field
- Add special order items to suggested orders; see option **L** in the **O** field
  - Note that in addition to keying **L** in the **O** field on this screen to add special order items to suggested orders, you can access the Suggested Orders Report option (MENU POREPT) via F6=CRT NEW RUN on this screen and set the **Add Special Order Items** field to **Y** to automatically add all qualified special order items when a suggested order is created. The **Add Special Order Items** field only displays on the Suggested Orders Report Screen (p. 34-3) when that screen is accessed through BWB via the F6=CRT NEW RUN function key.
- Delete a suggested order run; see option **D** in the **O** field
- Maintain a suggested order run; see option **M** in the **O** field
- Create a requisition/purchase order; see option **C** in the **O** field
- View, in one single place, a summarized snapshot of the suggested order; see option **I** in the **O** field
- Create an empty suggested order run; see F4=CRT EMPTY RUN
- Create a new suggested order run (Suggested Orders Report) or maintain a Suggested Orders Report Template; see F6=CRT NEW RUN
- Access the Exception Center; see F10=EXC CENTER

NOTE: If you scroll down on this screen and then selected one or more runs for processing (e.g., linking, maintenance), when you are returned to this screen, you will be positioned to the same scroll location where you left off, even if the run(s) had since been re-sequenced in that list (e.g., its priority has changed and so it has moved to a different scroll position).

---

NOTE: This is a roll screen. More... appears at the bottom of a roll screen to indicate that more data is available for viewing. Last appears at the bottom of the last screen of data. To scroll through information on roll screens press:

- \* PAGE DOWN or SHIFT-ROLL FWD to display the next screen
  - \* PAGE UP or SHIFT-ROLL BACK to display the previous screen
- 

### Workbench Suggested Orders List Screen fields and Function Keys

| Field/Function Key  | Description |
|---|-------------|
| <b>Common Fields and Function Keys for ALL three views toggled with F7 function key</b> |             |

|               |  |
|---------------|--|
| O<br>(Option) | <p>Use this column to enter the function to perform for one or more of the suggested orders in the list. Be sure to press ENTER after entering the function (value) in the <b>O</b> field.</p> <p>Key <b>V</b> to add a vendor and/or warehouse to an existing run. The Add Vendor To Suggested Order Screen (p. 38-19) will appear.</p> <p>Key <b>L</b> to Link/Unlink special order items to suggested orders. The Add/Remove All Qualifying Special Ordered Items To/From Suggested Order Screen (p. 38-22) will appear.</p> <p>Key <b>D</b> to delete the suggested order run; valid only if you are authorized to the Delete Suggested Orders menu option (MENU POREPT). The Delete Run Screen (p. 38-25) will appear.</p> <p>Key <b>M</b> to maintain the suggested order run; valid only if you are authorized to the Suggested Order Maintenance menu option (MENU POREPT). The Workbench Suggested Lines List Screen (p. 38-27) will appear.</p> <p>Key <b>C</b> to create requisitions and purchase orders; valid only if you are authorized to the Create Req From Suggested Orders menu option (MENU POREPT). The Create Requisitions and Purchase Orders Screen (p. 38-59) will appear.</p> <p>Key <b>I</b> to obtain more information about the run. The Suggested Order Run Detail Screen (p. 38-81) will appear.</p> <p>(A 1) Optional</p> |

## Workbench Suggested Orders List Screen fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Min                | <p>These two columns indicate whether specific order minimums have been met by this suggested order. If order minimums have not been met, you should check the inventory in other warehouses to determine if you can increase the size of this suggested order to meet the required minimums.</p> <hr/> <p>NOTE: Order quantities on multi ship-to orders are not directly compared to order minimums. Instead, if a vendor has more than one multi ship-to order (i.e., the <b>T</b> column contains <b>M</b>), the total order quantity of all multi ship-to orders is compared to the order minimums.</p> <hr/> <ul style="list-style-type: none"> <li>• <b>V</b> represents the vendor minimums (units, value, weight and size) specified through Vendor Master Maintenance (MENU POFILE).<br/>The units, value, weight, and size of all items on the suggested order are added together and the totals are compared with the required vendor minimums. If all minimums have been met by this order, <b>Y</b> appears. If one or more minimum has not been met, <b>N</b> appears.</li> </ul> <hr/> <p>NOTE: When totaling the units for all items on the suggested order, the unit of measure is irrelevant. For example, 5 eaches of one item are added to 10 cases of another item to total 15 units.</p> <hr/> <ul style="list-style-type: none"> <li>• <b>I</b> represents the minimum order quantity for this item as specified through Vendor/Item Master Maintenance (MENU POFILE). The order quantity of each item is compared with its minimum order quantity. If all items on the suggested order meet their minimum order quantity, <b>Y</b> appears. If one or more items does not meet its minimum order quantity, <b>N</b> appears.</li> </ul> <p>Both of these columns are considered when you use the <b>F2=BLW VND MIN / F2=ALL ORDERS</b>.</p> <p>When you use the <b>F2=BLW VND MIN</b> toggle key, both the vendor minimums and the minimum order quantity are considered in determining which suggested orders to display.</p> <p>Display</p> |
| Mx                 | <p>A <b>Y</b> in this column indicates that all of the vendor master order maximum values (units, weight, and size) specified through Vendor Master Maintenance (MENU POFILE) have been met as part of the suggested order creation or maintenance process. If one or more of the maximum values is not met, an <b>N</b> appears.</p> <p>Display</p>   |

## Workbench Suggested Orders List Screen fields and Function Keys

| Field/Function Key | Description |
|--------------------|-------------|
|--------------------|-------------|

### Specific Fields Only for the “Line Types” view toggled with F7 function key

NOTE: The values for the **Rush Lines**, **Below OP Lines**, **Below CP Lines**, and **Neg Avl Lines** are calculated originally only if you use the Suggested Order Report to create the run (so, items which were manually added to a run do not update these values). Also, if a line is deleted that was flagged as a **Rush Line**, **Below OP Line**, **Below CP Line**, or **Neg Avl Line**, then the number of lines will be re-totaled and the highest priority will be reassigned. Lines will also be included in the total for the one priority it was assigned, but will not be included in the totals for any other priority categories to which it might apply. For example, if a **Below OP Line** is also **Below CP**, it only is assigned one priority when the Suggested Order Report is run, so it will not show up once under each column but rather only shows up under the “highest” priority column (according to Purchasing Options Maintenance, MENU XAFILE) that is applicable and to which it was assigned. If your options have **Below OP** as priority 2 and **Below CP** as priority 1, then the item will be included in the total under the **Below CP** column. If your options have **Below OP** as priority 1 and **Below CP** as priority 2, then the item will show under **Below OP**.

|            |   |
|------------|---|
| Rush Lines | This value displays the number of lines in the run that are marked with the Rush Purchase Order priority, defined in Purchasing System Options Maintenance (MENU XAFILE); refer to that option for details about this priority. |
|------------|---|

This column’s value is calculated upon the creation of the suggested order run via the Suggested Order Report function. It could also be recalculated during the suggested order maintenance function.

---

NOTE: Items which are manually added to a suggested order run are always added with a normal priority and therefore will not update this value. Also refer to the ‘Note’ in the header of this section for further details.

---

The fields on the screen change accordingly, based on the F9 toggle key.</p> <p>For details about these fields, refer to the Suggested Order Maintenance End Order Screen (p. 35-22) and Auto Round to Vendor Min Max Levels Screen (p. 35-31) in Suggested Orders Maintenance (MENU POREPT).</p> <p>Display</p>  |
| F8=Minimum /<br>F8=Maximum /<br>F8=Override                               | <p>The F8=MINIMUM / F8=MAXIMUM / F8=OVERRIDE function key displays on this screen in the “Targets” view only.</p> <p>Press F8 to toggle between showing three groups of data on the top portion of this screen.</p> <p>When this screen is first accessed, <b>OVERRIDE</b> data is shown. You can then toggle to show <b>MINIMUM</b> data, then <b>MAXIMUM</b> data, and then back to <b>OVERRIDE</b> data. The fields on the screen change accordingly, based on the toggle key.</p>  |
| F9=Pct Met /<br>F9=Ordered /<br>F9=Settings                               | <p>The F9=PCT MET / F9=ORDERED / F9=SETTINGS function key displays on this screen in the “Targets” view only.</p> <p>Press F9 to toggle between showing three groups of data on the top portion of this screen.</p> <p><b>SETTINGS</b> and <b>PCT MET</b> views will display data for Minimum, Maximum or Override, depending on the current <b>F8</b> view.</p> <p><b>ORDERED</b> view will switch the data (Minimum, Maximum or Override), depending on the current <b>F8</b> view to Ordered.</p> <p>When this screen is first accessed, <b>SETTINGS</b> data (value, cubes, units, and weight) is shown. This data initially comes from the vendor master and can then be overridden. You can then toggle to show <b>PCT MET</b> data (to see how Target data compare to your Ordered data), then <b>ORDERED</b> data (to see extended data: value, cubes, units, and weight extended by quantity ordered), and then back to <b>TARGET</b> data. The fields on the screen change accordingly, based on the toggle key.</p> |

## Add Vendor To Suggested Order Screen

```

          ADD VENDOR TO SUGGESTED ORDER

Run#:      69
Vendor:    200   K & M CORPORATION
Dmd WH:    1     Hartford, CT
Rcv WH:    1     Hartford, CT
PO Type:   Standard
Owner:     APDEMO

New Vendor?  _ _ _ _ _
New WH?     _ _ _ _ _
New PO Type: _ _ _ _ _      ( ,M,C)

                                           F12=Return

```

This screen displays after entering option V in the **O** field on the Workbench Suggested Orders List Screen (p. 38-5) of the corresponding suggested order.

Use this screen to create new vendors and/or warehouses for an existing run that will be empty for the new one created.

Fields on the top portion of this screen will default from the suggested order that was selected (via V) on the Workbench Suggested Orders List Screen (p. 38-5).

Once a new vendor and/or warehouse has been added, the last vendor, vendor name, warehouse, warehouse name, PO Type, and PO Type description will appear on the screen.

| Enter              | <p>Press ENTER to confirm your entries.</p> <p>The screen will be refreshed and the <b>Last</b> action performed will be displayed on the screen. The F5=MAINTAIN LAST function key will now also appear, once ENTER is pressed.</p>   |

---

## Add/Remove All Qualifying Special Ordered Items To/From Suggested Order Screen

```
ADD/REMOVE ALL QUALIFYING SPECIAL ORDERED ITEMS TO/FROM SUGGESTED ORDER

Run#:          69
Vendor:    200      K & M CORPORATION
Dmd WH:    2        Los Angeles, CA
Rcv WH:    2        Los Angeles, CA
PO Type:                   Standard
Owner:    APDEMO

F2=Link All      F4=Unlink All      F5=Maintain      F7=Mnt Lnk      F12=Return
```

This screen displays after entering option L in the **O** field on the Workbench Suggested Orders List Screen (p. 38-5).

Use this screen to add all applicable, non-linked qualifying special ordered items (including drop ships) to the selected suggested order, remove all applicable special orders currently linked to the selected suggested order, or to maintain the special order links or the special orders themselves.

When special ordered items are linked to a suggested order run, the run number is updated to the Special Order File (SPORD) entries; later, when that run is submitted for requisition/purchase order creation, if the special order items are successfully added to a Req/PO, then the run number in the SPORD file is replaced with the Req/PO number(s). This linking of special order items directly to the run therefore eliminates the two step process of the user having to create the Req/PO from the run first, and then having to add the special order items to it later.

Several things to consider include:

- Even if the Req/PO creation process is submitted for only some selected, marked lines from a run (as opposed to the entire run), all linked special orders will be selected for processing. In other words, linked special order items are not tied to any specific items on the run but rather to the run itself.
- Attempts will be made to include any linked special order/drop-ship directly onto the Reqs/POs being created for the run, but if that is not possible, multiple Reqs/POs may be created (e.g., due to various ship-to addresses for multiple drop-ships).
- If for some edit/error reason a special order/drop-ship is unable to be placed on any Req/PO (e.g., missing costs) during the Req/PO creation process, it will automatically be unlinked from that run

so that it can then be maintained/changed, if applicable, and/or available for linking to a different run or available for inclusion on a Req/PO via some other method (e.g., manually).

All fields on this screen are display only.

### Add/Remove All Qualifying Special Ordered Items To/From Suggested Order Screen fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Run#               | This field displays the specific run number assigned to this run when it was created.<br>Display  |

This screen displays after entering option M in the **O** field on the Workbench Suggested Orders List Screen (p. 38-5). It also displays after selecting **F5=MAINTAIN LAST** on the Create New Suggested Order Run Screen (p. 38-86) and Add Vendor To Suggested Order Screen (p. 38-19), or after pressing **F5=MAINTAIN** on the Add/Remove All Qualifying Special Ordered Items To/From Suggested Order Screen (p. 38-22), Delete Run Screen (p. 38-25), or the Suggested Order Run Detail Screen (p. 38-81).

Use this screen to review and maintain the existing line items on the suggested order. Suggested order line items on this screen are sorted by Purchase Priority, Item and Demand Warehouse.

You can toggle between displaying all items or only those not reviewed through the use of the **F2=NOT REVIEWED / F2=ALL ITEMS** function key. An order is considered reviewed once all of the line items have been selected for review by entering their corresponding reference number in the **Sel** field.

**NOTE:** Many roll screens that show the item number and description will display the item description on a separate line or the item and description on the same line, depending on the system options. This display of single or double line per item can be changed by pressing **F24=DOUBLE LINE / F24=SINGLE LINE**. **F24=DOUBLE LINE** will expand a collapsed screen or **F24=SINGLE LINE** will collapse an expanded screen.

**NOTE:** This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. Last appears at the bottom of the last screen of data. To scroll through information on roll screens press:

- \* **PAGE DOWN** or **SHIFT-ROLL FWD** or **F7=PAGE DOWN** to display the next screen
- \* **PAGE UP** or **SHIFT-ROLL BACK** or **F8=PAGE UP** to display the previous screen.

### Workbench Suggested Lines List Screen fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Vendor             | The number and name of the vendor with which the suggested order will be placed.<br>Display  |
| Rcv WH             | The number of the warehouse that will receive the goods from the vendor.<br>Display  |
| Vendor Mins Met    | This field indicates whether all vendor minimums (units, value, weight and size) have been met by this order. Vendor minimums are specified in Vendor Master Maintenance (MENU POFILE).<br><br>For more information on meeting vendor minimums, refer to the documentation for the Suggested Order List Screen (p. 35-5) in Suggested Order Maintenance (MENU POREPT).<br>Display  |
| Reference No       | The line number used to select the item for maintenance. Key this number in the <b>Sel</b> field on the lower portion of the screen to select the item.<br>Display   |
| P (Priority)       | This field displays the priority assigned to the suggested order line.<br>Display  |
| Item/Description   | The number and description of the item.<br>Display   |
| M                  | This field indicates (using <b>Y</b> and <b>N</b> ) whether the minimum order quantity for this item has been met by this order. The minimum order quantity is specified through Vendor/Item Master Maintenance (MENU POFILE).<br><br>For more information on meeting an item's minimum order quantity, refer to the documentation for the Suggested Order List Screen (p. 35-5) in Suggested Order Maintenance (MENU POREPT).<br>Display  |
| PO Qty             | The quantity of the item that is suggested for order appears in this field. For centralized POs, this quantity includes demand from all warehouses.<br><br><b>Calculation: PO Quantity</b> = Quantity On-hand - Allocated + + Unavailable Locations - Unposted Allocated Returns + In-process Warehouse Transfers + Allocated Special Orders + On Purchase Order + Inventory Unposted Transactions<br><br>The Quantity On-hand (listed in the above calculation) will take into consideration the <b>Qty Avail ATS/PO</b> flag (in Location Master Maintenance (MENU WMFILE)) that is specified on each location defined as unavailable when determining if the quantities in the location should be counted as on hand or not.<br>Display |

This screen displays after pressing **ENTER** on the Workbench Suggested Lines List Screen (p. 38-27) after entering a selection in the **Sel** field or after entering an item number and quantity. You can also access this screen after entering a selection in the **Sel** field and pressing **ENTER** on the Workbench Suggested Lines List - All Warehouses Screen (p. 38-50).

Use this screen to:

- Select the vendor from whom you will be ordering this item
- Change the order quantity for Regular and Multi Ship-To purchase orders
- Override the unit cost of the item
- Compare total quantity demanded from all warehouses with the vendor's minimum order quantity to determine whether you need to create a Centralized PO or order extra quantities and distribute them to other warehouses
- Delete line items from the suggested order

If Value Added Services is installed on your system and you are maintaining a suggested order for a work order vendor, you may use this screen to maintain a suggested order for an item made by an outside service vendor or a suggested work order for a parent item manufactured in-house. Note that fields on this screen differ for a suggested work order and are identified in the Work Order Fields that are described before the function key definitions.

---

## Workbench Extended Item Comments Screen

This screen displays after pressing F13=EXITMCMT on the Workbench Suggested Line Maintenance Screen (p. 38-35). For details about when the F13=EXITMCMT is available, refer to that function key description on the Workbench Suggested Line Maintenance Screen (p. 38-35).

Use this screen to review extended item comments (EICs) for the current suggested order item.

Initially, EICs, if any, are defaulted to display based on the selected item (or item EIC group) and warehouse. Therefore, if the warehouse does not use warehouse level EICs (as determined via Warehouse Numbers Maintenance, MENU IAFILE), then applicable system level EIC information defined for the item (or item EIC group) will be presented by default. If the warehouse does use warehouse level EICs, then applicable warehouse-specific EICs (for the selected item/EIC group and warehouse) will be presented by default.

NOTE: EICs displayed are for all active Inventory Accounting Extended Item Comment (IAEIC) records for the current suggested order item or for this item's extended comment group. If EIC comments for the indicated warehouse are displayed, comments for unauthorized companies will not be included. If EIC comments for all warehouses are displayed, comments for unauthorized companies, unauthorized warehouses, and consignment warehouses will not be included.

 F2=All Items F12=Return F15=Sug Cmt Mnt  
 F4=Avl/On PO/Usq F6=Locate F14=Std Cmt Mnt F23=More Keus

This screen displays after pressing F5=All WHs on the Workbench Suggested Lines List Screen (p. 38-27).

Use this screen to review suggested order items for all warehouses for this vendor and run. Suggested order items are displayed in order by Priority, Item, and then Demand Warehouse.

You can toggle between displaying all items or only those not reviewed through the use of the F2=NOT REVIEWED / F2=ALL ITEMS function key. An order is considered reviewed once all of the line items have been selected for review (by entering their corresponding reference number in the Sel field).

NOTE: Many roll screens that show the item number and description will display the item description on a separate line or the item and description on the same line, depending on the system options. This display of single or double line per item can be changed by pressing F24=DOUBLE LINE / F24=SINGLE LINE. F24=DOUBLE LINE will expand a collapsed screen or F24=SINGLE LINE will collapse an expanded screen.

NOTE: This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. Last appears at the bottom of the last screen of data. To scroll through information on roll screens press:

- \* PAGE DOWN or SHIFT-ROLL FWD or F7=PAGE DOWN to display the next screen
- \* PAGE UP or SHIFT-ROLL BACK or F8=PAGE UP to display the previous screen.

This screen displays after pressing F15=Sug Cmt Mnt from within Buyers Workbench, where available.

Depending on where this screen is accessed from, a few differences occur. If this screen is accessed from the Workbench Suggested Lines List Screen (p. 38-27) or the Workbench Suggested Lines List - All Warehouses Screen (p. 38-50), the title of this screen is "Order Comments" and the **Item No**, **Description**, and **Sug Qty** (and **U/M**) fields are not displayed. If this screen is accessed from the Workbench Suggested Line Maintenance Screen (p. 38-35), the title of this screen is "Line Item Comments" and the **Item No**, **Description**, and **Sug Qty** (and **U/M**) fields are included. Line Item

Comments are specific to the selected item. The remaining information is the same regardless of which Buyers Workbench screen this screen was called from.

Before this screen is displayed, the standard comments from Standard Comment Maintenance (MENU POFILE) are copied to the Suggested Orders Comment File (POSCMT) for the Vendor, Vendor/Item, or just Item. This copy function occurs only the first time that this screen appears for the suggested order or suggested order item.

Comments will be created for the warehouse of the suggested order that is being maintained, or for the warehouse shown on the change screen. This warehouse is referred to as the **Demand Warehouse** on the Workbench Suggested Orders List Screen (p. 38-5). These comments in the POSCMT file will be used when the requisitions are created from the suggested order, as opposed to the standard comments from Standard Comments Maintenance (MENU POFILE).

Use this screen to view, add, change or delete comments (suggested order level or suggested item level) for a specified suggested order/item.

---

NOTE: Order comments may be saved to purchase order history if the Purchasing Options Maintenance (MENU XAFILE) to **Keep Order Comments in History** is **Y**.

---

NOTE: If **Keep Detail Comments in History** is **Y** in Purchasing Options Maintenance (MENU XAFILE), comments may be saved to purchase order history.

---

NOTE: This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. Last appears at the bottom of the last screen of data. To scroll through information on roll screens press:  
 \* **PAGE DOWN** or **SHIFT-ROLL FWD** to display the next screen  
 \* **PAGE UP** or **SHIFT-ROLL BACK** to display the previous screen.

---

## Create Requisitions and Purchase Orders Screen

```

CREATE REQUISITIONS AND PURCHASE ORDERS

Run#:      1,173
Vendor? 200, K & M CORPORATION
WH?      **
Owner:   APDEMO,

Override Due Date:
Create Purchase Order(s):      '(Y,N)'
  Create WH Transfer PO(s) for Centralized: '(Y,N)'
Approval Code:
PO Output Queue:              QPRINT,
Create separate REQ/PO for each Drop Ship: '(Y,N)'
Promised:                      '(Y,N)'

F2=Create
F4=Suggested Order List
F8=Overrides
F12=Return

```

This screen displays after entering option C in the **O** field on the Workbench Suggested Orders List Screen (p. 38-5), by pressing F18=CREATE REQ from the Workbench Suggested Lines List Screen (p. 38-27), or by pressing F15=CREATE REQS from the Suggested Order Maintenance End Order Screen (p. 35-22).

Use this screen to create requisitions and purchase orders from the selected suggested order, if you are authorized to the Create Req From Suggested Orders menu option (MENU POREPT).

When the selected run includes linked special order items, after the requisition/purchase order is created, the linked special order items are reviewed and added to the requisition/purchase order. Multiple requisition(s)/purchase order(s) may be created when drop ship items are included.

An F8=OVERRIDES function key is also provided that allows you to override various vendor and ship-to information for the selected vendor and warehouse (if one warehouse and vendor has been selected).

If you selected a C (Centralized) type purchase order on the Workbench Suggested Orders List Screen (p. 38-5), the **Create WH Transfer PO(s) for Centralized** field will appear on this screen, and you will have the option to create warehouse transfer purchase orders for Centralized suggested orders.

If a default ship-to record is not found for a company/warehouse combination, the company and warehouse in error will be shown at the bottom of this screen in the **Company Error** and **Warehouse Error** fields.

When Suggested Order Lines have been marked, when the F18=CREATE REQ is taken to create the requisition, these lines are moved to a new run number that is created. If no lines are left on the original Suggested Order because all lines were marked, then the original suggested order is deleted. Otherwise, the original suggested order will be updated to reflect the lines that remain.

NOTE: If warehouse and/or vendor is changed after using F8=OVERRIDES, pressing F8=OVERRIDES again or F2=CREATE will result in the previous override values being ignored.

---

NOTE: Suggested Orders for Work Orders will not be processed. They are bypassed and will remain in the suggested orders.

---

### Create Requisitions and Purchase Orders Screen fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Run#               | <p>This field displays the specific run of the selected Suggested Orders Report. Last  
F5=Print Report    F12=Return

This screen displays after pressing F2=CREATE on the Create Requisitions and Purchase Orders Screen (p. 38-59), if requisitions/purchase orders were created.

This screen displays a list of requisitions/purchase orders that were created during the creation process. When requisitions/purchase orders are created, if there are special order items linked to a suggested order, these special order items will be added to Req/PO as well.

### Important

If you want to retain a record of the information displayed on this screen, use the F5=PRINT REPORT function key to print the information on the Buyers Workbench Req/PO Created Information Report (p. 38-69). This screen cannot be accessed again once you exit from it.

NOTE: This is a roll screen. More... appears at the bottom of a roll screen to indicate that more data is available for viewing. Last appears at the bottom of the last screen of data. To scroll through information on roll screens press:

- \* PAGE DOWN or SHIFT-ROLL FWD to display the next screen
- \* PAGE UP or SHIFT-ROLL BACK to display the previous screen

### Buyers Workbench Req/PO Created Information Screen fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Run#               | This field displays the run number of the selected suggested order.<br>Display  |
| Co                 | This field displays the company associated with the Req/PO.<br>Display  |
| Req No             | This field displays the associated requisition number for any requisition that was created.<br>Display  |
| PO Num             | This field displays the related purchase order number for any purchase order that was created.<br>Display   |
| Status             | This field displays the Req/PO creation status: <ul style="list-style-type: none"> <li>• Pnding</li> <li>• Apprvd</li> <li>• Closed</li> <li>• Partl</li> <li>• Open</li> <li>• Hld-xx (xx=hold code)</li> </ul> Display  |
| WH                 | This field displays the warehouse associated with the Req/PO.<br>Display  |
| Vendor             | This field displays the number of the vendor associated with the Req/PO.<br>Display   |
| F5=Print Report    | Press the <b>F5=PRINT REPORT</b> function key to print the information displayed on this screen. The Report Options Screen (explained in the appendix section of the Cross Application User Guide) will appear. After pressing <b>ENTER</b> on that screen, the Buyers Workbench Req/PO Created Information Report (p. 38-69) prints. |
| F12=Return         | Press the <b>F12=RETURN</b> function key to return to the calling screen (Workbench Suggested Orders List Screen (p. 38-5) or Workbench Suggested Lines List Screen (p. 38-27))   |

## Buyers Workbench Req/PO Created Information Report

| Co | Req No | PO Num | Status | WH | Vendor                  |
|----|--------|--------|--------|----|-------------------------|
| 01 | S00229 |        | Pnding | 1  | 100 SHARP INTERNATIONAL |

This report prints after pressing **F5=PRINT REPORT** on the Buyers Workbench Req/PO Created Information Screen (p. 38-67), and then pressing **ENTER** on the Report Options Screen (explained in the appendix section of the Cross Application User Guide).

This report prints the information displayed on the Buyers Workbench Req/PO Created Information Screen (p. 38-67), so that you can retain a record for future purposes.

### Buyers Workbench Req/PO Created Information Report fields and Function Keys

| Field/Function Key | Description  |

```

This screen displays after pressing F8=OVERRIDES on the Create Requisitions and Purchase Orders Screen (p. 38-59).

Before the requisition or purchase order is created, you have the option to use this screen to override various vendor and ship-to information for the selected vendor and warehouse (if one warehouse and one vendor has been selected). This information is defaulted in the same manner as the header and end order values in Enter or Change Requisitions (MENU POMAIN).

Note the following:

- Only certain header and end order fields are included on this screen. Header and end order fields not included on this screen will be filled in with the default value when requisitions and purchase orders are created. You must use Enter or Change Requisitions (MENU POMAIN) if you want to change a field that is not located on this screen.
- From the Create Requisitions and Purchase Orders Screen (p. 38-59), you can select to create requisitions and purchase orders for several vendors and warehouses at the same time. If more than one vendor or warehouse is selected, then you will not be able to change the **Vendor** and **Ship-To** header fields located on this screen and it therefore cannot be displayed. You must instead select only one warehouse and one vendor in order to display this screen and modify the **Vendor** and **Ship-To header** fields.
- In Enter or Change Requisitions (MENU POMAIN), you can change the ship-to number and warehouse for the requisition on the Requisition/Purchase Order Maintenance Header Screen. However, these fields cannot be changed once items are added to the requisition. You will also not be able to change the warehouse and ship-to number on this screen since the requisition/purchase order is being created from a suggested order, which already has line items on it. The warehouse that will be used for creating requisitions/purchase orders will be the suggested order warehouse, and the ship-to will be the default shipping location for the suggested order warehouse.

- Distribution A+ EDI, Fax, and/or Mail Server must be installed if you want to EDI purchase orders, Fax purchase orders, and/or want to Email purchase orders.

### Create Requisitions and Purchase Orders - Overrides Screen fields and Function Keys

| Field/Function Key      | Description  |

| Maximum:                   |        |                     | .00          | .00000          | .000            | .0000          |                |                |                  |
|                            |        |                     | N/A          | 100.00          | 100.00          | 100.00         |                |                |                  |
| F5=Maintain                |        |                     |              |                 | F12=Return      |                |                |                |                  |

This screen displays after entering option I in the **O** field on the Workbench Suggested Orders List Screen (p. 38-5).

Use this screen to view, in one single place, a summarized snapshot of the information available from the multiple views on the Workbench Suggested Orders List Screen (p. 38-5) for the selected run. A brief summary of each field is explained below; refer to the Workbench Suggested Orders List Screen (p. 38-5) for further details.

All fields on this screen are display only.

NOTE: The **Maximum** field will always show as **.00** in the Value column and **N/A** in the percent below, since there is no maximum value applicable.

## Suggested Order Run Detail Screen fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| P (Priority)       | This field displays the priority assigned to the suggested order run.<br>Display |
| Vendor             | This field displays the vendor number associated with the run.<br>Display        |
| Vendor Name        | This field displays the vendor name associated with the run.<br>Display          |

### Suggested Order Run Detail Screen fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Lines              | This field displays the total number of detail lines, excluding linked special orders from the SPORD file.<br>Display   |
| Owner              | This field displays the owner (user ID/buyer) of the suggested order run.<br>Display  |
| Rc WH              | This field displays the number of the warehouse that will receive the goods from the vendor.<br>Display   |
| Dm WH              | This field displays the number of the warehouse that requires the goods for its inventory.<br>Display   |
| T                  | This field displays the type of purchase orders to be created from this run, indicated by one of the following: <ul style="list-style-type: none"> <li>• <b>M</b> = multi ship-to</li> <li>• <b>C</b> = centralized</li> <li>• <b>Blank</b> = standard (neither multi ship-to nor centralized)</li> </ul> Display   |
| Run#               | This field displays the specific run number assigned to this run when it was created.<br>Display  |
| Min                | These two columns indicate whether specific vendor minimums have been met by this suggested order. <ul style="list-style-type: none"> <li>• <b>V</b> represents the vendor minimums (units, value, weight and size) specified through Vendor Master Maintenance (MENU POFILE). If all minimums, if any, have been met by this order, <b>Y</b> appears. If one or more minimum has not been met, <b>N</b> appears.</li> <li>• <b>I</b> represents the minimum order quantity for this item as specified through Vendor/Item Master Maintenance (MENU POFILE). If all items on the suggested order run meet their minimum order quantity, if any, <b>Y</b> appears. If one or more items does not meet its minimum order quantity, <b>N</b> appears.</li> </ul> Display |

### Suggested Order Run Detail Screen fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Mx                 | <p>This column indicates whether any specific vendor maximums have been reached by this suggested order.</p> <ul style="list-style-type: none"> <li>• <b>V</b> represents the vendor maximums (units, value, weight, and size) specified through Vendor Master Maintenance (MENU POFILE). If all maximums, if any, have been met by this order, <b>Y</b> appears. If one or more maximum has not been reached, <b>N</b> appears.</li> </ul> <p>Display</p>  |
| Rush Lines         | <p>This field displays the number of lines in the run that are categorized as Rush Purchase Order items and as such, have been marked with the Rush Purchase Order priority/color defined in Purchasing System Options Maintenance (MENU XAFILE); refer to that option for details about this category.</p> <p>This value is initially calculated upon the creation of the suggested order run via the Suggested Order Report function. It could also be recalculated during the suggested order maintenance function when the user updates/enters through the Suggested Order Maintenance End Order Screen (p. 35-22).</p> <hr/> <p>NOTE: Items which are manually added to a suggested order run are always added with a normal priority and therefore will not update this value.</p> <hr/> <p>Display</p> |
| Below OP Lines     | <p>This field displays the number of lines in the run that are marked with the Below Order Point priority, defined in Purchasing System Options Maintenance (MENU XAFILE); refer to that option for details about this priority.</p> <p>This value is initially calculated upon the creation of the suggested order run via the Suggested Order Report function. It could also be recalculated during the suggested order maintenance function when the user updates/enters through the Suggested Order Maintenance End Order Screen (p. 35-22).</p> <hr/> <p>NOTE: Items which are manually added to a suggested order run are always added with a normal priority and therefore will not update this value.</p> <hr/> <p>Display</p>  |

**Suggested Order Run Detail Screen fields and Function Keys**

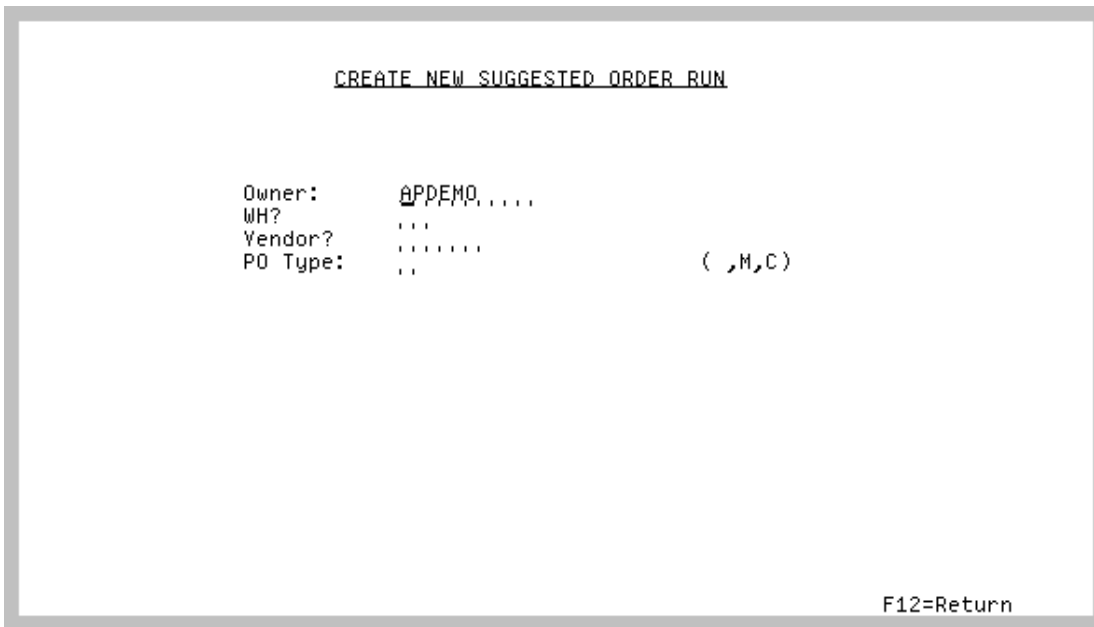

| Field/Function Key | Description   |
|--------------------|---|
| Below CP Lines     | <p>This field displays the number of lines in the run that are marked with the Below Critical Point priority, defined in Purchasing System Options Maintenance (MENU XAFIL2); refer to that option for details about this priority.</p> <p>This value is initially calculated upon the creation of the suggested order run via the Suggested Order Report function. It could also be recalculated during the suggested order maintenance function when the user updates/enters through the Suggested Order Maintenance End Order Screen (p. 35-22).</p> <hr/> <p>NOTE: Items which are manually added to a suggested order run are always added with a normal priority and therefore will not update this value.</p> <hr/> <p>Display</p>   |
| Neg Avl Lines      | <p>This field displays the number of lines in the run that are marked with the Negative Purchase Net Available, defined in Purchasing System Options Maintenance (MENU XAFIL2); refer to that option for details about this priority.</p> <p>This value is initially calculated upon the creation of the suggested order run via the Suggested Order Report function. It could also be recalculated during the suggested order maintenance function when the user updates/enters through the Suggested Order Maintenance End Order Screen (p. 35-22).</p> <hr/> <p>NOTE: Items which are manually added to a suggested order run are always added with a normal priority and therefore will not update this value.</p> <hr/> <p>Display</p> |
| Spc Ord Lines      | <p>This field displays the number of special order items added (linked) to the suggested order.</p> <p>Display</p>  |
| Target%            | <p>This field displays the target percentage, which identifies how close this suggested order is towards meeting the next closest vendor minimum (cubes, units, weight and amount), if any.</p> <p>Display</p>  |
| Discount%          | <p>This field displays the vendor volume discount (VVD), if any, applicable based on this run's details compared to the VVD requirements, defined in Vendor Volume Discount Maintenance (MENU POFIL2).</p> <p>Display</p>   |
| Ordered            | <p>Ordered data is shown for Value, Cubes, Units, and Weight.</p> <p>Display</p>  |

---

**Suggested Order Run Detail Screen fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Minimum            | <p>The vendor minimum data for Value, Cubes, Units, and Weight from the Vendor Master File (VENDR), followed below by the calculated percent of how close the Ordered data is to reaching those minimums.</p> <p><b>Example:</b> If the vendor minimum for units is 50, and the run's current ordered quantity of units is 20, you would see the Minimum Units in this field as 50 with a calculated 20 (percent) shown immediately below it.</p> <p>Display</p>   |
| Override           | <p>The override values for this run noted on the Suggested Order Maintenance End Order Screen (p. 35-22), followed below by the calculated percent of how close the Ordered data is to reaching these overrides.</p> <p><b>Example:</b> If the override minimum for units is 50, and the run's current ordered quantity of units is 20, you would see the Override Units in this field as 50 with a calculated 20 (percent) shown immediately below it.</p> <p>Display</p>   |
| Maximum            | <p>The vendor maximum data for Value, Cubes, Units, and Weight from the Vendor Master File (VENDR), followed below by the calculated percent of how close the Ordered data is to reaching those maximums.</p> <p><b>Example:</b> If the vendor maximum for units is 50, and the run's current ordered quantity of units is 20, you would see the Maximum Units in this field as 50 with a calculated 20 (percent) shown immediately below it.</p> <hr/> <p>NOTE: There is no maximum value specification allowed so it will always show as zero, and therefore, no maximum value percent is ever calculated, thus N/A is displayed.</p> <hr/> <p>Display</p> |
| F5=Maintain        | <p>Press F5=MAINTAIN to maintain the selected run. The Workbench Suggested Lines List Screen (p. 38-27) will appear.</p>   |
| F12=Return         | <p>If you keyed   in just one <b>O</b> field on the Workbench Suggested Orders List Screen (p. 38-5) to select one run to view in detail, you will be returned to that screen.</p> <p>If you keyed   in multiple <b>O</b> fields on the Workbench Suggested Orders List Screen (p. 38-5) to select multiple runs to view in detail, you will remain on the current screen and the next run's information will be presented for viewing purposes.</p>   |

## Create New Suggested Order Run Screen

This screen displays after selecting F4=CRT EMPTY RUN on the Workbench Suggested Orders List Screen (p. 38-5).

Use this screen to create a new/empty suggested order run for vendors which may not already exist in the suggested order list. Items can then be manually added to the new suggested order run (via F5=MAINTAIN LAST), even if minimums and maximums have not yet been set up for these items.

Once a new suggested order run has been created, the last owner, warehouse, warehouse name, vendor, vendor name, PO Type, PO Type description, and new run number will appear on the screen.

---

NOTE: Items must be set up in Vendor/Item Maintenance (MENU POFILE) and Item Balance Maintenance (MENU IAFILE) before they can be added to a new suggested order run that is created.

---

### Create New Suggested Order Run Screen fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Owner              | <p>This field displays the owner of this suggested order.</p> <p>Key the owner (user ID) of the suggested order for which you are creating a new suggested order run, or accept the default value.</p> <p><i>Default Value:</i> The owner from the Workbench Suggested Orders List Screen (p. 38-5).</p> <p><i>Valid Values:</i> A valid Distribution A+ user ID.</p> <p>(A 10) Required</p> |

---

**Create New Suggested Order Run Screen fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| WH                 | <p>Use this field to enter the warehouse for which you are creating a new suggested order run.</p> <p>Key the appropriate warehouse ID. Depending on your entry in the <b>PO Type</b> field, the system will validate if the warehouse entered allows centralized PO's or multi-warehouse ship-tos.</p> <p><i>Valid Values:</i> A valid warehouse number (non-consignment) defined in Distribution A+ through Warehouse Numbers Maintenance (MENU IAFILE), which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(A 2) Required</p>  |
| Vendor             | <p>Use this field to enter the vendor for which you are creating a new suggested order run.</p> <p>Key the appropriate vendor number.</p> <p><i>Valid Values:</i> A vendor defined through Vendors Maintenance (MENU POFIELD/MENU APFILE), for which purchase orders are allowed.</p> <p>(A 6) Required</p>   |
| PO Type            | <p>This field indicates the type of purchase order for which you are creating a new suggested order run.</p> <p>Leave <b>Blank</b> for standard (neither multi ship-to nor centralized).</p> <p>Key <b>M</b> for multi ship-to.</p> <p>Both the vendor and warehouse must allow multiple ship-to purchase orders to be valid; that is, the <b>Allow Multi Ship-To POs</b> field must be <b>Y</b> in Vendor Master Maintenance (MENU POFIELD/MENU APFILE), and the <b>Mult Ship-to POs</b> field must be <b>Y</b> in Warehouse Numbers Maintenance (MENU IAFILE).</p> <p>Key <b>C</b> for centralized.</p> <p>The warehouse must be set to allow central ship-to POs with warehouse transfers to be valid; that is, the <b>Allow Central Ship-to POs w/WH Trans</b> field must be <b>Y</b> on the Warehouse Number File Maintenance Screen (in MENU IAFILE) for the warehouse.</p> <p><i>Valid Values:</i> Blank, M, or C</p> <p>(A 1) Optional, since blank = a valid value</p> |
| F5=Maintain Last   | <p>F5=MAINTAIN LAST appears after you press ENTER to create the new suggested order run.</p> <p>Press F5=MAINTAIN LAST to maintain the run that was just created. The Workbench Suggested Lines List Screen (p. 38-27) will appear.</p>   |
| F12=Return         | <p>Press F12=RETURN to return to the Workbench Suggested Orders List Screen (p. 38-5), without creating a new suggested order run.</p>  |

### Create New Suggested Order Run Screen fields and Function Keys

---

| Field/Function Key | Description   |
|--------------------|---|
| Enter              | <p>Press <b>ENTER</b> to confirm your entries and create a new suggested order run. The screen will be refreshed and the <b>Last</b> action performed will be displayed on the screen. The <b>F5=MAINTAIN LAST</b> function key will now also appear, once <b>ENTER</b> is pressed and processing completes.</p> <p>A “shell” of a suggested order run will be created for the owner, warehouse, and vendor entered on this screen. The run number will be automatically assigned, and no items will exist on the suggested order. You can then manually add items to this suggested order via <b>F5=MAINTAIN LAST</b>, or by using <b>M</b> on the Workbench Suggested Orders List Screen (p. 38-5).</p> |

---

## Suggested Orders Report Template Load Screen

```
SUGGESTED ORDERS REPORT TEMPLATE LOAD

Template? _ . . . . .

F3=Exit                F5=Template Maintenance
```

This screen displays after selecting F6=CRT NEW RUN on the Workbench Suggested Orders List Screen (p. 38-5).

Use this screen to create suggested order runs for vendors, like the Suggested Orders Report option would do. Once you follow the screens that this function provides access to, you will also be able to print the Suggested Orders Report.

You can only select to maintain a template if your User ID buyer matches to the **Restricted to Buyer**, if one was entered.

---

NOTE: Items must be set up in Vendor/Item Maintenance (MENU POFILE) and Item Balance Maintenance (MENU IAFILE) before they can be added to a new suggested order run that is created.

---

### Suggested Orders Report Template Load Screen fields and Function Keys

| Field/Function Key      | Description   |
|-------------------------|---|
| Template                | <p>Use this field to load a previously defined template, so that you do not have to key values each time you run the Suggested Orders Report.</p> <p>To create a new template, leave this field blank and press <b>F5=TEMPLATE MAINTENANCE</b>. The Suggested Orders Report Template Maintenance Screen (p. 38-93) appears.</p> <p>To load a previously defined template, key the template in this field and press <b>ENTER</b>, or key <b>?</b> and press <b>Enter</b> to select one from the Suggested Orders Report Template Listing Screen (p. 38-91). The Suggested Orders Report Screen (p. 34-3) appears and the information (Vendor List, Buyer List, PLine List, Warehouse List, etc.) from the selected template will be defaulted into the fields on the Suggested Orders Report Screen (p. 34-3).</p> <p>Leave this field blank and press <b>Enter</b> to create a new Suggested Order Run without the information (Vendor List, Buyer List, PLine List, Warehouse List, etc.) being defaulted in. The Suggested Orders Report Screen (p. 34-3) appears.</p> <p>Refer to the Suggested Orders Report Screen (p. 34-3) in Suggested Orders Report (MENU POREPT) for details.</p> <p><i>Valid Values:</i> Blank or a valid suggested orders report template previously defined through Template Maintenance (via <b>F5=TEMPLATE MAINTENANCE</b> on this screen).</p> <p>(A 10) Optional</p> |
| F3=Exit                 | Press <b>F3=EXIT</b> to return to the Workbench Suggested Orders List Screen (p. 38-5).   |
| F5=Template Maintenance | Press <b>F5=TEMPLATE MAINTENANCE</b> to add, change or delete a suggested orders report template. The Suggested Orders Report Template Maintenance Screen (p. 38-93) will appear.   |
| Enter                   | <p>Press <b>ENTER</b> (with or without entering a template) to access the Suggested Orders Report Screen (p. 34-3). Refer to this screen in Suggested Orders Report (MENU POREPT) for details.</p> <p>Press <b>ENTER</b> after keying a <b>?</b> in the <b>Template</b> field to select a previously defined template from the Suggested Orders Report Template Listing Screen (p. 38-91).</p>  |

Select:  ...          LIMITS          Last
                  Buyer?  ....

                                     F12=Return
  
```

This screen displays after keying a **?** in the **Template** field on the Suggested Orders Report Template Load Screen (p. 38-89) or Suggested Orders Report Template Maintenance Screen (p. 38-93) and pressing **ENTER**.

This screen displays a list of existing suggested order templates that have been created for the Suggested Orders Report.

To select a template to use for the Suggested Orders Report, key the **SI** number of that template in the **Select** field and press **ENTER**. You can also filter the list of templates by buyer, using the **Buyer** limits field.

---

NOTE: This is a roll screen. More... appears at the bottom of a roll screen to indicate that more data is available for viewing. Last appears at the bottom of the last screen of data. To scroll through information on roll screens press:

- \* **PAGE DOWN** or **SHIFT-ROLL FWD** to display the next screen
  - \* **PAGE UP** or **SHIFT-ROLL BACK** to display the previous screen

## Suggested Orders Report Template Maintenance Screen

```

SUGGESTED ORDERS REPORT TEMPLATE MAINTENANCE

Function: _      (A,C,D)
Template? .....

F3=Exit      F12=Return
  
```

This screen displays after selecting F5=TEMPLATE MAINTENANCE on the Suggested Orders Report Template Load Screen (p. 38-89).

Use this screen to add, change, or delete suggested order report template process formats. You can only select to maintain a template if your User ID buyer matches to the **Restricted to Buyer**, if one was entered.

When you select an existing template that has default values defined, those default values (created here) will be displayed to eliminate the need of having to select the appropriate values for the specific run of the suggested orders report.

After performing a function, information for the last function performed will display on this screen.

### Suggested Orders Report Template Maintenance Screen fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Function           | <p>Key <b>A</b> to add a new suggested order report template.</p> <p>Key <b>C</b> to change an existing default suggested order report template.</p> <p>Key <b>D</b> to delete an existing default suggested order report template.</p> <p><i>Valid Values:</i> A, C, D</p> <p>(A 1) Required</p> |

**Suggested Orders Report Template Maintenance Screen fields and Function Keys**

| <b>Field/Function Key</b> | <b>Description</b>  |

---

## Suggested Orders Report Template Settings Screen

```

SUGGESTED ORDERS REPORT TEMPLATE SETTINGS
Add

Template:    MONDAY-ALL

Description:  _____

Restricted to Buyer? , , , ,

F12=Return

```

This screen displays after selecting to add, change, or delete a suggested orders report template on the Suggested Orders Report Template Maintenance Screen (p. 38-93) and pressing **ENTER**.

Use this screen to enter a description for the suggested order report template you are adding or maintaining. You will also have the option to restrict the template to a particular buyer. If you selected to delete a template, **F24=DELETE** will appear and you will be prompted to press **F24** to confirm deletion.

If you are adding a new template or changing an existing template, after further defining the template settings on this screen and pressing **ENTER**, you will be forwarded to the Suggested Orders Report Screen (p. 34-3) in Suggested Orders Report (MENU POREPT). Once you continue through the process from the Suggested Orders Report Screen (p. 34-3), the Suggested Orders Report Template File (SOTMP) will be updated.

### Suggested Orders Report Template Settings Screen fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Template           | The suggested orders report template you selected on the Suggested Orders Report Template Maintenance Screen (p. 38-93).<br>Display |
| Description        | Use this field to key the description for the suggested order template you are adding or changing.<br>(A 30) Required               |

**Suggested Orders Report Template Settings Screen fields and Function Keys**

| Field/Function Key  | Description  |
|---------------------|--|
| Restricted to Buyer | <p>Use this field if you want to restrict the suggested order template to a particular buyer.</p> <p>Key the buyer. Your User ID buyer must match the <b>Restricted to Buyer</b>.</p> <p><i>Valid Values:</i> a buyer defined through Buyers Maintenance (MENU POFILE).</p> <p>(A 3) Optional</p>  |
| F12=Return          | <p>Press F12=RETURN to return to the Suggested Orders Report Template Maintenance Screen (p. 38-93).</p>   |
| F24=Delete          | <p>The F24=DELETE function key displays only if <b>D</b> was selected in the <b>Function</b> field on the Suggested Orders Report Template Maintenance Screen (p. 38-93).</p> <p>Press F24=DELETE to confirm deletion of the suggested order report template. You will be returned to the Suggested Orders Report Template Maintenance Screen (p. 38-93) and the template will be deleted.</p> |
| Enter               | <p>Press ENTER to confirm your selections. The Suggested Orders Report Screen (p. 34-3) appears. Refer to this screen in Suggested Orders Report (MENU POREPT) for details.</p>  |

---

Use this option to print buyer budget purchase versus actual information and the variance between the two for an individual buyer or for multiple buyers. For each buyer specified on the Buyer Budget/Actual Analysis Report Selection Screen (p. 39-3), this option prints a Buyer Budget Analysis report according to the buyer budget level assigned through Buyers Maintenance (MENU PROFILE). For each individual buyer, a report with buyer budget/actual information will print with one of the following buyer budget levels when actual data has been posted:

- Warehouse
- Warehouse/Vendor
- Warehouse/Vendor/Buyer Item Class
- Warehouse/Vendor/Buyer Item Class/Subclass
- Warehouse/Buyer Item Class
- Warehouse/Buyer Item Class/Subclass
- Vendor
- Vendor/Buyer Item Class
- Vendor/Buyer Item Class/Subclass
- Buyer Item Class
- Buyer Item Class/Subclass

---

## Buyer Analysis Report

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title  | Purpose  |
|--|--|
| Buyer Budget/Actual Analysis Report Selection Screen | Use to enter criteria to limit the information printed on the Buyer Budget/Analysis Report for each buyer. |

---

| <b>Title</b>                 | <b>Purpose</b>   |
|------------------------------|--|
| Buyer Budget/Analysis Report | Prints a buyer budget analysis between monthly budget purchase amounts and actual purchase amounts derived from those purchase orders with an assigned buyer code. |

---

## Buyer Budget/Actual Analysis Report Selection Screen

| BUYER BUDGET/ACTUAL ANALYSIS REPORT |           |               |
|-------------------------------------|-----------|---------------|
| Company?                            | - .       | To? ...       |
| Buyer?                              | ....      | To? ....      |
| Warehouse?                          | ...       | To? ...       |
| Vendor Number:                      | .....     | To .....      |
| Buyer Item Cls/Subcls?              | ... / ... | To? ... / ... |
| Fiscal Year:                        | ....      | To .....      |

F3=Exit

This screen displays after selecting option 15 - Buyer Analysis Report from MENU POREPT. Use this screen to enter criteria to limit the information printed on the Buyer Budget/Analysis Report (p. 39-5) for each buyer. If no criteria is keyed, all buyer analysis information will be included on the report. Additionally, if more than one buyer is entered, multiple reports will print for each buyer specified. There are a total of eleven reports available for the buyer level.

Refer to the Cross Applications User Guide for an explanation of the rules for entering From/To Ranges.

### Buyer Budget/Actual Analysis Report Selection Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|

This report prints following your responses on the Buyer Budget/Actual Analysis Report Selection Screen (p. 39-3), and the Report Options Screen. Buyer budget/actual buyer purchase information meeting the specified selection criteria will print.

If the **Buyer Budget Level** field is set to **0** in Buyer Analysis Report (MENU PROFILE) for any of the buyers specified in the limiting criteria, no statistical data is saved for the buyers and reports cannot be generated. If a report cannot be generated, a break message will be issued indicating that “**Buyer levels are 0 for the buyer range specified. No Buyer Analysis reports were generated.**”

This report presents you with a buyer budget analysis between monthly budget purchase amounts and actual purchase amounts derived from those purchase orders with an assigned buyer code. If there is no actual data for a specified buyer budget, the budget will not print.

The report name is selected based on the level assigned to the buyer (i.e. buyer item class) and prints that buyer level as the second heading line. The program then attempts to match the actual to budget for the analysis. When the actual detail does not match the budget detail (i.e. actual in warehouse 6 and budget for warehouse 3), the actual will print on the selected report with a budget of zero for comparison.

You may define buyer budgets for a buyer at the following levels:

- 1 - Warehouse
- 2-Warehouse/Vendor
- 3-Warehouse/Vendor/Buyer Item Class
- 4-Warehouse/Vendor/Buyer Item Class/Subclass
- 5- Warehouse/Buyer Item Class
- 6- Warehouse/Buyer Item Class/Subclass
- 7-Vendor

- 8- Vendor/Buyer Item Class
- 9- Vendor/Buyer Item Class/Subclass
- 10- Buyer Item Class
- 11- Buyer Item Class/Subclass

**Buyer Budget/Analysis Report**

| Report/Listing Fields | Description   |
|-----------------------|---|
| Headings              | <p>Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.</p> <p>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings.</p> <p>The report sub-title is selected based on the level assigned to the buyer (i.e. By Warehouse, By Buyer Item Class) and then prints that buyer ID and name as the third heading line.</p> |
| Company               | The company number and name for the associated budget.  |
| Warehouse             | The warehouse ID and name associated with budget.   |
| Budget                | This row of fiscal periods is the period budget entered for this buyer through Buyer Budgets Maintenance (MENU POFIL2) for each month displayed.  |
| Actual                | This row of fiscal periods is the actual monthly buyer purchase amount derived from those purchase orders with the selected buyer's buyer code for each month displayed based on the PO print date.   |
| Variance              | This row of fiscal periods is the variance between the monthly buyer budget entered for the buyer and the actual period purchase amount that has been processed through Distribution A+ for the selected buyer.   |
| Total                 | <p>This row of fiscal periods is the total period amounts, if applicable, for each buyer budget level assigned to the selected buyer. These buyer budget levels include, but are not limited to, the following total lines:</p> <ul style="list-style-type: none"> <li>• Buyer</li> <li>• Company</li> <li>• Warehouse</li> <li>• Vendor</li> <li>• Buyer Item Class</li> <li>• Buyer Item Subclass</li> <li>• Fiscal Year</li> </ul>   |

---

Use this option to print the Special Order Summary Report. This report prints one line for every vendor in which a special order is assigned. Special orders are comprised of drop-shipped items (shipped directly from the vendor to the customer), non-stocked items [items defined through Item Master Maintenance (MENU IAFILE) with an **N** keyed in the **Update Inventory** field indicating that they are non-stocks], and any other type of special order. For more information on special orders, refer to Special Order Processing (p. 5-4).

---

NOTE: This report may also be printed, in summary, through Maintain Special Orders (MENU POMAIN). Select **F4=SUMMARY RPT** from the Vendor Summary Screen (p. 10-9).

---

---

## Special Order Summary Report

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

This report prints following your responses on the Special Order Detail Report Screen (p. 41-2), and the Report Options Screen.

Detailed information for each special order is printed (one line is printed for each special order item line that has been created on customer orders in Order Entry).

### Special Order Detail Report

| Report/Listing Fields | Description   |
|-----------------------|---|
| Headings              | <p>Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.</p> <p>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings.</p> <p>The warehouse number and name and the vendor number and name are also printed at the top of each page.</p> |
| Our Item/Description  | The item number and item description of the special ordered item from the sales order. If the description in the sales order is blank, the description will print from the Item Master File (ITMST).  |
| Ord Quantity, U/M     | The order quantity reflects the quantity of items ordered and the ordering unit of measure.   |
| Ord No                | The company number and order number.in Order Entry that contains this item.   |
| Mfg Item/Description  | The manufacturer's item number and description from the Vendor/Item Master File.  |

---

**Special Order Detail Report**

| Report/Listing Fields | Description  |
|-----------------------|--|
| PO Quantity, U/M      | The quantity of the item that will be purchased based on the buying unit of measure for the item.  |
| Req-PO                | This field will be blank if the <b>Status</b> is <b>Unordered</b> or <b>Selected</b> .<br>If the <b>Status</b> is <b>On Req</b> or <b>On PO</b> , this field will print the company and the requisition/purchase order number.   |
| Ord Price, U/M        | The unit final price and unit of measure of the item expressed based on the pricing unit of measure from the sales order.  |
| Rq Shp                | The requested ship date (expected date for shipment) of the order to the customer.   |
| Item Cost, U/M        | The cost of the item expressed in the pricing unit of measure.   |
| Status                | This field displays the status of the special order. The status may be one of the following: <ul style="list-style-type: none"> <li>• <b>Unordered</b>: has not been placed in a requisition or purchase order</li> <li>• <b>Selected</b>: has been selected for inclusion through Work with Special Orders</li> <li>• <b>On Req</b>: has been included on a requisition</li> <li>• <b>On PO</b>: has been included on a purchase order</li> <li>• <b>On WO</b>: has been included on a work order (if Value Added Services is installed)</li> </ul> |
| Ord Cost              | The unit cost of the item from the sales order.  |
| SO Type               | This field displays <b>S/O</b> for a special order and <b>D/S</b> for a drop shipment special order.   |
| Ovr Price, U/M        | The override price of the item as specified from   |
| Date                  | The date the purchase order was printed.   |

---

This option prints the Special Order Edit Report. The customer order, requisition, and/or purchase order refer to a special order. Use this report to verify that no discrepancies exist between these documents. This verification will ensure that the documents have not been altered since they were entered/created.

---

## Special Order Edit Report

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                                   | Purpose  |
|---|--|
| Special Orders Edit Error Report Screen | Use to select the warehouse(s) to print on the Special Order Error Report.   |
| Special Order Edit Error Report         | Prints error messages and the values that differ (identifying where each value is contained) for each discrepancy encountered. |

---

This report prints following your responses on the Special Orders Edit Error Report Screen (p. 42-2), and the Report Options Screen.

Error messages and the values that differ (identifying where each value is contained) for each discrepancy encountered are printed.

### Special Order Edit Error Report

| Report/Listing Fields | Description  |
|-----------------------|--|
| Headings              | <p>Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.</p> <p>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings.</p> <p>The warehouse number and name are also printed.</p> |
| Vendor                | This is the primary vendor assigned to the special order item, or another vendor selected through Maintain Special Orders (MENU POMAIN).   |
| Buy                   | The buyer associated with the vendor from whom an item is special ordered.   |
| Item/Description      | The item that has been special ordered and its description.  |
| Mfg Item Number       | The manufacturer's item number defined through Vendor/Item Information Maintenance (MENU POFIL).   |
| Order No              | The company and number of the customer's order.  |

Purchase order cost does not equal special order purchasing cost</li> </ol> |

---

---

This option allows you to define the vendors and vendor information used in Purchasing. You also can select the vendors for which you want to add/change vendor-level special order options or e-mail contacts, or for which you want to review vendor audit activity.

Through this option, a mass copy functionality is also available that will assist you in copying vendor/item related files from one vendor to another vendor. This is useful if you are switching an entire product line from one vendor to another.

---

## Vendors Maintenance

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                                      | Purpose  |
|--|--|
| Vendor Master Maintenance Selection Screen | Use to select a vendor to add, change or delete.   |
| Vendor Search Screen                       | Use to review and change search criteria and to select a vendor for processing.  |
| Vendor Special Order Options Screen        | Use to specify special order options for a specific vendor.  |
| Copy Vendor Item Information Screen        | Use to copy vendor/item related files from one vendor to another vendor.   |
| Vendor Audit Activity Screen               | Use to review vendor audit activity for the vendor you selected on the Vendor Master Maintenance Selection Screen (p. 43-3). |
| Vendor Audit Activity Detail Screen        | Use to review specific vendor change information about the activity you selected.  |

---

| Title   | Purpose  |
|---|--|
| Vendor Master Maintenance (1) Screen                    | Use to add, change, or delete vendor purchasing information.   |
| Vendor Master Maintenance (2) Screen                    | Use to add or change vendor user field information.  |
| A/P Vendor Master Maintenance Screen                    | Use to add, change, or delete vendor information used by Accounts Payable.   |
| Vendor ACH Information Maintenance Screen               | Use to identify the bank account information to establish ACH transfers.   |
| Vendor Master Additional Information Maintenance Screen | Use to enter EDI and/or FAX vendor master information.   |
| Vendor Master Additional EDI Maintenance Screen         | Use to set up the conditions for creating and transmitting the Product Activity Data (852) document to this vendor.  |
| Vendor Master Additional EDI Maintenance - 867 Screen   | Use to set up the conditions for creating and transmitting the Product Transfer & Resale Report (867) to this vendor.  |
| Vendor Master Additional Email Maintenance Screen       | Use to add or change additional vendor information concerning e-mail transmission for certain documents.   |
| Vendor Rebate Customer Maintenance Screen               | Use to identify those customers having a rebate relationship with this vendor in which the method for rebate payment is accounts receivable, as opposed to accounts payable. |

## Vendor Master Maintenance Selection Screen

```

VENDOR MASTER MAINTENANCE

Function:  .. (A,C,D)

Vendor No: .....

Find: .....

City: .....

F2=S/O Options      F3=Exit      F5=Copy V/I Info  F11=Email Contacts  F18=Vendor Activity

```

This screen displays after selecting option **1** - Vendors Maintenance on MENU POFIL2 or MENU APFILE.

Use this screen to select a vendor to add, change or delete. You can also use this screen to:

- select a vendor for which you want to add/change vendor-level special order options or e-mail contacts
- select a vendor for which you want to access vendor audit activity
- copy vendor/item information from one vendor to another vendor

### Vendor Master Maintenance Selection Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Function           | <p>Key <b>A</b> to add a new vendor.</p> <p>Key <b>C</b> to change existing vendor information.</p> <p>Key <b>D</b> to delete an existing vendor. You cannot delete a vendor if:</p> <ul style="list-style-type: none"> <li>• open vouchers exist for that vendor</li> <li>• open purchase orders exist for that vendor</li> <li>• vendor/item records exist for that vendor</li> <li>• Bid &amp; Quote is installed and either open or closed bids exist for that vendor</li> <li>• the vendor is assigned to a vendor group (MENU POFIL2)</li> </ul> <p>(A 1) Required</p> |

### Vendor Master Maintenance Selection Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Vendor No          | <p>Key the six character vendor number of the vendor you are adding, changing, or deleting.</p> <p>If you are unsure of the vendor number, use the <b>Find</b> and <b>City</b> fields with the ENTER key to activate the Vendor Search feature.</p> <p>(A 6) Required</p>  |
| Find               | <p>Use this field either alone or with the <b>City</b> field to search for the vendor by name.</p> <p>Key up to 10 characters (the first 10) of one or more words in the vendor's name. Key the words in any order and separate each word with one blank space.</p> <p>For information on entering search criteria, refer to Searches in the Introduction section of this user guide.</p> <p>(A 40) Optional</p>   |
| City               | <p>Use this field together with the <b>Find</b> field to search for a vendor in a particular city.</p> <p>Key up to 8 characters (the first 8) of the vendor's city.</p> <p>For information on entering search criteria, refer to Searches in the Introduction section of this user guide.</p> <p>(A 8) Optional</p>   |
| F2=S/O Options     | <p>Use this function key to maintain vendor-level special order options. The Vendor Special Order Options Screen (p. 43-9) appears.</p> <p>Key the number of the vendor in the <b>Vendor No</b> field for which you want to maintain (add, change or delete) vendor-level special order options and press this function key to access the Vendor Special Order Options Screen. You can maintain special order options for a particular vendor, and based on company-level options defined through Special Order Options Maintenance (MENU XAFILE), vendor-level options may override company-level options and be used during Special Order Processing for a particular vendor.</p> <hr/> <p>NOTE: Special order options are not available for deleted vendors, work order vendor numbers, and outside service vendor numbers.</p> |
| F3=Exit            | <p>Press F3=EXIT to cancel this option and return to MENU POFILE.</p>  |

---

**Vendor Master Maintenance Selection Screen Fields and Function Keys**

---

| Field/Function Key   | Description   |
|--|---|
| F5=Copy V/I Info   | <p>This function key displays only if Purchasing is installed and activated. The availability of vendor/item related records is completely reliant on Purchasing.</p> <p>Press <b>F5=COPY V/I INFO</b> to perform a mass copy of vendor/item related files from one vendor to another vendor. This is useful if you are switching an entire product line from one vendor to another. The Copy Vendor Item Information Screen (p. 43-19) will appear.</p> <hr/> <p><b>NOTE:</b> When PO vendor/item and/or PO vendor/item/price file records are updated and <b>Days to Keep Vendor/Item Audit Activity</b> is greater than <b>0</b> in Purchasing System Options Maintenance (MENU XAFILE), vendor/item activity will be tracked when <b>F5=COPY V/I INFO</b> is pressed.</p> |
| F11=Email Contacts   | <p>The <b>F11=EMAIL CONTACTS</b> function key appears only if you have the Mail Server module installed.</p> <p>Press <b>F11=EMAIL CONTACTS</b> to add or maintain a vendor e-mail contact. The Vendor Contact Maintenance Selection Screen will appear. Refer to the Mail Server User Guide for information about this screen.</p>   |
| F18=Vendor Activity  | <p>The <b>F18=VENDOR ACTIVITY</b> function key appears only if the <b>Days to Keep Vendor Audit Activity</b> field in Purchasing Options Maintenance (MENU XAFILE) contains a value of at least 1.</p> <p>Press <b>F18=VENDOR ACTIVITY</b> to display vendor master audit activity for the selected vendor. The Vendor Audit Activity Screen (p. 43-25) will appear.</p> <hr/> <p><b>NOTE:</b> Deleted vendors are not available for review through Vendor Audit Activity. When a vendor is deleted, any previously tracked data for that vendor will also be deleted.</p>  |
| <p><b>Important</b></p>  |   |
| <p>Tracked activity older than the number of days keyed in the <b>Days to Keep Vendor Audit Activity</b> field in Purchasing Options Maintenance (MENU XAFILE) will be purged when you press <b>F18=VENDOR ACTIVITY</b>.</p> |   |
| Enter  | <p>The <b>ENTER</b> key performs two functions:</p> <ul style="list-style-type: none"> <li>• Press this key to confirm your selections. The Vendor Master Maintenance (1) Screen (p. 43-32) will display.</li> <li>• Press this key to view a list of vendors after keying search criteria in the <b>Find</b> and <b>City</b> fields. The Vendor Search Screen (p. 43-7) will appear.</li> </ul>  |

This screen displays after keying vendor search criteria (or by pressing a function key in some cases) on any screen throughout Distribution A+ in which this ability is provided. Vendors that match the vendor search word criteria keyed will display.

Use this screen to select the desired vendor.

### Vendor Search Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| (Reference Number) | The reference number of the displayed vendor. To select a vendor, you must key this number in the Selection field on this screen.<br>Display   |
| Vendor Information | The following information is displayed for each vendor: <ul style="list-style-type: none"> <li>• Vendor name</li> <li>• City</li> <li>• State or province</li> <li>• Zip or postal code</li> <li>• Country code number, phone number, and extension</li> <li>• Country code number, fax number, and extension</li> </ul> Display |
| Selection          | Key the <b>(Reference Number)</b> of the vendor you wish to select.<br>(N 2,0) Required  |

**Vendor Search Screen Fields and Function Keys**

| <b>Field/Function Key</b> | <b>Description</b>  |
|---------------------------|---|
| Find                      | <p>This field allows you to search for a vendor. Key search word criteria (full or partial) that match the vendor you wish to locate. The vendor name that contains all of the characters entered will be displayed.</p> <p>(A 40) Optional</p>   |
| City                      | <p>When searching for a vendor using the <b>Find</b> field, this field may be used to limit the number of vendors to display. Key the city or the beginning characters of the city in which this vendor resides. The characters keyed will be matched against the city in the AP Vendor Master File (<b>APVEN</b>) and Vendor Master File (<b>VENDR</b>).</p> <p>(A 8) Optional</p> |
| F12=Return                | <p>Press the <b>F12=RETURN</b> key to return to the previous screen without selecting a vendor from this screen.</p>  |
| Enter                     | <p>The <b>ENTER</b> key serves two purposes:</p> <ul style="list-style-type: none"><li>• After keying search criteria in the <b>Find</b> and <b>City</b> fields, press <b>ENTER</b> to limit the list of vendors to the keyed criteria.</li><li>• After keying a reference number in the <b>Selection</b> field, press <b>ENTER</b> to select the vendor.</li></ul>                 |

| Add to Approved Requisition:             | Y         |           | 1     |
| Add to Purchase Order:                   | N         |           | 0     |
| Add to Req/PO Based On:                  | R (L,O,R) |           |       |
| F12=Return                               |           |           |       |

This screen appears after you press F2=S/O OPTIONS on the Vendor Master Maintenance Selection Screen (p. 43-3). Use this screen to specify special order options for a specific vendor. If you are using the auto-creation process (as determined through Special Order Options Maintenance (MENU XAFILE)) and the **Use Vendor Level Options First** field is set to **Y** in that option, the options specified on this screen will be used to handle special orders during the auto-creation process for this vendor.

## Vendor Special Order Options Screen Fields and Function Keys

| Field/Function Key                      | Description   |
|---|---|
| Place S/O Items on a Req/PO Immediately | <p>Use this field to specify whether or not requisitions or purchase orders will be automatically created for special order items for this vendor at end order time. Also, auto-creation options defined through this option will be considered for this vendor when you run Special Order Automatic Req Creation (MENU POMAST).</p> <p>Key <b>Y</b> to allow Distribution A+ to automatically create requisitions or purchase orders for special order items at end order time.</p> <p>If this field is set to <b>Y</b>, at least one of the following fields on this screen must be set to <b>Y</b>:</p> <ul style="list-style-type: none"> <li>• Create New Requisition</li> <li>• Add to Unapproved Requisition</li> <li>• Add to Approved Requisition</li> <li>• Add to Purchase Order</li> </ul> <p>Once a field is set to <b>Y</b>, the <b>Sequence</b> field on this screen will display the hierarchy in which special order line items will be added to the new/existing requisition or purchase order.</p> <p>Key <b>N</b> to prevent Distribution A+ from automatically creating requisitions or purchase orders for special order items for this vendor at end order time if vendor-level special order options are being used first.</p> <p>(A1) Required</p> |
| S/O Items: Create New Requisition       | <p>If you keyed <b>Y</b> in the <b>Place S/O Items on Req/PO Immediately</b> field, use this field to specify whether or not a new requisition will be created for special order items for this vendor.</p> <p>Key <b>Y</b> to automatically create new requisitions for special order items for this vendor:</p> <ul style="list-style-type: none"> <li>• at end order time after the lines are extracted (MENU OEMAIN),</li> <li>• as the special order automatic requisition creation process runs (MENU POMAST),</li> <li>• as any process associated with Offline Order Entry (e.g., Storefront and Point of Sale) runs.</li> </ul> <p>Key <b>N</b> to prevent new requisitions from being automatically created for special order items for this vendor.</p> <p>(A 1) Required</p>  |

---

**Vendor Special Order Options Screen Fields and Function Keys**

| Field/Function Key                       | Description   |
|--|---|
| S/O Items: Add to Unapproved Requisition | <p>If you keyed <b>Y</b> in the <b>Place S/O Items on Req/PO Immediately</b> field, use this field to specify whether or not special order items will be added to unapproved requisitions for this vendor.</p> <p>Key <b>Y</b> to automatically add special order items to unapproved requisitions for this vendor.</p> <p>Key <b>N</b> to prevent special order items from being automatically added to unapproved requisitions for this vendor.</p> <p>(A 1) Required</p>   |
| S/O Items: Add to Approved Requisition   | <p>If you keyed <b>Y</b> in the <b>Place S/O Items on Req/PO Immediately</b> field, use this field to specify whether or not special order items will be added to approved requisitions for this vendor.</p> <p>Key <b>Y</b> to automatically add special order items to approved requisitions for this vendor.</p> <p>Key <b>N</b> to prevent special order items from being automatically added to approved requisitions for this vendor.</p> <p>(A 1) Required</p>   |
| S/O Items: Add to Purchase Order         | <p>If you keyed <b>Y</b> in the <b>Place S/O Items on Req/PO Immediately</b> field, use this field to specify whether or not special order items will be added to purchase orders for this vendor.</p> <p>Key <b>Y</b> to automatically add special order items to purchase orders for this vendor.</p> <p>Key <b>N</b> to prevent special order items from being automatically added to purchase orders for this vendor.</p> <p><b>WARNING!</b></p> <p>If a change request process updates an existing purchase order that has already been sent via EDI, you will be notified to resend the purchase order. However, if using the advanced special order features to automatically add special order items to existing purchase orders and to reprint purchase orders when special order items are added, you will not be notified to resend the purchase orders already sent through EDI. In this case, you must manually resend the purchase orders through EDI to notify the trading partner of the updates.</p> <p>(A 1) Required</p> |

## Vendor Special Order Options Screen Fields and Function Keys

| Field/Function Key                                 | Description   |
|--|---|
| S/O Items AND D/S Items:<br>Add to Req/PO Based On | <p>The <b>D/S Items: Add to Req/PO Based On</b> field on this screen appears only if the <b>Use Drop-Ships</b> field is set to <b>Y</b> through System Options Maintenance (MENU XAFILE).</p> <p>Use these fields to determine how special order and drop ship line items will be added to an existing requisition/purchase order. These fields apply only if <b>Y</b> is selected in at least one of the options on this screen for both special order items and drop ship items (i.e., <b>Add to Unapproved Requisition, Add to Approved Requisition, and/or Add to Purchase Order</b>).</p> <p>Key <b>L</b> (Last requisition/purchase order) if you want special order line items or drop ship line items added to the last or most recent requisition/purchase order with the latest order date. The line items will be added to the last requisition/purchase order entered for this vendor that is open, not received, not in use, whose warehouse ID matches the warehouse on the order, and, if applicable, whose drop ship address matches the drop ship on the order. If there is more than one open requisition/purchase order for a vendor on the latest order date, then the line items will be added to the one with the highest requisition/purchase order number.</p> <p>Key <b>O</b> (sales Order number) if you want special order line items or drop ship line items added to a requisition/purchase order based on the sales order number. The line items will be added to the most recent requisition/purchase order located that already contains lines from this same sales order number. If there are no lines from this sales order number included in any of the eligible requisitions/purchase orders, then the process will revert to <b>L</b> (the last requisition/purchase order method). If there are multiple eligible requisitions/purchase orders located, then the requisition/purchase order with the highest sequence number will be used.</p> <p>Key <b>R</b> (Requested ship date) if you want special order line items or drop ship line items added to a requisition or purchase order based on the requested ship date from the order detail record. The line items will be added to the requisition/purchase order that has the closest due date that is equal to or less than the lines requested ship date. For example, if a customer places 12 orders that</p> |

## Vendor Special Order Options Screen Fields and Function Keys

| Field/Function Key   | Description  |
|--|--|
| S/O Items AND D/S<br>Items: Add to Req/PO<br>Based On<br>Continued.... | <p>they want delivered on the 12th day of each month and you do not want to store the inventory for a year, you would create 12 requisitions/purchase orders for the vendor, each with a due date on the 5th of the month. By then choosing this option (R), the special order line or drop ship line added with a requested ship date of June 1st, would be placed on the requisition/purchase order that has a due date of May 5th.</p> <p>If there are multiple eligible requisitions/purchase orders located, then the requisition/purchase order with the highest sequence number will be used.</p> |

---

### Important

Lead times affect which requisition/purchase order is selected to add special order or drop ship line items to. When **R** is keyed in this field and the lead time is being used to calculate a requisition's/purchase order's due date for this company (as determined through Purchasing Options Maintenance, MENU XAFILE), then the due date used will be the requested ship date from the line instead of today's date.

#### *Without Lead Times*

When **R** is keyed in this field and you are not using Lead Time, the Order Entry's requested ship date will be the due date on the purchase order line level.

**Example:** Assume a special order or drop ship item is entered on an order with a requested ship date of March 15th, and you had the following requisitions open with due dates every 2 months: Jan 1 (req # JS1234), Mar 1 (req # ST4567), May 1 (req # AA7789), July 1 (req # WC9332), Sept 1 (req # DB0111), and Nov 1 (req # MB5534). The requisition selected for this item would be ST4567, dated Mar 1, since it is the one with the closest date, but prior to, the requested ship date of March 15th.

## Vendor Audit Activity Screen

| VENDOR AUDIT ACTIVITY  |                 |         |         |              |
|--|-----------------|---------|---------|--------------|
| Vendor: 200      K & M CORPORATION                             |                 |         |         |              |
| Sel  | Function        | User ID | Date    | User Time    |
| 1  | Change          | APDEMO  | 7/30/09 | 18:08:47 EST |
| 2  | Add S/O Options | APDEMO  | 7/30/09 | 17:59:24 EST |
| 3  | Change          | APDEMO  | 7/30/09 | 17:55:00 EST |
| 4  | Change          | APDEMO  | 7/30/09 | 12:02:32 EST |
| 5  | Change          | APDEMO  | 7/29/09 | 21:13:27 EST |
| Selection: _ .      From System Activity Date: ..... To: ..... |                 |         |         | Last         |
| F2=Actual Time      F5=Refresh      F12=Return                 |                 |         |         |              |

This screen appears after you press F18=VENDOR ACTIVITY on the Vendor Master Maintenance Selection Screen (p. 43-3). Use this screen to review summary vendor audit activity for the vendor you selected on the Vendor Master Maintenance Selection Screen (p. 43-3). You can limit the activity records that display based on a system activity date range. You can also review detailed information about change activity by selecting an activity from the list.

Through this screen, you will be able to track and retain vendor information changes made through Vendors Maintenance (MENU POFILE/MENU APFILE) for the number of days entered in the system option field **Days to Keep Vendor Audit Activity** in Purchasing Options Maintenance (MENU XAFILE). If zero is entered in the system option field, the system will not track any vendor change activity and it therefore will not be available through this Vendor Audit Activity.

Changes are grouped together for each specific vendor change and the individual field changes are available for display on the Vendor Audit Activity Detail Screen (p. 43-30).

### Vendor Audit Activity Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Sel                | <p>This field displays the line number of a vendor activity.</p> <p>Key this number in the <b>Selection</b> field to select a particular activity to review in detail.</p> <hr/> <p>NOTE: Detail information is available for an activity only if you select a function for which tracked information has been changed for the vendor. If you select an activity for which tracked information has not been changed for a vendor, you will receive a message indicating that detailed information is not available.</p> <hr/> <p>Display</p> |
| Function           | <p>This field displays the activity that was performed on the vendor through Vendors Maintenance (MENU POFIELD/MENU APFILE).</p> <p>Functions include:</p> <ul style="list-style-type: none"> <li>• Add S/O Options</li> <li>• Change S/O Options</li> <li>• Delete S/O Options</li> <li>• Add Email Contact</li> <li>• Change Email Contact</li> <li>• Delete Email Contact</li> <li>• Add (vendor)</li> <li>• Change (vendor)</li> </ul> <p>Display</p>  |

## Vendor Audit Activity Screen Fields and Function Keys

| Field/Function Key                                   | Description   |
|--|---|
| User/Actual/System Time                              | <p>This field displays the time on which the activity was performed on the vendor. The display of this field can be toggled via the F2=ACTUAL TIME / F2=USER TIME / F2=SYSTEM TIME key to show the time in the User Time, Actual Time, or System Time, including the time zone. When this field is toggled, the corresponding date field also changes accordingly.</p> <p>The <b>User Time</b> is the time in which the activity occurred shown in your default time zone. Your default user time zone is set up through Register A+ User IDs (MENU XACFIG).</p> <p>The <b>Actual Time</b> is the time in which the activity occurred shown in the time zone of the user who performed the activity.</p> <p>The <b>System Time</b> is the time in which the activity occurred shown in the system's default time zone. The system's default time zone is set up through Time Zone Codes Maintenance (MENU OEFIL3).</p> <p>For example, a change was made to a vendor at your company's New York office at 2:00 p.m., Eastern Standard Time (EST). You are inquiring on the activity from an office in San Diego, California, which uses Pacific Standard Time (PST). PST is 3 hours earlier than EST. The User Time will display as 11:00 PST (your time zone), and the Actual Time will display as 14:00 EST (the time zone in which the user performed the activity). Additionally, you can view the activity in the system's time zone.</p> <p>Display</p> |
| Selection  | <p>Use this field to select the line of the activity you want to review in detail.</p> <p>Key the line number shown in the <b>Sel</b> column of the activity you want to select and press ENTER. The Vendor Audit Activity Detail Screen (p. 43-30) will appear.</p> <p>(N 2,0) Optional</p>  |
| System Activity Date From/To                         | <p>Use this from and to range field to limit the vendor activity records to display based on a date range.</p> <p>Key the system date range in the default date format specified for your user ID through Register A+ User IDs (MENU XACFIG).</p> <p>Leave this field blank to display all existing vendor activity records for this item. Note that audit activity records are retained based on the value entered in the <b>Days to Keep Vendor Audit Activity</b> in Purchase Options Maintenance (MENU XAFILE).</p> <p>(2 @ N 6,0) Optional</p>   |
| F2=Actual Time /<br>F2=User Time /<br>F2=System Time | <p>Use this toggle function key to display the User Time, Actual Time, or System Time, including the time zone.</p> <p>For details about the different times that you can display, refer to the <b>User/Actual/System Time</b> field on this screen.</p>  |

---

**Vendor Audit Activity Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| F5=Refresh         | Use this function key to refresh the screen according to the system date range specified in the <b>System Activity Date From/To</b> fields and, if applicable, to include any new activity performed since you accessed this screen. |
| F12=Return         | Press F12=RETURN to return to the previous screen.   |
| Enter              | After entering an activity line in the <b>Selection</b> field, press ENTER to display detailed vendor change information. The Vendor Audit Activity Detail Screen (p. 43-30) will appear.  |

---

## Vendor Audit Activity Detail Screen

```

VENDOR AUDIT ACTIVITY DETAIL

Vendor: 200      K & M CORPORATION
User ID/System Date: APDEMO      8/19/10

Field Changed
Old Value      New Value
Payee Address 2
PO Box 32117   PO Box 32116
Federal Tax ID
*****
State Tax ID   438-9987S      438-99875

Last
F12=Return
    
```

This screen appears after you select an activity and press **ENTER** on the Vendor Audit Activity Screen (p. 43-25). Use this screen to review specific vendor change information about the activity you selected. Vendor changes made through Vendors Maintenance (MENU POFILE/MENU APFILE) will be shown on this screen, including the previous value and the new value.

**NOTE:** For the **Federal Tax ID** field, the display is based on your authorization to **Allow Access to Federal Tax ID** in Application Action Authority (MENU XASCTY). If you are not authorized, the field will display asterisks. If you are authorized, the un-encrypted federal tax identification code will display.

### Vendor Audit Activity Detail Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Vendor             | The vendor number and vendor name assigned through Vendor Master Maintenance (MENU POFILE/APFILE).   |
| User ID            | The user that performed the activity.  |
| System Date        | The <b>System Date</b> is the date on which the activity occurred shown in relation to the system's default time zone. The system's default time zone is set up through Time Zone Codes Maintenance (MENU OEFIL3). |
| Field Changed      | The field name for the actual field that was changed (for example: <b>Description</b> ).   |
| Old Value          | The value of the field before the change was made.   |

---

**Vendor Audit Activity Detail Screen Fields and Function Keys**

| <b>Field/Function Key</b> | <b>Description</b>  |
|---------------------------|---|
| New Value                 | The value of the field after the change was made.   |
| F12=Return                | Press the F12=RETURN function key to return to the Vendor Audit Activity Screen (p. 43-25). |

**Vendor Master Maintenance (1) Screen Fields and Function Keys**

---

| Field/Function Key               | Description  |
|----------------------------------|--|
| Different Payee Name/<br>Address | <p>This field is used to indicate if the payee for this vendor has a different name and/or address than that keyed on this screen.</p> <p>Key <b>Y</b> if the payee for this vendor has a different name and/or address as that keyed on this screen. You will be allowed to key the payee's address in the <b>Payee</b> field on the A/P Vendor Master Maintenance Screen (p. 43-48).</p> <p>Key <b>N</b> if the payee for this vendor has the same name and/or address as that keyed on this screen. You will not be allowed to key a <b>Payee</b> on the A/P Vendor Master Maintenance Screen (p. 43-48).</p> <hr/> <p>NOTE: This field is only used within Vendor's Maintenance (MENU APFILE/MENU POFILE).</p> <hr/> <p>(A 1) Optional</p>   |
| Buyer                            | <p>Use this field to select the buyer responsible for purchasing from this vendor. You may also assign a buyer at the vendor/warehouse level (if the buyer for the warehouse is different than the buyer entered in this field), vendor/item level, and/or vendor/item/warehouse level (if the buyer at the vendor/item level is different than the buyer at the vendor/warehouse level).</p> <p>Key the buyer code of the primary person in your organization responsible for purchasing from this vendor. The buyer code is included on all new requisitions and may be changed during Enter or Change Requisitions (MENU POMAIN).</p> <p>If you change the buyer assigned to a vendor, when you complete your maintenance in this option the system will update the IM&amp;P and vendor/item level records for the vendor and buyer. For example, assume buyer 234 is assigned to vendor 100. If you change the buyer to 104, the system will change all records for vendor 100 and buyer 234 to buyer 104. A record for vendor 100 and buyer 82 would not be changed.</p> <p><i>Valid Values:</i> A buyer code defined through Buyers Maintenance (MENU POFILE).</p> <p>(A 3) Optional</p> |
| Disc Pct                         | <p>Key the standard price discount percent taken for purchases from this vendor. The discount percent keyed here is included on all new requisitions and may be changed during Enter or Change Requisitions (MENU POMAIN).</p> <p>(N 4,2) Optional</p>   |
| Ship Via                         | <p>Key the standard shipping instructions for the vendor. This is included on all new requisitions and may be changed during Enter or Change Requisitions (MENU POMAIN).</p> <p>(A 20) Optional</p>  |

---

**Vendor Master Maintenance (1) Screen Fields and Function Keys**

| Field/Function Key           | Description   |
|------------------------------|---|
| Min Val                      | <p>Key the vendor's minimum acceptable purchase order value.</p> <p>The value keyed here is displayed when completing a requisition for this vendor and is used to verify that the minimum order value is met. If the purchase amount requisitioned from this vendor is less than the value keyed in this field, a warning message is displayed.</p> <p>(N 9,2) Optional</p>  |
| FOB Code                     | <p>The FOB code contains shipping information, including who is responsible (you or the vendor) for shipping charges and freight damages.</p> <p>Use this field to assign a default FOB code to this vendor. The code you enter will display on the Requisition Header Screen in Enter or Change Requisitions (MENU POMAIN) each time you enter a requisition for this vendor.</p> <p>Key the FOB code.</p> <p><i>Valid Values:</i> An FOB code defined through FOB Codes Maintenance (MENU POFIL2 or MENU OEFIL3).</p> <p>(A 5) Optional</p>   |
| Currency                     | <p>This field appears only if International Currency is installed and activated through Activate International Currency (MENU ICMAST).</p> <p>Key the currency code for the vendor's currency: the foreign vendor's currency code or accept the default value for vendors whose trading currency is the same as your the company's currency.</p> <hr/> <p>NOTE: If you change the currency code on this screen, the change will also affect the code in the Currency field on the A/P Vendor Master Maintenance Screen (p. 43-48).</p> <hr/> <p><i>Default Value:</i> The default local currency specified for the system through International Currency Options Maintenance (MENU ICFIL).</p> <p><i>Valid Values:</i> A currency code defined through Currency/Exchange Codes Maintenance (MENU ICFIL).</p> <p>(A3) Required</p> |
| Currency Code<br>Description | <p>This field appears only if International Currency is installed and activated through Activate International Currency (MENU ICMAST).</p> <p>This field displays the description for the currency code in the Currency field.</p> <p>Display</p>   |

---

**Vendor Master Maintenance (1) Screen Fields and Function Keys**

| Field/Function Key       | Description  |
|--------------------------|--|
| Lead Time                | <p>The number of weeks required for this vendor to make a shipment from the time the Purchase Order is printed. The value keyed here will be used as the default for all new vendor/item records created manually for this vendor through Vendor/Item Information (MENU POFILE) or automatically through Create Default Vendor/Item Information (MENU POFILE).</p> <p>If you select to use allocation time periods for a warehouse, the lead time is used in calculating the date on which inventory will be allocated for each customer order.</p> <p>If you do not have Inventory Management &amp; Planning or Advanced Inventory Management installed, you must key the lead time for allocation time periods.</p> <p>When the Purchasing Options (MENU XAFILE) Company Option to <b>Calculate PO Due Dates Based on Lead Times</b> is set to <b>Y</b>, this value will be reviewed for inclusion of the item level due date.</p> <p>(N 2,0) Optional</p> |
| Exch Code                | <p>This field appears only if International Currency is installed and activated through Activate International Currency (MENU ICMASST).</p> <p>Key the exchange code to be used to access the exchange rate for the vendor's currency.</p> <hr/> <p>NOTE: If you change the exchange code on this screen, the change will also affect the code in the Exch Code field on the A/P Vendor Master Maintenance Screen (p. 43-48).</p> <hr/> <p><i>Valid Values:</i> An exchange code defined through Currency/Exchange Codes Maintenance (MENU ICFILE).</p> <p>(A3) Optional</p>   |
| Exch Code<br>Description | <p>This field appears only if International Currency is installed and activated through Activate International Currency (MENU ICMASST).</p> <p>This field displays the description of the exchange code in the Exch Code field.</p>  |

---

**Vendor Master Maintenance (1) Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| Calc from Receipts | <p>This field is protected and defaults to <b>N</b> if the <b>Allow PO's</b> field is <b>N</b> on this screen.</p> <p>This field allows the calculation of lead time from receipt history when running the Lead Time History Report (MENU IMREPT).</p> <p>Key <b>A</b> to include all items for this vendor. This changes the default to <b>Y</b> for <b>Update Lead Time</b> fields associated with all purchase order line items for this vendor.</p> <p>Key <b>N</b> to not include any items for this vendor. This changes the default to <b>N</b> for <b>Update Lead Time</b> fields associated with all purchase order line items for this vendor. Even if you change a line item's default to <b>Y</b> on a PO for this vendor, the average lead time calculation will occur, but the IM&amp;P Balance File will not be updated.</p> <p>Key <b>I</b> to have a check made against each vendor/item record. This changes the default to the value on the Vendor/Item record for <b>Update Lead Time</b> fields associated with all purchase order line items for this vendor.</p> <p><i>Valid Values:</i> A, N, I</p> <p>(A 1) Required</p> |
| Ord Cycle          | <p>The order cycle code used to represent the order cycle for this vendor. This is used to classify vendors based on the frequency in which you place orders with a vendor.</p> <p>The value keyed here is used when printing the Suggested Orders Report [via Suggested Orders Report (MENU POREPT)].</p> <p><b>Example:</b> Assign vendors whom you purchase from on a weekly basis the Order Cycle Code of "WK"; assign vendors whom you purchase from on a monthly basis the Order Cycle Code of "MN", etc. When printing the Suggested Orders Report, you may print separate reports for vendors with weekly and monthly order cycles.</p> <p>(A 2) Optional</p>   |
| Order Frequency    | <p>Key the number of weeks for the interval at which a PO is issued to this vendor. The value keyed here will be used as the default for all new vendor/item records created manually for this vendor through Vendor/Item Information (MENU POFIELD) or automatically through Create Default Vendor/Item Information (MENU POFIELD).</p> <p>If you select to use allocation time periods for a warehouse, the order frequency is used in calculating the date on which inventory will be allocated for each customer order.</p> <p>If you do not have Inventory Management &amp; Planning or Advanced Inventory Management installed, you must key the order frequency for allocation time periods.</p> <p>(N 3,1) Optional</p>   |

---

---

**Vendor Master Maintenance (1) Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Sfty Stc %         | <p>The percentage of minimum level inventory used as safety stock. Safety stock is used to prevent stockouts when variable customer demand or extended vendor lead times occur. This value will print on the Suggested Orders Report (MENU POREPT).</p> <p>(N 5,3) Optional</p>   |
| Item Prt           | <p>This field is protected and defaults to <b>O</b> if the <b>Allow PO's</b> field is <b>N</b> on this screen.</p> <p>This is the item print code used to determine whether your item number, the manufacturer's item number, or both item numbers are printed on Purchase Orders for this vendor.</p> <p>Key <b>O</b> to print item numbers used by your organization (our item number) on Purchase Orders for this vendor.</p> <p>Key <b>M</b> to print the manufacturer's item number on Purchase Orders for this vendor.</p> <p>Key <b>B</b> to print both your item number and the manufacturer's item number on Purchase Orders for this vendor.</p> <hr/> <p>NOTE: If you select either <b>M</b> or <b>B</b>, you will be required to key the manufacturer's order number during Enter or Change Requisitions (MENU POMAIN).</p> <hr/> <p>(A 1) Required</p> |
| GTIN Prt           | <p>This is the Global Trade Item Number (GTIN) print code used to determine whether your GTINs are printed on Purchase Orders for this vendor. GTINs may be set up for your items through UPC &amp; GTIN Item/UOM Cross Reference Maintenance (MENU IAFILE).</p> <p>Key <b>Y</b> to print GTINs, if any, for an item number/Buying U/M on Purchase Orders for this vendor.</p> <p>Key <b>N</b> if you do not want GTINs printed on Purchase Orders for this vendor.</p> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p>  |

---

**Vendor Master Maintenance (1) Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| Rbt Mthd           | <p>This field is used to determine if rebates that must be requested from your vendor (applied for) should be created as open invoices in Accounts Receivable or as credit memos in Accounts Payable.</p> <p>Key <b>R</b> if rebates for this vendor should be created as open invoices in Accounts Receivable. If you key an <b>R</b>, the Vendor Rebate Customer Maintenance Screen (p. 43-88) will be presented during this vendor master maintenance to allow you to identify those customers using this vendor with account receivable type rebates.</p> <p>Key <b>P</b> if rebates for this vendor should be created as credit memos in Accounts Payable.</p> <p>Leave this field blank if you do not want to assign a rebate method to this vendor. When rebates are posted, no credit memo or invoice will be created for this vendor, and no general ledger entries will be made to the pending rebates account.</p> <p>(A 1) Optional</p> |
| Elec Rbt Typ       | <p>Use this field to specify the electronic file format that the Rebate Extract Filing option (MENU OERMAIN) will use when generating electronic filing reports for this vendor. XML and flat file formats are available. For a complete description of each filing format and more information about generating rebate filing reports, refer to the Order Entry Rebates User Guide.</p> <p>Key <b>A</b> if you want to use the paper industry flat file format.</p> <p>Key <b>B</b> to use the paper industry XML file format.</p> <p>Key <b>C</b> to use the generic flat file format.</p> <p>Key <b>D</b> to use the generic XML file format.</p> <p>Leave this field blank if you do not want electronic files generated for this vendor. Extract filing reports for this vendor will always use the print format.</p> <p><i>Valid Values:</i> A, B, C, D, or blank</p> <p>(A 1) Optional</p>   |

**Vendor Master Maintenance (1) Screen Fields and Function Keys**

| Field/Function Key      | Description   |
|-------------------------|---|
| Allow PO's              | <p>This field is used to determine if purchase orders may or may not be created for this vendor.</p> <p>Key <b>Y</b> if purchase orders may be created for this vendor.</p> <p>Key <b>N</b> to prohibit the creation of purchase orders for this vendor, which includes Suggested Order Maintenance (MENU POREPT) and Buyers Workbench (MENU POREPT).</p> <p>If this field is <b>N</b>, then the following fields on this screen, the Vendor Master Additional Information Maintenance Screen (p. 43-65) and Vendor Master Additional Email Maintenance Screen (p. 43-83), will be protected and default to <b>N</b> or <b>O</b>:</p> <ul style="list-style-type: none"> <li>• Default to <b>N</b>: <b>Calc from Receipts, Allow Off-Line Validation, Print Purchase Orders, Print Vendor RFQ, EDI Purchase Orders, FAX Purchase Orders, FAX Vendor RFQ, Email Purchase Orders, and Email Vendor RFQ</b></li> <li>• Default to <b>O</b>: <b>Item Print</b></li> </ul> <p>(A 1) Required</p> |
| Vendor Volume Disc Type | <p>If the vendor offers volume discounts (i.e., PO level discounts), use this field to specify one of the following types of discounts:</p> <ul style="list-style-type: none"> <li>• Highest qualifying percentage discount.</li> <li>• Sum of the qualifying discounts.</li> <li>• Chain discount where all qualifying discounts are applied, but each is based on the previously discounted value rather than the original cost.</li> </ul> <p>If the vendor does not allow volume discounts, leave this field blank.</p> <p>Key <b>1</b> to use the highest qualifying percentage discount.</p> <p>Key <b>2</b> to use the sum of the qualifying discounts.</p> <p>Key <b>3</b> to chain the qualifying discount values and use the result.</p> <p>For more information on vendor volume discounts, refer to Vendor Volume Discounts in the Purchasing Overview section.</p> <p>(A 1) Optional</p>   |
| Last PO Dt              | <p>Key the date on which the last order was placed with this vendor.</p> <p>Distribution A+ will update this field as purchase orders are printed for the vendor.</p> <hr/> <p>NOTE: Key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFIILE).</p> <hr/> <p>(N 6,0) Optional</p>  |

**Vendor Master Maintenance (1) Screen Fields and Function Keys**

| Field/Function Key        | Description  |
|---------------------------|--|
| Allow Multi Ship-To POs   | <p>Use this field to specify whether or not the vendor accepts purchase orders with more than one ship-to address.</p> <p>Key <b>Y</b> if the vendor will ship items on a single purchase order to more than one warehouse.</p> <hr/> <p>NOTE: For every warehouse you wish to be available for inclusion on a multi-warehouse purchase order, you must key <b>Y</b> in the <b>Multi Ship-to POs</b> field in Warehouse Numbers Maintenance (MENU IAFILE).</p> <hr/> <p>Key <b>N</b> if the vendor will not ship items on a single purchase order to more than one warehouse.</p> <p>For information on multi-warehouse purchase orders, refer to Multi-Warehouse Purchase Orders in the Purchasing Overview section.</p> <p>(A1) Required</p>   |
| Misc Notes                | <p>Use this field to add any brief notes pertaining to this vendor, or to requisitions for this vendor. The text you enter here will display on the Requisition Header Screen whenever you enter a requisition for this vendor through Enter or Change Requisitions (MENU POMAIN).</p> <p>Key the note for this vendor.</p> <p>(A 20) Optional</p>   |
| Allow Off-Line Validation | <p>This field displays only if EDI is installed. Also, this field is protected and defaults to <b>N</b> if the <b>Allow PO's</b> field is <b>N</b> on this screen.</p> <p>Key <b>Y</b> to have incoming EDI invoices from this vendor automatically receipt validated when they are received. If you key <b>Y</b>, the automatic receipt validation will check the <b>Cost Variance Warning Percent and Cost Variance Warning Value</b> defined through Purchasing Options Maintenance (MENU XAFILE). Incoming invoices that exceed the cost variance warning percent/value will not be receipt validated, but will remain as pending invoices marked with an error through Incoming Documents (MENU EIMAIN).</p> <p>Key <b>N</b> to prevent incoming EDI invoices from this vendor being automatically receipt validated when they are received. If you key <b>N</b>, invoices received through EDI must be manually validated through Voucher Entry (MENU APMAN).</p> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p> |
| User Area                 | <p>Use this field to key any additional information regarding this vendor.</p> <p>(A 15) Optional</p>  |

---

**Vendor Master Maintenance (1) Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| Transport Mode     | <p>This field displays only if the country in the vendor's address is defined as a European Community (EC) member through Country Names Maintenance (MENU ARFIL2).</p> <p>Companies in EC member countries are required to submit a monthly Intrastat Report (MENU IAREPT) to their respective governments detailing shipments to and receipts from other EC member countries. The mode of transport for each shipment or receipt is required on the report. The transport mode code you enter here will be used as the default transport mode whenever you enter a requisition for this vendor.</p> <p>Key the transport mode code for this vendor.</p> <p><i>Valid Values:</i> A transport mode code defined through Transport Mode Maintenance (MENU OEFIL3 or MENU POFIL2).</p> <p>(A 2) Required</p> |
| Min Units          | <p>Key the vendor's minimum acceptable purchase quantity.</p> <p>The value keyed here is displayed when completing a requisition for this vendor and is used to verify that the minimum order quantity is met. If the number of units requisitioned from this vendor is less than the value keyed in this field, a warning message is displayed.</p> <p>When International Currency is installed, for vendors whose trading currencies differ from the company's local currency, this value will display in the trading currency with the trading currency symbol displayed to the right and the local currency equivalent and symbol displayed below.</p> <p>(N 11,3) Optional</p>   |
| Min Wght/Min Size  | <p>Key the vendor's minimum acceptable order weight and size values.</p> <p>The values keyed here are displayed when completing a requisition for this vendor and are used to verify that the minimum weight and size values are met. If the total weight and size of the items requisitioned from this vendor are less than the values keyed in these fields, a warning message is displayed.</p> <p>(2 @ N 13,4) Optional</p>   |

---

**Vendor Master Maintenance (1) Screen Fields and Function Keys**

| Field/Function Key              | Description   |
|---------------------------------|---|
| Max Units / Max Wght / Max Size | <p>Vendor maximum values can be entered using the <b>Max Units</b>, <b>Max Wght</b>, and <b>Max Size</b> fields. The system will look at the values entered in these fields to determine item ratios for those items that already exist on a Suggested Order, to ensure that the correct ratio remains based on the units, weight and size. The system will round up to or round down to the maximum appropriately, while keeping the ratios on the suggested order.</p> <p>For example, if using vendor maximums, and the vendor tells you the delivery truck holds 30,000 pounds and you have 40,000 pounds of items, the round to maximum calculation will round down to the maximum of 30,000 pounds. If you have 30,000 pounds of items and a delivery truck that holds 40,000 pounds of items, the system will round up to the maximum of 40,000 pounds of items proportionally.</p> <p>Key the vendor's maximum acceptable purchase quantity (units), maximum acceptable order weight, and/or size (cubes) values. These values are ONLY used during Suggested Order Maintenance (MENU POREPT) once you press F17=AUTO RND on the Suggested Order Maintenance End Order Screen (p. 35-22) to round to the vendor maximum levels.</p> <hr/> <p>NOTE: If you enter more than one value (that is, you enter a unit and weight or unit, weight and size), the system will look at all values keyed to determine the maximum without going over any one of these values (the greatest amount of any one of the values will be used to round to the maximum).</p> <hr/> <p>(3 @ N 11,3) Optional</p> |
| F12=Return                      | <p>Press F12=RETURN to return to Vendor Master Maintenance Selection Screen (p. 43-3) without updating this vendor.</p>   |
| F24=Delete                      | <p>F24=DELETE displays in Delete Mode only.</p> <p>Press F24=DELETE to delete the selected vendor. A vendor may not be deleted if any open payables exist for the vendor.</p>   |

## Vendor Master Maintenance (2) Screen

```

VENDOR MASTER MAINTENANCE
Change
Vendor: 200      Name: K & M CORPORATION
USER FLDS? 1 Industry      .....
F12=Return
    
```

This screen displays after pressing **ENTER** from the Vendor Master Maintenance (1) Screen (p. 43-32) if at least one vendor user field has been created through Vendor User Fields Maintenance (MENU POFILE).

Use this screen to add or change vendor user field information. This information will help with the classification of a vendor.

---

NOTE: The information defined here pertains to the vendor. However, you may also define user fields for the customer or item.

---

### Vendor Master Maintenance (2) Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| USER FLDS          | <p>For each vendor user field previously defined, you can assign one of the valid vendor user field values to this specific vendor. The valid values for a specific vendor user field are keyed to the right of that field.</p> <p>Up to six vendor user fields, and an unlimited number of vendor user field values for each of the six, are defined through Vendor User Fields Maintenance (MENU POFILE). Only those user fields already defined will appear on this screen.</p> <p>Display</p> |

---

**Vendor Master Maintenance (2) Screen Fields and Function Keys**

---

| Field/Function Key  | Description  |
|---------------------|--|
| (USER FIELD VALUES) | <p>Through Vendor User Fields Maintenance (MENU POFILE) you can define up to six vendor user fields (in the <b>Code No</b> field) to further classify a vendor. The description you enter for each of those code numbers displays on this screen. Once a code number has been defined (you may define up to 6), you can then create and associate as many vendor user field values (in the <b>User Field</b> field) as desired for the defined code numbers.</p> <p>Key a vendor user field value which has been defined for the specific vendor user field. After you key the user code and press ENTER, the description of the user code will display.</p> <p><i>Valid Values:</i> Any vendor user field value defined for the specific vendor user field through Vendor User Fields Maintenance (MENU POFILE).</p> <p>(6 @ A 5) Optional</p>  |
| F12=Return          | Press F12=RETURN to return to the Vendor Master Maintenance (1) Screen (p. 43-32).   |
| Enter               | <p>Press ENTER to confirm your selections and update additions or changes made for this vendor.</p> <p>One of the following screens will appear based on the following conditions and hierarchy:</p> <ul style="list-style-type: none"> <li>• A/P Vendor Master Maintenance Screen (p. 43-48), if Accounts Payable is installed.</li> <li>• Vendor Master Additional Information Maintenance Screen (p. 43-65), if Accounts Payable is not installed and either the EDI or FAX modules are installed.</li> <li>• Vendor Master Additional Email Maintenance Screen (p. 43-83), if EDI and FAX are not installed and Mail Server is installed.</li> <li>• Vendor Rebate Customer Maintenance Screen (p. 43-88), if Mail Server is not installed and you are using Vendor Rebates, and you identified the vendor as using the Accounts Receivable method of rebates [on the Vendor Master Maintenance (1) Screen (p. 43-32)].</li> <li>• Vendor Master Maintenance Selection Screen (p. 43-3), if Vendor Rebates are not being used, or if you did not identify the vendor as using the Accounts Receivable method of rebates [on the Vendor Master Maintenance (1) Screen (p. 43-32)].</li> </ul> |

NOTE: This screen displays only if Accounts Payable is installed on your system.

This screen appears when you press **ENTER** on the following screens:

- Vendor Master Maintenance Selection Screen (p. 43-3) if Purchasing is not installed
- Vendor Master Maintenance (1) Screen (p. 43-32) if Purchasing is installed and you are not using User Fields.
- Vendor Master Maintenance (2) Screen (p. 43-46) if Purchasing is installed.

Use this screen to specify vendor information to be used in Accounts Payable.

### A/P Vendor Master Maintenance Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Vendor             | If Purchasing is installed, this field is display-only.<br>Key the vendor name.<br>(A 30) Required/Display   |
| CC Vendor          | Use this field to identify if the vendor located in the <b>Vendor</b> field on this screen is allowed to pay by credit card.<br>Key <b>Y</b> to identify this vendor as a credit card vendor.<br>Key <b>N</b> if this vendor is not a credit card vendor and instead must pay by check or ACH.<br>(A 1) Required |

### A/P Vendor Master Maintenance Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Payee              | <p>This field is display-only if <b>Different Payee Name/Address</b> is <b>N</b> on the Vendor Master Maintenance Selection Screen (p. 43-3)</p> <p>This field is required if <b>Different Payee Name/Address</b> is <b>Y</b> on the Vendor Master Maintenance (1) Screen (p. 43-32).</p> <p>Key the name of the payee to be used when processing vouchers and printing checks for this vendor. You can override this name when keying a voucher.</p> <hr/> <p>NOTE: The payee is not necessarily the same as the assignee. The payee's name and address is used during voucher and payment processing. The assignee (see <b>Assignee</b>) is a different vendor with a different Vendor ID. The assignee is used for voucher creation and receives payment for this vendor.</p> <hr/> <p>During check processing, when vouchers exist for multiple vendors, and these vendors have exactly the same payee name and address information, only one check will generate since the same address exists for both the vendor and payee name. To generate separate checks for this example, you can either enter the vendor as an assignee to vouchers (if multiple), or use the <b>Sep Chk</b> field (if only one voucher), or simply change the name or address slightly so that these vendors can be differentiated and will be sorted to separate checks per vendor.</p> <p>(A 30) Required/Display</p> |
| Addr 1 - Addr 4    | <p>These fields are display-only if <b>Different Payee Name/Address</b> is <b>N</b> on the Vendor Master Maintenance (1) Screen (p. 43-32).</p> <p>You can use the <b>Addr 4</b> field only if <b>Form Type</b> is <b>2</b> in System Options Maintenance (MENU XAFILE).</p> <p>Key the payee's street address, post office box number or other address information except for the city, state/province, country, and zip/postal code which are specified in fields below.</p> <p>(4 @ A 30) Optional/Display</p>   |
| Phone/Ext          | <p>In the <b>Phone</b> field, key the payee's telephone number, which includes a 3-character country access code followed by the area code and telephone number. For example: 011 (781) 555-1212</p> <p>In the <b>Ext</b> Field, key the telephone extension of the contact person specified in the <b>AP Contact</b> field.</p> <p><i>Valid Values:</i> Numerals and the following symbols: - ( ) . /. Blank spaces are allowed between numerals only if <b>Allow Blank Phone Delimiters</b> is <b>Y</b> in Systems Options Maintenance (MENU XAFILE).</p> <p>(N 3,0/N 20,0/N 4,0) Optional</p>  |

## A/P Vendor Master Maintenance Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Fax/Ext            | <p>In <b>Fax</b> field, key the payee's fax number, which includes a 3-character country access code followed by the area code and telephone number. For example: 011 (781) 555-1212</p> <p>In the <b>Ext</b> Field, key the telephone extension for the fax machine.</p> <p><i>Valid Values:</i> Numerals and the following symbols: - ( ) . /. Blank spaces are allowed between numerals only if <i>Allow Blank Phone Delimiters</i> is Y in Systems Options Maintenance (MENU XAFILE).</p> <p>(N 3,0/N 20,0/N 4,0) Optional</p>   |
| Tax Body           | <p>Use this field if the <b>Calculate GST for Purchases (Inputs)</b> field is set to Y through AP Options Maintenance (MENU APFIL2) and you want to calculate GST for purchases from this vendor. The tax body you key here will be used during the receipt validation process through Voucher Entry (MENU APMAN). The GST rate specified for the tax body will be used in the calculation of GST for purchases.</p> <p>Key the tax body. After you key the tax body and press ENTER, the description of the tax body appears beneath this field.</p> <p><i>Valid Values:</i> A tax body defined through Tax Body Maintenance (MENU OEFIL or ARFILE). Because this field is used to calculate the tax amount for purchases, the tax body should be one with the <b>Goods/Services Tax</b> field set to Y in Tax Body Maintenance.</p> <p>(A 10) Optional</p> |
| City               | <p>This field is display-only if <b>Different Payee Name/Address</b> is N on the Vendor Master Maintenance (1) Screen (p. 43-32).</p> <p>Key the payee's city.</p> <p>(A 20) Optional/Display</p>  |
| St/Prov            | <p>This field is display-only if <b>Different Payee Name/Address</b> is N on the Vendor Master Maintenance (1) Screen (p. 43-32).</p> <p>Key the payee's state or province.</p> <p><i>Valid Values:</i> A state or province code defined through State/Province Codes Maintenance (MENU OEFIL3) if <b>Validate State/Province</b> is Y in Systems Options Maintenance (MENU XAFILE).</p> <p>(A 30) Optional\Display</p>  |

**A/P Vendor Master Maintenance Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| A/P Contact        | <p>Use this field to key the name of the vendor's primary accounts payable contact person. The name you key in this field may differ from the one keyed in the Contact field on the Vendor Master Maintenance (1) Screen (p. 43-32).</p> <p>The name keyed in this field is used when a voucher is created for this vendor. You may override this field when creating a voucher.</p> <p>(A 30) Optional</p>  |
| Zip/Pstl           | <p>This field is display-only if <b>Different Payee Name/Address</b> is <b>N</b> on the Vendor Master Maintenance (1) Screen, Vendor Master Maintenance (1) Screen (p. 43-32).</p> <p>Key the payee's zip or postal code.</p> <p>(A 10) Optional\Display</p>   |
| Sort Word          | <p>Used when sequencing reports by vendor. Reports and inquiries sort this vendor by this sort word, not by the vendor name.</p> <p>(A 10) Required</p>  |
| 1099 Req'd         | <p>Used to determine whether a 1099 form is required for this vendor.</p> <p>Key <b>Y</b> if this vendor requires a 1099 form be completed.</p> <p>Key <b>N</b> if this vendor does not require a 1099 form.</p> <p>(A 1) Required</p>   |
| Force Cash Dsc     | <p>Used to indicate if cash discounts should be applied regardless if payment is made after the discount date. This is a default value and may be overridden during Voucher Entry (MENU APMMAIN).</p> <p>Key <b>Y</b> to force a cash discount for this voucher even if the discount date has passed.</p> <p>Leave this field blank if you do not wish to specify a default force cash discount value for this vendor.</p> <p>Key <b>N</b> if you do not want to force cash discounts for this vendor. This means that cash discounts will not be taken if the discount date has passed.</p> <p><i>Valid Values:</i> Y, N or blank</p> <p>(A 1) Optional</p> |

---

### A/P Vendor Master Maintenance Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Fed Tax ID         | <p>The display of this field is based on your authorization to <b>Allow Access to Federal Tax ID</b> in Application Action Authority (MENU XASCTY). If you are not authorized, the field will display asterisks. If you are authorized, the un-encrypted federal tax identification code will display.</p> <p>Key federal tax identification code for this vendor.</p> <p>For vendors that require a 1099 form, this code is printed on 1099 forms in it's original (un-encrypted) format.</p> <p>For vendors for whom you want to calculate GST for purchases, this code displays during the receipt validation process through Voucher Entry (MENU APMAIN).</p> <p>(A 15) Optional</p>                   |
| ID Type            | <p>The Federal Tax ID Type.</p> <p>This field defines the type of taxpayer identification number the value in the corresponding <b>Fed Tax ID</b> field is. This type is determined by the IRS. Note that this field is a required field in the 1099 export file.</p> <p>Key <b>1</b> to print <b>EIN</b> (the IRS code for Employee Identification Number), which is a business, organization, some sole proprietors or other entity account type.</p> <p>Key <b>2</b> to print <b>SSN</b> (the IRS code for Social Security Number), which is an individual, including some sole proprietors account type.</p> <p>Leave blank if the Federal Tax ID Type cannot be determined.</p> <p>(A 1) Optional</p> |
| State Tax ID       | <p>The state tax identification code for this vendor, which is for informational purposes only.</p> <p>Use this field when a state tax identification code is required.</p> <p>(A 15) Optional</p>   |
| Hold Code          | <p>Use this field to enter a user-defined code that identifies invoices for special payment processing for all vouchers for this vendor. Vouchers for this vendor are held and cannot be paid until the hold code is removed from the voucher.</p> <p><i>Valid Values:</i> Must be a valid hold code defined through Hold Codes Maintenance (MENU APFILE)</p> <p>(A 2) Optional</p>  |

---

**A/P Vendor Master Maintenance Screen Fields and Function Keys**

---

| Field/Function Key | Description  |
|--------------------|--|
| Pay Days           | <p>The maximum number of days required for payment to this vendor. This value is used to calculate the due date when creating vouchers for this vendor. The due date may be calculated based on the invoice date or the voucher entry date. This is specified in A/P Options Maintenance (MENU APFIL2).</p> <hr/> <p>NOTE: The Cash Requirements Report (MENU POREPT) in Purchasing uses the due date.</p> <hr/> <p>(N 3,0) Required</p>   |
| Payment Pty        | <p>The default priority for which payment is made to this vendor.</p> <p>When a voucher is created for this vendor, the payment priority keyed in this field is used as the default. You may override or accept this default value. When selecting vouchers for payment during Payment Selection (MENU APCHCK), you may select for payment those vouchers of a specified priority.</p> <p>Key 1 if the payment priority for this vendor is high.</p> <p>Key 2 if the payment priority for this vendor is medium.</p> <p>Key 3 if the payment priority for this vendor is low.</p> <p>For example, assume that this vendor demands prompt payment within 30 days. Assign this vendor a payment priority of 2 in this field. When a voucher is keyed for this vendor, the payment priority of 2 for the voucher is displayed. Accept the default priority. After the voucher is posted and you are ready to select vouchers for payment, select vouchers with a payment priority of 1 or 2 only. The voucher created for this vendor is selected for payment. Vendors assigned a payment priority of 3 are not selected.</p> <p>(N 1,0) Required</p> |
| A/P Class          | <p>Use this field to enter the class code that classifies this vendor. This field can be used in the vendor performance analysis.</p> <hr/> <p>NOTE: This A/P Class is the “vendor class” referred to elsewhere in this user guide.</p> <hr/> <p><i>Valid Values:</i> An A/P Class defined in Vendor Class Maintenance (MENU APFILE).</p> <p>(A 2) Optional</p>  |

**A/P Vendor Master Maintenance Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Urgency Days       | <p>The number of days since either the invoice date or the voucher entry date [depending on your selection through A/P Options Maintenance (MENU APFIL2)] that payment to this vendor is considered urgent.</p> <hr/> <p>NOTE: The value in this field must be greater than that in the <b>Payment Days</b> field. This field is required if you key a value in the <b>Urgency Pty</b> field.</p> <hr/> <p>From the value keyed in this field, the urgency date is calculated. The urgency date is used when keying a voucher through Voucher Entry (MENU APMAIN). The payment priority for a voucher is replaced by the urgency priority if the selected voucher is not paid by the urgency date. The urgency date may be accepted or overridden during Voucher Entry.</p> <p>When this number of days has passed, the urgency priority (see <b>Urgency Pty</b>) is used instead of the payment priority when selecting vouchers for payment through Payment Selection (MENU APCHCK) if you choose to select vouchers by payment priority.</p> <p>For example, assume that the vendor with a payment priority of 2 demands payment within 30 days. If you have not paid this vendor within the 30 days, and it is urgent that this vendor be paid, assign an urgency days of 30 in this field. When a voucher is keyed for this vendor, the urgency date is calculated as 30 days from the voucher entry date (or invoice date depending on your selection in A/P Options.) You may override the urgency date, if desired.</p> <p>Also assume that this vendor has an urgency priority of 1. When the urgency date is reached, the vendor's payment priority of 2 is replaced by the vendor's urgency priority of 1. When you select vouchers for payment through Payment Selection, select all vouchers with a payment priority of 1. If the urgency date has passed, this vendor's voucher is selected (since the urgency priority of 1 is used). If the urgency date has not yet been reached, this vendor's voucher is not selected (since the payment priority of 2 is used).</p> <p>(N 3,0) Optional</p> |

### A/P Vendor Master Maintenance Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Urgency Pty        | <p>The default urgency priority for which payment is made to this vendor.</p> <p>When a voucher is created for this vendor, the urgency priority keyed in this field is used as the default. You may override or accept this default value.</p> <p>The urgency priority is used instead of the payment priority for this vendor when the urgency date (see <b>Urgency Days</b>) is reached. When selecting vouchers for payment during Payment Selection (MENU APCHCK), you may select for payment those vouchers of a specified priority.</p> <hr/> <p>NOTE: The value in this field must be of a higher priority than that in the <b>Payment Pty</b> field. Also, this field is required if you key a value in the <b>Urgency Days</b> field.</p> <hr/> <p>Key 1 if the urgency priority for this vendor is high.</p> <p>Key 2 if the urgency priority for this vendor is medium.</p> <p>Key 3 if the urgency priority for this vendor is low.</p> <p>For example, assume that this vendor demands prompt payment within 30 days, and therefore assigned this vendor a payment priority of 2. Assign this vendor an urgency priority of 1 in this field. When a voucher is keyed for this vendor, the urgency priority of 1 for the voucher is displayed.</p> <p>After the voucher is posted and you are ready to select vouchers for payment, select vouchers with a payment priority of 1 only. If the urgency date has not yet been reached (see <b>Urgency Days</b>), the voucher for this vendor is not selected since the payment priority is 2; if the urgency date has passed, the voucher for this vendor is selected since the urgency priority of 1 is used instead of the payment priority of 2.</p> <p><i>Valid Values:</i> 1, 2, or 3</p> <p>(N 1,0) Optional</p> |
| Terms              | <p>The default standard payment terms for this vendor. These may be overridden or accepted during Voucher Entry (MENU APMAN).</p> <p>This field is descriptive only and not used for calculations.</p> <p>(A 20) Optional</p>   |
| Csh Dsc Pct        | <p>The default standard price discount percent for this vendor. This percentage may be overridden or accepted during Voucher Entry (MENU APMAN).</p> <hr/> <p>NOTE: This field is required if you key a value in the <b>Cash Dsc Days</b> field.</p> <hr/> <p>(N 5,3) Required</p>  |

### A/P Vendor Master Maintenance Screen Fields and Function Keys

| Field/Function Key   | Description   |
|----------------------|---|
| Allow Split Terms    | <p>Use this field to specify if you want to allow split term amounts for each voucher for this vendor. Split terms pertain to vendors who allow their invoice amounts to be split over a specific period of time. Split terms codes are created and maintained in Split Terms Code Maintenance (MENU APFIL2).</p> <p>Key <b>Y</b> if you wish to allow split terms for this vendor. If split terms are allowed, you will be able to split invoice amounts so that installments may be made over a period of predefined pay dates. If you key <b>Y</b>, you must specify a default split terms code in the <b>Dft Split Terms Code</b> field.</p> <p>Key <b>N</b> if you wish to omit split term processing. If split terms are not allowed, invoice amounts will not be allowed to be split.</p> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p> |
| Csh Dsc Dys          | <p>Use this field to enter the default number of days available to take the cash discount indicated in the <b>Csh Dsc Pct</b> field. This value may be overridden or accepted during Voucher Entry (MENU APMAIN).</p> <hr/> <p>NOTE: This field is required if you key a value in the <b>Cash Dsc Pct</b> field.</p> <hr/> <p>(N 3,0) Optional</p>  |
| Dft Split Terms Code | <p>Use this field to specify a default split terms code for this vendor. This is the default split terms code that will be used throughout voucher entry.</p> <p>Key the default split terms code you wish to assign to this vendor.</p> <p>Leave this field blank if you specified <b>N</b> in the <b>Allow Split Terms</b> field.</p> <p><i>Valid Values:</i> Must be a valid split terms code defined through Split Terms Code Maintenance (MENU APFIL2).</p> <p>(A 2) Optional/Blank</p>  |
| Dft 1099 Box         | <p>The value entered in this field defines a default 1099-MISC payment box number. A list is available of the applicable 1099 boxes in which to report amounts when the 1099-MISC form prints.</p> <p>Key the default 1099 box number to be used for this vendor for the voucher being processed.</p> <p>The value in this field will be consulted when the 1099 is printed, and will be used by Voucher Entry as a way of setting the box reporting for the 1099-Misc forms generated for vouchers for this vendor.</p> <p><i>Valid Values:</i> Blank, or one of the values in the Order Control File (ORCTL) for the 1099-MISC Payment Boxes records (these values are presented when you key a ? in this field)</p> <p>(N 2,0) Optional</p>  |

---

**A/P Vendor Master Maintenance Screen Fields and Function Keys**

| Field/Function Key   | Description  |
|--|--|
| Sep Check  | <p>Use this field to specify if a separate check is required for each voucher for this vendor.</p> <p>Key <b>Y</b> if a separate check is required for each voucher for this vendor.</p> <p>Key <b>N</b> if a separate check is not required for each voucher for this vendor.</p> <p>This may be overridden when entering a voucher for this vendor.</p> <p>(A 1) Required</p>  |
| User Area  | <p>Use this field to key additional information regarding this vendor.</p> <p>(A 20) Optional</p>  |
| Assignee   | <p>Key the number of the vendor to which payment will be made. This value is used as the default <b>Assignee</b> value when creating a voucher for this vendor. The assignee is a different vendor with a different Vendor ID to whom payment is made.</p> <p>The assignee specified here is used as the default assignee when creating a voucher for this vendor if <b>Use Assignees</b> is <b>Y</b> in AP Options Maintenance (MENU APFIL2). You can override the default assignee during Voucher Entry (MENU APMAIN).</p> <p><i>Valid Values:</i> A vendor number defined through Vendors Maintenance (MENU POFIL2). This vendor number must be different from the vendor number in the <b>Vendor</b> field. When International Currency is installed, the currency specified for this assignee (through Vendors Maintenance) must be the same as the currency specified for the selected vendor.</p> <p>(A 6) Optional</p> |
| Currency   | <p>This field only displays when International Currency is installed.</p>  |
| <p><b>Important</b></p>  |  |
| <p>Once you define a currency for a vendor, you cannot change the currency if there are any existing vendor/item records, open POs, open requisitions, open payables, or PO history. You may, however, change the vendor's exchange code.</p>  |  |
| <p>Key the currency code for this vendor's currency.</p> <p>If you change the currency code on this screen, the change also will affect the code in the <b>Currency</b> field on the Vendor Master Maintenance (1) Screen (p. 43-32).</p> <p><i>Valid Values:</i> A currency code defined through Currency/Exchange Codes Maintenance (MENU ICFIL2).</p> <p>(A 3) Required</p> |  |

**A/P Vendor Master Maintenance Screen Fields and Function Keys**

| Field/Function Key          | Description   |
|-----------------------------|---|
| (Currency Code Description) | <p>This field only displays when International Currency is installed.</p> <p>This field displays the description associated with the currency code entered in the <b>Currency</b> field.</p> <p>Display</p>   |
| PO Required                 | <p>Use this field to determine if a purchase order number is required when creating vouchers for this vendor.</p> <p>Key <b>Y</b> if a purchase order number is required when creating vouchers for this vendor.</p> <p>Key <b>N</b> if a purchase order number is not required when creating vouchers for this vendor.</p> <p>(A 1) Required</p>   |
| Exch Code                   | <p>This field only displays when International Currency is installed.</p> <p>Key the exchange code to be used to access the exchange rate for the vendor's currency.</p> <p>If you change the exchange code on this screen, the change also will affect the code in the <b>Exch Code</b> field on the Vendor Master Maintenance (1) Screen (p. 43-32).</p> <p><i>Valid Values:</i> An exchange code defined for the currency through Currency/Exchange Codes Maintenance (MENU ICFILE).</p> <p>(A 3,0) Required</p> |
| (Exchange Code Description) | <p>This field only displays when International Currency is installed.</p> <p>This field displays the description associated with the exchange code entered in the <b>Exch Code</b> field.</p> <p>Display</p>  |
| Credit Limit                | <p>Key the amount of credit available with this vendor.</p> <p>When International Currency is installed, key the amount of credit available from this vendor in the vendor's currency. The local currency equivalent will display beneath the vendor's currency. The corresponding currency edit symbol appears to the right of each value.</p> <p>(N 9,0) Required</p>   |

---

**A/P Vendor Master Maintenance Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| Vendor G/L Cd      | <p>The vendor G/L code assigned to this vendor. The vendor G/L code is used to determine which accounts in your general ledger are updated based on the vendor to whom payment is made.</p> <p>Based on your selections in the G/L Interface (See the G/L Interface User Guide), you may update more than one A/P Liability, A/P Cash Discount and A/P expense accounts based on the classification of the vendor to whom payment was made. The vendor G/L code is used to establish this classification of vendor for your general ledger.</p> <p>Key the vendor G/L code for this vendor.</p> <p>Leave this field blank if you do not wish to assign a G/L code to this vendor, or if you have not set up the vendor G/L code in the G/L Interface.</p> <p>For example, assume that you have two classifications of vendors: hard goods supplier vendors and professional service vendors. Assume also that it is necessary to track the expenses made to each classification of vendor. You need to create these vendor G/L codes through Vendor G/L Codes Maintenance (MENU APFILE), and set up the G/L Interface to indicate which expense accounts are updated for each classification of vendor. If you create the vendor G/L codes of “HG” for hard good supplier vendors, and “PS” for professional service vendors, you would next assign each vendor either of these vendor G/L codes.</p> <p>(A 2) Optional</p> |
| Dft Bus Unit       | <p>The default business unit code assigned to this vendor. This default is used when keying a voucher for this vendor if you have set up the G/L Interface to use business units (see the Cross Applications User Guide.) The business unit code is used to update accounts in your general ledger based on a specification made on a voucher. This condition is represented by the business unit code.</p> <p>Key a default business unit in this field if the vendor deals with only one business unit. You may accept or override the business unit when keying a voucher for this vendor through Voucher Entry (MENU APMAIN).</p> <p>Leave this field blank if you do not wish to assign a default business unit to this vendor, or if you do not use business units in the G/L Interface.</p> <p><i>Valid Values:</i> Blank or a valid business unit which has been set up through Business Units Maintenance (MENU APFILE).</p> <p>(A 2) Required</p>   |

---

### A/P Vendor Master Maintenance Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| PO-AP Transfer     | <p>Activates or deactivates receipt validation and landing cost validation during Voucher Entry (MENU APMAIN) for this vendor.</p> <p>Key <b>Y</b> to allow access to receipt validation and landing cost validation for this vendor during voucher entry.</p> <p>Key <b>N</b> to prohibit receipt validation and landing cost validation for this vendor during voucher entry.</p> <hr/> <p>NOTE: This field should be set to <b>N</b> if the vendor is a warehouse transfer vendor, since no receipt validation is done on a transfer Purchase Order.</p> <hr/> <p>(A 1) Required</p>   |
| Allow Vouchers     | <p>Indicates if vouchers can be created for this vendor. Vouchers are created for vendors that will receive payment for goods and services. Some vendors should not allow vouchers to erroneously be created, such as, vendors that are paid by an assignee vendor account, or vendors used for processing and tracking warehouse transfer purchases.</p> <p>Key <b>Y</b> if vouchers can be created for this vendor. This is the circumstance for most vendors.</p> <p>Key <b>N</b> if vouchers cannot be created for this vendor. This is useful when creating vendors that are used as assignees only. A voucher may be created for the assignee only when a voucher is created for the vendor who uses that assignee.</p> <p>(A 1) Required</p> |

---

**A/P Vendor Master Maintenance Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| ACH                | <p>Application Action Authority (MENU XASCTY) user authorization for <b>Vendor ACH Information</b> is required to access the F4=ACH INFORMATION KEY.</p> <p>Automatic Clearing House (ACH) is a nationwide electronic network for financial transactions. ACH processes large volumes of credit and debit transactions in batches. Electronic ACH payments provide better cash management capabilities, lower costs and faster processing than traditional paper payments. You can benefit from having this ability to process vendor payments as ACH transactions.</p> <p>Use this field to indicate the default value of the selected vendor's payment preference. This value will default into the <b>ACH Payment</b> field for this vendor on the End Voucher Screen during Voucher Entry (MENU APMAIN).</p> <p>Key <b>Y</b> to select ACH payments as this vendor's default payment preference. If this field is <b>Y</b>, ACH information must exist for this vendor in the ACH Vendor Information File (ACHVEN). To add ACH information, press the F4=ACH INFORMATION function key.</p> <p>Key <b>N</b> to select paper checks as this vendor's default payment preference.</p> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p> |
| Landing Costs Only | <p>Determines whether or not this vendor has been established only as a landing cost vendor. Purchase Orders can not be created for landing cost only vendors, and therefore, normal receipt validation does not occur. The only receipt validation which can occur is that for landing costs.</p> <p>Key <b>Y</b> to identify this vendor as a landing cost only vendor.</p> <p>Key <b>N</b> if you do not want this vendor to be a landing cost only vendor.</p> <p><i>Valid Values:</i> If the value in the <b>Allow POs</b> field on the Vendor Master Maintenance Screen is <b>Y</b>, you must set this field to <b>N</b>.</p> <p>(A 1) Required</p>   |
| F4=ACH information | <p>Application Action Authority (MENU XASCTY) user authorization for <b>Vendor ACH Information</b> is required to access the F4=ACH INFORMATION KEY.</p> <p>In order to use this function key, the <b>ACH</b> field on this screen must be <b>Y</b>.</p> <p>Press F4=ACH INFORMATION to enter or maintain ACH information for this vendor. The Vendor ACH Information Maintenance Screen (p. 43-63) will appear.</p>  |
| F12=Return         | <p>Press F12=RETURN to return to the previous screen without saving any additions or changes. The Vendor Master Maintenance (2) Screen (p. 43-46) will appear if Purchasing is installed and <b>User Codes</b> have been defined, the Vendor Master Maintenance (1) Screen (p. 43-32) will appear if Purchasing is installed and <b>User Codes</b> are not defined. Otherwise, the Vendor Master Maintenance Selection Screen (p. 43-3) will appear.</p>  |

---

### **A/P Vendor Master Maintenance Screen Fields and Function Keys**

| <b>Field/Function Key</b> | <b>Description</b>   |
|---------------------------|--|
| Enter                     | <p>Press <b>ENTER</b> to confirm your selections and update additions or changes made for this vendor.</p> <p>If Purchasing and EDI or Fax are installed, the Vendor Master Additional Information Maintenance Screen (p. 43-65).</p> <p>If Purchasing and Mail Server are installed, the Vendor Master Additional Email Maintenance Screen (p. 43-83)</p> <p>Depending on the rebate method selected on the Vendor Master Maintenance Screen*, either the Vendor Master Maintenance Selection Screen (p. 43-3) or the Vendor Rebate Customer Maintenance Screen (p. 43-88) will then display.</p> |

## Vendor ACH Information Maintenance Screen

VENDOR ACH INFORMATION MAINTENANCE

Vendor: IC3000 SAUERKRAUT PRODUCTS

Payee: SAUERKRAUT PRODUCTS INTL DIVSN

Receiving DFI Identification: 424982722 .....

DFI Account Number: 87363533 .....

Individual ID Number: IC3000 .....

F12=Return

This screen displays after pressing **F4=ACH INFORMATION** on the A/P Vendor Master Maintenance Screen (p. 43-48). Use this screen to enter or maintain ACH information for the indicated vendor. ACH information is used when ACH transactions are submitted with this vendor as a receiver (that is, as a company or individual). It is this receiver that authorizes a company or individual (originator) to initiate a transaction to their financial institution account.

### Vendor ACH Information Maintenance Screen Fields and Function Keys

| Field/Function Key           | Description   |
|------------------------------|---|
| Vendor                       | This is the vendor for which you are adding or maintaining ACH information.<br>Display  |
| Payee                        | This is the payee name for those vendors that have a different payee name selected on the A/P Vendor Master Maintenance Screen (p. 43-48). If a different payee name has not been selected, this field does not appear.   |
| Receiving DFI Identification | This field identifies the Transit Routing Number of the receiver's Depository Financial Institution (DFI).<br>Key the transit routing number of the receiving bank.<br><br>NOTE: This field is used in the creation of the ACH payment group to generate the hash totals on the Control Record.<br><br><i>Valid Values:</i> Numbers only<br>(A 20) Required |

**Vendor ACH Information Maintenance Screen Fields and Function Keys**

| Field/Function Key   | Description  |
|----------------------|--|
| DFI Account Number   | <p>This field identifies the receiver’s account number at their Depository Financial Institution (DFI).</p> <p>Key the receiving bank account number.</p> <p>(A 20) Required</p>   |
| Individual ID Number | <p>This field indicates the receiver’s identification number. This number may be printed on the receiver’s bank statement by the Receiving Financial Institution.</p> <p>Key the unique receiver ID or vendor ID of this receiver.</p> <p><i>Default Value:</i> vendor ID</p> <p>(A 20) Required</p> |
| F12=Return           | <p>Press F12=RETURN to return to the A/P Vendor Master Maintenance Screen (p. 43-48), without updating this screen.</p>  |
| Enter                | <p>Press ENTER to confirm your selections. The A/P Vendor Master Maintenance Screen (p. 43-48) will appear. You will be prompted to press ENTER again to confirm your selections.</p>  |

|                               | Hold EDI Purchase Orders: N (Y,N)         |
|                               | Update Vendor/Item/Warehouse              |
|                               | File with Price Catalog (832): Y (Y,N)    |
|                               | IA Vendor: .....                          |
|                               | Department:                               |
|                               | Send Product Activity Data (852): Y (Y,N) |
|                               | Send Product Transfer & Resale            |
|                               | Report (867): Y (Y,N)                     |
| FAX INFO:                     | FAX Number: 312-427-5561                  |
|                               | NickName:                                 |
|                               | FAX Purchase Orders: N (Y,N)              |
|                               | FAX Vendor RFQ: N (Y,N)                   |
| F12=Return                    |   |

NOTE: This screen displays only if the EDI and/or FAX module is installed/set up. The **FAX Info** fields appear on this screen only after the FAX module system options have been set up through Fax System Options Maintenance (MENU AXMAIN). The **EDI Info** fields appear on this screen only after the EDI system options have been set up through EDI Options (MENU EIMAIN).

This screen displays after pressing **ENTER** on the Vendor Master Maintenance (2) Screen (p. 43-46), or, if A/P is installed, the A/P Vendor Master Maintenance Screen (p. 43-48).

Use this screen to enter EDI and/or FAX vendor master information.

This fax data is maintained in Distribution A+ through this screen and is used as the default data for this vendor when processing Purchase Orders. However, if this vendor's individual Purchase Order job is being processed interactively (as opposed to batch) through FAX, you have the option to override some of this data with that from the installed fax system's (e.g. QUADRANT's FastFax) files. This would occur on the Fax Cover Sheet Information Screen. Refer to this screen as provided in the Appendix section of the FAX User Guide.

**Vendor Master Additional Information Maintenance Screen Fields and Function Keys**

| Field/Function Key    | Description   |
|-----------------------|---|
| Print Purchase Orders | <p>This field is protected and defaults to <b>N</b> if the <b>Allow PO's</b> field is <b>N</b> on the Vendor Master Maintenance (1) Screen (p. 43-32).</p> <p>Since Purchase Orders may be printed and/or sent via EDI or FAX, it is required to identify the method(s) to be used for this particular vendor.</p> <p>Key <b>Y</b> to indicate, for this vendor's default, that Purchase Orders should be printed. This field must be <b>Y</b> if both the EDI Purchase Orders and FAX Purchase Orders fields are <b>N</b>.</p> <hr/> <p>NOTE: If only EDI or FAX is installed and if the applicable purchase order field is <b>N</b>, then this <b>Print Purchase Orders</b> field must still be <b>Y</b>. Keying a <b>Y</b> here does not preclude the use of EDI or FAX for Purchase Orders. The <b>EDI Purchase Orders</b> and/or <b>FAX Purchase Orders</b> field(s) may also be <b>Y</b>.</p> <hr/> <p>Key <b>N</b> to indicate, for this vendor, that Purchase Orders should not be printed. If an <b>N</b> is keyed here, either the <b>EDI Purchase Orders</b> field or the <b>Fax Purchase Orders</b> field must be <b>Y</b>.</p> <hr/> <p>NOTE: If you key an <b>N</b> in this field and instead use EDI or FAX for your Purchase Orders, you may still produce a reprint of those POs through Purchase Orders (MENU POMAIN). A message will print at the top of the PO identifying the original method of "printing."</p> <hr/> <p>(A 1) Required / Display</p> |
| Print Vendor RFQ      | <p>This field is protected and defaults to <b>N</b> if the <b>Allow PO's</b> field is <b>N</b> on the Vendor Master Maintenance (1) Screen (p. 43-32).</p> <p>Since Vendor RFQs may be printed and/or sent via FAX, you are required to identify the method(s) to be used for this particular vendor.</p> <p>Key <b>Y</b> to indicate, for this vendor's default, that Vendor RFQs should be printed. This field must be <b>Y</b> if the <b>FAX Vendor RFQ</b> field is set to <b>N</b>. Additionally, keying <b>Y</b> in this field does not preclude the use of EDI or FAX for Vendor RFQs. The <b>FAX Vendor RFQ</b> field may also be <b>Y</b>.</p> <p>Key <b>N</b> to indicate, for this vendor, that Vendor RFQs should not be printed. If <b>N</b> is keyed in this field, the <b>Fax Vendor RFQ</b> field must be <b>Y</b>.</p> <hr/> <p>(A 1) Required</p>   |

---

**Vendor Master Additional Information Maintenance Screen Fields and Function Keys**

---

| Field/Function Key  | Description   |
|---|---|
| Trading Partner Id  | <p>This field is required only if you key a <b>Y</b> in the <b>EDI Purchase Orders or Send Product Activity Data (852)</b> field.</p> <p>A unique trading partner identification code should be assigned to each vendor [and customer, through Customer/Ship to Master Maintenance (MENU ARFILE)] with whom EDI documents such as Purchase Orders or Product Activity Data (852) (PAD) documents will be exchanged. To assist in ensuring the codes are unique, it may be helpful to utilize the vendor (or customer) name or number as the <b>Trading Partner ID</b> or as part of the <b>Trading Partner ID</b>.</p> <p>By using the <b>Trading Partner ID</b>, inquiries can be made to determine which documents were sent to whom and the current status (e.g., has the document been received by that vendor/customer).</p> <p>Key the desired trading partner identification code. Note that values keyed in this field are not validated, so be sure text entered is keyed correctly.</p> <p>(A 15) Required/Optional</p> |
| EDI Purchase Orders   | <p>This field is protected and defaults to <b>N</b> if the <b>Allow PO's</b> field is <b>N</b> on the Vendor Master Maintenance (1) Screen (p. 43-32).</p> <p>Since Purchase Orders may be printed and/or sent via EDI or FAX, it is required to identify the method(s) to be used for this particular vendor.</p> <p>Key <b>Y</b> to indicate, for this vendor's default, that EDI should be used for Purchase Orders. A Trading Partner ID must be identified as well.</p> <p>Key <b>N</b> to indicate, for this vendor's default, that EDI should not be used for Purchase Orders.</p>   |
| <p><b>Important</b></p> <p>Refer to the <b>Print Purchase Orders</b> field description for details about PO printing options and requirements for printing POs as related to EDI.</p> |   |
| <p>(A 1) Required</p>   |   |

---

## Vendor Master Additional Information Maintenance Screen Fields and Function Keys

| Field/Function Key   | Description  |
|--|--|
| Hold EDI Purchase Orders                                   | <p>If using EDI for Purchase Orders, as determined with a <b>Y</b> in the <b>EDI Purchase Orders</b> field, you must use this field to determine the default for whether an EDI PO “print” for this vendor will be available for immediate processing, or if an EDI hold will be placed on the job, which would require a manual release.</p> <p>A <b>Y</b> indicates, for this vendor’s default, that if a PO print is submitted to EDI for one of this vendor’s requisitions, it will go on hold until manually released through EDI. Refer to the EDI User Guide for details about releasing jobs from EDI hold.</p> <p>An <b>N</b> indicates, for this vendor’s default, that if a PO print is submitted to EDI for one of this vendor’s requisitions, no EDI hold will occur and EDI processing will continue normally.</p> <p>(A 1) Required</p>   |
| Update Vendor/Item/Warehouse File with Price Catalog (832) | <p>Use this field to indicate if the Price Catalogs Warehouse Selection Screen (MENU EIMAIN - Option 1) is to be displayed when you press <b>F15=RECEIVE</b> or <b>F17=RECEIVE ALL</b> on the Pending Incoming EDI Price Catalogs Screen (MENU EIMAIN). The Price Catalogs Warehouse Selection Screen will allow you to select which warehouses will have their associated Vendor/Item/Price File updated with the new price information contained in the received Price Catalog.</p> <p>Key <b>Y</b> to indicate that the Price Catalogs Warehouse Selection Screen (MENU EIMAIN) is to be displayed when you press <b>F15=RECEIVE</b> or <b>F17=RECEIVE ALL</b> on the Pending Incoming EDI Price Catalogs Screen (MENU EIMAIN).</p> <p>Key <b>N</b> to indicate that the Price Catalogs Warehouse Selection Screen (MENU EIMAIN) will not be displayed when you press <b>F15=RECEIVE</b> or <b>F17=RECEIVE ALL</b> on the Pending Incoming EDI Price Catalogs Screen (MENU EIMAIN). This will cause no warehouse specific Vendor/Item/Price Files to be updated with the new price information contained in the received Price Catalog.</p> <p>(A 1) Required</p> |
| IA Vendor  | <p>This field appears only if EDI is installed. If you key a <b>Y</b> in the <b>Send Product Activity Data (852)</b> field, use this field to enter the customer ID the vendor uses to identify your company. The vendor will provide this information. Distribution A+ puts whatever you key in this field in the <b>IA Vendor No.</b> field of the outgoing <b>Product Activity Data (852)</b> documents when it creates that document during Day-End Processing (MENU XAMAST).</p> <hr/> <p>NOTE: This field is not related in any way to the Inventory Accounting (IA) module.</p> <hr/> <p>Key the ID number.</p> <p>(A 10) Optional</p>  |

---

**Vendor Master Additional Information Maintenance Screen Fields and Function Keys**

---

| Field/Function Key                          | Description  |
|---|--|
| Department                                  | <p>This field appears only if EDI is installed. If you key a <b>Y</b> in the <b>Send Product Activity Data (852)</b> field, use this field to enter the department ID for the department at the vendor's company that should receive the Product Activity Data (852) document. The vendor will provide this information. Distribution A+ puts whatever you key in this field in the <b>Department</b> field of the outgoing Product Activity Data (852) document when it creates that document during Day-End Processing (MENU XAMAST).</p> <p>Key the department ID.</p> <p>(A 5) Optional</p>  |
| Send Product Activity Data (852)            | <p>This field appears only if EDI is installed. Use this field to specify if you want to send Product Activity Data (852) (PAD) documents to this vendor. PAD documents notify the vendor whenever selected quantities of any items of which the vendor is a primary vendor have changed. The vendor can then submit a suggested order or ship a predetermined quantity of the item(s). For more information about the PAD document, refer to the Tools to Assist the Buyer section of this User Guide.</p> <p>Key <b>Y</b> if you want to send PAD documents to this vendor.</p> <hr/> <p>NOTE: PAD documents are warehouse-specific. If you key a <b>Y</b> in this field, when Distribution A+ creates PAD documents for this vendor, it will not consider the quantities of any items stocked in a warehouse with an <b>N</b> in the <b>Send Outgoing Product Activity Data (852)</b> field in Warehouse Number Maintenance (MENU IAFIELD). If you have multiple warehouses and you want to create PAD documents for all items and units of measure for a vendor, you must be sure that the <b>Send Outgoing Product Activity Data (852)</b> field is set to <b>Y</b> in Warehouse Number Maintenance (MENU IAFIELD) for every warehouse that stocks that vendor's items.</p> <hr/> <p>Key <b>N</b> if you do not want to send PAD documents to this vendor.</p> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p> |
| Send Product Transfer & Resale Report (867) | <p>This field appears only if EDI is installed. Use this field to specify if you want to send Product Transfer &amp; Resale Report (867) (PTR) documents to this vendor. PTR documents notify the vendor of product movement. For more information about the PTR document, refer to the Tools to Assist the Buyer section of this User Guide.</p> <p>Key <b>Y</b> if you want to send PTR documents to this vendor.</p> <p>Key <b>N</b> if you do not want to send PTR documents to this vendor.</p> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p>  |

---

**Vendor Master Additional Information Maintenance Screen Fields and Function Keys**

| Field/Function Key   | Description  |
|--|--|
| FAX Number   | <p>This field displays the fax number specified on the Vendor Master Maintenance (1) Screen (p. 43-32).</p> <p>Display</p>   |
| Nickname   | <p>This field is only used if you are using the Quadrant FastFax third party software product. Also, this field or the <b>FAX Number</b> field is required only if the <b>FAX Purchase Orders</b> field is <b>Y</b>.</p> <p>A unique name code should be assigned to each vendor (or customer) with whom FAX documents such as Purchase Orders will be exchanged. To assist in ensuring the codes are unique, it may be helpful to utilize the vendor (or customer) name or number as the <b>Nickname</b> or as part of the <b>Nickname</b>.</p> <p>By using the <b>Nickname</b> in your files, you can limit the keying of required fax data to send documents to/from this vendor. A nick name is identified and defined for this vendor with the fax requirements in the chosen fax system's files. Once defined there, that data can be associated with this vendor by simply identifying that same nickname in this field. Then, when desired, you can key this nickname in Distribution A+ and the fax file data will be pulled in and used.</p> <p>Key the desired <b>Nickname</b>. Note that values keyed in this field are not validated, so be sure text entered is keyed correctly.</p> <p>(A 10) Required/Optional</p> |
| FAX Purchase Orders  | <p>This field is protected and defaults to <b>N</b> if the <b>Allow PO's</b> field is <b>N</b> on the Vendor Master Maintenance (1) Screen (p. 43-32).</p> <p>Since Purchase Orders may be printed and/or sent via EDI or FAX, it is required to identify the method(s) to be used for this particular vendor.</p> <p>Key <b>Y</b> to indicate, for this vendor's default, that FAX should be used for the "printing" of Purchase Orders. A FAX number or nickname also must be identified.</p> <p>Key <b>N</b> to indicate, for this vendor's default, that FAX should not be used for "printing" Purchase Orders.</p>  |
| <p><b>Important</b></p>  |  |
| <p>Refer to the Print Purchase Orders field description for details about PO printing options and requirements for printing POs as related to FAX.</p> |  |
| <p>(A 1) Required</p>  |  |

---

**Vendor Master Additional Information Maintenance Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| FAX Vendor RFQ     | <p>This field will only display when Fax System Options Maintenance (MENU AXMAIN) options are set to use the interface for Quadrant Fax. Also, this field is protected and defaults to <b>N</b> if the <b>Allow PO's</b> field is <b>N</b> on the Vendor Master Maintenance (1) Screen (p. 43-32).</p> <p>Since Vendor RFQs may be printed and/or sent via FAX, you are required to identify the method(s) to be used for this particular vendor.</p> <p>Key <b>Y</b> to indicate, for this vendor's default, that FAX should be used for the "printing" of Vendor RFQs. A FAX number or nickname also must be identified.</p> <p>Key <b>N</b> to indicate, for this vendor's default, that FAX should not be used for "printing" Vendor RFQs.</p> <p>(A 1) Required</p>  |
| F12=Return         | Press <b>F12=RETURN</b> to return to the previous screen.   |
| Enter              | <p>Press <b>ENTER</b> to confirm your entries.</p> <p>One of the following screens will appear based on the following conditions and hierarchy:</p> <ul style="list-style-type: none"> <li>• Vendor Master Additional EDI Maintenance Screen (p. 43-72), if you have EDI installed and you keyed a <b>Y</b> in the <b>Send Product Activity Data (852)</b> field.</li> <li>• Vendor Master Additional EDI Maintenance - 867 Screen (p. 43-80), if <b>Send Product Transfer &amp; Resale Report (867)</b> is set to <b>Y</b> on the Vendor Master Additional Information Maintenance Screen (p. 43-65) and if you have EDI installed and you keyed a <b>N</b> in the <b>Send Product Activity Data (852)</b> field.</li> <li>• Vendor Master Additional Email Maintenance Screen (p. 43-83), if Mail Server is installed.</li> <li>• Vendor Rebate Customer Maintenance Screen (p. 43-88), if Mail Server is not installed and you are using Vendor Rebates, and you identified the vendor as using the Accounts Receivable method of rebates [on the Vendor Master Maintenance (1) Screen (p. 43-32)].</li> <li>• Vendor Master Maintenance Selection Screen (p. 43-3), if Vendor Rebates are not being used, or if you did not identify the vendor as using the Accounts Receivable method of rebates [on the Vendor Master Maintenance (1) Screen (p. 43-32)].</li> </ul> |

## Vendor Master Additional EDI Maintenance Screen

| ADDITIONAL EDI MAINTENANCE |  |
|----------------------------|--|
| Vendor:                    | 200 K & M CORPORATION                  |
| 852 OPTIONS:               | Send Frequency (Days): 1               |
|                            | Transaction Handling Code: A (F,G,H,Z) |
|                            | Purge Days: 999                        |
|                            | No. of Pre-Assigned PO Numbers: ...    |
|                            | Send Quantities:                       |
|                            | Quantity Sold: Y (Y,N)                 |
|                            | Quantity Returned: Y (Y,N)             |
|                            | On-Hand Quantity: Y (Y,N)              |
|                            | Maximum On-Hand Quantity: Y (Y,N)      |
|                            | Minimum On-Hand Quantity: Y (Y,N)      |
|                            | Quantity On Back Order: Y (Y,N)        |
|                            | Quantity On PO: Y (Y,N)                |
|                            | Quantity Committed: Y (Y,N)            |
|                            | Quantity Available: Y (Y,N)            |
|                            | Exclude Non-Stock Items: N (Y,N)       |
| .F12=Return                |  |

This screen displays after you press the **ENTER** key on the Vendor Master Additional Information Maintenance Screen (p. 43-65), if you have EDI installed/set up and you keyed a **Y** in the **Send Product Activity Data (852)** field.

Use this screen to set up the conditions for creating and transmitting the PAD document to this vendor. Fields on this screen allow you to specify:

- how often to send the PAD document to the vendor
- how you want the vendor to respond
- how often to purge records from the Product Activity Data Header File and the Product Activity Data Detail File during Day-End Processing (MENU XAMAST)
- whether the PAD document should contain requisition numbers for the vendor to use when responding
- what changes in quantity for each item to report to the vendor
- whether Distribution A+ should consider non-stock items when deciding whether to create and transmit the PAD document

---

**Vendor Master Additional EDI Maintenance Screen Fields and Function Keys**

| Field/Function Key    | Description  |
|-----------------------|--|
| Send Frequency (Days) | <p data-bbox="527 367 1422 468">Use this field to specify how often you want Distribution A+ to check item quantities in the Item Balance File and, if one or more quantities have changed, create the PAD document for this vendor.</p> <p data-bbox="527 485 1422 1026">When you first select to use PAD documents for a vendor, Distribution A+ takes a snapshot of the quantities in the Item Balance File for each item of which the vendor is the primary vendor. The snapshot is stored in the EDI 852 Item Balance Snapshot File ( EOITB). The first time you run Day-End Processing (MENU XAMAST) after the number of days in this field has passed, Distribution A+ compares the quantities in the Item Balance File for the selected items with the information in the EDI 852 Item Balance Snapshot File. If there has been a change in any one quantity for an item, Day-End Processing creates an outgoing PAD document for the vendor and stores a new snapshot of the item quantities in the EDI 852 Item Balance Snapshot File. The outgoing PAD document will use the vendor's purchasing unit of measure as defined through Vendor/Item Information (MENU POFIE). This is the unit of measure quantities will be listed in on the outgoing PAD document. If there is no purchasing unit of measure defined through Vendor/Item Information, the PAD will use the primary unit of measure as defined in the Item Master File.</p> <p data-bbox="527 1043 1422 1108">Key the number of days you want to wait before checking the quantities in the Item Balance File for this vendor.</p> |
|                       | <hr/> <p data-bbox="553 1129 1385 1331"><b>NOTE:</b> Distribution A+ checks the Item Balance File and creates the PAD document as part of Day-End Processing (MENU XAMAST). If the number of days in this field ends on a day when you do not run Day-End Processing, the PAD document will be created the first time you run Day-End Processing after that date.</p> <hr/>  |
|                       | <p data-bbox="527 1356 1422 1591"><b>Example:</b> Vendor 100 has a 5 in the <b>Send Frequency (Days)</b> field. The last time Distribution A+ checked the Item Balance File quantities for vendor 100 was at Day-End on Monday, March 2. The first Day-End after 5 days would be run on March 8. However, March 8 is a Sunday and your company does not run Day-End on Sundays. The quantities in the Item Balance File will not be checked for vendor 100 until you run Day-End Processing on Monday, March 9.</p>  |
|                       | <p data-bbox="527 1640 1016 1673"><i>Valid Values:</i> A number greater than zero.</p> <p data-bbox="527 1682 686 1717">(N 3,0) Required</p>   |

---

---

**Vendor Master Additional EDI Maintenance Screen Fields and Function Keys**

---

| Field/Function Key        | Description   |
|---------------------------|---|
| Transaction Handling Code | <p>Use this field to indicate how you want the vendor to respond to PAD documents. The information in this field is passed to the vendor in the PAD document.</p> <p>Key <b>F</b> if you want the vendor to plan and submit a suggested PO for these items and units of measure. You can then enter the suggested PO as a requisition through Enter or Change Requisitions (MENU POMAIN) to create the order.</p> <p>Key <b>G</b> if you want the vendor to create a PO and ship the items. You will then have to create a requisition through Enter or Change Requisitions (MENU POMAIN) and print the Purchase Order through Print Purchase Orders (MENU POMAIN) before you will be able to receive the items into inventory.</p> <p>Key <b>H</b> if the PAD document is for notification, only. Use this code if you want the vendor to be aware of the changes in item quantities, but do not want the vendor to take any action at this time. Keying an H notifies the vendor that you may be submitting a PO for some or all of these items soon.</p> <p>Key <b>Z</b> if you want the vendor to take some other, predetermined action. For example, you may have instructed vendor 1200 to send you a price quote upon receipt of a PAD document with a <b>Transaction Handling Code</b> of <b>Z</b>.</p> <p>(A 1) Required</p> |
| Purge Days                | <p>Use this field to specify how often you want Distribution A+ to purge records from the Product Activity Data Header File and the Product Activity Data Detail File during Day-End Processing (MENU XAMAST).</p> <p>During Day-End Processing, Distribution A+ will purge all records for which the difference between the send date of the PAD document and the day-end date is greater than the number of days you specify here.</p> <p>Key the number of days you want used to purge PAD document records.</p> <p><i>Valid Values:</i> A number greater than zero.</p> <p>(N 3,0) Required</p>   |

---

---

**Vendor Master Additional EDI Maintenance Screen Fields and Function Keys**

---

| Field/Function Key             | Description  |
|--------------------------------|--|
| No. of Pre-Assigned PO Numbers | <p>In the PAD document, you can send the vendor one or more pre-assigned requisition numbers. The vendor can then use these requisition numbers when submitting a suggested PO or shipping the items.</p> <p>If you key a number in this field, when Distribution A+ creates the PAD document for a vendor during Day-End Processing (MENU XAMAST), it will check the Order Control File for the last requisition number used, generate the specified number of requisition numbers for the vendor, and then update the last number used in the Order Control File.</p> <p><b>Example:</b> : The last requisition number used in the Order Control File is 10082. The <b>No. of Pre-Assigned PO Numbers</b> for vendor 100 is 3. When Distribution A+ creates the PAD document for vendor 100, it will assign requisition numbers 10083, 10084, and 10085 and include those in the PAD document. Additionally, Distribution A+ will reset the last requisition number used in the Order Control File to 10085.</p> |

---

**NOTE:** If you want to pre-assign requisition numbers to vendors, it is recommended that you set the **Use Requisition No. for PO No.** field to **Y** in Purchasing Options Maintenance (MENU XAFILE).

The numbers sent to the vendor are requisition numbers. If the **Use Requisition No. for PO No.** field is set to **Y**, and you key the pre-assigned requisition number when you enter the requisition, that number will become the PO number when you print the Purchase Order.

However, if the **Use Requisition No. for PO No.** field is set to **N**, you must either key the requisition number in the **Our PO No.** field on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13), or have the system assign the next available PO number. If you key the PO number, that number may have already been used for another PO. If you let the system assign the next available PO number, the PO number you are using will not match the number the vendor received in the PAD document and may have already entered in their files.

---

(N 2,0) Optional

---

**Vendor Master Additional EDI Maintenance Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Send Quantities    | <p>Use these fields to specify which types of quantity changes this vendor should be notified about.</p> <p>During Day-End Processing (MENU XAMAST), Distribution A+ creates the PAD document for a vendor if there has been a change in quantity for at least one item of which that vendor is the primary vendor. However, the PAD document is not sent to the vendor, unless the quantity that changed is one that is selected on this screen. Additionally, any PAD document sent to the vendor will include information for each quantity changed that you select here.</p> <p><b>Example:</b> Vendor 100 has a <b>Y</b> in the <b>Quantity Sold</b>, <b>Quantity Returned</b>, and <b>Quantity Available</b> fields. Vendor 100 is the primary vendor for item A120. Since the last PAD document was created for vendor 100, you have sold 5 A120s. Because there has been a change in quantity for an item of which vendor 100 is the primary vendor, Day-End Processing (MENU XAMAST -Option 2) will create the PAD document for vendor 100. The PAD document that is created will contain Quantity Sold and Quantity Available. Because Quantity Returned has not changed, it will not be included on the PAD document. Additionally, because there has been a change to one or more of the quantities selected on this screen (i.e., <b>Quantity Sold</b> and <b>Quantity Available</b>), the PAD document will be sent to vendor 100.</p> <p>You can select to send the PAD document to this vendor whenever one or more of the following quantities have changed for an item of which the vendor is the primary vendor:</p> |
| Quantity Sold      | <p>The quantity of this item that has been sold to customers since the last time the PAD document was created for the vendor.</p> <p><i>Default Value:</i> N.</p> <p><i>Valid Values:</i> You must key a <b>Y</b> for at least one of the Send Quantities.</p> <p>(A 1) Required</p>  |
| Quantity Returned  | <p>The quantity of this item that has been returned by customers since the last time the PAD document was created for this vendor.</p> <p><i>Default Value:</i> N.</p> <p><i>Valid Values:</i> You must key a <b>Y</b> for at least one of the Send Quantities.</p> <p>(A 1) Required</p>   |

---

**Vendor Master Additional EDI Maintenance Screen Fields and Function Keys**

| Field/Function Key       | Description   |
|--------------------------|---|
| On-Hand Quantity         | <p>The quantity of the item that is currently on-hand; meaning the quantity before considering items ordered by your customers or ordered from your vendors.</p> <p><i>Default Value:</i> N.</p> <p><i>Valid Values:</i> You must key a <b>Y</b> for at least one of the Send Quantities.</p> <p>(A 1) Required</p>   |
| Maximum On-Hand Quantity | <p>The maximum quantity of the item that should remain in inventory as defined through the Item Balance File Maintenance (MENU IAFILE).</p> <p><i>Default Value:</i> N.</p> <p><i>Valid Values:</i> You must key a <b>Y</b> for at least one of the Send Quantities.</p> <p>(A 1) Required</p>  |
| Minimum On-Hand Quantity | <p>The minimum quantity of the item that should remain in inventory as defined through the Item Balance File Maintenance (MENU IAFILE).</p> <p><i>Default Value:</i> N.</p> <p><i>Valid Values:</i> You must key a <b>Y</b> for at least one of the Send Quantities.</p> <p>(A 1) Required</p>  |
| Quantity on Back Order   | <p>The quantity of the item that is on backorder. This is the quantity that has been ordered by customers, but cannot be shipped.</p> <p><i>Default Value:</i> N.</p> <p><i>Valid Values:</i> You must key a <b>Y</b> for at least one of the Send Quantities.</p> <p>(A 1) Required</p>  |
| Quantity on PO           | <p>The quantity of the item that is on open purchase orders. Items on an open purchase order have been ordered through Purchasing, but not yet received.</p> <p><i>Default Value:</i> N.</p> <p><i>Valid Values:</i> You must key a <b>Y</b> for at least one of the Send Quantities.</p> <p>(A 1) Required</p>   |
| Quantity Committed       | <p>The quantity of the item that is currently committed to specific customer orders. Inventory can be committed to orders automatically as the orders are entered, or manually through Inventory Commit/Uncommit (MENU OEMAST). Depending on how you have set up your Order Entry options, the quantity committed may or may not equal the quantity allocated for an item.</p> <p><i>Default Value:</i> N.</p> <p><i>Valid Values:</i> You must key a <b>Y</b> for at least one of the Send Quantities.</p> <p>(A 1) Required</p> |

---

**Vendor Master Additional EDI Maintenance Screen Fields and Function Keys**

---

| Field/Function Key      | Description  |
|-------------------------|--|
| Quantity Available      | <p>The quantity of the item that is available to fill customer orders. This quantity is calculated during Day-End Processing (MENU XAMAST) on the date that the PAD document is scheduled to be created for the vendor.</p> <p>If Warehouse Management is not installed, the quantity available is calculated as:</p> <p><b>Calculation:</b> Qty Available = Qty On-Hand - Qty Allocated + Unposted Receipts + Special Orders</p> <p>If Warehouse Management is installed, the quantity available is calculated as:</p> <p><b>Calculation:</b> Qty Available = Qty On-Hand - Qty Allocated + Unposted Receipts + Special Orders - Allocated Warehouse Transfers - Qty in Reserved Locations + Returns in Reserved Locations</p> <p><i>Default Value:</i> N</p> <p><i>Valid Values:</i> You must key a Y for at least one of the Send Quantities.</p> <p>(A 1) Required</p>   |
| Exclude Non-Stock Items | <p>Key Y if you do not want Distribution A+ to consider the quantities of non-stock items when determining whether to create the PAD document for this vendor. A non-stock item is an item defined with an N in the <b>Update Inventory</b> field through Item Master File Maintenance (MENU IAFILE).</p> <p>Key N if you do want Distribution A+ to consider the quantities of non-stock items.</p> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p>  |
| F12=Return              | <p>Press the F12=RETURN function key to cancel your entries and return to the Vendor Master Additional Information Maintenance Screen (p. 43-65).</p>  |
| Enter                   | <p>Press ENTER to confirm your entries.</p> <p>One of the following screens will appear based on the following conditions and hierarchy:</p> <ul style="list-style-type: none"> <li>• Vendor Master Additional EDI Maintenance - 867 Screen (p. 43-80), if <b>Send Product Transfer &amp; Resale Report (867)</b> is set to Y on the Vendor Master Additional Information Maintenance Screen (p. 43-65)</li> <li>• Vendor Rebate Customer Maintenance Screen (p. 43-88), if Mail Server is not installed and you are using Vendor Rebates, and you identified the vendor as using the Accounts Receivable method of rebates [on the Vendor Master Maintenance (1) Screen (p. 43-32)].</li> <li>• Vendor Master Maintenance Selection Screen (p. 43-3), if Vendor Rebates are not being used, or if you did not identify the vendor as using the Accounts Receivable method of rebates [on the Vendor Master Maintenance (1) Screen (p. 43-32)].</li> </ul> |

## Vendor Master Additional EDI Maintenance - 867 Screen

```
ADDITIONAL EDI MAINTENANCE - 867
Vendor: 200 K & M CORPORATION

867 OPTIONS:      Send Frequency:      W
                  If weekly, enter day of week:  ..
                  Purge Days:      365

F12=Return
```

This screen displays after you press the **ENTER** key on the

- Vendor Master Additional Information Maintenance Screen (p. 43-65), if you have EDI installed/set up and you keyed a **Y** in the **Send Product Transfer & Resale Report (867)** field and you keyed a **N** in the **Send Product Activity Data (852)** field.
- Vendor Master Additional EDI Maintenance Screen (p. 43-72), if you have EDI installed and you keyed a **Y** in the **Send Product Transfer & Resale Report (867)** field.

Use this screen to set up the conditions for creating and transmitting the Product Transfer& Resale Report document to this vendor. Fields on this screen allow you to specify:

- how often to send the Product Transfer& Resale Report document to the vendor
- how often to purge records from the Product Transfer& Resale Report Header File and the Transfer& Resale Report Detail File during Day-End Processing (MENU XAMAST).

---

**Vendor Master Additional EDI Maintenance -867 Screen Fields and Function Keys**

| Field/Function Key           | Description   |
|------------------------------|---|
| Send Frequency               | <p>Use this field to specify how often you want Distribution A+ to capture the information and create the Product Transfer&amp; Resale Report document for this vendor.</p> <p>Key an <b>M</b> for monthly frequency that will be submitted on the first day-end after the last day-end of the month with from/to dates covering the previous calendar month.</p> <p>Key a <b>D</b> for daily frequency (maximum of once a day) will be submitted for invoices posted the previous day.</p> <p>Key a <b>W</b> for weekly frequency that will be created during the first day-end on or after the day of the week selected within a from-to date range covering the seven (7) days prior to but not including the day selected.</p> <p><i>Valid Values:</i> M for monthly, W for weekly and D for daily.</p> <p>(A 1,0) Required</p> |
| If weekly, enter day of week | <p>Use this field to specify the day of the week that the Product Transfer&amp; Resale Report document will be created for <b>Send Frequency</b> of weekly.</p> <p><i>Valid Values:</i> A number between 1 and 7.</p> <p>(N 1,0) Required</p>   |
| Purge Days                   | <p>Use this field to specify how often you want Distribution A+ to purge records from the Product Transfer&amp; Resale Header File and the Product Transfer&amp; Resale Detail File during Day-End Processing (MENU XAMAST).</p> <p>During Day-End Processing, Distribution A+ will purge all records for which the difference between the send date of the PTR document and the day-end date is greater than the number of days you specify here.</p> <p>Key the number of days you want used to purge PTR document records.</p> <p><i>Valid Values:</i> A number greater than zero.</p> <p>(N 3,0) Required</p>   |
| F12=Return                   | <p>Press <b>F12=RETURN</b> to cancel your entries and return to the Vendor Master Additional EDI Maintenance Screen (p. 43-72) or the Vendor Master Additional Information Maintenance Screen (p. 43-65).</p>   |

## Vendor Rebate Customer Maintenance Screen

| VENDOR REBATE CUSTOMER MAINTENANCE |                   |            |          |
|------------------------------------|-------------------|------------|----------|
| Vendor: 200                        | K & M CORPORATION | US Dollars |          |
| Co                                 | Customer          | Name       | Currency |
| 1                                  | .....             |            |          |
| 2                                  | .....             |            |          |
| 3                                  | .....             |            |          |

F12=Return

---

NOTE: This screen displays only if you are using Vendor Rebates, and you identified the vendor as using the Accounts Receivable method of rebates [on the Vendor Master Maintenance (1) Screen (p. 43-32)].

---

This screen displays after pressing **ENTER** on the one of the following screens, depending on which modules are installed:

- Vendor Master Maintenance (2) Screen (p. 43-46)
- A/P Vendor Master Maintenance Screen (p. 43-48)
- Vendor Master Additional Information Maintenance Screen (p. 43-65)
- Vendor Master Additional EDI Maintenance Screen (p. 43-72)
- Vendor Master Additional Email Maintenance Screen (p. 43-83)

Use this screen to identify those customers having a rebate relationship with this vendor in which the method for rebate payment is accounts receivable, as opposed to accounts payable. The customer numbers will be used in determining the accounts affected. In other words, when rebates are generated by this vendor for these customers, these customer number will be used in A/R to ensure G/L consistency.

---

### Vendor Rebate Customer Maintenance Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Co                 | <p>NOTE: This field displays only if you are established in Distribution A+ through System Options Maintenance (MENU XAFILE) as multi-company.</p> <p>The companies defined in Distribution A+ for which rebates might be established will be presented. For each company presented, the customer number is to be keyed to identify with whom the vendor/customer rebate relationship exists.</p> <p>Display</p>                      |
| Customer           | <p>Use this field to identify the customer number, for the specified company, with whom the rebate relationship exists. This customer number will be used in determining how A/R will be affected.</p> <p>Key the desired customer number. After keying the number and pressing <b>ENTER</b>, the name of the customer, as defined through Customer/Ship to Master Maintenance (MENU ARFILE) will display.</p> <p>(A 10) Optional</p> |
| F12=Return         | Press <b>F12=RETURN</b> to return to the previous screen.   |
| Enter              | Press <b>ENTER</b> to confirm your selections and update additions or changes made for this vendor. The Vendor Master Maintenance Selection Screen (p. 43-3) will display.  |

---

## Vendors Listing

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

If you are accessing Vendors Listing from **MENU APFILE**, you will be presented with the following screen and listing:

| Title                              | Purpose  |
|------------------------------------|--|
| A/P Vendor Master File List Screen | Use to select the range of vendors to print on the Vendor Master File Listing for Accounts Payable (p. 43-93). |

| <b>Title</b>                                    | <b>Purpose</b>  |
|---|---|
| Vendor Master File Listing for Accounts Payable | Prints the contents of the Accounts Payable Vendor Master File. |

---

If you are accessing Vendors Listing from **MENU POFILE**, you will be presented with the following screen and listings:

| <b>Title</b>   | <b>Purpose</b>  |
|--|---|
| Vendor Master File List Screen                             | Use to select the range of vendors to print on the Vendor Master File Listing for Purchasing.   |
| Vendor Master File Listing for Purchasing - for Purchasing | Prints the contents of the Vendor Master File.  |
| Vendor EDI/FAX/EMAIL Options Listing                       | Prints EDI/FAX/EMAIL options for the vendors.   |
| Vendor Special Order Options Listing                       | Prints the special order options defined for vendors through Vendors Maintenance (MENU POFILE). |

---

## A/P Vendor Master File List Screen

AP VENDOR MASTER FILE LIST

Vendor:            \_ .....    to    .....

Sort Word:        .....        to    .....

Vendor AP Class?    ...        to?    ...

Hold Code?        ...        to?    ...

Include Full Address:    ..    (Y,N)

F3=Cancel

This screen displays after selecting option **11** - Vendors Listing from the A/P File Maintenance Menu (MENU APFILE). Use this screen to select the range of vendors and other criteria to print on the Vendor Master File Listing for Accounts Payable (p. 43-93).

Refer to the Cross Applications User Guide for an explanation of the rules for entering From/To Ranges.

### A/P Vendor Master File List Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Vendor             | Key the range of vendor numbers to print on the Vendor Master File Listing.<br>(2 @ A 6) Required   |
| Sort Word          | Key the range of sort words assigned to the vendors to print. Sort words are assigned to a vendor through Vendors Maintenance on the A/P Vendor Master Maintenance Screen (p. 43-48) (MENU APFILE/MENU POFILE).<br>(2 @ A 10) Required  |
| Vendor A/P Class   | Key the range of Vendor A/P Classes assigned to the vendors to print. Vendor A/P Classes are assigned to a vendor through Vendors Maintenance on the A/P Vendor Master Maintenance Screen (p. 43-48) (MENU APFILE/MENU POFILE).<br><i>Valid Values:</i> a vendor A/P Class defined through Vendor Class Maintenance (MENU APFILE)<br>(2 @ A 2) Required |

**A/P Vendor Master File List Screen Fields and Function Keys**

| <b>Field/Function Key</b> | <b>Description</b>  |
|---------------------------|---|
| Hold Code                 | Key the range of hold codes assigned to the vendors to print. Hold codes are assigned to a vendor through Vendors Maintenance on the A/P Vendor Master Maintenance Screen (p. 43-48) (MENU APFILE/MENU POFILE).<br><i>Valid Values:</i> an A/P hold code defined through Hold Codes Maintenance (MENU APFILE)<br>(2 @ A 2) Required   |
| Include Full Address      | Use to determine if the vendor's full address will print on the report.<br>Key <b>Y</b> to print the full address that includes four address lines, city, state/province, zip/postal code, and country code. This adds 2 print lines per vendor to the report.<br>Key <b>N</b> to only print the customer name and not print the 2 lines of full address information address on the report.<br>(A 1) Required |
| F3=Cancel                 | Press <b>F3=CANCEL</b> to cancel this option and return to MENU APFILE.   |
| Enter                     | Press <b>ENTER</b> to confirm your entries. The Report Options Screen will display. The reference section for this screen is in the Appendix section of the Cross Applications User Guide.  |

This listing is produced following your responses on the A/P Vendor Master File List Screen (p. 43-91), and the Report Options Screen.

All vendors that match the criteria specified on the A/P Vendor Master File List Screen (p. 43-91) are printed. This listing is sequenced by vendor number. When International Currency is installed, the fields relevant to that module are also printed. Refer to the Vendors Maintenance screens for details on the specific fields of this report.

NOTE: The Vendors Listing printed from Menu POFIL and the Vendors Listing printed from Menu APFIL are different reports and list the information relevant to each specific module.

NOTE: For the **Federal Tax ID** field, the display is based on your authorization to **Allow Access to Federal Tax ID** in Application Action Authority (MENU XASCTY). If you are not authorized, the field will display asterisks. If you are authorized, the un-encrypted federal tax identification code will display.

## Vendor Master File List Screen

VENDOR MASTER FILE LIST

Include Full Address:            **N** (Y,N)

Vendor Number:        ..... To:        .....

EDI/FAX/EMAIL Options Listing: **N** (Y,N)

Special Order Options Listing: **N** (Y,N)

F3=Cancel

This screen displays after selecting option **11** - Vendors Listing from the Purchasing File Maintenance Menu (MENU POFILE). Use this screen to select the range of vendors to print on the Vendor Master File Listing for Purchasing (p. 43-96). You can also select whether to print EDI, FAX and e-mail information for the selected vendors and whether to print the Vendor Special Order Options Listing.

### Vendor Master File List Screen Fields and Function Keys

| Field/Function Key   | Description  |
|----------------------|--|
| Include Full Address | Use this field to specify if the full address for this vendor will print.<br>Key <b>Y</b> to print the vendor's full address.<br>Key <b>N</b> if you do not want the full address printed.<br>(A 1) Required |
| Vendor Number        | Select the vendors to print on the Vendor Master File Listing using the FROM/TO ranges explained in the Cross Applications User Guide.<br>(2 @ A 6) Required   |

---

**Vendor Master File List Screen Fields and Function Keys**

| Field/Function Key            | Description  |
|-------------------------------|--|
| EDI/FAX/EMAIL Options Listing | <p>This field appears only if you have one or more of the following modules installed:</p> <ul style="list-style-type: none"> <li>• Electronic Data Interchange (EDI)</li> <li>• FAX</li> <li>• Mail Server</li> </ul> <p>Key <b>Y</b> to print the Vendor EDI/FAX/EMAIL Options Listing, which lists the EDI, FAX, and e-mail information that has been entered for each vendor selected. The report will print after the Vendor Master File Listing for Purchasing (p. 43-96).</p> <p>Key <b>N</b> if you do not want to print the Vendor EDI/FAX/EMAIL Options Listing. Only the Vendor Master File Listing for Purchasing (p. 43-96) will print.</p> <p>(A 1) Required</p> |
| Special Order Options Listing | <p>Use this field to specify whether or not you want the Vendor Special Order Options Listing to print along with the Vendor Master File Listing. The Vendor Special Order Options Listing prints the special order options defined for vendors through Vendors Maintenance (MENU POFIL).</p> <p>Key <b>Y</b> if you want the Vendor Special Order Options Listing to print. If you key <b>Y</b>, the listing will print based on the vendor range only; it will not take into consideration any additional selection criteria.</p> <p>Key <b>N</b> if you do not want the Vendor Special Order Options Listing to print.</p> <p>(A 1) Required</p>                            |
| F3=Cancel                     | <p>Press <b>F3=CANCEL</b> to cancel this option and return to MENU POFIL.</p>  |
| Enter                         | <p>Press <b>ENTER</b> to confirm your entries. The Report Options Screen will display. The reference section for this screen is in the Appendix section of the Cross Applications User Guide.</p>  |

The Vendor Special Order Options Listing prints the special order options defined for vendors through Vendors Maintenance (MENU POFILE). Refer to Vendor Special Order Options Screen (p. 43-9) for a description of the fields on this report.

---

## Vendor/Item and Vendor/Item/Warehouse Information

### Vendor/Item

This option allows you to establish item ordering information used when creating or changing requisitions through Enter or Change Requisitions (MENU POMAIN). Unique ordering information is established for each vendor from whom an item can be purchased. Items purchased from a vendor on a regular basis may be linked to that vendor through this option; this is referred to as a vendor/item. The data relating to a vendor/item is maintained in the Vendor/Item File. If any costs are associated with this vendor/item, this data is maintained in the Vendor/Item/Price File (VIPRC). For example, if an item is available from three vendors, this option may be used to create three records for this item in the Vendor/Item File; and also automatically create three records in the Vendor/Item/Price File for the associated costs.

Before a vendor/item can be added, the vendor must already have been created in the Vendor Master File through Vendors Maintenance (MENU POFILE/MENU APFILE), and the item must have been created in the Item Master File through Item Master Maintenance (MENU IAFILE). Vendor/items that were previously created may be viewed through the Vendor/Item Information Inquiry (MENU POMAIN).

Vendor/item records can also be defined for warehouse transfer vendors. However, since the costing used for warehouse transfers comes from options defined through Purchasing Options Maintenance (MENU XAFILE), the costing screen will not be displayed in this option for warehouse transfer vendors. Additionally, since this costing screen is not available for warehouse transfer vendors, multi-currency landing costs are not permitted.

---

NOTE: You have the option to automatically generate vendor/item information instead of manually keying it through this option. See CHAPTER 53: *Create Default Vendor/Item Information from Item Master/Item Balance* (MENU POFILE).

---

If you are using EDI to transmit Product Activity Data (852) documents, the purchasing unit of measure is used when creating those documents.

---

If the **Days to Keep Vendor/Item Audit Activity** field is greater than 0 in Purchasing System Options Maintenance (MENU XAFILE), vendor/item information changes will be tracked and can be accessed via the F18=VENDOR/ITEM ACTIVITY function key on the Vendor/Item Master Maintenance Screen (p. 44-4) in this menu option.

## Vendor/Item/Warehouse

When adding a vendor/item record to the Vendor/Item File, you will be prompted for vendor/item cost information. Keying this information will automatically create a record for that vendor/item in the Vendor/Item/Price File (VIPRC).

If desired, you may also identify a warehouse when creating the vendor/item record. This will ensure that when this related record is created in the Vendor/Item/Price File, the costs will be specific to that warehouse; this is referred to as a vendor/item/warehouse. Maintaining costs at the warehouse level is usually needed for distributors with multi-warehouse environments.

If no separate data for an individual warehouse is necessary, a vendor/item/price record with no warehouse (**WH** field is blank on this initial screen) will be created and used as the default cost information for the vendor/item.

While vendor/item records can be defined for warehouse transfer vendors, vendor/item/warehouse records cannot be defined for warehouse transfer vendors. This is because the costing information comes from the options defined through Purchasing Options Maintenance (MENU XAFILE).

---

NOTE: The vendor cost data included in the Vendor/Item/Price File is not the same field as the item cost/pricing data maintained in the Item Balance File.

---

If the **Days to Keep Vendor/Item Audit Activity** field is greater than 0 in Purchasing System Options Maintenance (MENU XAFILE), vendor/item/warehouse information changes will be tracked and can be accessed via the F18=VENDOR/ITEM ACTIVITY function key on the Vendor/Item Master Maintenance Screen (p. 44-4) in this menu option.

## Vendor/Item Information Maintenance

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                                 | Purpose  |
|---------------------------------------|--|
| Vendor/Item Master Maintenance Screen | Use to select the vendor/item or vendor/item/warehouse record to add, change or delete, and access vendor/item audit activity, if available. |

| <b>Title</b>  | <b>Purpose</b>   |
|---|--|
| Vendor/Item Audit Activity Screen                       | Use to review a summary of vendor/item or vendor/item/warehouse activity for the vendor, item, and, optionally, a warehouse.   |
| Vendor/Item Audit Activity Detail Screen                | Use to view specific changes for vendor/item or vendor/item/warehouse information about the activity you selected, including the previous (old) value and the new value.           |
| Vendor/Item File Detail Screen                          | Use to establish conversion factors used in Purchasing.  |
| Vendor/Item Price File Screen                           | Use to review default information when adding a new vendor/item.   |
| Vendor/Item Information Landing Costs Screen (p. 19-13) | Use to display or recalculate (for review) the landing costs for the vendor, item, and warehouse. This screen is described in CHAPTER 19: <i>Vendor/Item Information Inquiry</i> . |

## Vendor/Item Master Maintenance Screen

```

VENDOR/ITEM MASTER MAINTENANCE

Function:  _ (A,C,D)

Vendor No: .....
Find: .....
City: .....

Item No: .....
Find: .....
Item: ..... Class: .....

WH?      ... (Optional)

F3=Exit      F18=Vendor/Item Activity
    
```

This screen displays after selecting option **2** - Vendor/Item Information Maintenance (MENU PROFILE).

Use this screen to select the vendor/item or vendor/item/warehouse record to add, change or delete. If the **WH** field is left blank, you are creating/maintaining a vendor/item record; if a value is keyed, you are creating/maintaining a vendor/item/warehouse record.

If the **Days to Keep Vendor/Item Audit Activity** field is greater than **0** in Purchasing System Options Maintenance (MENU XAFIELD), vendor/item information changes will be tracked and you can access vendor/item or vendor/item/warehouse information changes via the **F18=VENDOR/ITEM ACTIVITY** function key on this screen.

### Vendor/Item Master Maintenance Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Function           | Key <b>A</b> to add a vendor/item or vendor/item/warehouse record.<br>Key <b>C</b> to change an existing vendor/item or vendor/item/warehouse record.<br>Key <b>D</b> to delete an existing vendor/item or vendor/item/warehouse record. |
|                    | NOTE: Vendor/item information cannot be deleted if an open payable or vendor contract exists for this vendor and item.   |
|                    | (A 1) Required   |

---

**Vendor/Item Master Maintenance Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Vendor No          | <p>Key the vendor number for whom you are adding, changing or deleting vendor/item or vendor/item/warehouse information.</p> <p><i>Valid Values:</i> Any vendor set up through Vendor Master Maintenance</p> <p>(A 6) Required</p>   |
| Find               | <p>Use this field to activate the Vendor Search feature when you do not know the vendor's number.</p> <p>Key the vendor's name or up to 10 characters (the first 10) of one or more words in the vendor's name and press <b>ENTER</b> to display the Vendor Search Screen.</p> <p>To limit the vendor search by city (i.e., search for the specified vendor name within a particular city), key a city in the <b>City</b> field as well.</p> <p>For more information on using searches, refer to the Cross Applications User Guide.</p> <p>(A 40) Optional</p> |
| City               | <p>When using the <b>Find</b> field to search for a vendor, you can limit the search to a particular city by keying a partial or complete city name in this field.</p> <p>If you enter characters in this field, the Vendor Search Screen displays only vendors that meet the criteria specified here and in the <b>Find</b> field.</p> <p>For more information on using searches, refer to the Cross Applications User Guide.</p> <p>(A 8) Optional</p>   |
| Item No            | <p>Key the number of the item, supplied by this vendor, for which processing will occur.</p> <p><i>Valid Values:</i> Any item set up through Item Master Maintenance (MENU IAFILE)</p> <p>(A 27) Required</p>  |

---

**Vendor/Item Master Maintenance Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| Find               | <p>Use this field to search for an item using one or more words that closely match the item for which you are searching. The words you key may be up to 15 characters long and may appear in any order. Key the most unique words to improve the speed of the search. Leave this field blank if you would like to search on an item class.</p> <p>To search for manufacturer item numbers, prefix the criteria you enter with <b>M/</b>. The system will search based on the Vendor/Item File (VNITM) valid manufacturer item number.</p> <p>To search for customer item numbers, prefix the criteria you enter with <b>C/</b>. The system will search based on the Item/Customer Cross Reference File (IAXRF) valid customer item numbers.</p> <p>To search for UPC cross references, prefix the criteria you enter with <b>U/</b>. The system will search based on the Universal Product Code File (ITUPC) for valid UPC cross references.</p> <p>To search for GTIN cross references, prefix the criteria you enter with <b>G/</b>. The system will search based on the Global Trade Item Number File (ITGTIN) for valid GTIN cross references.</p> <p>(A 40) Optional</p> |
| Item No            | <p>This field may be used in addition to, or in place of, entering search criteria in the <b>Find</b> field to further limit the items to display.</p> <p>Key a partial item number. All items that match the characters of the item number keyed in this field will display. This is helpful if you recall part of an item number, but not the entire number.</p> <p>For information on entering search criteria, refer to the Cross Applications User Guide.</p> <p>(A 27) Optional</p>   |
| Class              | <p>This field may be used in addition to (not in place of) the search criteria in the <b>Find</b> or <b>Item No</b> fields to further limit the number of items that will display, based on their item class.</p> <p>Key the appropriate item class and sub-class, if any. Only items that have been assigned the item class that is keyed in this field will display on the Item Description Search Screen.</p> <p>For information on entering search criteria, refer to the Cross Applications User Guide.</p> <p>(A 2/A 2) Optional</p>  |

---

---

**Vendor/Item Master Maintenance Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| WH                 | <p>This field appears only if the <b>Multi Warehouse</b> field is set to <b>Y</b> through System Options Maintenance (MENU XAFILE).</p> <p>This field determines whether or not you are creating/maintaining a default vendor/item/warehouse record (this field is left blank), or a unique vendor/item/warehouse record (this field contains a value).</p> <p>If creating/maintaining a default vendor/item/warehouse record, leave this field blank to work with this record for the specified vendor/item. In other words, if a warehouse is not keyed in this field, pricing information is considered to be at the vendor/item level.</p> <p>If creating/maintaining a unique vendor/item/warehouse record, key the ID of the warehouse for which vendor/item/price costing information will be created/maintained. In other words, if a warehouse is keyed in this field, this will create a unique vendor/item/warehouse record which will be used specifically for vendor item cost data.</p> <p><i>Valid Values:</i> A warehouse defined through Warehouse Numbers Maintenance (MENU IAFILE). If the vendor specified in the <b>Vendor No</b> field is a warehouse transfer vendor, this field must be blank.</p> <p>(A 2) Optional</p> |
| F3=Exit            | Press <b>F3=EXIT</b> to cancel this option and return to MENU POFILE.  |

---

---

## Vendor/Item Master Maintenance Screen Fields and Function Keys

| Field/Function Key       | Description  |
|--------------------------|--|
| F18=Vendor/Item Activity | <p>The F18=VENDOR/ITEM ACTIVITY function key appears only if the <b>Days to Keep Vendor/Item Audit Activity</b> field is greater than 0 in Purchasing System Options Maintenance (MENU XAFILE).</p> <p>If vendor/item audit records exist, after entering a value in the <b>Function</b>, <b>Vendor No</b>, <b>Item No</b>, and optional <b>WH</b> fields, press F18=VENDOR/ITEM ACTIVITY to access vendor/item audit activity for the number of days vendor/item audit activity is kept (see note below). The Vendor/Item Audit Activity Screen (p. 44-9) will appear.</p> <p>If the <b>WH</b> field is blank, you will be accessing vendor/item information changes.</p> <p>If the <b>WH</b> field contains a value, you will be accessing vendor/item/warehouse information changes.</p> <hr/> <p>NOTE: Deleted vendor/item or vendor/item/warehouse records are not available for review through Vendor/Item Audit Activity. When a vendor/item or vendor/item/warehouse record is deleted, any previously tracked data will also be deleted.</p> <hr/> <p style="text-align: center;"><b>Important</b></p> <p>When F18=VENDOR/ITEM ACTIVITY is pressed, all Vendor/Item Audit Activity File records with a system date older than the number of days defined in the <b>Days to Keep Vendor/Item Audit Activity</b> field in Purchasing System Options Maintenance (MENU XAFILE) will be purged.</p> <hr/> |
| Enter                    | <p>Press ENTER to confirm your selections.</p> <p>If there is vendor search criteria, the Vendor Search Screen (p. 43-7) appears.</p> <p>If there is item search criteria, the Item Search Screen appears. Refer to the Inventory Accounting User Guide for information on this screen.</p> <p>If no warehouse was keyed (in the <b>WH</b> field), the Vendor/Item File Detail Screen (p. 44-17) will display. If a warehouse was keyed, the Vendor/Item Price File Screen (p. 44-26) will display.</p> <hr/>  |

## Vendor/Item Audit Activity Screen

| VENDOR/ITEM AUDIT ACTIVITY |    |                   |                                    |            |            |              |
|----------------------------|----|-------------------|------------------------------------|------------|------------|--------------|
| Vendor: 200                |    | K & M CORPORATION |                                    | Warehouse: |            |              |
| Item: A150                 |    |                   |                                    |            |            |              |
| 3-Ring Binder - 2" Red     |    |                   |                                    |            |            |              |
| Sel                        | WH | Function          | User ID                            | Program    | Date       | User Time    |
| 1                          |    | Change            | APDEMO                             | P0910      | 10/24/18   | 13:35:52 EST |
| 2                          |    | Change            | APDEMO                             | P0910      | 10/24/18   | 9:38:30 EST  |
| 3                          |    | Change            | APDEMO                             | P0910      | 10/24/18   | 9:38:04 EST  |
| Selection: ...             |    |                   |                                    |            |            | Last         |
|                            |    |                   | From System Activity Date: .....   |            | To: .....  |              |
|                            |    |                   | Warehouse? ... (**-All Warehouses) |            |            |              |
|                            |    |                   | F2=Actual Time                     |            | F12=Return |              |

This screen displays after pressing F18=VENDOR/ITEM ACTIVITY from the Vendor/Item Master Maintenance Screen (p. 44-4).

Use this screen to review a summary of vendor/item or vendor/item/warehouse activity for the vendor, item, and, optionally, a warehouse displayed in the header area.

If the **Warehouse** field (in the header area of this screen) is blank, you are viewing related vendor/item information changes.

If the **Warehouse** field (in the header area of this screen) is filled with a valid warehouse, you are viewing vendor/item/warehouse information changes.

Initially the vendor, item and, optionally, a warehouse field values are filled with values selected on the Vendor/Item Master Maintenance Screen (p. 44-4). You can then limit the vendor/item or vendor/item/warehouse activity summary displayed by using the **Warehouse** number limit field value, and **From/To System Activity Date** range.

If no vendor/item activity records exist, a message will display informing you that no records were located.

---

NOTE: When this screen is accessed, a purge occurs of the Vendor/Item Audit Activity File records with a system date older than the number of days defined in the **Days to Keep Vendor/Item Audit Activity** field in Purchasing System Options Maintenance (MENU XAFIELD). Only vendor/item audit activity records are displayed for the number of days vendor/item audit activity is kept based on the **Days to Keep Vendor/Item Audit Activity** field.

---

NOTE: This is a roll screen. More... appears at the bottom of a roll screen to indicate that more data is available for viewing. Last appears at the bottom of the last screen of

---

data. To scroll through information on roll screens press:

\* PAGE DOWN or SHIFT-ROLL FWD or F7=PAGE DOWN to display the next screen

\* PAGE UP or SHIFT-ROLL BACK or F8=PAGE UP to display the previous screen.

### Vendor/Item Audit Activity Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Vendor             | <p>The vendor you selected on the Vendor/Item Master Maintenance Screen (p. 44-4) for which audit activity is displayed. The vendor's description displays to the right of the vendor number.</p> <p>Display</p>  |
| Item               | <p>The item you selected on the Vendor/Item Master Maintenance Screen (p. 44-4) for which audit activity is displayed. The item's description displays below the item number.</p> <p>Display</p>  |
| Warehouse          | <p>The warehouse, if any, for which audit activity is displayed. The warehouse's description displays to the right of the warehouse number.</p> <p>The value of this field can be blank, **, or a valid warehouse number defined through Warehouse Numbers Maintenance (MENU IAFILE).</p> <p>If this field is blank, this screen shows vendor/item audit activity.</p> <p>If ** is displayed in this field, this screen shows vendor/item or vendor/item/warehouse audit activity for all warehouses.</p> <p>If a valid warehouse number is displayed in this field, this screen shows vendor/item/warehouse audit activity for this warehouse only.</p> <p>Initially, this field displays the warehouse you selected, if any, on the Vendor/Item Master Maintenance Screen (p. 44-4), and this screen shows related audit activity.</p> <p>If you enter a different value in the <b>Warehouse</b> limit field displayed on the lower portion of this screen and press ENTER, this screen will be refreshed with a new value of the <b>Warehouse</b> field and related audit activity.</p> <p>Display</p> |
| Sel                | <p>This is the line number of the corresponding activity record. Use this number in the <b>Selection</b> field (on the lower portion of the screen) to choose a record for further details.</p> <p>Display</p>  |
| WH                 | <p>The warehouse for which changes were made.</p> <p>Display</p>  |

### Vendor/Item Audit Activity Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Function           | <p>The function of the activity that was performed on the vendor/item or vendor/Item/warehouse records (files VNITM, VIPRC, ICVIP) through this option or other programs.</p> <p>Functions include:</p> <ul style="list-style-type: none"> <li>• Add<br/>Vendor/Item or Vendor/Item/Warehouse record</li> <li>• Change<br/>Vendor/Item or Vendor/Item/Warehouse record</li> </ul> <p>Display</p>   |
| User ID            | <p>The user ID of the person who performed the activity on the on the vendor/item or vendor/Item/warehouse records (files VNITM, VIPRC, ICVIP).</p> <p>Display</p>   |
| Program            | <p>The name of the program that performed the activity on the vendor/item or vendor/Item/warehouse records (files VNITM, VIPRC, ICVIP).</p> <p>Display</p>   |
| Date               | <p>This field displays the date, in your default date format specified through Register A+ User IDs (MENU XACFIG), on which the activity was performed on the vendor/item or vendor/Item/warehouse records (files VNITM, VIPRC, ICVIP).</p> <p>The display of this field may change depending on the corresponding <b>Time</b> field and what time is shown via the F2=ACTUAL TIME / F2=USER TIME / F2=SYSTEM TIME toggle key.</p> <p>The <b>User Date</b> is the date on which the activity occurred in relation to your default time zone. Your default user time zone is set up through Register A+ User IDs (MENU XACFIG).</p> <p>The <b>Actual Date</b> is the date on which the activity occurred shown in relation to the time zone of the user who performed the activity.</p> <p>The <b>System Date</b> is the date on which the activity occurred shown in relation to the system's default time zone. The system's default time zone is set up through Time Zone Codes Maintenance (MENU OEFIL3).</p> <p><b>Example:</b> A change was made to an item at your company's New York office at 7:00 p.m., Eastern Standard Time (EST) on March 24th. You are inquiring on the activity from an office in Paris, France, which is 6 hours ahead of New York. The <b>User Time</b> and <b>User Date</b> will display as 1:00 a.m., March 25th. The <b>Actual Time</b> and <b>Actual Date</b> will display as 2:00 p.m., March 24th. The time zone difference caused the variance between the <b>User Date</b> and <b>Actual Date</b>. Additionally, you can view the activity in the <b>System Date</b>, which is in relation to the system's time zone.</p> <p>Display</p> |

## Vendor/Item Audit Activity Screen Fields and Function Keys

| Field/Function Key                    | Description  |
|---------------------------------------|--|
| User Time / Actual Time / System Time | <p>This field displays the time on which the activity was performed on the vendor/item or vendor/Item/warehouse records (files VNITM, VIPRC, ICVIP).</p> <p>The display of this field can be toggled with the <b>F2=ACTUAL TIME / F2=USER TIME / F2=SYSTEM TIME</b> function key to show the time in the <b>User Time</b>, <b>Actual Time</b>, or <b>System Time</b>, including the time zone. When this field is toggled, the corresponding <b>Date</b> field also changes accordingly.</p> <p>The <b>User Time</b> is the time in which the activity occurred shown in your default time zone. Your default user time zone is set up through Register A+ User IDs (MENU XACFIG).</p> <p>The <b>Actual Time</b> is the time in which the activity occurred shown in the time zone of the user who performed the activity.</p> <p>The <b>System Time</b> is the time in which the activity occurred shown in the system's default time zone. The system's default time zone is set up through Time Zone Codes Maintenance (MENU OEFIL3).</p> <p><b>Example:</b> A change was made to a special order item at your company's New York office at 2:00 p.m., Eastern Standard Time (EST). You are inquiring on the activity from an office in San Diego, California, which uses Pacific Standard Time (PST). PST is 3 hours earlier than EST. The <b>User Time</b> will display as 11:00 PST (your time zone), and the <b>Actual Time</b> will display as 14:00 EST (the time zone in which the user performed the activity). Additionally, you can view the activity in the system's time zone.</p> <p>Display</p> |
| Selection                             | <p>Use this field to select the line of the activity you want to review in detail.</p> <p>Key the line number shown in the <b>Sel</b> column of the activity you want to select and press <b>ENTER</b> to review detailed information. The Vendor/Item Audit Activity Detail Screen (p. 44-15) will appear.</p> <p>(N 2,0) Optional</p>  |

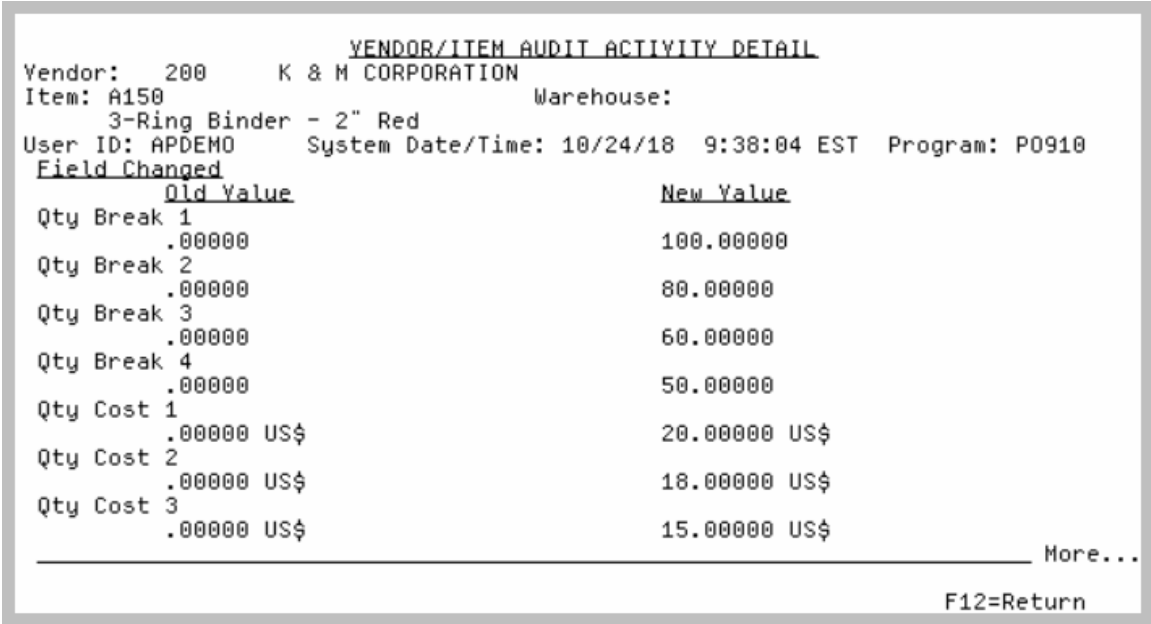

### Vendor/Item Audit Activity Screen Fields and Function Keys

| Field/Function Key                                   | Description   |
|--|---|
| From System Activity Date                            | <p>Use this field to limit the vendor/item activity records to display based on a date range.</p> <p>Key the date range in the appropriate date format (see valid values below) and press <b>ENTER</b>.</p> <p>Leave this field blank to display all existing vendor activity records for this item.</p> <hr/> <p><b>NOTE:</b> Audit activity records are retained based on the value entered in the <b>Vendor/Item Audit Activity</b> field in Purchasing System Options Maintenance (MENU XAFIELD).</p> <hr/> <p>Refer to the Cross Applications User Guide for the rules of keying FROM/TO ranges.</p> <p><i>Valid Values:</i> Key the date using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFIELD).</p> <p>(2 @ N 6,0) Optional</p> |

| F12=Return                   | <p>Press the F12=RETURN function key to return to the Vendor/Item Audit Activity Screen (p. 44-9).</p>   |

### Vendor/Item File Detail Screen

This screen displays vendor/item information, after pressing **ENTER** from the Vendor/Item Master Maintenance Screen (p. 44-4), if no warehouse was keyed. This information is used as the default when creating a requisition or purchase order through Enter or Change Requisitions (MENU POMAIN).

Use this screen to establish conversion factors used in Purchasing. These conversion factors define the relationships between various units of measure.

### Buying U/M and Conversion

#### EXAMPLE 1: Buying U/M and Conversion

Golf balls are stocked and sold by the box (4 sleeves per box). They are purchased by the gross (12 boxes per gross) and priced by the box. Stocking U/M will display as BX.

|              |                                    | Stocking U/M: BX                            |
|--------------|------------------------------------|---|
| Buy U/M: GR  | Buy Conversion Factor:<br>12.00000 | 12 BX (stocking U/M) per GR<br>(buying U/M) |
| Cost U/M: BX | Buy Conversion Factor:<br>12.00000 | 12 BX (cost U/M) per GR<br>(buying U/M)     |

## Alternate U/M and Conversion

### EXAMPLE 2: Alternate U/M and Conversion

Golf balls are stocked and sold by the box (4 sleeves per box). They are purchased by the gross (12 boxes per gross) and priced by the gross. Golf balls may alternately be purchased by the box. Stocking U/M will display as BX.

---

|              |   | Stocking U/M: BX                          |
|--------------|---|---|
| Buy U/M: GR  | Buy Conversion Factor<br>12.00000       | 12 BX (stocking U/M) per GR (buying U/M)  |
| Alt U/M: BX  | Alternate Conversion Factor<br>12.00000 | 12 BX (alternate U/M) per GR (buying U/M) |
| Cost U/M: GR | Buy Conversion Factor:<br>1.00000       | 1 GR (cost U/M) per GR (buying U/M)       |

---

## Catch Weight Costs U/M and Conversion

### EXAMPLE 3: Catch Weight Costs U/M and Conversion

In Item Master Maintenance (MENU IAFILE), the primary stocking unit of measure for the catch weight item is box. One BX weighs 200 pounds. The buying unit of measure is CAS and the buying conversion factor is 12 (12 BX per CAS). The Weight field will be the total weight per CAS, 2400 pounds (200 X 12 = 2400) in this example.

---

|              |                                   | Pricing U/M: LB | Stocking U/M: BX                          |
|--------------|-----------------------------------|-----------------|---|
| Buy U/M: CAS | Buy Conversion Factor<br>12.00000 |                 | 12 BX (stocking U/M) per CAS (buying U/M) |
| Cost U/M: LB | Buy Conversion Factor:<br>1.00000 |                 | 1 LB (cost U/M) per LB (buying U/M)       |

**Vendor/Item File Detail Screen Fields and Function Keys**

| Field/Function Key         | Description  |
|----------------------------|--|
| Item No<br>Our Description | <p>Item Information extracted from the Item Master File (ITMST) [maintained through Item Master Maintenance (MENU IAFILE)] is displayed for the following fields:</p> <ul style="list-style-type: none"> <li>• Item No</li> <li>• Our Description</li> </ul> <p>Display</p>  |
| Stk U/M                    | <p>The stocking unit of measure is defined in Item Master Maintenance (MENU IAFILE) as a unit of measure in which an item is stocked (i.e., each, case, box, etc.); up to three stocking units of measure can be defined in Item Master Maintenance. The first unit of measure shown here is also known as the primary stocking unit of measure.</p> <p>Display</p>  |
| Mfg No                     | <p>Although this field defaults to the manufacturer number identified in the Item Master File (ITMST), this field can be modified to provide a more exact vendor/item manufacturer's number.</p> <p>Key a number to be utilized as a vendor/item number. This vendor/item number will then be used as the default value in the <b>Mfg. No</b> field when creating a requisition through Enter or Change Requisitions (MENU POMAIN).</p> <p><i>Default Value:</i> This is the manufacturer number extracted from the Item Master File (ITMST) [maintained through Item Master Maintenance (MENU IAFILE)].</p> <p>(A 27) Optional</p>  |
| Mfg Description            | <p>Although this field defaults to the item description identified in the Item Master File (ITMST), this field can be modified to provide a more exact vendor/item manufacturer's unique description.</p> <p>Key a description to be utilized as a vendor/item description. This vendor/item description will then be used as the default value in the <b>PO Desc</b> field when creating a requisition through Enter or Change Requisitions (MENU POMAIN).</p> <p><i>Default Value:</i> This is the item description extracted from the Item Master File (ITMST) [maintained through Item Master Maintenance (MENU IAFILE)] and displayed in the <b>Our Description</b> field above.</p> <p>(2 @ A 31) Optional</p> |

**Vendor/Item File Detail Screen Fields and Function Keys**

| Field/Function Key   | Description  |
|----------------------|--|
| Buy U/M & Conversion | <p>Units of measure must be established for ordering from vendors. <b>Buy U/M</b> is the unit of measure in which the item is usually purchased from the vendor. The default value for this field is retrieved from the primary stocking U/M (that is, the U/M identified in the first of the stocking U/M fields on the Item File Maintenance Screen 1) in Item Master Maintenance (MENU IAFILE); however, as this is the vendor's unit of measure it does not have to be a valid defined stocking unit of measure.</p> <p>The conversion factor for the vendor's <b>Buy U/M</b> will be 1 if an item is purchased and stocked in the same unit of measure. Otherwise, quantities are multiplied by the conversion factor to express the quantity in the primary stocking unit of measure [i.e., the first unit of measure in Item Master Maintenance (MENU IAFILE)]. The conversion factor must be linked to that primary stocking U/M so they system will know how to convert this vendor's <b>Buy U/M</b> to the <b>Stk U/M</b>.</p> <p>When defining a vendor/item record for a warehouse transfer vendor, the buying unit of measure will default as the first unit of measure defined for the item through Item Master Maintenance (MENU IAFILE). This field is then protected and cannot be changed.</p> <hr/> <p>NOTE: If you have EDI installed, this unit of measure is used for EDI outgoing Product Activity Data (852) (PAD) documents. You will need to define an EDI reference unit of measure for this unit of measure through EDI Unit of Measure (MENU EIFIL1). If this field is blank or if there is no vendor/item record, the first stocking unit of measure as defined in Item Master File Maintenance (MENU IAFILE) will be used for the EDI outgoing PAD documents.</p> <hr/> <p>Key the buying unit of measure and the conversion factor to the stocking unit of measure.</p> <p><i>Valid Values:</i> there is no validation of this field, any 1 - 3 characters can be used</p> <p>(A 3, N 11,5) Required</p> |

**Vendor/Item File Detail Screen Fields and Function Keys**

| Field/Function Key   | Description  |
|----------------------|--|
| Alt U/M & Conversion | <p><b>Alt U/M</b> is the alternate unit of measure in which an item can be purchased from the vendor. It will default to the second unit of measure that you identified in the stocking U/M fields on the Item File Maintenance Screen 1 in Item Master Maintenance (MENU IAFILE), however, as this is the vendor's unit of measure it does not have to be a valid defined stocking unit of measure,</p> <p>If an item can be purchased in a second unit of measure which is the same as any one of the stocking unit of measures, the quantity will be posted to that corresponding stocking unit of measure. However, the units of measure must be an exact match for this to occur: an alternate unit of measure of DZ is not an exact match to a stocking unit of measure of DOZ.</p> <p>Quantities are multiplied by the conversion factor to express the quantity in the <b>Buy U/M</b> (primary purchasing) unit of measure. The conversion factor must be linked to the <b>Buy U/M</b> so the system will know how to convert this vendor's <b>Alt U/M</b> to the <b>Stk U/M</b>.</p> <p>The conversion fields that display on the second line describe the conversion between the <b>Alt U/M</b> and the <b>Buy U/M</b>.</p> <p>Key the alternate unit of measure and the conversion factor to the buying unit of measure.</p> <p><i>Valid Values:</i> there is no validation of this field, any 1 - 3 characters can be used</p> <p>(A 3, N 11,5) Required</p> |

**Vendor/Item File Detail Screen Fields and Function Keys**

| Field/Function Key    | Description   |
|-----------------------|---|
| Cost U/M & Conversion | <p><b>Cost U/M</b> is the unit of measure in which the cost is expressed. It will default to the pricing unit of measure in Item Master Maintenance (MENU IAFILE). It may be the same as the buy unit of measure.</p> <p>The cost must be multiplied by the cost conversion factor in order to express the field in the <b>Buy U/M</b>. If the <b>Cost U/M</b> is equal to the <b>Buy U/M</b> then the conversion factor will equal 1. If the <b>Cost U/M</b> is equal to the <b>Alt U/M</b> then the conversion factor must be equal to the <b>Alt Conversion</b> factor.</p> <p>If this item is defined as a catch weight item through Item Master Maintenance (MENU IAFILE), <i>*Catch Weight*</i> will display to the left of the <b>Cost U/M</b> field. The values in the <b>Cost U/M</b> and <b>Cost Conversion</b> fields cannot be changed for catch weight items. The costing unit of measure will be the same as the item's pricing unit of measure defined though Item Master Maintenance (MENU IAFILE).</p> <p>The costing conversion factor will be calculated as the item's weight (from the Item Master primary stocking unit of measure) multiplied by the buying conversion factor entered on this screen.</p> <p>If the vendor is a warehouse transfer vendor, the costing unit of measure will default to the pricing unit of measure. This field is then protected and cannot be changed.</p> <p>Key the cost unit of measure and the conversion factor to the buying unit of measure.</p> <p><i>Valid Values:</i> there is no validation of this field, any 1 - 3 characters can be used</p> <p>(A 3, N 11,5) Required</p> |
| Weight                | <p>This field is required for catch weight items.</p> <p>The weight of this item per buying unit of measure.</p> <p>(N 9,4) Optional/Required</p>   |
| Std Pack              | <p>Standard pack reflects the multiple by which this vendor requires you to buy this item (e.g., if an item can only be purchased in multiples of 5, then this number must be 5). The response you enter here is used on the Suggested Orders Report (MENU POREPT). For suggested order processing, the standard pack value you key in this field is used to suggest the ordering of full packs of an item.</p> <p><b>Example:</b> If the suggested orders report option finds that 48 units of an item should be purchased, and the standard pack is 5, then 50 items will be suggested on the Suggested Order Report.</p> <p>(N 9,3) Optional</p>   |

---

**Vendor/Item File Detail Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Sfty Stck %        | <p>The safety stock indicates by a percentage how much additional inventory is included in the minimum balance to provide a buffer for variation in the customer demand and vendor lead times (i.e., the amount of inventory that should remain in stock at all times).</p> <p>(N 5,3) Optional</p>   |
| Min Ord Qty        | <p>This is the minimum quantity of this item that may be purchased from this vendor.</p> <p>(N 9,3) Optional</p>  |
| Lead Time          | <p>Use this field to identify the number of weeks required for delivery from the time of purchase. You can also use this field for Suggested Orders Report (MENU POREPT) if you do not have Inventory Management &amp; Planning or Advanced Inventory Management installed, or if the item is not a planned item.</p> <p>Additionally, if you select to <b>Use Allocation Time Period</b> for a warehouse via Warehouse Numbers (MENU IAFILE), the lead time is used in calculating the date on which inventory will be allocated for each order. You must key this lead time if you do not have Inventory Management &amp; Planning or Advanced Inventory Management installed.</p> <p>The setting of the <b>Calc from Receipts</b> field determines how the number of weeks in this field is calculated.</p> <p>When the Purchasing Options (MENU XAFILE) Company Option to <b>Calculate PO Due Dates Based on Lead Times</b> is set to <b>Y</b>, this value will be reviewed for inclusion of the item level due date.</p> <p><i>Default Value:</i> blank when the <b>Calc from Receipts</b> field in Vendors Maintenance (MENU POFILE) is <b>I, Y</b> and protected when the <b>Calc from Receipts</b> field in Vendors Maintenance (MENU POFILE) is <b>A, N</b> and protected when the <b>Calc from Receipts</b> field in Vendors Maintenance (MENU POFILE) is <b>N</b>.</p> <p>(N 2,0) Optional</p> |
| Order Frequency    | <p>Key the number of weeks for the interval at which a PO is issued to purchase this item from this vendor.</p> <p>If you do not have Inventory Management &amp; Planning or Advanced Inventory Management installed and select to use allocation time periods for a warehouse, the order frequency is used in calculating the date on which inventory will be allocated for each order.</p> <p>(N 3,1) Optional</p>  |

**Vendor/Item File Detail Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Calc from Receipts | <p>This field allows the calculation of lead time from receipt history when running the Lead Time History Report (MENU IMREPT). This field is only used if you have IM&amp;P.</p> <p>Key <b>Y</b> to calculate the lead time history for the selected vendor/item based on the vendor's shipment history. This changes the default to <b>Y</b> for <b>Update Lead Time</b> fields associated with all PO line items for this vendor.</p> <hr/> <p>NOTE: If an item contains multiple vendor/item records, key <b>Y</b> for only one vendor. If the primary vendor on the item balance file is a warehouse transfer vendor, the lead time on the item balance file will be updated with receipts from only the transfer vendor. This holds true even if this field is <b>Y</b> for other vendors that this item may be received from.</p> <hr/> <p>Key <b>N</b> to not calculate the lead time history for the selected vendor/item. This changes the default to <b>N</b> for <b>Update Lead Time</b> fields associated with all PO line items for this vendor. Even if you change a line item's default to <b>Y</b> on a PO for this vendor, the lead time calculation will occur, but the IM&amp;P Balance File will not be updated.</p> <p><i>Default Value:</i> The <b>Calc from Receipts</b> field in Vendor Master Maintenance (MENU POFILE) is the default for this field as follows:</p> <ul style="list-style-type: none"> <li>• If set to <b>A</b>, this field defaults to <b>Y</b> and you cannot alter it</li> <li>• If the field is set to <b>N</b>, this field defaults to <b>N</b> and cannot be altered</li> <li>• If the field is set to <b>I</b>, then this field defaults to the stored value within the Vendor/Item record and you can key a valid value</li> </ul> <p>(A 1) Optional</p> |
| Taxable            | <p>This is used as the default when keying this item on a requisition for this vendor. It indicates whether this item is taxable or non-taxable.</p> <p>Key <b>Y</b> if this item is taxable from this vendor.</p> <p>Key <b>N</b> if this item is not taxable from this vendor.</p> <p>(A 1) Required</p>   |

---

**Vendor/Item File Detail Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Update Avg Cost    | <p>This field determines whether or not the average cost will be updated in the Item Balance File when the item is received and the receipt is posted.</p> <p>Key <b>Y</b> to update the average cost field in the Item Balance File. You may then override this field when entering requisitions through:</p> <ul style="list-style-type: none"> <li>• Enter or Change Requisitions (MENU POMAIN)</li> </ul> <p>And, when entering receipts through:</p> <ul style="list-style-type: none"> <li>• Enter or Change Receivers or PO Receipts (MENU POMAIN)</li> <li>• Warehouse Management (MENU WMMAIN), if Warehouse Management is installed</li> </ul> <p>Key <b>N</b> and the average cost will not be updated.</p> <p>(A 1) Required</p> |
| Update OH Qty      | <p>This field determines whether or not on-hand quantities will be updated in the Item Balance File (<b>ITBAL</b>) when the item is received and the receipt is posted.</p> <p>Key <b>Y</b> to update on-hand quantities. It is suggested that you answer <b>Y</b> to this option.</p> <p>Key <b>N</b> and on-hand quantities will not be updated. If the <b>Update Inventory</b> field in Item Master Maintenance (MENU IAFILE) is <b>N</b> for this item, then you must key an <b>N</b> in this field.</p> <p>You may override this field at requisition entry time only.</p> <p>(A 1) Required</p>  |
| User Area          | <p>This field is provided should you wish to key any additional vendor/item information.</p> <p>(A 15) Optional</p>  |
| F12=Return         | <p>Press the <b>F12=RETURN</b> function key to return to the Vendor/Item Master Maintenance Screen (p. 44-4) without saving any changes made on this screen.</p>   |
| Enter              | <p>Press the <b>ENTER</b> key to confirm your selections. The Vendor/Item Price File Screen (p. 44-26) will display.</p>   |

This screen displays Vendor/Item/Price File (VIPRC) information and landing cost data for a vendor/item or vendor/item/warehouse. This screen displays after pressing **ENTER** from the Vendor/Item File Detail Screen (p. 44-17), or from the Vendor/Item Master Maintenance Screen (p. 44-4), if a warehouse was keyed.

When adding a new vendor/item, default information is displayed. This information is extracted from the Item Master File and maintained through Item Master Maintenance (MENU IAFILE).

If this screen was accessed from the Vendor/Item Master Maintenance Screen (p. 44-4), the data keyed on this screen will be specific to that warehouse. For any other warehouse for the same vendor/item, the default vendor/item cost information will be used instead.

### NOTES:

- The default vendor/item cost information is created when this screen is accessed without a warehouse keyed on the Vendor/Item Master Maintenance Screen.
- Landing cost information is applicable only if you are using Purchasing Landing Costs, as defined through Warehouse Numbers Maintenance (MENU IAFILE).
- This screen is not displayed for warehouse transfer vendors.

### Vendor/Item Price File Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|

**Vendor/Item Price File Screen Fields and Function Keys**

| Field/Function Key   | Description   |
|----------------------|---|
| Landing Cd           | <p>This field indicates the landing code to be used to calculate landing costs when this vendor/item is ordered.</p> <p>Key the desired landing cost code.</p> <p>If a value is entered in this field, the F6=LANDING CST function key will display on this screen once the record has been created.</p> <p><i>Valid Values:</i></p> <ul style="list-style-type: none"> <li>• A landing code defined through Landing Factors Maintenance (MENU POFIELD).</li> <li>• If creating/maintaining a default vendor/item/warehouse record (<b>WH</b> field is blank on initial screen), this value must be a landing code that is not warehouse specific (as determined through Landing Factors Maintenance), since a landing code that is warehouse specific is invalid for a default cost record.</li> <li>• If the <b>WH</b> field contains a value (on the initial screen), you can only enter a landing code that has been defined for that warehouse (or for all warehouses) through Landing Factors Maintenance; therefore, the landing code entered cannot be set up for a different warehouse.</li> </ul> <p>(A 5) Optional</p>   |
| Std Pack             | <p>Standard pack reflects the multiple by which this vendor requires you to buy this item (e.g., if an item can only be purchased in multiples of 5, then this number must be 5). The response you enter here is used on the Suggested Orders Report (MENU POREPT). For suggested order processing, the standard pack value you key in this field is used to suggest the ordering of full packs of an item.</p> <p><b>Example:</b> If the suggested orders report option finds that 48 units of an item should be purchased, and the standard pack is 5, then 50 items will be suggested on the Suggested Order Report.</p> <p>Entering a value in this field on this screen allows this value to be stored at the warehouse level within the Vendor/Item Price File (VIPRC), instead of the Vendor/Item File (VNITM) level. When you access this screen, this field will initially default as blank. If kept blank, the respective global vendor/item value entered on the Vendor/Item File Detail Screen (p. 44-17) will be the value used at the warehouse level (this value is shown in the <b>Vendor/Item Std Pack</b> field shown to the right of this field). Only when you enter a value (including zero) in this field, will this value be associated with the warehouse level (overriding the global vendor/item value).</p> <p>(N 9,3) Optional (in delete mode this field is protected)</p> |
| Vendor/Item Std Pack | <p>This field displays the global vendor/item standard pack order quantity value for informational purposes only.</p> <p>Display</p>  |

---

**Vendor/Item Price File Screen Fields and Function Keys**

---

| Field/Function Key      | Description   |
|-------------------------|---|
| Separate Cost           | <p>This field displays only if you are creating/maintaining a vendor/item/warehouse record [a warehouse was entered on the Vendor/Item Master Maintenance Screen (p. 44-4)].</p> <p>This field indicates if separate cost information will be maintained for the indicated warehouse.</p> <p>Key <b>Y</b> if you want to maintain separate cost information for this warehouse (applicable in a multi-warehouse environment only). The <b>Vendor/Item Cost</b> field will only be available for maintenance if a <b>Y</b> is keyed in this field.</p> <p>Leave blank if you want the default cost information used for this warehouse. The <b>Vendor/Item Cost</b> field will be protected (display only).</p> <hr/> <p>NOTE: If you have EDI installed, and <b>Update Vendor/Item/Warehouse File with Price Catalog (832)</b> is set to <b>Y</b> on the Vendor Master Additional Information Maintenance Screen (p. 43-65), when the Price Catalogs Warehouse Selection Screen (MENU EIMAIN) is displayed, it will display warehouse choices. That screen will not display warehouse choices if this field is blank.</p> <hr/> <p><i>Valid Values:</i> Y or blank<br/>(A 1) Optional</p> |
| Min Ord Qty             | <p>This is the minimum quantity of this item that may be purchased from this vendor.</p> <p>Entering a value in this field on this screen allows this value to be stored at the warehouse level within the Vendor/Item Price File (<b>VIPRC</b>), instead of the Vendor/Item File (<b>VNITM</b>) level. When you access this screen, this field will initially default as blank. If kept blank, the respective global vendor/item value entered on the Vendor/Item File Detail Screen (p. 44-17) will be the value used at the warehouse level (this value is shown in the <b>Vendor/Item Min Ord Qty</b> field shown to the right of this field). Only when you enter a value (including zero) in this field, will this value be associated with the warehouse level (overriding the global vendor/item value).</p> <p>(N 9,3) Optional (in delete mode this field is protected)</p>   |
| Vendor/Item Min Ord Qty | <p>This field displays the global vendor/item minimum order quantity value for informational purposes only.</p> <p>Display</p>  |

---

**Vendor/Item Price File Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| Vendor/Item Cost   | <p>This field identifies the vendor's base cost for the item being processed.</p> <p>If creating/maintaining a vendor/item record (the <b>WH</b> field is left blank on the initial screen), this field is optional. If creating/maintaining a vendor/item/warehouse record (the <b>WH</b> field contains a value on the initial screen), this field is accessible only if a <b>Y</b> is keyed in the <b>Separate Cost</b> field (which displays only when creating/maintaining a vendor/item/warehouse record).</p> <p>Key the desired cost for the identified vendor, item, and (optional) warehouse. This cost must be expressed in the costing unit of measure identified on the Vendor/Item File Detail Screen (p. 44-17).</p> <p>When International Currency is installed, if the vendor's trading currency differs from the company's local currency, this field may be toggled with the <b>F11=LOCAL CURRENCY / F11=TRADING CURRENCY</b> function key to display amounts in the trading currency with the currency symbol to the right, or in the company's local currency with the symbol for the company's local currency displayed to the right.</p> <p>If the toggle key displays as <b>F11=LOCAL CURRENCY</b>, this field displays the local equivalent of the value in the <b>Vendor/Item Cost</b> field. The symbol for the company's local currency will display to the right of this amount.</p> <p>If the toggle key displays as <b>F11=TRADING CURRENCY</b>, this field will not display; instead the local currency equivalent will appear in the <b>Vendor/Item Cost</b> field with the symbol for the company's local currency displayed to the right.</p> <p><i>Default Value:</i> When first adding a record to the Vendor/Item File, the type of cost identified in the <b>Cost to be Used for GL</b> field on the Maintain O/E Options - Price Setting Screen 2 of the Order Entry Options Maintenance (MENU XAFILE) will be used.</p> <p>(N 15,5) Optional</p> |
| Qty                | <p>Up to five quantity breaks are allowed for which this vendor gives a discount. These values are expressed in the primary buying unit of measure (<b>Buy U/M</b>) on the Vendor/Item File Detail Screen (p. 44-17). Please note that these items must be keyed in highest to lowest sequence in the list.</p> <p>(5 @ N 10,3) Optional</p>  |

---

**Vendor/Item Price File Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Cst/Pct (%)        | <p>This is either the discounted unit cost or discount percent to be applied to the unit cost without quantity breaks, (based on your selection in the <b>Code</b> field) for each corresponding quantity break. These five (5) values are expressed in the costing unit of measure (<b>Cost U/M</b>).</p> <p>Key the relative amounts.</p> <p>When International Currency is installed, and the <b>Code</b> is set to <b>C</b> for currency, these unit cost fields for each corresponding quantity break are keyed in the vendor’s trading currency. The trading currency symbol will display to the right of the first cost amount. To view local currency equivalent amounts, press F11=LOCAL CURRENCY.</p> <p>Currency values will be keyed lowest to highest; the cost paid is less when you buy more. Percentage values are keyed highest to lowest; the calculated amount has a higher discount when you buy more.</p> <p><i>Default Value:</i> the default is based on the <b>Cost to be Used for GL</b> field in Order Entry Options (MENU XAFILE) and may be the standard, average, or user cost from the first warehouse in the Item Balance File (ITBAL).</p> <p>(5 @ N 15,5) Optional</p> |
| Code               | <p>This is the code identifying the cost field as either a currency amount or percentage.</p> <p>Key <b>C</b> if the value entered in the <b>Cst/Pct</b> field is the unit cost for purchase order quantities that qualify for the associated quantity break level (entered in the <b>Qty</b> field).</p> <p>Key <b>%</b> if the value entered in the <b>Cst/Pct</b> field is the discount percent allowed for purchase order quantities that qualify for the associated quantity break level (entered in the <b>Qty</b> field). The actual unit cost is calculated by discounting the unit cost by this percent.</p> <p>(A 1) Required</p>   |
| Exp Date           | <p>NOTE: This field is reserved for future use.</p> <p>This is the date that the cost information will expire. Using this field allows you to limit the time that a particular cost is available (e.g., expiration date for quotes).</p> <p>Key the expiration date for the cost values keyed on this screen, or leave blank to leave the values in effect indefinitely.</p> <p><i>Valid Values:</i> Key the date using the <b>Default Date Format</b> for this user, specified through Register User IDs (MENU XACFIG), or if that field is blank, key the date using the system’s <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFILE).</p> <p>(N 6,0) Optional</p>  |

## Vendor/Item Price File Screen Fields and Function Keys

| Field/Function Key                      | Description   |
|---|---|
| Buyer                                   | <p>Use this field to select the buyer responsible for purchasing this item from this vendor [and for this warehouse if a warehouse was entered on the Vendor/Item Master Maintenance Screen (p. 44-4)]. You may also assign a buyer code at the vendor level, and/or vendor/warehouse level.</p> <p>Key the desired buyer code. This code will be included on all new requisitions and may be changed during Enter or Change Requisitions (MENU POMAIN).</p> <p>If you change the buyer assigned to a vendor, when you complete your maintenance in this option the system will update all IM&amp;P records for the vendor.</p> <p><i>Default Value:</i> The buyer code entered in Vendor Master Maintenance (MENU POMAIN); or, if entering a vendor/item/warehouse, this is the buyer code from Vendor/Item Information Maintenance (POFILE), if one exists.</p> <p><i>Valid Values:</i> A buyer code defined through Buyers Maintenance (MENU POFILE)</p> <p>(A 3) Optional</p> |
| F6=Landing Cst                          | <p>After creating a vendor/item/warehouse record (<b>WH</b> field on the initial screen contains a value), this function key displays on this screen only if a landing code has been entered in the <b>Landing Cd</b> field.</p> <p>Press the F6=LANDING CST function key to access the Vendor/Item Information Landing Costs Screen (p. 19-13) to review/recalculate landing cost estimates for this vendor/item/warehouse.</p>  |
| F11=Local Currency/<br>Trading Currency | <p>Press F11=LOCAL CURRENCY / F11=TRADING CURRENCY to toggle between a display of vendor/item costs and unit costs/discount percents in the trading currency and a display of these costs in the company's local currency.</p> <p>Press F11=LOCAL CURRENCY to display vendor/item costs and unit costs/discount percents in the company's local currency. The symbol for the company's local currency will display to the right of the vendor/item cost and the local equivalent value displayed below will disappear.</p> <p>Press F11=TRADING CURRENCY to display vendor/item costs and unit costs/discount percents in the trading currency. The symbol for the trading currency will display to the right of the vendor/item cost and the local currency equivalent value and local currency symbol will display below.</p>   |
| F12=Return                              | <p>Press F12=RETURN to return to the Vendor/Item Master Maintenance Screen (p. 44-4) without saving any changes made on this screen.</p>  |
| F24=Delete                              | <p>The F24=DELETE function key appears in delete mode only.</p> <p>Press F24=DELETE to delete the record displayed. The Vendor/Item Master Maintenance Screen (p. 44-4) will appear.</p>  |

7\*\* Vendor/Item Record(s) Were Printed.

This listing is produced following your responses on the Vendor/Item Master File List Screen (p. 44-34), and the Report Options Screen.

Item numbers (Ours or the Manufacturer's) and detailed buying information for the selected vendor(s) are printed, including the standard pack and minimum order quantity at both the vendor/item and vendor/item/warehouse levels. Pricing information for default and specific warehouses are also provided.

### Vendor/Item Master File List

| Report/Listing Fields       | Description   |
|-----------------------------|---|
| Headings                    | <p>Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.</p> <p>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings.</p> |
| Vendor                      | The vendor number and name for the following list of items.   |
| Currency                    | When International Currency is installed, the vendor's trading currency description.  |
| Our Item Number/Description | Based on the <b>Item Number (O/M)</b> field specified on the Vendor/Item Master File List Screen (p. 44-34), this will either be the stocking item number and description or the vendor's manufacturing item number and description.  |
| Mfg Item Number/Description |   |

**Vendor/Item Master File List**

| <b>Report/Listing Fields</b> | <b>Description</b>  |
|------------------------------|---|
| Unit Cost                    | The unit cost of the item when purchased from this vendor.<br>When International Currency is installed, this value is displayed in the vendor's trading currency with the currency symbol printed to the right. The company's local currency equivalent amount and currency symbol are printed on the line below. |
| U/M Cst, U/M Stock           | The cost/price unit of measure and the primary stocking unit of measure for the item as defined through Item Master Maintenance (MENU IAFILE).  |
| Ord Frq                      | The number of weeks from the between issue of purchase orders to this vendor.   |
| Sfty Stck                    | Indicates what percent of additional inventory is included in the minimum balance as a buffer for variations in lead time and customer demand.  |
| Ld Tm                        | The number of weeks required for delivery from the time of purchase.  |
| Upd Ld Tm                    | When Inventory Management & Planning or Advanced Inventory Management is installed, this field determines if the lead time will be updated automatically based on receipt history from the Lead Time History Report (MENU IMREPT).  |
| Buy U/M, Conv. Factor        | The vendor's buying unit of measure and the conversion factor from the buying unit of measure to the item's primary stocking unit of measure.   |
| Alt U/M, Conv. Factor        | The vendor's alternate unit of measure and the conversion factor from the alternate unit of measure to the buying unit of measure.  |
| Cost U/M, Conv. Factor       | The vendor's cost unit of measure and the conversion factor from the cost unit of measure to the buying unit of measure.  |

---

Standard comments are pre-defined vendor, item, or vendor/item (items specific to a vendor) comments that are automatically included in requisition entry performed through Enter or Change Requisitions (MENU POMAIN). Use this option to define standard comments used for a requisition.

Vendor comments (order comments) are automatically copied into each new requisition created for the vendor, and displayed on the Order Comments/Line Item Comments Change Screen (p. 6-34).

Item comments are automatically copied to a line comment (a comment that may be printed on a Purchase Order or Receiving List) when the item is added to the order, and displayed on the Order Comments/Line Item Comments Change Screen (p. 6-34).

Vendor/Item comments are copied to a line comment when the specified item is added to a requisition created for a specific vendor. Additionally, vendor/item comments will replace item comments.

Vendor, Item, and Vendor/Item comments entered through this option are also visible within other areas of Distribution A+, and can be used to further expand vendor item descriptions if more information is necessary. Areas where standard comments can be reviewed are:

- Item Inquiry (MENU IAMAIN)
- Vendor/Item Information (MENU POMAIN)
- Work With Special Orders (MENU POMAIN)
- Return to Vendor Processing (MENU POMAIN)
- Enter or Change Requisitions (MENU POMAIN)
- Suggested Order Maintenance (MENU POREPT)
- Point of Sale Entry (MENU PSMAIN)

---

## Standard Comments Maintenance

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

---

| Title                               | Purpose   |
|-------------------------------------|---|
| Standard Comment Maintenance Screen | Use to select the vendor, item, or vendor/item for which a comment is being added, changed, or deleted. |
| Vendor/Item Comments Screen         | Use to add, change, or delete comments for the given vendor, item, or vendor/item.                      |

---

## Standard Comment Maintenance Screen

```

          STANDARD COMMENT MAINTENANCE

Function:  _  (A,C,D)

Vendor No: .....
          Find: .....
          City: .....

Item No:  .....
          Find: .....
          Item: ..... Class: .....

                                           F3=Exit
  
```

This screen displays after selecting option **3** - Standard Comments Maintenance (MENU POFILE). You can also access this screen from Buyers Workbench (MENU POREPT) via the F14=STD CMT MNT function key, where available.

Use this screen to select the vendor, item, or vendor/item for which a comment is being added, changed, or deleted.

Vendor comments are defined by keying a vendor number in the **Vendor No** field and leaving the **Item No** field blank.

Item comments are defined by keying an item number in the **Item No** field and leaving the **Vendor No** field blank.

Vendor/Item comments are defined by keying a vendor number in the **Vendor No** field and an item number in the **Item No** field.

### Standard Comment Maintenance Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Function           | <p>Key <b>A</b> to add a comment for a vendor, item, or vendor/item.</p> <p>Key <b>C</b> to change an existing comment for a vendor, item, or vendor/item.</p> <p>Key <b>D</b> to delete an existing comment for a vendor, item, or vendor/item.</p> <p>(A 1) Required</p> |

## Standard Comment Maintenance Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Vendor No          | <p>Key the vendor number associated with the comment to add, change, or delete. This field should be left blank if defining item comments. This field is required if defining vendor comments or vendor/item comments.</p> <hr/> <p><b>NOTE:</b> If a vendor/item comment is being added, the vendor/item information must be defined in Vendor/Item Information Maintenance (MENU POFILE) before a comment can be added through this option.</p> <hr/> <p><i>Default Value:</i> If this screen is accessed from Buyers Workbench via F14=STD CMT MNT, where available, the vendor number is defaulted in from the calling screen.</p> <p><i>Valid Values:</i> Any vendor set up in Vendor Master Maintenance.<br/>(A 6) Required/Optional</p> |
| Find               | <p>Use this field to activate the Vendor Search feature when you do not know the vendor's number.</p> <p>Key the vendor's name or up to 10 characters (the first 10) of one or more words in the vendor's name and press <b>ENTER</b> to display the Vendor Search Screen.</p> <p>To limit the vendor search by city (i.e., search for the specified vendor name within a particular city), key a city in the <b>City</b> field as well.</p> <p>For more information on using searches and for a description of the search screens, refer to the Cross Applications User Guide.<br/>(A 40) Optional</p>  |
| City               | <p>When using the <b>Find</b> field to search for a vendor, you can limit the search to a particular city by keying a partial or complete city name in this field.</p> <p>If you enter characters in this field, the Vendor Search Screen displays only vendors that meet the criteria specified here and in the <b>Find</b> field.</p> <p>For more information on using searches and for a description of the search screens, refer to the Cross Applications User Guide.<br/>(A 8) Optional</p>  |
| Item No            | <p>This field is used to add a comment to an item or vendor/item. This field should be left blank if defining vendor comments. This field is required if defining item or vendor/item comments.</p> <p>Key the item number associated with the comment to add, change, or delete.</p> <p><i>Default Value:</i> If this screen is accessed from Buyers Workbench via F14=STD CMT MNT on the Workbench Suggested Line Maintenance Screen (p. 38-35), the item number is defaulted in from that screen.</p> <p><i>Valid Values:</i> Any item set up in Item Master Maintenance (MENU IAFILE).<br/>(A 27) Optional</p>   |

**Standard Comment Maintenance Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| Find<br>(Item)     | <p>Use this field to search for an item using one or more words that closely match the item for which you are searching. The words you key may be up to 15 characters long and may appear in any order. Key the most unique words to improve the speed of the search. Leave this field blank if you would like to search on an item class.</p> <p>To search for manufacturer item numbers, prefix the criteria you enter with <b>M/</b>. The system will search based on the Vendor/Item File (VNITM) valid manufacturer item number.</p> <p>To search for customer item numbers, prefix the criteria you enter with <b>C/</b>. The system will search based on the Item/Customer Cross Reference File (IAXRF) valid customer item numbers.</p> <p>To search for UPC cross references, prefix the criteria you enter with <b>U/</b>. The system will search based on the Universal Product Code File (ITUPC) for valid UPC cross references.</p> <p>To search for GTIN cross references, prefix the criteria you enter with <b>G/</b>. The system will search based on the Global Trade Item Number File (ITGTIN) for valid GTIN cross references.</p> <p>(A 40) Optional</p> |
| Item No<br>(Item)  | <p>This field may be used in addition to, or in place of, entering search criteria in the <b>Find</b> field to further limit the items to display.</p> <p>Key a partial item number. All items that match the characters of the item number keyed in this field will display. This is helpful if you recall part of an item number, but not the entire number.</p> <p>For information on entering search criteria, refer to the Cross Applications User Guide.</p> <p>(A 27) Optional</p>   |
| Class<br>(Item)    | <p>This field may be used in addition to (not in place of) the search criteria in the <b>Find</b> or <b>Item No</b> fields to further limit the number of items that will display, based on their item class.</p> <p>Key the appropriate item class and sub-class, if any. Only items that have been assigned the item class that is keyed in this field will display on the Item Description Search Screen.</p> <p>For information on entering search criteria, refer to the Cross Applications User Guide.</p> <p>(A 2/A 2) Optional</p>  |
| F3=Exit            | <p>Press <b>F3=EXIT</b> to cancel this option and return to MENU POFILE.</p> <p>If this screen is accessed from Buyers Workbench (MENU POREPT), you are instead returned to the calling screen.</p>   |

---

### Standard Comment Maintenance Screen Fields and Function Keys

---

| Field/Function Key | Description  |
|--------------------|--|
| Enter              | Press <b>ENTER</b> to confirm your selections. The Vendor/Item Comments Screen (p. 45-7) will display. |

---

## Vendor/Item Comments Screen

This screen allows you to add, change, or delete comments for the given vendor, item, or vendor/item.

The type of comment being maintained will display at the top of the screen (VENDOR or ITEM COMMENTS), along with the function being performed (ADD, CHANGE, or DELETE).

### Vendor/Item Comments Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Vendor No/Item No  | <p>This field displays the vendor number and name if a vendor comment is being added/maintained.</p> <p>If an item comment or vendor/item comment is being added/maintained, this field displays the item number and description.</p> <p>Display</p> |

**Vendor/Item Comments Screen Fields and Function Keys**

| Field/Function Key    | Description  |
|-----------------------|--|
| Print                 | Use this field to restrict printing. To access it, press F5 and enter one of the codes listed below.<br><br>NOTE: When completed, press F5=CHANGE PRINT CODES again to refresh the screen.<br><br>Key P to print the comment on the Purchase Order only.<br>Key R to print the comment on the Receiving List only.<br>Key I to display on inquiries only and print in the Requisition Edit List (POMAIN), for internal use.<br>Leave blank to print on both the Purchase Order and Receiving List, and display on all inquiries.<br>(A 1) Optional |
| Comments              | Up to fifteen lines of sixty characters each are provided for the comment you wish to add, change or delete.<br>(15 @ A 62) Required   |
| F24=Delete            | NOTE: The F24=DELETE function key displays in Delete Mode only.<br><br>Press F24=DELETE to delete the comment displayed. The Standard Comment Maintenance Screen (p. 45-3) will display and the comment will be deleted.   |
| F5=Change Print Codes | Press F5=CHANGE PRINT CODES to access the <i>Print</i> field to restrict the printing of certain comments (refer to the <i>Print</i> field).   |
| F12=Return            | Press F12=RETURN to return to the Standard Comment Maintenance Screen (p. 45-3) without saving any changes made on this screen.  |
| Enter                 | Press to confirm your selections. The Standard Comment Maintenance Screen (p. 45-3) will display and the last function performed will be indicated.  |

**Standard Comments Listing**

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                             | Purpose   |
|-----------------------------------|---|
| Standard Comment File List Screen | Use to select criteria to print on the Vendor/Item Comments Listing (p. 45-11). |
| Vendor/Item Comments Listing      | Prints the comments defined for the selected vendors, items, or vendors/items.  |

---

## Standard Comment File List Screen

STANDARD COMMENT FILE LIST

Comment Type:    -    (I/V)

Vendor No:        ..... To: .....

Item No - From: .....  
                  To: .....

F3=Cancel

This screen displays after selecting option **13** - Standard Comments Listing from MENU POFILE. Use this screen to select criteria to print on the Vendor/Item Comments Listing (p. 45-11).

Refer to the Cross Applications User Guide for the rules of keying FROM/TO ranges.

### Standard Comment File List Screen Fields and Function Keys

| Field/Function Key | Description   |

| Enter              | Press <b>ENTER</b> to confirm your selections. The Report Options Screen will display. The reference section for this screen is in the Appendix section of the Cross Applications User Guide. |

## Vendor/Item Comments Listing

| P0922 23/06/11 7:15:35                        |          | STANDARD COMMENTS FILE LIST  |  | AK/APDEMO       | PAGE: 1 |
|---|----------|--|--|-----------------|---------|
| All Vendors                                   |          | All Our Item Numbers   |  | VENDOR COMMENTS |         |
| Vendor No./Name                               | Prt Code | Standard Comment(s)  |  |                 |         |
| -----   |          |  |  |                 |         |
| Vendor: IC1000 LITTLE ITALY RESTAURANT SUPPLY | P        | Use this vendor to order trending items that require artist or craftsman specialty production. |  |                 |         |
| Vendor: 100 SHARP INTERNATIONAL               | P        | Please inform us A.S.A.P. if you must backorder.   |  |                 |         |

This listing is produced following your responses on the Standard Comment File List Screen (p. 45-10), and the Report Options Screen.

The comments defined for the selected vendors, items, or vendors/items are printed.

For a description of the information contained in this report, refer to the Standard Comment Maintenance Screen (p. 45-3).

---

This option is used to define special charges used in Purchasing when creating orders through Enter or Change Requisitions (MENU POMAIN). Special charges are used to record non-product charges (freight, handling charges, etc.) and may be one of two types: order charges, and line charges.

Each type of charge can have up to nine pre-defined descriptions (/1 through /9, and &1 through &9). Order charges begin with the character “/”; line charges begin with the character “&”.

Special charges must be set up for each company using Purchasing. Special charges are specified in Purchasing on the Requisition/Purchase Order Special Charge Screen (p. 6-66).

---

## Special Charges Maintenance

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                                       | Purpose   |
|---|---|
| Special Charge Maintenance Selection Screen | Use to select the special charge code to create, maintain, or delete. |
| Special Charge Maintenance Screen           | Use to enter, change, or delete special charge information.           |

---

## Special Charge Maintenance Selection Screen

```

SPECIAL CHARGE MAINTENANCE

Function:      - (A,C,D)
Company?      01
Special Charge Code? ...

F3=Exit
  
```

This screen displays after selection option 4 - Special Charges Maintenance (MENU POFILE). Use this screen to select the special charge code to create, maintain, or delete.

### Special Charge Maintenance Selection Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Function           | <p>Key <b>A</b> to add a special charge code.</p> <p>Key <b>C</b> to change an existing special charge code.</p> <p>Key <b>D</b> to delete an existing special charge code.</p> <p>(A 1) Required</p>   |
| Company            | <p>This field appears only if the <b>Multi Company</b> field is set to <b>Y</b> through System Options Maintenance (MENU XAFILE).</p> <p>Enter the company for which you will be adding, changing or deleting a special charge code.</p> <p><i>Default Value:</i> The default company defined in Authority Profile Maintenance (MENU XASCTY) if one has been defined; otherwise, this is the default company defined through System Options Maintenance (MENU XAFILE)</p> <p><i>Valid Values:</i> A valid company number defined through Company Name Maintenance (MENU XAFILE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(N 2,0) Required</p> |

---

**Special Charge Maintenance Selection Screen Fields and Function Keys**

---

| Field/Function Key  | Description   |
|---------------------|---|
| Special Charge Code | Enter the new or existing code used to define a special charge for an order. Special charge codes can be used for an entire order or for a single item on an order.<br><i>Valid Values:</i> /1 through /9, and &1 through &9<br>(A2) Required |
| F3=Exit             | Press F3=EXIT to cancel this option and return to MENU POFILE.  |
| Enter               | Press ENTER to confirm your selections. The Special Charge Maintenance Screen (p. 46-4) will display.   |

---

## Special Charge Maintenance Screen

```

SPECIAL CHARGE MAINTENANCE    CHANGE
Company: 1 A & C Office Supply
Special Charge Code:          &1
Special Charge Description: Item Special Handling .....
                             .....
Taxable:                      Y, (Y/N)

F12=Return
    
```

This screen displays after making a selection on the Special Charge Maintenance Selection Screen (p. 46-2). This screen is used to enter, change, or delete special charge information.

### Special Charge File Maintenance Screen Fields and Function Keys

| Field/Function Key         | Description   |
|----------------------------|---|
| Special Charge Description | <p>This is the description of the special charge code.</p> <p>Enter the appropriate description, modify the existing description, or delete the description.</p> <p>The first description line is required for the special charge. The second line is optional.</p> <p>(2 @ A 31) Required</p>  |
| Taxable                    | <p>This field determines if this special charge is taxable or not. The value keyed here is used as the default on the Requisition/Purchase Order Special Charge Screen (p. 6-66) during Purchasing.</p> <p>Key <b>Y</b> if this special charge amount is to be added to the taxable value of this order.</p> <p>Key <b>N</b> if this special charge is not taxable.</p> <p>(A 1) Required</p> |
| F12=Return                 | <p>Press <b>F12=RETURN</b> to return to the Special Charge Maintenance Selection Screen (p. 46-2) without saving any changes made on this screen.</p>   |

---

### Special Charge File Maintenance Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| F24=Delete         | The F24=DELETE function key displays in Delete Mode only.<br>Press F24=DELETE to delete the special charge code displayed. The previous screen, Special Charge Maintenance Selection Screen (p. 46-2) will display and the special charge code will be deleted.   |
| Enter              | Press <b>Enter</b> to verify the data keyed and re-display the screen. If no errors exist, press <b>Enter</b> again to update the file. The Special Charge Maintenance Selection Screen (p. 46-2) will display and the last function performed will be indicated. |

---

## Special Charges Listing

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                                    | Purpose  |
|--|--|
| Special Charge Definitions Report Screen | Use to select the range of companies to print on the Special Charge Definitions Listing (p. 46-7). |
| Special Charge Definitions Listing       | Prints the special charge definitions for the selected company(s).                                 |

| -----                          |                            |          |                            |           |         |
| Company:01 A & C Office Supply |                            |          |                            |           |         |
| &1                             | Item Special Handling      |          | YES                        |           |         |
| /1                             | Freight                    |          | YES                        |           |         |

This listing is produced following your responses on the Special Charge Definitions Report Screen (p. 46-6), and the Report Options Screen.

The special charge definitions for the selected company(s) are printed. Additionally, if the special charge is taxable, **YES** will print after the special charge description; otherwise, **NO** will print.

---

A hold code is used to place a requisition on hold. This option allows you to optionally define hold codes to be used during Enter or Change Requisitions (MENU POMAIN). When a requisition is held, you cannot approve the requisition, and you will not be allowed to print a purchase order or requisition.

A requisition may be automatically put on hold with the following hold codes:

- **SO** - Suggested Order
- Any user-defined hold code that has been specified for a unique purpose through system/company/warehouse tailoring options will also be used, when applicable, to automatically put an order on hold. For example, if RV is identified as the RTV Return Requisitions hold code, when return purchase orders are processed through various methods, they may automatically be put on RV hold. These hold codes are user defined through this option and then assigned to the applicable options record.

You may also define additional hold codes through this option. At the End Requisition Screen during Enter or Change Requisitions (MENU POMAIN), you key the hold code and the requisition will be held with that hold code type.

Requisitions are released from hold by blanking out the hold code on the End Requisition Screen during Enter or Change Requisitions (MENU POMAIN).

---

## Hold Codes Maintenance

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                                  | Purpose  |
|--|--|
| Hold Code Maintenance Selection Screen | Use to select the hold code to create or maintain. |
| Hold Code Maintenance Screen           | Use to enter or change hold code information.      |

This listing is produced following your responses on the Order Hold Codes Report Screen (p. 47-6), and the Report Options Screen.

Hold codes and their descriptions are printed for the indicated companies.

---

Landing factors are used in the calculation of estimated landing costs at the item or group (PO, requisition, or receiver) level. A landing factor itself is made up of a landing code, a landing factor description to identify its purpose, and a calculation formula. Up to six different landing factors can be defined for each warehouse through Warehouse Numbers Maintenance (MENU IAFILE).

Landing costs can be created in a variety of ways through the use of a landing code. An unlimited number of landing codes/landing factor variables may be defined. Landing codes can then be assigned to a Vendor/Item/Price File (VIPRC) record to ensure that when that item is ordered from that vendor, a specific landing cost will be calculated and applied.

---

## Landing Factors Maintenance

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                                       | Purpose   |
|---|---|
| Landing Factor Maintenance Selection Screen | Use to maintain a landing code representing a set of landing factors.         |
| Landing Factors List Screen                 | Use to review the existing landing codes and select for maintenance.          |
| Landing Factors Maintenance Screen          | Use to enter the landing factor values for the landing code being maintained. |

---

## Landing Factor Maintenance Selection Screen

```

LANDING FACTORS MAINTENANCE

Function:  _  (A,C,D)
Landing Code: .....
WH?      ...  (Optional for Add only)

F3=Exit  F4=List

```

This screen displays after selecting option 6 - Landing Factors Maintenance (MENU POFILE) and is used to maintain a landing code representing a set of landing factors. The number of landing factors available is determined by how many are selected for use through Warehouse Numbers Maintenance (MENU IAFILE). You may define a landing factor for a single warehouse, or you may define a landing factor applicable to all warehouses.

### Landing Factor Maintenance Selection Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Function Key       | <p>Key <b>A</b> to add a landing code and identify the factors to be used in calculating landing costs.</p> <p>Key <b>C</b> to change an existing landing code's factors.</p> <p>Key <b>D</b> to delete an existing landing code's factors. A landing code cannot be deleted if it has been assigned to a vendor/item price record through Vendor/Item Information Maintenance (MENU POFILE).</p> <p>(A 1) Required</p> |
| Landing Code       | <p>Key the landing code which represents the landing factors being maintained.</p> <p>If you wish to modify or delete landing factors, but are unsure of the existing landing codes by which they are referred, use the <b>F4=LIST</b> function key to display a list of those that currently exist.</p> <p>(A 5) Required</p>  |

---

**Landing Factor Maintenance Selection Screen Fields and Function Keys**

## Landing Factors Maintenance Screen

```

          LANDING FACTORS MAINTENANCE Change
Landing Code: ECU2
Description: European Currency Unit -. Multi
          Amount  Method  Currency?  Exchange?
Freight      ..... 2,416    %          BPS        WSJ
Handling Fees ..... 1,528    U          GDM        WSJ
Broker Fees  ..... 2,778    C          FRF        WSJ
Duty         ..... 100,000   W          ITL        WSJ
Landing Cost 5: .....                ..         USD        WSJ
Landing Cost 6: .....                ..         USD        WSJ
                                     (% , C , U , W , S)
          WH for Descriptions? 1.
                                     F12=Return
    
```

This screen appears after you press **ENTER** on the Landing Factor Maintenance Selection Screen (p. 48-2). Use this screen to enter the landing factor values for the landing code being maintained.

If you selected a warehouse on the Landing Factor Maintenance Selection Screen (p. 48-2), the name and number of the selected warehouse display at the top of this screen to indicate the warehouse to which the landing code applies.

If a warehouse name and number do not display, then the landing factors apply to all warehouses and can be used by any warehouse. In this case, the landing factor's descriptions will be presented to the warehouse specified on the bottom of this screen.

### Example: Single Currency Landing Factor

| Landing Factor 100-2 |        |                                |     |
|----------------------|--------|--------------------------------|-----|
| Freight              | 15.000 | % (percent of extended cost)   | USD |
| Handling Fees        | 1.500  | W (amount per extended weight) | USD |
| Broker Fees          | 5.000  | C (specific currency amount)   | USD |
| Duty                 | 1.000  | U (amount per number of units) | USD |

Assume an item has a unit cost of \$75.00 and weighs 5 lbs. If you receive a quantity of 1, the landing cost values are calculated as:

- Freight:  $15.000\% \times 75.00$  extended cost = \$11.25
- Handling Fee:  $1.500 \times 5$  extended weight = \$7.50
- Broker Fees:  $5.000 \times 1 =$  \$5.00
- Duty:  $1.000 \times 1$  unit of the purchasing unit of measure = \$1.00
- Total Receipt Cost for one unit =  $\$75.00 + 24.75 = \$99.75$ 
  - Landing Costs for one unit:  $11.25 + 7.50 + 5.00 + 1.00 = \$24.75$

If you receive a quantity of 10, the landing cost values are calculated as:

- Freight:  $15.000\% \times 750.00$  extended cost = \$112.50
- Handling Fee:  $1.500 \times 50$  extended weight = \$75.00
- Broker Fees:  $5.000 \times 1 =$  \$5.00
- Duty:  $1.000 \times 10$  units of the purchasing unit of measure = \$10.00
- Total Receipt Cost for ten units =  $\$750.00 + 202.50 = \$952.50$ 
  - Landing Costs for ten units:  $112.50 + 75.00 + 5.00 + 10.00 = 202.50$

**Example: Multi-Currency Landing Factor**

| Landing Factor ECU-2 |        |                                |     |
|----------------------|--------|--------------------------------|-----|
| Freight              | 2.416  | % (percent of extended cost)   | USD |
| Handling Fees        | 1.528  | U (amount per number of units) | USD |
| Broker Fees          | 25.000 | C (specific currency amount)   | CAD |
| Duty                 | 10.000 | W (amount per extended weight) | CAD |

Assume an item has a unit cost of \$55.58 USD and weighs 11 lbs. The currency exchange rate is 0.646705 USD/CAD. If you receive a quantity of 1, the landing cost values are calculated as:

- Freight:  $2.416\% \times 55.58$  USD extended cost = 1.34281 USD
- Handling Fees:  $1.528$  USD x 1 unit of the purchasing unit of measure = 1.52800 USD
- Broker Fee:  $\$25.000$  CAD x 1 = \$25.00 CAD / \$16.16763 USD
- Duty:  $\$10.000$  CAD x 11 extended weight= 110.00 CAD / \$71.13755 USD
- Total Receipt Cost for one unit =  $\$55.58$  USD + 90.18 USD = 145.76 USD
  - Landing Costs for one unit:  $\$1.34281$  USD + 1.52800 USD + 16.16763 USD + 71.13755 USD = 90.17599 USD

If you receive a quantity of 10, the landing cost values are calculated as:

- Freight:  $2.416\% \times 555.80 \text{ USD extended cost} = 13.42813 \text{ USD}$
- Handling Fees:  $1.528 \text{ USD} \times 10 \text{ units of the purchasing unit of measure} = 15.2800 \text{ USD}$
- Broker Fee:  $\$25.000 \text{ CAD} \times 1 = \$25.00 \text{ CAD} / \$16.16763 \text{ USD}$
- Duty:  $\$10.000 \text{ CAD} \times 110 \text{ extended weight} = 1100.00 \text{ CAD} / \$711.37554$
- Total Receipt Cost for ten units =  $\$555.80 + 756.25 = \$1312.05 \text{ USD}$ 
  - Landing Costs for ten unit:  $13.42813 + 15.28 + 16.16763 + 711.37554 = \$756.2513 \text{ USD}$

---

NOTE: If no **Landing Cost(s)**, **Amount**, or **Method** fields display on this screen, it is because you have selected a warehouse which has not yet had landing costs defined for it. To define landing costs for a warehouse, refer to Warehouse Numbers Maintenance (MENU IAFILE), as described in the Inventory Accounting User Guide.

---

### Landing Factors Maintenance Screen Fields and Function Keys

| Field/Function Key    | Description  |
|-----------------------|--|
| Description           | <p>This is the description of the landing code selected by the landing code keyed on the previous screen. Enter the appropriate description for this landing code, or modify the existing description.</p> <p>(A 30) Required</p>  |
| Landing Factors 1 - 6 | <p>This field displays landing factors defined through Warehouse Numbers Maintenance (MENU IAFILE).</p> <p>If no landing factors were defined for the displayed warehouse, a generic <b>Landing Cost</b> header will display instead of a defined landing cost description (e.g., Freight).</p> <p>Display</p> |
| Amount                | <p>This field is required only if an associated <b>Method</b> is keyed.</p> <p>Key a monetary value or a percentage value to be used with the calculation method keyed in the <b>Method</b> field to determine landing costs.</p> <p>(6 @ N 9,3) Required/Optional</p>   |

---

**Landing Factors Maintenance Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| Method             | <p>This field is required only if an associated <b>Amount</b> is keyed.</p> <p>Use this field to determine how the value in the <b>Amount</b> field will be used to calculate the landing cost.</p> <p>The valid values are described as follows:</p> <ul style="list-style-type: none"> <li>• <b>%</b> - Defines the landing factor amount to be a percentage of the line item's extended cost.</li> <li>• <b>C</b> - Defines the landing factor amount to be a specific currency amount.</li> <li>• <b>U</b> - Defines the landing factor amount to be a currency amount per item based on the purchasing buying unit of measure (<b>BUY</b>). Purchase orders for quantities in the alternate purchasing unit of measure (<b>ALT</b>) will be converted accordingly. The calculated landing cost will reflect the total charge for all units in a line item.</li> <li>• <b>W</b> - Defines the landing factor amount to be a currency amount per line item weight based on the purchasing buying unit of measure (<b>BUY</b>). Purchase orders for quantities in the alternate purchasing unit of measure (<b>ALT</b>) will be converted accordingly. The calculated landing cost will reflect the total weight of all items included in a line.</li> <li>• <b>S</b> - Defines the landing factor to be a specific currency amount per size (cube) based on the purchasing unit of measure (<b>BUY</b>). Purchase orders for quantities in the alternate purchasing unit of measure (<b>ALT</b>) will be converted accordingly. The calculated landing cost will reflect the total cubic space for all units in the line item.</li> </ul> <p>Key a method by which the value in the <b>Amount</b> field will be used to calculate the landing cost value.</p> <p><i>Valid Values:</i> %, C, U, W, S</p> <p>(6 @ A 1) Required/Optional</p> |
| Currency           | <p>This field only displays when International Currency is installed.</p> <p>These fields indicate the currency code used for each landing factor.</p> <p>Key the currency code to be used for the landing cost or accept the default if you want these factors calculated in the company's local currency.</p> <p><i>Default Value:</i> The default local currency specified through International Currency Options Maintenance (MENU ICFILE).</p> <p><i>Valid Values:</i> A currency code defined through Currency/Exchange Codes Maintenance (MENU ICFILE).</p> <p>(6 @ A 3) Required</p>  |

---

## Landing Factors Maintenance Screen Fields and Function Keys

| Field/Function Key  | Description   |
|---------------------|---|
| Exchange Code       | <p>This field only displays when International Currency is installed.</p> <p>These fields specify the exchange code used to determine the exchange rate for each landing cost.</p> <p>Key the exchange code to be used for each landing factor.</p> <p><i>Valid Values:</i> An exchange code defined for the currency through Currency/Exchange Codes Maintenance (MENU ICFILE).</p> <p>(6 @ A 3) Required</p>  |
| WH for Descriptions | <p>This field displays only if the landing factor being processed is not for a specific warehouse (as selected on the Landing Factor Maintenance Selection Screen (p. 48-2)).</p> <p>Key the warehouse for which you wish to display defined landing cost descriptions. All landing cost descriptions defined for that warehouse will be presented. If no landing costs have been defined for a specific warehouse, none will be presented.</p> <p><i>Default Value:</i> Those landing cost descriptions for the warehouse assigned to this User ID as the default warehouse through Authority Profile Maintenance (MENU XASCTY).</p> <p>(N 2,0) Required</p> |
| F12=Return          | <p>Press F12=RETURN to return to the Landing Factor Maintenance Selection Screen (p. 48-2) screen without saving any changes made on this screen.</p>   |
| F24=Delete          | <p>F24=DELETE displays only if you selected to delete a landing factor on the Landing Factor Maintenance Selection Screen (p. 48-2).</p> <p>Press F24=DELETE to delete the landing factor record. You will have to press F24=DELETE twice to confirm the deletion request and return to the Landing Factor Maintenance Selection Screen (p. 48-2).</p>  |
| Enter               | <p>Press ENTER to edit your entry. Press ENTER again to accept the data as displayed. The Landing Factor Maintenance Selection Screen (p. 48-2) will display.</p>   |

## Landing Factors Listing

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                                      | Purpose   |
|--|---|
| Landing Factors File List Selection Screen | Use to select the range of warehouses for which landing factors will print on the Landing Factors File Listing. |
| Landing Factors File Listing               | Prints Landing factors (codes and methods) for the indicated warehouses.  |

|                         | Landing cost type 2            | .500 Curr/Wght                     |                 | 1.000 Curr/Unit                |                 | .000 Curr/Unit  | .000 Curr/Unit |
|                         | CURRENCY: USD/WSJ              | USD/WSJ                            | USD/WSJ         | USD/WSJ                        | USD/WSJ         | USD/WSJ         | USD/WSJ        |

NOTE: The contents of this report will differ depending on the number of landing costs being utilized by the selected warehouse.

This listing is produced following your responses on the Landing Factors File List Selection Screen (p. 48-12), and the Report Options Screen (refer to the Cross Applications User Guide for details about this screen.)

Landing factors (codes and methods) are printed for the indicated warehouses. Page breaks will occur for each new warehouse included in the listing.

### Landing Factors File Listing

| Report/Listing Fields  | Description  |
|------------------------|--|
| Headings               | <p>Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.</p> <p>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings.</p> <p>This report uses the variable <b>Landing Factor Description</b> field as defined in Warehouse Numbers Maintenance (MENU IAFILE) for the column headings of those six columns.</p> |
| Code                   | The Landing Code which represents the landing factors variable data.   |
| Landing Cost 1 Heading | The <b>Landing Factor 1 Amount</b> and <b>Method</b> actual data will print on the first line with descriptive information to assist in understanding their relationship between the two values.   |
| Landing Cost 2 Heading | The <b>Landing Factor 2 Amount</b> and <b>Method</b> actual data will print on the second line with descriptive information to assist in understanding their relationship between the two values.  |

---

**Landing Factors File Listing**

| <b>Report/Listing Fields</b> | <b>Description</b>  |
|------------------------------|---|
| Landing Cost 3 Heading       | The <b>Landing Factor 3 Amount</b> and <b>Method</b> actual data will print on the first line with descriptive information to assist in understanding their relationship between the two values.  |
| Landing Cost 4 Heading       | The <b>Landing Factor 4 Amount</b> and <b>Method</b> actual data will print on the second line with descriptive information to assist in understanding their relationship between the two values. |
| Landing Cost 5 Heading       | The <b>Landing Factor 5 Amount</b> and <b>Method</b> actual data will print on the first line with descriptive information to assist in understanding their relationship between the two values.  |
| Landing Cost 6 Heading       | The <b>Landing Factor 6 Amount</b> and <b>Method</b> actual data will print on the second line with descriptive information to assist in understanding their relationship between the two values. |
| Currency                     | When International Currency is installed, this line contains the currency code and exchange rate used for each individual landing factor.   |

---

---

Buyer codes may be defined through this option to be used for buyer validation. Each buyer code (which has a thirty position buyer name associated with it) may be up to three characters long. Once created, you may assign a buyer code at the following levels:

- Vendor (MENU POFILE)
- Vendor/warehouse (MENU POFILE)
- Vendor/item (MENU POFILE)
- Vendor/item/warehouse (MENU POFILE)

Assigning a buyer code at the vendor/warehouse level is useful if the buyer for the warehouse is different than the overall buyer for that vendor (assigned through MENU POFILE). Assigning a buyer code at the vendor/item and/or vendor/item/warehouse level is useful if the buyer at the vendor/item level is different than the buyer at the vendor/warehouse level. Distribution A+ will update the buyer in the Inventory Management & Planning Balance File (IMBAL) or Advanced Inventory Management Balance File (AIBAL) with the appropriate buyer found at the most unique level in which the buyer exists. The Suggested Orders Report (MENU POREPT) may also be run by buyer. This would enable you to create requisitions for that buyer's items only. The item selection by buyer will be made at the most unique level in which the buyer exists.

Additionally, buyer budget levels may be assigned through this option in order to capture statistical budget/actual information on various levels. You may define buyer budgets for a buyer at the following levels:

- 1 - Warehouse
  - 2-Warehouse/Vendor
  - 3-Warehouse/Vendor/Buyer Item Class
  - 4-Warehouse/Vendor/Buyer Item Class/Subclass
  - 5- Warehouse/Buyer Item Class
  - 6- Warehouse/Buyer Item Class/Subclass
  - 7-Vendor
  - 8- Vendor/Buyer Item Class
  - 9- Vendor/Buyer Item Class/Subclass
  - 10- Buyer Item Class
-

- 11- Buyer Item Class/Subclass

---

## Buyers Maintenance

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| <b>Title</b>                       | <b>Purpose</b>   |
|------------------------------------|--|
| Buyer Maintenance Selection Screen | Use to select the buyer code to add or change.   |
| Buyer Maintenance Screen           | Use to enter or change the buyer name and User ID associated with the selected buyer code. |

---

## Buyer Maintenance Selection Screen

```

BUYER MAINTENANCE

Function:  _  (A,C)
Buyer?    ....

F3=Exit
  
```

This screen displays after selecting option 7 - Buyers Maintenance (MENU POFILE). Use this screen to select the buyer code to add or change.

### Buyer Maintenance Selection Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Function           | Key <b>A</b> to add a buyer code.<br>Key <b>C</b> to change an existing buyer code.<br>(A 1) Required   |
| Buyer              | Use this field to select the buyer code to add or change.<br>Key the desired code. This code may then be used at the vendor, vendor/<br>warehouse, vendor/item, and/or vendor/item/warehouse level.<br>(A 3) Required |
| F3=Exit            | Press <b>F3=EXIT</b> to exit this option and return to MENU POFILE.   |
| Enter              | Press <b>ENTER</b> to confirm your selections. The Buyer Maintenance Screen (p. 49-4) will display.   |

## Buyer Maintenance Screen

```

BUYER MAINTENANCE                                CHANGE
Buyer:      APD
Buyer Name: Application Plus Demo User,....
Buyer User ID: APDEMO,....
Buyer Budget Level: ... (0-11)
  1 - Warehouse
  2 - Warehouse/Vendor
  3 - Warehouse/Vendor/Buyer Item Class
  4 - Warehouse/Vendor/Buyer Item Class/Subclass
  5 - Warehouse/Buyer Item Class
  6 - Warehouse/Buyer Item Class/Subclass
  7 - Vendor
  8 - Vendor/Buyer Item Class
  9 - Vendor/Buyer Item Class/Subclass
 10 - Buyer Item Class
 11 - Buyer Item Class/Subclass
F12=Return
    
```

This screen displays after pressing **ENTER** on the Buyer Maintenance Selection Screen (p. 49-3). Use this screen to enter or change the **Buyer Name** and the **User ID** defined through Register A+ User IDs (MENU XACFIG) associated with the selected buyer code. Additionally, you may use this screen to assign a buyer budget level for the selected buyer if you wish to track statistical budget/actual data for purchasing. This level will establish the default budget level for a specific buyer for the Budget Analysis Report.

### Buyer Maintenance Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Buyer Name         | This is the description of the selected buyer code; usually the buyer's name. Key the appropriate description for this buyer code, or modify the existing description.<br>(A 30) Required |

---

**Buyer Maintenance Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Buyer User ID      | <p>Use this field to enter the Buyer's User ID.</p> <p>Workflow Management uses the value entered in this field for each buyer to determine how to deliver and escalate messages with a Buyer or Purchasing Manager recipient code. If you plan to use alerts that send messages to the buyer or purchasing manager, you must add a <b>Buyer User ID</b> for each buyer.</p> <p>Suggested Orders uses the value entered in this field to replace the user ID that is running the Suggested Orders Report, if the <b>Assign Owner by Buyer</b> field is <b>Y</b> to allow the Buyer's User ID to be the owner of the group when they are separated out onto individual suggested order reports by buyer. If you plan to use this feature in suggested orders, then you must add a Buyer User ID for each buyer.</p> <p>Key the User ID for this buyer.</p> <p><i>Valid Values:</i> A User ID defined through Register A+ User IDs (MENU XACFIG)</p> <p>(A 10) Optional</p>  |
| Buyer Budget Level | <p>This field is used to enter a buyer budget level for the selected buyer. Buyer Budgets are defined through Buyer Budgets Maintenance (MENU POFIL2) and are used to track statistical budget/actual costs on a buyer level. Budgets are tracked using the budget levels you assign in this field.</p> <p>You may assign one of the following buyer budget levels for a buyer:</p> <ul style="list-style-type: none"> <li>• 1 - Warehouse</li> <li>• 2-Warehouse/Vendor</li> <li>• 3-Warehouse/Vendor/Buyer Item Class</li> <li>• 4-Warehouse/Vendor/Buyer Item Class/Subclass</li> <li>• 5- Warehouse/Buyer Item Class</li> <li>• 6- Warehouse/Buyer Item Class/Subclass</li> <li>• 7-Vendor</li> <li>• 8- Vendor/Buyer Item Class</li> <li>• 9- Vendor/Buyer Item Class/Subclass</li> <li>• 10- Buyer Item Class</li> <li>• 11- Buyer Item Class/Subclass</li> </ul> <p>Key the appropriate buyer budget level you wish to assign to the selected buyer.</p> <p>Key zero if you do not wish to assign a buyer budget level to the selected buyer. Statistical information will not be saved for this buyer.</p> <p><i>Valid Values:</i> A valid buyer budget level (0-11) displayed on this screen.</p> <p>(N 2,0) Required</p> |

**Buyer Maintenance Screen Fields and Function Keys**

| <b>Field/Function Key</b> | <b>Description</b>  |
|---------------------------|---|
| F12=Return                | Press <b>F12=RETURN</b> to return to the Buyer Maintenance Selection Screen (p. 49-3) without updating this screen. |
| Enter                     | Press <b>ENTER</b> to confirm your selection. The Buyer Maintenance Selection Screen (p. 49-3) will display.        |

---

## Buyers Listing

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| <b>Title</b>       | <b>Purpose</b>   |
|--------------------|--|
| Buyer Code Listing | Prints the buyer codes/descriptions and buyer budget levels. |

---

## Buyer Code Listing

| BUYER Cd | BUYER Name                     | BUYER Budget Lvl | BUYER User ID: |
|----------|--------------------------------|------------------|----------------|
| P0975    | 09/06/10 19.44.57              | BUYER CODE LIST  | AF/APDEMO      |
|          |                                |                  | PAGE 1         |
| APD      | Application Plus Demo User     | 00 None          | APDEMO         |
| APT      | Application Plus Training User | 00 None          | APLUS          |
| ATO      | AUTO WH TRANSFER               | 00 None          |                |
| 101      | Bill DeFeo                     | 01 Warehouse     | WDEFEO         |
| 102      | Ed Hoxie                       | 01 Warehouse     | EHOXIE         |
| 103      | Sammy Cooke                    | 00 None          | SCOOKIE        |
| 104      | Bob Brown                      | 01 Warehouse     | RBROWN         |

This listing is produced following your responses on the Report Options Screen, which displayed after selecting option 17 - Buyers Listing (MENU POFILE).

Buyer codes/descriptions and buyer budget levels (as defined through Buyers Maintenance) are printed.

---

Once buyer codes have been defined through MENU POFIL, this option may be used to assign buyers at the vendor/warehouse level, allowing you to maintain information pertaining to purchases made to a vendor from a given warehouse. This is useful since there may be different buyers for each warehouse from the same vendor. You may also assign buyers at the vendor, vendor/item, and/or vendor/item/warehouse level for those situations when there are several buyers requesting products from the same vendor for the same warehouse (as in the case when a company may buy many different product lines from the same vendor).

This option should only be used if the buyer for the warehouse is different than the buyer assigned at the vendor level (through MENU POFIL).

If the **Days to Keep Vendor/Item Audit Activity** field is greater than 0 in Purchasing System Options Maintenance (MENU XAFIL), buyer changes that then updates the buyer in the vendor/item files will be tracked and can be accessed via the F18=VENDOR/ITEM ACTIVITY function key on the Vendor/Item Master Maintenance Screen (p. 44-4) in this menu option.

When working with vendors that require the use of Goods and Services Taxes, this option will also create the tax body assignment to a vendor and warehouse combination. This tax body will be used to calculate GST for purchase order line items during the receipt validation process in Voucher Entry (MENU APMAIN) if the **Calculate GST for Purchases (Inputs)** field is set to Y through AP Options Maintenance (MENU APFIL2).

---

## Vendor/Warehouse Assignments Maintenance

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

---

| Title   | Purpose  |
|---|--|
| Vendor/Warehouse Maintenance Selection Screen | Use to select the vendor/warehouse assignment record you wish to add, change, or delete. |
| Vendor/Warehouse Maintenance Screen           | Use to assign a buyer to the record being added.   |

## Vendor/Warehouse Maintenance Selection Screen

```

VENDOR/WAREHOUSE MAINTENANCE

Function:  _      (A,C,D)

Vendor No: .....

Find: .....
City: .....

Warehouse? 1, .

F3=Exit
    
```

This screen displays after selecting option 8 - Vendor/Warehouse Assignments Maintenance (MENU POFILE). Use this screen to select the vendor/warehouse assignment record you wish to add, change, or delete. You then assign a buyer code to this record on the Vendor/Warehouse Maintenance Screen (p. 50-5).

### Vendor/Warehouse Maintenance Selection Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Function           | <p>Key <b>A</b> to add a vendor/warehouse assignment record.</p> <p>Key <b>C</b> to change an existing vendor/warehouse assignment record.</p> <p>Key <b>D</b> to delete an existing vendor/warehouse assignment record.</p> <p>(A 1) Required</p>  |
| Vendor No          | <p>Use this field to select the vendor for whom a vendor/warehouse assignment record will be created.</p> <p>If you do not know a vendor number, use the vendor search by keying search words (or beginning characters) in the <b>Find</b> and <b>City</b> fields.</p> <p><i>Valid Values:</i> Any existing vendor specified in Vendors Maintenance (MENU POFILE/MENU APFILE)</p> <p>(A 6) Required</p> |

---

**Vendor/Warehouse Maintenance Selection Screen Fields and Function Keys**

---

| Field/Function Key | Description  |
|--------------------|--|
| Find               | <p>Use this field to activate the Vendor Search feature when you do not know the vendor's number.</p> <p>Key the vendor's name or up to 10 characters (the first 10) of one or more words in the vendor's name and press <b>ENTER</b> to display the Vendor Search Screen.</p> <p>To limit the vendor search by city (i.e., search for the specified vendor name within a particular city), key a city in the <b>City</b> field as well.</p> <p>For more information on using searches and for a description of the search screens, refer to the Cross Applications User Guide.</p> <p>(A 40) Optional</p>                 |
| City               | <p>When using the <b>Find</b> field to search for a vendor, you can limit the search to a particular city by keying a partial or complete city name in this field.</p> <p>If you enter characters in this field, the Vendor Search Screen displays only vendors that meet the criteria specified here and in the <b>Find</b> field.</p> <p>For more information on using searches and for a description of the search screens, refer to the Cross Applications User Guide.</p> <p>(A 8) Optional</p>   |
| Warehouse          | <p>Use this field to select the warehouse for which a vendor/warehouse assignment record will be created.</p> <p>Key the desired warehouse.</p> <p><i>Default Value:</i> The default warehouse defined in Authority Profile Maintenance (MENU XASCTY) if one has been defined; otherwise, this is the <b>Default Warehouse</b> defined through Company Name Maintenance (MENU XAFIELD)</p> <p><i>Valid Values:</i> A valid warehouse number defined through Warehouse Numbers Maintenance (MENU IAFIELD) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(A 2) Required</p> |
| F3=Exit            | <p>Press <b>F3=EXIT</b> to exit this option and return to MENU POFIELD.</p>  |
| Enter              | <p>Press <b>ENTER</b> to confirm your selections. If you entered vendor search criteria, the Vendor Search Screen (p. 43-7) will display. Otherwise, the Vendor/Warehouse Maintenance Screen (p. 50-5) will display.</p>   |

---

## Vendor/Warehouse Maintenance Screen

| VENDOR/WAREHOUSE MAINTENANCE |       | ADD                 |
|------------------------------|-------|---------------------|
| Vendor No:                   | 100   | SHARP INTERNATIONAL |
| Warehouse:                   | 1     | Hartford, CT        |
| Buyer?                       | 103   | Sammy Cooke         |
| Tax Body?                    | ..... |                     |
| F12=Return                   |       |                     |

This screen displays after selecting a vendor and warehouse and pressing **ENTER** on the Vendor/Warehouse Maintenance Selection Screen (p. 50-3). Use this screen to assign a buyer to the record being added. You may also use this screen to change the buyer assigned to an existing record, or to delete an existing record, if in the delete mode.

For example, assume buyer 206 is assigned to vendor 100. If you change the buyer to 210, the system will change all records for vendor 100 and buyer 206 to buyer 210. A record for vendor 100 and buyer 202 would not be changed.

#### Vendor/Warehouse Maintenance Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Buyer              | <p>Use this field to select the buyer code that will be assigned to this vendor/warehouse assignment record. This is useful if this buyer for this warehouse is different than the buyer assigned in the Vendor Master File.</p> <p>Key the desired buyer code. This buyer will be used for purchases to this vendor from the indicated warehouse.</p> <p>If you change the buyer assigned to a vendor, when you complete the maintenance in this option, the system will update the vendor/item/warehouse level records for the vendor and buyer.</p> <p><i>Valid Values:</i> A buyer code defined through Buyers Maintenance (MENU POMAIN)</p> <p>(A 3) Required</p> |

### Vendor/Warehouse Maintenance Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Tax Body           | <p>Key the tax body you want assigned to this vendor and warehouse combination. This tax body will be used to calculate GST for purchase order line items during the receipt validation process in Voucher Entry (MENU APMAIN) if the <b>Calculate GST for Purchases (Inputs)</b> field is set to <b>Y</b> through AP Options Maintenance (MENU APFIL2).</p> <p><i>Valid Values:</i> A tax body created through Tax Body Maintenance (MENU OEFIL2). Because this field is used to calculate the tax amount for purchases, the tax body should be one with the <b>Goods/Services Tax</b> field set to <b>Y</b> in Tax Body Maintenance.</p> <p>(A 10) Optional</p> |
| F12=Return         | Press the <b>F12=RETURN</b> function key to return to the Vendor/Warehouse Maintenance Selection Screen (p. 50-3) without saving your changes.  |
| F24=Delete         | <p>The <b>F24=DELETE</b> function key appears only when you are deleting a record.</p> <p>Press the <b>F24=DELETE</b> function key to delete the record displayed. You will be prompted to press the <b>F24=DELETE</b> function key again to confirm deletion. The Vendor/Warehouse Maintenance Selection Screen (p. 50-3) will display and the record will be deleted.</p>   |
| Enter              | Press <b>ENTER</b> to confirm your selection. The Vendor/Warehouse Maintenance Selection Screen (p. 50-3) will display.   |

## Vendor/Warehouse Assignments Listing

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                                    | Purpose   |
|--|---|
| Vendor/Warehouse Assignments List Screen | Use to select the criteria for which the Vendor/W/H Assignments Listing (p. 50-9) will print. |
| Vendor/W/H Assignments Listing           | Prints vendor/warehouse information defined through option 8.                                 |

## Vendor/Warehouse Assignments List Screen

VENDOR/WAREHOUSE ASSIGNMENTS LIST

Vendor No:      - ..... To: .....

WH?                ...      (Blank for ALL)

F3=Cancel

This screen displays after selecting option **18** -Vendor/Warehouse Assignments List Screen (MENU POFIL). Use this screen to select the criteria for which the Vendor/W/H Assignments Listing (p. 50-9) will print.

Refer to the Cross Applications User Guide for an explanation of the rules for entering From/To Ranges.

### Vendor/Warehouse Assignments List Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Vendor No          | <p>Use this field to limit the listing to the vendor or range of vendors entered in this field.</p> <p>Key the range of vendors for which the listing will print.</p> <p><i>Valid Values:</i> A vendor defined through Vendor Master Maintenance (MENU POFIL)</p> <p>(2 @ A 6) Optional</p> |

**Vendor/Warehouse Assignments List Screen Fields and Function Keys**

| <b>Field/Function Key</b> | <b>Description</b>   |
|---------------------------|--|
| WH                        | <p>Use this field to limit the listing to the warehouse indicated in this field.<br/>Key the warehouse for which the listing will print.<br/>Leave this field blank to print the listing for all warehouses.<br/><i>Default Value:</i> The default warehouse defined in Authority Profile Maintenance (MENU XASCTY) if one has been defined; otherwise, this is the <b>Default Warehouse</b> defined through Company Name Maintenance (MENU XAFILE)<br/><i>Valid Values:</i> A valid warehouse number defined through Warehouse Numbers Maintenance (MENU IAFILE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).<br/>(A 2) Optional</p> |
| F3=Cancel                 | <p>Press F3=CANCEL to cancel this option and return to the menu.</p>   |
| Enter                     | <p>Press ENTER to confirm your selections. The Report Options Screen will display.</p>   |

---

## Vendor/W/H Assignments Listing

| P0875 08/04/09 12:34:10     |                     | VENDOR/WH ASSIGNMENTS LISTING |       |             | AM/APOEMO  | PAGE: 1               |
|-----------------------------|---------------------|-------------------------------|-------|-------------|------------|-----------------------|
| Selection Criteria: Vendor: |                     | to: 999999                    | WH:   |             |            |                       |
| Vendor                      | Name                | WH                            | Buyer | Name        | Tax Body   | Description           |
| 100                         | SHARP INTERNATIONAL | 1                             | 103   | Sammy Cooke | RHODEISLND | State of Rhode Island |

This listing is produced following your responses on the Vendor/Warehouse Assignments List Screen (p. 50-7) and the Report Options Screen. Refer to the Appendix section of the Cross Applications User Guide for details about this screen.

Vendor/warehouse information defined on the Vendor/Warehouse Maintenance Screen (p. 50-5) is printed.

---

You may optionally define vendor user fields (up to 6 may be defined) and vendor user field values that can be used to categorize vendors. You may then assign these vendor user field values when adding/maintaining a vendor through Vendor Master Maintenance (MENU PROFILE).

---

## Vendor User Fields Maintenance

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title  | Purpose   |
|--|---|
| Vendor User Field Maintenance Selection Screen | Use to select a vendor user field or a vendor user field value to add or change.          |
| Vendor User Field Maintenance Screen           | Use to add or change the description of the vendor user field or vendor user field value. |

---

## Vendor User Field Maintenance Selection Screen

USER VENDOR FIELDS

Function:            -            (A,C)

User Field No:      ..            (1 2 3 4 5 6)

User Field?        .....

F3=Exit

This screen displays after selecting option **9** - Vendor User Fields Maintenance (MENU PROFILE). Use this screen to select a vendor user field or a vendor user field value to add or change.

### Vendor User Field Maintenance Selection Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Function           | <p>Key <b>A</b> to add a vendor user field (1, 2, 3, 4, 5, or 6), or to add a vendor user field value to an existing vendor user field. A vendor user field value serves as a “valid value” for a vendor user field.</p> <p>Key <b>C</b> to change the description of an existing vendor user field/vendor user field value.</p> <p>(A 1) Required</p>   |
| User Field No      | <p>Up to 6 user field numbers (vendor user fields) may be defined. Before defining a vendor user field value, you must first define the vendor user field number for which the value will be a valid value.</p> <p>Use the <b>User Field No</b> field without a <b>User Field</b> value keyed to maintain a vendor <b>User Field No</b> (1, 2, 3, 4, 5, or 6). Use this field with a <b>User Field</b> value keyed to maintain that vendor user field value for the selected vendor user field.</p> <p>Key the vendor user field number (1 - 6) that you are defining or maintaining. Once a vendor user field number has been defined, you will not be allowed to delete that number.</p> <p><i>Valid Values:</i> 1 - 6</p> <p>(A 1) Required</p> |

---

**Vendor User Field Maintenance Selection Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| User Field         | <p>This field allows you to set up vendor user field values for a specific vendor user field (1 - 6). You may define as many vendor user field values as desired for each vendor user field to help categorize a vendor.</p> <p>When entering a vendor through Vendor Master Maintenance (MENU POFILE) you may key a vendor user field value defined here that further describes the vendor being added or maintained</p> <p><i>Valid Values:</i> This field must be blank if you have not defined the vendor user field for which you wish to assign a vendor user field value. If a vendor user field has been defined, this field is optional.</p> <p>(A 5) Optional/Blank</p> |
| F3=Exit            | Press F3=EXIT to cancel this option. MENU POFILE will display.  |
| Enter              | Press ENTER to confirm your selections. The Vendor User Field Maintenance Screen (p. 51-4) will display.  |

---

## Vendor User Field Maintenance Screen

USER VENDOR FIELDS Change

Code No: 1

User Field:

Description: Overhead .....

F12=Return

## Vendor User Field Maintenance Screen

USER VENDOR FIELDS Change

Code No: 1 Overhead

User Field: UTIL

Description: Utilities .....

F12=Return

This screen displays after pressing **ENTER** on the Vendor User Field Maintenance Selection Screen (p. 51-2). Use this screen to add or change the description of the vendor user field or vendor user field value.

---

**Vendor User Field Maintenance Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Code No            | The vendor user field <b>Code No</b> (1 - 6) you are adding/maintaining. If the field has already been defined, the description will display as well.<br>Display  |
| User Field         | The vendor user field value being maintained for the selected vendor user field. If you are maintaining the vendor user field (as opposed to a vendor user field value), this field will be blank.<br>Display   |
| Description        | <p>If you are adding/maintaining a vendor user field <b>Code No</b> (1 - 6), this is the description of the <b>Code No</b>. If you are adding/maintaining a vendor user field value, this is the description of the <b>User Field</b>.</p> <p>Key the description of the vendor user field <b>Code No</b> or vendor <b>User Field</b> value.</p> <p><b>Example:</b> : If you are defining vendor user field 1, you might enter Allows Returns for the description. Then, you may set up the vendor user field value Y for vendor user field 1, and key a description such as Yes, Allows Returns.</p> <hr/> <p>NOTE: When adding a customer through Vendor Master Maintenance (MENU PROFILE), the description keyed here will display on the Vendor Master Maintenance (2) Screen. If you define all 6 vendor user fields, all 6 descriptions will display. You may then key actual vendor user field values that further define the vendor, if desired.</p> <hr/> <p>(A 30) Required</p> |
| F12=Return         | Press F12=RETURN to return to the Vendor User Field Maintenance Selection Screen (p. 51-2).   |
| Enter              | Press ENTER to update the description. The Vendor User Field Maintenance Selection Screen (p. 51-2) will display.   |

---

## Vendor User Fields Listing

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                     | Purpose   |
|---------------------------|---|
| Vendor User Field Listing | Prints the vendor user field value(s) and description(s) for each vendor user field defined (up to 6 may be defined). |

---

## Vendor User Field Listing

```
P0836 09/06/10 19.45.56                USER VENDOR FIELD LISTING                AF/APDEMO  PAGE  1
                USER VENDOR FIELD NUMBER: 1
USER FIELD  Overhead
-----
                UTIL  Utilities
```

This listing prints after entering responses on the Report Options Screen (refer to the Appendix section of the Cross Applications User Guide for details about this screen.) The Report Options Screen displays after selecting option 19 - Vendor User Fields Listing (MENU PROFILE).

For each vendor user field defined (up to 6 may be defined), the vendor user field value(s) and description(s) are printed. This listing is sequenced by vendor user field.

For a description of the data printed on this report, refer to the Vendor User Field Maintenance Screen (p. 51-4).

---

Event codes are characters (letters, numbers, symbols) assigned to descriptions of events that regularly occur while conducting domestic or international business. Recurring events associated with a PO receiver may be assigned codes so that these events can be quickly entered on the PO Receiver Note Pad and transactions can be easily tracked. You may maintain the note pad through Enter or Change Receivers or PO Receipts (MENU POMAIN) or the Item Inquiry (refer to the Appendix section of the Purchasing User Guide for details).

Use this option to create and maintain codes for recurring events you wish to record and track.

---

**NOTE:** If you have International Currency installed, the same event codes also may be created and maintained through Event Codes Maintenance (MENU ICFILE). A Currency Contract Note Pad [see Currency Contract Inquiry (MENU ICMAIN)] also is provided so that events may be entered for a contract. Refer to the International Currency User Guide for information related to currency contracts.

---

---

## Event Code Maintenance

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| <b>Title</b>                             | <b>Purpose</b>   |
|--|--|
| Event Codes Maintenance Selection Screen | Use to add or change an event code.  |
| Event Codes Maintenance Screen           | Use to enter a description for the event you are adding or to change the description of an existing event. |

---

## Event Codes Maintenance Selection Screen

```

EVENT CODE MAINTENANCE

Function:  -   (A,C)

Event Code?  ....

F3=Exit
  
```

This screen displays after selecting option **10** - Event Code Maintenance (MENU POFILE) or option **5** - Event Code Maintenance (MENU ICFILE). Use this screen to add or change an event code.

### Event Codes Maintenance Selection Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Function           | Key <b>A</b> to add a new event code.<br>Key <b>C</b> to change an existing event code.<br>(A 1) Required                                       |
| Event Code         | Use this field to enter the code you want to add or change.<br>Key up to three characters to be representative of this event.<br>(A 3) Required |
| F3=Exit            | Press <b>F3=EXIT</b> to cancel this operation and return to MENU POFILE or MENU ICFILE.   |
| Enter              | Press <b>ENTER</b> to accept your selection. The Event Codes Maintenance Screen (p. 52-3) will display.   |

## Event Codes Maintenance Screen

```

EVENT CODE MAINTENANCE
Change

Event Code:  VOR

Event Code Description:  Vendor, Order, Received at, MH...

F3=Exit      F12=Return
  
```

This screen displays after entering a **Function** and **Event Code** and pressing **ENTER** from the Event Codes Maintenance Selection Screen (p. 52-2). Use this screen to enter a description for the event you are adding or to change the description of an existing event.

### Event Code Maintenance Screen Fields and Function Keys

| Field/Function Key     | Description   |
|------------------------|---|
| Event Code             | This field displays the event code you entered on the Event Codes Maintenance Selection Screen (p. 52-2).<br>Display  |
| Event Code Description | Use this field to enter the description for a new event or to change the description of an existing event.<br>Key a description.<br>Use this field to enter the description for a new event or to change the description of an existing event.<br>(A 30) Required |
| F3=Exit                | Press <b>F3=EXIT</b> to cancel this operation and return to MENU POFILE or MENU ICFILE.   |
| F12=Return             | Press <b>ENTER</b> to cancel this operation and return to the Event Codes Maintenance Selection Screen (p. 52-2).   |
| Enter                  | Press <b>ENTER</b> to confirm the description and return to the Event Codes Maintenance Selection Screen (p. 52-2).   |

## Event Code Listing

---

The reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title               | Purpose  |
|---------------------|--|
| Event Codes Listing | Prints all defined event codes and their descriptions. |

---

## Event Codes Listing

| Event Code | Description                   |
|------------|-------------------------------|
| CIV        | Customer Invoice Sent         |
| VIV        | Vendor Invoice Received       |
| VOC        | Vendor Order Received/Customs |
| VOR        | Vendor Order Received at WH   |
| 100        | In-transit Truck or Rail      |
| 200        | In-transit Water              |
| 300        | European Customs              |
| 400        | USA Customs                   |
| 500        | Canadian Customs              |

This report prints after pressing **ENTER** on the Report Options Screen, which displays after selecting option **21** - Event Code Listing (MENU POFILE) or option **15** - Event Code Listing (MENU ICFILE).

All defined event codes and their descriptions will print on this listing. Refer to Event Codes Maintenance (MENU POFILE/MENU ICFILE) for details.

## Create Default Vendor/Item Information from Item Master/Item Balance

---

Vendor/Item information can be manually keyed through Vendor/Item Information Maintenance (MENU POFIL), or automatically generated using this option. To minimize the effort of setting up the information, use this option to create default vendor/item information for a selected group of vendors, item classes and/or items based on your Item Balance File (ITBAL) data [maintained through Item Balance Maintenance (MENU IAFIL)]. For each warehouse/item that has been created through Item Balance Maintenance (MENU IAFIL), this option creates an entry in the Vendor/Item File and Vendor/Item Price File for the warehouse/item's primary vendor. Additional information for the item is retrieved from the Item Master File, maintained through Item Master Maintenance (MENU IAFIL).

---

NOTE: Each vendor must be a primary vendor in the Item Balance File in order for records to be created.

---

Vendor/item records can also be automatically defined for warehouse transfer vendors. However, note that since the costing used for warehouse transfers comes from the options defined through Purchasing Options Maintenance (MENU XAFIL), the costing information is not defined here. Also note that since this costing information is not available for warehouse transfer vendors, multi currency landing costs are not permitted.

When the vendor/item information is defined for warehouse transfer vendors through this option, the buying unit of measure will default to the first unit of measure defined for the item through Item Master Maintenance (MENU IAFIL) and the costing unit of measure will default to the pricing unit of measure. Both of these fields are protected and cannot be changed.

---

NOTE: When PO vendor/item and/or PO vendor/item/price file records are updated and **Days to Keep Vendor/Item Audit Activity** is greater than 0 in Purchasing System Options Maintenance (MENU XAFIL), vendor/item activity will be tracked.

---

---

## Create Default Vendor/Item Information from Item Master/Item Balance

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

---

| Title  | Purpose   |
|--|---|
| Create Vendor/Item File Information Screen                       | Use to select the default ordering information for the Vendor/Item File and Vendor/Item Price File.                                   |
| Vendor/Item Master File Update From Item Balance Report          | Prints vendor/item and vendor/item price information that was updated from the Item Balance File.                                     |
| Vendor/Item Master File Update From Item Balance Report - Errors | Prints vendor/item and vendor/item price information that was not updated from the Item Balance File due to errors found in the data. |

## Create Vendor/Item File Information Screen

CREATE VENDOR/ITEM FILE INFORMATION

Selection

Vendor:           - .....           To:           .....

Item Class?       ... / ...           To?       ... / ...

Item Number: .....           To: .....

F3=Cancel

This screen displays from option 20 - Create Default Vendor/Item Information from Item Master/Item Balance. Use this screen to select the default ordering information for the Vendor/Item File and Vendor/Item Price File.

Refer to the Cross Applications User Guide for the rules of keying FROM/TO ranges.

### Create Vendor/Item File Information Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Vendor             | <p>Key the range of vendors for which default ordering information will be used.</p> <p><i>Valid Values:</i> Must be a primary vendor in the Item Balance File (ITBAL); item balance records are defined through Item Balance Maintenance (MENU IAFILE)</p> <p>(2 @ N 6,0) Optional</p> |
| Item Class         | <p>Key the range of item classes for which default ordering information will be used.</p> <p><i>Valid Values:</i> Must be a valid item class in Item Class/Sub Class Maintenance (MENU IAFILE)</p> <p>(2 @ A 2) Optional</p>  |

**Create Vendor/Item File Information Screen Fields and Function Keys**

---

| <b>Field/Function Key</b> | <b>Description</b>   |
|---------------------------|--|
| Item Number               | Key the range of items that will be used to create default vendor/item and vendor/item price information.<br><br><i>Valid Values:</i> Must be a valid item number in Item Master Maintenance (ITMST); items are defined through Item Master Maintenance (MENU IAFILE)<br><br>(2 @ A 27) Optional |
| F3=Cancel                 | Press F3=CANCEL to cancel this option and return to MENU POFILE.   |
| Enter                     | Press ENTER to confirm your selections and update the Vendor/Item File and Vendor/Item Price File with new information. The Report Options Screen will display. The reference section for this screen is in the Appendix section of the Cross Applications User Guide.                           |

---

This report prints following your selections on the Create Vendor/Item File Information Screen (p. 53-3), and the Report Options Screen. Refer to the Appendix section of the Cross Applications User Guide for details about this screen.

Use this report to review the vendor/item and vendor/item price information that was updated from the Item Balance File.

When this report is generated, a Vendor/Item Master File Update From Item Balance Report - Errors also prints. This report prints invalid vendor and invalid unit of measure error information from the Vendor/Item Master File Update. This report is identical the report shown above with the exception that all printed information is in regard only to any associated errors.

### Vendor/Item Master File Update From Item Balance Report

| Report/Listing Fields | Description   |
|-----------------------|---|
| Item Number           | The item number added to the Vendor/Item File (VNITM) and Vendor/Item Price File (VIPRC). |
| Manufacturers Number  | The manufacturer's item number used for the item that was added.                          |

**Vendor/Item Master File Update From Item Balance Report**

| Report/Listing Fields     | Description  |
|---------------------------|--|
| Manufacturers Description | The description information used to create the manufacturers description in the Vendor/Item File (VNITM) and Vendor/Item Price File (VIPRC).   |
| Vendor Number             | The primary vendor from the Item Balance File (ITBAL) used to create the Vendor/Item File (VNITM) and Vendor/Item Price File (VIPRC).  |
| Cost                      | <p>The type of cost (standard, user, or average) is determined by the costing value (S, U, or A) in the Item Balance File. If Order Entry is installed, this costing value is entered through Order Entry Options Maintenance (MENU XAFILE). If Order Entry is not installed, the type of cost will default to the average cost.</p> <p>When International Currency is installed, the cost printed is displayed in the vendor's trading currency and the company's local currency is displayed on the line below. Each cost amount is followed by the appropriate currency symbol.</p> |
| Total Records Read        | The total number of records read based on the selection criteria selected.   |
| Records Added             | The total number of records added from the total records read.   |
| Error Records             | The total number of records found to be in error from the qualifying available records read.   |

---

Country names comprise a country ID (such as “FRN” for France) and a description for that ID (such as “France” for the ID FRN). Once created, the country names can be assigned to customers, vendors, and warehouses to be included in the address information that would normally be included on any documents/forms/labels (such as, invoices, purchase orders, shipping labels, etc.) for those customers, vendors, and warehouses.

In addition to country names being used for printing information on documents/forms/ labels, country names are also used for European Community trade reports and for country of origin restrictions. For example, country names maintained through this option as belonging to the European Community (EC) will determine that data required for EC trade reports is captured and stored in the system for customers/vendors/warehouses to which the country names are assigned. Additionally, if country of origin restrictions are to be used [as determined through System Options Maintenance (MENU XAFILE)], those restrictions would be established for the applicable countries through this option. This would result in various buying/selling functions throughout the application editing for those restrictions to ensure items are not processed between countries for which restrictions exist.

Use the Country Names Maintenance option to create country names for customers, vendors, and warehouses. Country names can be assigned to customers through Customer/Ship-to Master Maintenance (MENU ARFILE), vendors through Vendor Master Maintenance (MENU POFILE/ MENU APFILE), and warehouses through Warehouse Numbers Maintenance (MENU IAFILE). Also use this menu option to establish any country of origin restrictions required for your processing.

You can print a list of defined country names using the Country Names Listing option. This listing shows the country IDs, country names, and other information defined through Country Names Maintenance.

---

**NOTE:** Country names can be created through this menu option or Country Names Maintenance (MENU POFILE). The creation of country names through both menu options will update the same file.

---

Refer to Country Names Maintenance (MENU ARFIL2) in the Accounts Receivable User Guide for a complete explanation of this menu option.

---

---

Use this option to add, change, delete, suspend, or reinstate vendor price contracts. Once a contract is defined here, the discounted item cost will be retrieved whenever you enter purchase order requisitions that meet the terms of the contract.

---

NOTE: To use vendor contracts, the **Use Vendor Contracts** field in PO Company Options Maintenance (MENU XAFILE) must be set to **Y**.

---

A vendor contract consists of the following:

- Contract number (optional)
- Start and end dates
- Item number
- Unit cost
- As many as five quantity breaks that offer a discounted cost or percentage discount when you purchase a minimum quantity

- OR -

- A “buy/get” special that offers additional items at no charge, at a discounted cost, or at a percentage discount when you purchase a minimum quantity.

---

## Vendor Contracts Maintenance

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title  | Purpose  |
|--|--|
| Vendor Contract Maintenance Selection Screen | Use to select a vendor contract to be added, changed, deleted, suspended, or reinstated. |

---

| <b>Title</b>                       | <b>Purpose</b>  |
|------------------------------------|---|
| Vendor/Item Contract List Screen   | Use to view information about this vendor's contracts and select a contract for the function you are performing.                        |
| Vendor Contract Maintenance Screen | Use to enter contract information when adding or changing a contract. You can also use it to suspend, reactivate, or delete a contract. |

---

## Vendor Contract Maintenance Selection Screen

```

VENDOR CONTRACT MAINTENANCE

Function:      _ (A,C,D,S,R)

Vendor No:    .....
Find:        .....
City:        .....

Item No:     .....
Find:        .....
Item No:     ..... Class? .....

WH?          .. (Optional)
Promotion:   N
Contract No: .....
Start Date:  .....
Expiration Date: .....

F3=Exit  F4=Contract List
    
```

This screen appears after selecting option 1 - Vendor Contracts Maintenance (MENU POFIL2). Use this screen to select a vendor contract to be added, changed, deleted, suspended, or reinstated.

### Vendor Contract Maintenance Selection Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Function           | <p>Key <b>A</b> to add a new vendor contract.</p> <p>A vendor/item record must exist for the vendor and item specified on the contract. To create a vendor/item record, use Vendor/Item Information Maintenance (MENU POFILE).</p> <p>Key <b>C</b> to change an existing vendor contract.</p> <p>Key <b>D</b> to delete an existing vendor contract. You cannot delete a contract until all purchase orders based on it have been received complete or closed.</p> <p>Key <b>S</b> to suspend an existing vendor contract, which prohibits users from entering new purchase requisitions based on the contract. This is useful when you want to delete a contract but there are open orders against it.</p> <p>Key <b>R</b> to reactivate a suspended vendor contract.</p> <p>(A 1) Required</p> |

---

**Vendor Contract Maintenance Selection Screen Fields and Function Keys**

---

| Field/Function Key | Description  |
|--------------------|--|
| Vendor No          | <p>Use this field to specify the vendor for which you are adding, changing, deleting, suspending, or reinstating a contract.</p> <p>Key the appropriate vendor number.</p> <p>If you do not know a vendor number, use the vendor search by keying search words (or beginning characters) in the <b>Find</b> and <b>City</b> fields.</p> <p><i>Valid Values:</i> Any existing vendor specified in Vendors Maintenance (MENU POFILE/MENU APFILE)</p> <p>(A 6) Required</p>   |
| Find               | <p>Use this field to activate the Vendor Search feature when you do not know the vendor's number.</p> <p>Key the vendor's name or up to 10 characters (the first 10) of one or more words in the vendor's name and press <b>ENTER</b> to display the Vendor Search Screen.</p> <p>To limit the vendor search by city (i.e., search for the specified vendor name within a particular city), key a city in the <b>City</b> field as well.</p> <p>For more information on using searches, refer to the Cross Applications User Guide.</p> <p>(A 40) Optional</p> |
| City               | <p>When using the <b>Find</b> field to search for a vendor, you can limit the search to a particular city by keying a partial or complete city name in this field.</p> <p>If you enter characters in this field, the Vendor Search Screen displays only vendors that meet the criteria specified here and in the <b>Find</b> field.</p> <p>For more information on using searches, refer to the Cross Applications User Guide.</p> <p>(A 8) Optional</p>   |

**Vendor Contract Maintenance Selection Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Find               | <p>Use this field to search for an item using one or more words that closely match the item for which you are searching. The words you key may be up to 15 characters long and may appear in any order. Key the most unique words to improve the speed of the search. Leave this field blank if you would like to search on an item class.</p> <p>To search for manufacturer item numbers, prefix the criteria you enter with <b>M/</b>. The system will search based on the Vendor/Item File (VNITM) valid manufacturer item number.</p> <p>To search for customer item numbers, prefix the criteria you enter with <b>C/</b>. The system will search based on the Item/Customer Cross Reference File (IAXRF) valid customer item numbers.</p> <p>To search for UPC cross references, prefix the criteria you enter with <b>U/</b>. The system will search based on the Universal Product Code File (ITUPC) for valid UPC cross references.</p> <p>To search for GTIN cross references, prefix the criteria you enter with <b>G/</b>. The system will search based on the Global Trade Item Number File (ITGTIN) for valid GTIN cross references.</p> <p>(A 40) Optional</p> |
| Item No            | <p>This field may be used in addition to, or in place of, entering search criteria in the <b>Find</b> field to further limit the items to display.</p> <p>Key a partial item number. All items that match the characters of the item number keyed in this field will display. This is helpful if you recall part of an item number, but not the entire number.</p> <p>For information on entering search criteria, refer to the Cross Applications User Guide.</p> <p>(A 27) Optional</p>   |
| Class              | <p>This field may be used in addition to (not in place of) the search criteria in the <b>Find</b> or <b>Item No</b> fields to further limit the number of items that will display, based on their item class.</p> <p>Key the appropriate item class and sub-class, if any. Only items that have been assigned the item class that is keyed in this field will display on the Item Description Search Screen.</p> <p>For information on entering search criteria, refer to the Cross Applications User Guide.</p> <p>(A 4) Optional</p>  |

## Vendor Contract Maintenance Selection Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| WH                 | <p>When the contract price applies only to items ordered from a particular warehouse, use this field to specify the warehouse. If the contract price for this item applies to all warehouses, leave this field blank.</p> <p>Key the warehouse ID.</p> <p><i>Valid Values:</i> A valid warehouse number defined through Warehouse Numbers Maintenance (MENU IAFILE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(A 2) Optional</p>  |
| Promotion          | <p>This field is reserved for future use and is not currently used in the application.</p> <p>Leave this field set to <b>N</b>. Setting this field to <b>Y</b> may prevent contracts from being used in other areas, such as, Enter or Change Requisitions (MENU POMAIN).</p> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p>   |
| Contract No        | <p>Use this field to specify a contract number for identification purposes. Typically, you assign a number to a contract when you have more than one contract for the same vendor and item.</p> <hr/> <p style="text-align: center;"><b>Important</b></p> <p style="text-align: center;">If a contract has a number assigned to it, you must key that number during requisition entry to take advantage of contract pricing.</p> <hr/> <p>Key a contract number that is unique to this vendor/item combination.</p> <p>(A 10) Optional</p>                                     |
| Start Date         | <p>Use this field to specify the date the contract will go into effect.</p> <p>Key a date that is prior to the <b>Expiration Date</b>. If you leave this field blank, the date 00/00/00 is used.</p> <p><i>Valid Values:</i> Key a date that is less than the <b>Expiration Date</b>, using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFILE).</p> <p>(N 6, 0) Optional</p> |

---

**Vendor Contract Maintenance Selection Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| Expiration Date    | <p>Use this field to specify the last day the contract will be in effect.</p> <p>Key a date that is later than the <b>Start Date</b>. If you leave this field blank, the date 99/99/99 is used.</p> <p><i>Valid Values:</i> Key a date that is greater than the <b>Start Date</b>, using the <b>Default Date Format</b> for this user, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, key the date using the system's <b>Default Date Format</b> specified through System Options Maintenance (MENU XAFILE).</p> <p>(N 6, 0) Optional</p> |
| F3=Exit            | Press F3=EXIT to exit the option and return to MENU POFIL2.   |
| F4=Contract List   | <p>After entering a vendor number, press the F4=CONTRACT LIST function key to display the Vendor/Item Contract List Screen (p. 55-8), from which you can select a contract to change, delete, suspend, or reactivate.</p> <hr/> <p>NOTE: To limit the contract list further, enter a value in one or more of the other fields before pressing F4=CONTRACT LIST</p>  |
| Enter              | <p>Press the ENTER key to confirm your selections.</p> <p>If there is vendor search criteria, the Vendor Search Screen (p. 43-7) appears.</p> <p>If there is item search criteria, the Item Description Search Screen appears. Refer to the Inventory Accounting User Guide for information on this screen.</p> <p>The Vendor Contract Maintenance Screen (p. 55-15) appears.</p>   |

Selection:

-or- Valid From Date: ..... Warehouse? ... Contract: .....

Valid Through Date: ..... Promotion: N (Y,N,B)

Item No: .....

F2=Contract Desc    F5=Mfg Item No    F6=Dsp Contract    F12=Return

This screen appears after you enter a vendor number and press F4=CONTRACT LIST on the Vendor Contract Maintenance Selection Screen (p. 55-3). You can also display this screen by pressing the F16=CNTR LIST function key on the Requisition/Purchase Order Item Detail Entry Screen (p. 6-38), press F16=CONTRACT LIST on the Requisition/Purchase Order Maintenance Header Screen (p. 6-13), or press the F16=CONTRACTS function key on the Suggested Order Maintenance Screen (p. 35-36).

Use this screen to view information about this vendor's contracts and select a contract for the function you are performing. Using the fields at the bottom of this screen, you can change the list, displaying only contracts that meet one or more of the following selection criteria:

- Valid From Date (Start Date)
- Valid Through Date (Expiration Date)
- Item Number
- Warehouse
- Promotion
- Contract Number

When displayed from within Enter or Change Requisitions (MENU POMAIN) and Suggested Order Maintenance (MENU POREPT), these limiting fields may be filled in with dates, a warehouse, or an item number. To see all contracts, simply clear the limiting criteria.

NOTE: This is a roll screen. **More...** appears at the bottom of a roll screen to indicate that more data is available for viewing. Last appears at the bottom of the last screen of data. To scroll through information on roll screens press:

- \* PAGE DOWN or SHIFT-ROLL FWD to display the next screen
- \* PAGE UP or SHIFT-ROLL BACK to display the previous screen.

### Vendor/Item Contract List Screen Fields and Function Keys

| Field/Function Key              | Description  |

This screen displays when you press F6=DSP CONTRACT on the Vendor Contract Maintenance Screen (p. 55-15). Use this screen to review the details of the contract for this vendor/item.

All the fields on this screen are display only and cannot be changed.

### Vendor Contract Inquiry Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Vendor             | The number and name of the vendor entered on the Vendor Contract Maintenance Selection Screen (p. 55-3).   |
| Contract No        | The contract number if one was specified on the Vendor Contract Maintenance Selection Screen (p. 55-3).  |
| Desc               | This is the description for this contract.   |
| Our Item/Mfg Item  | The item number and manufacturer's number (beneath the item number) for the item entered on the Vendor Contract Maintenance Selection Screen (p. 55-3).  |
| Our Description    | The item description for the item entered on the Vendor Contract Maintenance Selection Screen (p. 55-3).   |
| WH                 | The warehouse ID and name for the warehouse entered on the Vendor Contract Maintenance Selection Screen (p. 55-3).<br>If the contract is not warehouse-specific (i.e., no warehouse is specified), <a href="#">Multi-Warehouse</a> is displayed. |

### Vendor Contract Inquiry Screen Fields and Function Keys

| Field/Function Key      | Description   |
|-------------------------|---|
| Date Code               | <p>The date code is used to specify whether to compare the requisition entry date or due date to the contract start and expiration dates when determining if a contract is valid. The validity of contracts is checked when you enter purchase requisitions.</p> <p>The entry date (E) is the date the requisition is entered. The due date (D) is the date specified on the Requisition Item Detail Entry Screen in Enter or Change Requisitions (MENU POMAIN).</p>  |
| Currency                | <p>The <b>Currency</b> field only displays when International Currency is installed. The <b>Currency</b> field displays the description of the vendor's default trading currency defined through Vendors Maintenance (MENU APFILE/MENU POFIELD).</p>  |
| Vendor/Item Cost        | <p>The <b>Vendor/Item Cost</b> specifies the item cost to which contract discounts will be applied. If this cost displays as zero, the contract will use the base cost as defined through Vendor /Item Information (MENU POFIELD). If there is a cost shown, the value represents the cost specified on the contract.</p> <p>When International Currency is installed, the item's cost is displayed in the vendor's trading currency. The company's local currency equivalent (based on the default company) amount appears to the right of the trading currency. You can also press F11=LOCAL CURRENCY / F11=TRADING CURRENCY to toggle between the vendor's trading currency and company's local currency. The currency symbol always appears to the right of each amount.</p>  |
| Qty Breaks: Qty         | <p>This field with the <b>Qty Breaks: Cst/Pct (%)</b> and <b>Qty Breaks: Code (%,\$)</b> fields is used to specify as many as five quantity breaks for which this vendor offers a discount. Each of the quantities in this field must have a corresponding value in the <b>Qty Breaks: Cst/Pct (%)</b> field. The quantities are keyed in descending order (i.e., from largest to smallest). This field is blank if this contract is a <b>Buy/Get</b> special.</p>  |
| Qty Breaks: Cst/Pct (%) | <p>This field together with the <b>Qty Breaks: Qty</b> and the <b>Qty Breaks: Code (%,\$)</b> fields specify either the discounted unit cost amount or the discount percent that is applied to the <b>Vendor/Item Cost</b> for each corresponding quantity break in the <b>Qty Breaks: Qty</b> field.</p> <p>Unit cost contracts will display the discounted cost for the buying unit of measure, displayed in ascending order (i.e., from lowest to highest) defining lower unit costs for larger order quantities.</p> <p>Discount percent contracts will display the percent of the <b>Vendor/Item Cost</b> that is subtracted from the cost when you purchase the quantity specified in the <b>Qty Breaks: Qty</b> field.</p> <p>When International Currency is installed, the amounts are expressed in the vendor's trading currency. To view local currency equivalent amounts, press F11=LOCAL CURRENCY.</p> |

### Vendor Contract Inquiry Screen Fields and Function Keys

| Field/Function Key                        | Description  |
|---|--|
| Qty Breaks: Code                          | <p>This field together with the <b>Qty Breaks: Cst/Pct (%)</b> and the <b>Qty Breaks: Qty</b> fields specifies the code to determine if the value in the <b>Qty Breaks: Cst/Pct (%)</b> is a unit cost or a discount percentage.</p> <p>A <b>\$</b> displays if the value entered in the <b>Qty Breaks: Cst/Pct (%)</b> field is the discounted unit cost; a <b>%</b> displays if the value is a percentage.</p>   |
| Buy / At (Value) / Code                   | <p>The <b>Buy</b> field is the minimum quantity you must purchase to receive an additional quantity at no charge or at a discounted cost.</p> <p>The <b>At</b> field specifies either the discounted unit cost or the discount percent that is applied to the <b>Vendor/Item Cost</b> when buying the quantity specified in the <b>Buy: Qty</b> field.</p> <p>The <b>Code</b> field shows whether the purchased portion of the buy/get special is expressed as a dollar amount (<b>\$</b>) or percentage (<b>%</b>).</p>   |
| Get / At (Value) / Code                   | <p>The <b>Get</b> field is the quantity you receive at a discounted cost when you purchase the quantity in the <b>Buy: Qty</b> field.</p> <p>The <b>At</b> field specifies either the discounted unit cost or the discount percent that is applied to the <b>Vendor/Item Cost</b> when buying the quantity specified in the <b>Get: Qty</b> field.</p> <p>The <b>Code</b> field shows whether the discount portion of the buy/get special is expressed as a dollar amount (<b>\$</b>) or percentage (<b>%</b>).</p>  |
| Discount Qty Limit                        | The maximum number of units that can be purchased at the discounted price from the <b>Get: Cst/Pct (%)</b> field on any single PO requisition item detail line.  |
| F5=Vendor/Item                            | Press the <b>F5=VENDOR/ITEM</b> function key to access the Vendor/Item Information Summary Screen (p. 19-3) of the Vendor/Item Inquiry (MENU POMAIN).  |
| F11=Local Currency / F11=Trading Currency | <p>Press <b>F11=LOCAL CURRENCY / F11=TRADING CURRENCY</b> to toggle between displaying the vendor/item cost and unit costs/discount percents in the trading currency and the local currency.</p> <p>Press <b>F11=LOCAL CURRENCY</b> to display the vendor/item cost and unit costs/discount percents in the local currency of the default company. The local currency code is displayed to the right of the amounts.</p> <p>Press <b>F11=TRADING CURRENCY</b> to display vendor/item costs and unit costs/discount percents in the trading currency. The trading currency code is displayed to the right of the amounts.</p> |
| F12=Return                                | Press the <b>F12=RETURN</b> function key to return to the Vendor/Item Contract List Screen (p. 55-8).  |
| Enter                                     | Press the <b>ENTER</b> key to return to the Vendor/Item Contract List Screen (p. 55-8).  |

```

This screen appears after selecting a contract from the Vendor Contract Maintenance Selection Screen (p. 55-3). Use this screen to enter contract information when adding or changing a contract. You can also use it to suspend, reactivate, or delete a contract.

### Quantity Break Discount Examples

#### EXAMPLE 1: Using Discounted Unit Cost

If the **Vendor/Item Cost** is \$10.00/case and the vendor offers \$1 off each case when you buy 500 cases, and \$.50 off when you purchase 250 cases, key the following values:

| Quantity | Cost / Percent | Code (% , \$) |
|----------|----------------|---------------|
| 500      | 9.00           | \$            |
| 250      | 9.50           |               |

#### EXAMPLE 2: Using Discount Percent

If the **Vendor/Item Cost** is \$10.00/case and the vendor offers a 5% discount when you buy 500 cases and a 3% discount for 250 cases, key the following values:

**EXAMPLE 2: Using Discount Percent**

| Quantity | Cost / Percent | Code (% , \$) |
|----------|----------------|---------------|
| 500      | 5              | %             |
| 250      | 3              |               |

**Buy/Get Quantity Break Discount Examples**

**EXAMPLE 3: Using Discounted Unit Cost**

If the vendor offers 1 unit at 1/2 price for every 4 you purchase at the regular cost of \$10.00, key the following values:

|     | Quantity | Cost / Percent | Code (% , \$) |
|-----|----------|----------------|---------------|
| Buy | 4        | 10             | \$            |
| Get | 1        | 5              | \$            |

**EXAMPLE 4: Using Discount Percent**

If the vendor offers 1 unit at 1/2 price for every 4 you purchase at the regular cost of \$10.00, key the following values:

|     | Quantity | Cost / Percent | Code (% , \$) |
|-----|----------|----------------|---------------|
| Buy | 4        | 10             | \$            |
| Get | 1        | 50             | %             |

For more information on discount percents, refer to Purchase Order Processing in this user guide.

---

## Vendor Contracts Listing

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                            | Purpose  |
|----------------------------------|--|
| Vendor/Contract File List Screen | Use to specify which contracts to include on the Vendor/Contract File List (p. 55-26).   |
| Vendor/Contract File List        | Prints vendors, as selected on the Vendor/Contract File List Screen (p. 55-24), and their associated price contracts and specifications. |

---

## Vendor/Contract File List Screen

The screenshot shows a terminal window titled "VENDOR/CONTRACT FILE LIST". It contains the following text:

```
VENDOR/CONTRACT FILE LIST

Vendor No:      _ ..... to .....
WH?            ... (Blank for ALL)
Item Number:   .. (M,0)
Print Suspended Contracts: .. (Y,N)

F3=Exit
```

This screen is displayed after selecting option 11 - Vendor Contracts Listing (MENU POFIL2). Use this screen to specify which contracts to include on the Vendor Contract Maintenance Selection Screen (p. 55-3).

Refer to the Cross Applications User Guide for an explanation of the rules for entering From/To Ranges.

### Vendor/Contract File List Screen Fields and Function Keys

This list is generated by your responses on the Vendor/Contract File List Screen (p. 55-24) and the Report Options Screen (described in the Appendix section of the Cross Applications User Guide).

This listing prints the vendors, as selected on the Vendor/Contract File List Screen (p. 55-24), and their associated price contracts and specifications. Suspended price contracts may or may not be printed on this listing, depending upon your entry in the **Print Suspended Contracts** field on the Vendor/Contract File List Screen (p. 55-24).

NOTE: All dates will print in the **Default Date Format** for the user that generated the report, specified through Register A+ User IDs (MENU XACFIG), or if that field is blank, the dates print using the system's **Default Date Format** specified through System Options Maintenance (MENU XAFIELD).

NOTE: The detail provided below will include all the fields that print on the report. Based on the report options you are viewing, the fields may not be in the exact sequence that they are printed on your report; and there will be fields in this list that may not be on your report.

### Vendor/Contract File List

| Report/Listing Fields               | Description   |
|-------------------------------------|---|
| Vendor                              | The vendor number and name for the vendor contract.   |
| Our Item Number/<br>Mfg Item Number | The item number or the manufacturer's item number as specified on Vendor/Contract File List Screen (p. 55-24) and the item description. |
| WH                                  | The warehouse in which this contract pricing will be applicable.  |

## Vendor/Contract File List

| Report/Listing Fields           | Description  |
|---------------------------------|--|
| Cost                            | The vendor/item cost keyed for the contract, or if that is blank, the vendor/item cost from the Vendor/Item Price File (VIPRC).  |
| Curr                            | When International Currency is installed, the vendor's trading currency code assigned through Vendor's Maintenance (MENU POFIELD/MENU APFIELD).  |
| Contract Number/<br>Description | The contract number, if one exists for named contracts, and the contract description.  |
| Start Date                      | The date upon which the contract pricing becomes effective.  |
| Expiration Date                 | The date upon which the contract pricing expires.  |
| Promotion Code                  | If this contract is for a promotion, a <b>Y</b> will display; otherwise an <b>N</b> displays.  |
| Suspend Code                    | If the pricing in this contract is suspended, a <b>Y</b> will display; otherwise an <b>N</b> displays.   |
| Quantity Cost Code              | A <b>\$</b> indicates that the values in the <b>QC1-QC5</b> (quantity /cost) fields are monetary values.<br>A <b>%</b> indicates that the values in the <b>QC1-QC5</b> (quantity /cost) fields are percentage off values.  |
| QB1 - QB5                       | The quantity break quantities for the monetary value or percentage off calculations.   |
| QC1 - QC5                       | Based on the <b>Quantity Cost Code</b> , these values will be the either the percentage discount values or the monetary amount   |
| Curr QC1 - QC5                  | When International Currency is installed and the <b>Quantity Cost Code</b> is <b>\$</b> , the monetary amount of the contract expressed in the vendor's trading currency is displayed.   |
| Buy Quantity Cost Code          | For buy/get contracts: <ul style="list-style-type: none"> <li>• A <b>\$</b> indicates that the values in the <b>at</b> and <b>QC1-QC2</b> (quantity /cost) fields are monetary values.</li> <li>• A <b>%</b> indicates that the values in the <b>at</b> and <b>QC1-QC2</b> (quantity /cost) fields are percentage off values.</li> </ul> |
| Buy                             | For buy/get contracts, the <b>Buy</b> field represents the quantity required to be purchased as the basis for the promotional cost/discount.   |
| at                              | For buy/get contracts, the <b>at</b> field represents the monetary purchase requirements to qualify for the discount.  |

**Vendor/Contract File List**

| Report/Listing Fields | Description  |
|-----------------------|--|
| Curr QC1 - Curr QC5   | When International Currency is installed, this field represents the vendor's trading currency value for the monetary value represented in the <b>at</b> field. |
| Get                   | For buy/get contracts, the <b>Get</b> field represents the quantity available to be acquired/purchased for the promotional cost/discount.                      |
| at                    | For buy/get contracts, the <b>at</b> field represents the monetary discount/amount to being offered as the discount.   |
| Curr QC1 - Curr QC5   | When International Currency is installed, this field represents the vendor's trading currency value for the monetary value represented in the <b>at</b> field. |

---

Use this option to set up, change, or delete vendor volume discounts which are automatically applied when you create requisitions through Suggested Order Maintenance (MENU POREPT).

| Field/Function Key        | Description  |
|---------------------------|--|
| Discount Type Information | <p>This field is the vendor volume discount type specified through Vendor Master Maintenance (MENU POFIL).</p> <p>The valid volume discount choices are:</p> <ul style="list-style-type: none"> <li>• 1 - use the highest qualifying percentage discount.</li> <li>• 2 - use the sum of the qualifying discounts.</li> <li>• 3 - chain the qualifying discount values and use the result (the chain discount will apply all qualifying discounts, but each is based on the previously discounted value rather than the original cost).</li> </ul> <p>Display</p> |
| (Reference Number)        | <p>Use to select a discount for maintenance or deletion.</p> <p>Display</p>  |
| Cube Minimum              | <p>The minimum number of cubes required for the discount.</p> <p>Display</p>   |
| Unit Minimum              | <p>The minimum purchase order quantity required for the discount.</p> <p>Display</p>   |
| Minimum Amount            | <p>The minimum purchase order monetary amount required for the discount.</p> <p>Display</p>  |
| Weight Minimum            | <p>The minimum weight of the items required for the discount.</p> <p>Display</p>   |
| FOB Code                  | <p>The FOB code specified for the discount.</p> <p>Display</p>   |
| Disc %                    | <p>The available discount percent applied for the specified minimum values.</p> <p>Display</p>   |
| Description               | <p>Use this field to describe the discount. This discount description, which is used for informational purposes only, appears on the Vendor Volume Discount Listing (p. 56-12) and the Suggested Order Maintenance End Order Screen.</p> <p>Key a description for the discount.</p> <p>(A 30) Required</p>   |
| Min Cubes                 | <p>Use this field to specify the minimum number of cubes required for the discount. The total cubic size of the entire purchase order must be equal to or greater than this amount to meet the discount requirements.</p> <p>Key the minimum number of cubes.</p> <p>(N 13,5) Optional</p>   |

---

---

**Vendor Volume Discount Maintenance Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Minimum Amount     | <p>Use this field to specify the minimum purchase order amount required for the discount. The total purchase order amount must be equal to or greater than this amount to meet the discount requirements.</p> <p>Key the minimum purchase order amount.</p> <p>(N 9,2) Optional</p>   |
| Min Units          | <p>Use this field to specify the minimum number of units required for the discount. The sum of all ordered quantities of the items on the purchase order must be equal to or greater than this amount to meet the discount requirements.</p> <p>Key the minimum number of units ordered for all items.</p> <p>(N 11,3) Optional</p>   |
| Min Weight         | <p>Use this field to specify the minimum weight required for the discount. The total weight of all items on the purchase order must be equal to or greater than this amount to meet the discount requirements.</p> <p>Key the minimum number of weight units required.</p> <p>(N 13,4) Optional</p>   |
| Discount Percent   | <p>Use this field to specify the discount percent applied when all corresponding minimums (i.e., cubes, amount, units and weight) for this discount are met.</p> <p>Key the discount percent as a whole number, using up to three decimal places for fractions of a percent (e.g., key 10 for 10%, key 12.5 for 12.5%).</p> <p>(N 5,3) Optional</p>   |
| FOB Code           | <p>Use this field to specify the FOB code for the discount. The FOB code contains shipping information, including who is responsible (you or the vendor) for shipping charges and freight damages. The FOB code for a vendor volume discount can be different from the FOB code assigned to the vendor through Vendor Master Maintenance (MENU POFIL). This allows for situations where the freight charges are part of the discount. For example, a vendor may agree to assume shipping charges if the total value of the order is above a specified amount.</p> <p>The FOB code you enter here is for informational purposes only. When you print a Purchase Order for the vendor and the discount you are defining here applies, the FOB code from the requisition header will print on the Purchase Order, not the FOB code on the discount.</p> <p>Key the FOB code for this discount.</p> <p><i>Valid Values:</i> An FOB code defined through FOB Codes Maintenance (MENU POFIL2 or MENU OEFIL3).</p> <p>(A 5) Optional</p> |

---

**Vendor Volume Discount Maintenance Screen Fields and Function Keys**

| Field/Function Key           | Description  |
|------------------------------|--|
| F2=VVD Desc/Vol Disc         | <p>Press the F2=VVD DESC / F2=VOL DISC key to toggle between display and non-display of the description for each discount. When the description is displayed, it appears above the minimum values and discount percent information producing two lines of information for each discount. In this double-line view mode, 4 volume discounts are displayed rather than 8.</p>  |
| F3=Exit                      | <p>The F3=EXIT function key is not displayed when a discount is selected for change.</p> <p>Press F3=EXIT to exit the option and return to MENU POFIL2.</p>  |
| F7=Page Down /<br>F8=Page Up | <p>More... appears at the bottom of a roll screen to indicate that more data is available for viewing. Last appears at the bottom of the last screen of data. On some roll screens, F7=PAGE DOWN and F8=PAGE UP are available for use but do not display.</p> <p>Use the F7=PAGE DOWN to display the next screen of information on a roll screen. The PAGE DOWN or SHIFT-ROLL FWD function keys perform the same task.</p> <p>Use the F8=PAGE UP to display the next screen of information on a roll screen. The PAGE UP or SHIFT-ROLL BACK function keys perform the same task.</p> |
| F12=Return                   | <p>Press F12=RETURN to return to the previous screen without saving your changes.</p> <p>If you have not selected a discount record (i.e., the fields at the bottom of the screen are blank), the Vendor Volume Discount Maintenance Selection Screen (p. 56-2) appears.</p> <p>If you have selected a discount record (i.e., the fields at the bottom of the screen contain information), the fields are cleared and you can either select another discount for editing or define a new discount.</p>   |

---

### Vendor Volume Discount Maintenance Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| F13-F20 to Change  | <p>Press the key that corresponds to the reference number (<b>Reference Number</b> field) of the discount you are changing or deleting.</p> <ul style="list-style-type: none"> <li>• F13=REFERENCE NUMBER 1</li> <li>• F14=REFERENCE NUMBER 2</li> <li>• F15=REFERENCE NUMBER 3</li> <li>• F16=REFERENCE NUMBER 4</li> <li>• F17=REFERENCE NUMBER 5</li> <li>• F18=REFERENCE NUMBER 6</li> <li>• F19=REFERENCE NUMBER 7</li> <li>• F20=REFERENCE NUMBER 8</li> </ul> <p>If the function keys on your keyboard are arranged in a single row, then press the shift key and the corresponding reference number.</p> <p><b>EXAMPLE:</b> To change line 8, press <b>SHIFT</b> and <b>F8</b>.</p> <p>-OR-</p> <p>If the function keys on your keyboard are arranged in a two rows, press the key which is directly above the reference number key in the bottom row.</p> <p><b>EXAMPLE:</b> To change line 8, find function key 8 in the bottom row. Press <b>F20</b> in the top row because it is directly above <b>F8</b>.</p> <p>The discount information appears in the fields at the bottom of the screen where you can change or delete the information.</p> <p>When you finish making changes, press <b>ENTER</b> to save them.</p> |
| F24=Delete         | <p>The <b>F24=DELETE</b> function key appears only after you select a discount by pressing one of the <b>F13-F20 TO CHANGE</b> function keys.</p> <p>Press <b>F24=DELETE</b> to delete the selected discount. You must press <b>F24=DELETE</b> a second time to confirm the deletion.</p>  |
| Enter              | <p>Press <b>ENTER</b> to confirm your selections.</p>  |

| Trading Minimum Amount       | When International Currency is installed, discounts based on monetary amounts will have the amount value shown in the vendor's trading currency. |
| Curr                         | When International Currency is installed, the currency code of the vendor's trading currency.  |

---

This option allows you to define the Sales Analysis/Purchasing Fiscal Calendars for each company.

Refer to SA/PO Fiscal Calendar Maintenance (MENU SAFILE) in the Sales Analysis User Guide for a detailed explanation of this option.

---

---

Use this option to set up or change buyer item classes and subclasses for your items. The use of buyer subclasses is optional. Buyer Item Classes/Subclasses are used for classifying items into categories for buyer budgets and buyer actual purchases.

---

## Buyer Item Class/SubClass Maintenance

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| <b>Title</b>                                  | <b>Purpose</b>  |
|---|---|
| Buyer Item Class Maintenance Selection Screen | Use to set up or change a buyer item class and/or buyer item subclass.  |
| Buyer Item Class Maintenance Screen           | Use to enter or update the description for the selected buyer item class or buyer subclass you selected on the Buyer Item Class Maintenance Selection Screen. |

---

## Buyer Item Class Maintenance Selection Screen

```

BUYER ITEM CLASS MAINTENANCE

Function:      -      (A,C)

Buyer Item Class?  ...

Buyer Item Subclass? ...

F3=Exit

```

This screen displays after selecting option 4 - Buyer Item Class/SubClass Maintenance (MENU POFIL2). Use this screen to setup or change a buyer item class and/or buyer item subclass. You may then create one or more buyer subclasses for the buyer item classes created.

### Buyer Item Class Maintenance Selection Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Function           | <p>Key <b>A</b> to add a new buyer item class or item subclass. You must first define an item class before subclasses can be setup.</p> <p>Key <b>C</b> to change the description of an existing buyer item class/subclass.</p> <p>(A 1) Required</p>          |
| Buyer Item Class   | <p>Use this field to enter the buyer item class you wish to add or change. Buyer item classes are used for grouping items into categories for buyer budgets and buyer actual purchases.</p> <p>Key the appropriate buyer item class.</p> <p>(A 2) Required</p> |

---

**Buyer Item Class Maintenance Selection Screen Fields and Function Keys**

| Field/Function Key  | Description  |
|---------------------|--|
| Buyer Item SubClass | <p>This field must be blank if you have not defined a buyer item class for which you wish to assign a buyer subclass; if a class has been defined, this field is optional.</p> <p>This field allows you to set up buyer subclasses for a specific buyer item class. You may define as many buyer subclasses as desired to help further categorize buyer items.</p> <p>Use this field to enter the buyer item subclass you want to add or change.</p> <p>Key the appropriate buyer item subclass.</p> <p>(A 2) Blank/Optional</p> |
| F3=Exit             | Press the <b>F3=EXIT</b> key to exit this option and return to MENU POFIL2.  |
| Enter               | Press the <b>ENTER</b> key to confirm your selections. The Buyer Item Class Maintenance Screen (p. 58-4) displays.   |

---

## Buyer Item Class Maintenance Screen

```

BUYER ITEM CLASS MAINTENANCE
Change

Buyer Item Class:  41  Cleaning Chemicals
Buyer Item Subclass:
Description:      Ccleaning Chemicals .....

F12=Return
    
```

This screen displays after pressing **ENTER** on the Buyer Item Class Maintenance Selection Screen (p. 58-2). Use this screen to enter or update the description for the selected buyer item class or buyer subclass you selected on the Buyer Item Class Maintenance Selection Screen (p. 58-2).

### Buyer Item Class Maintenance Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Buyer Item Class   | <p>This field is blank if you are adding or changing a buyer item class, which must be created before an actual buyer subclass can be defined.</p> <p>The following buyer item class/subclass information displays in the upper portion of this screen:</p> <ul style="list-style-type: none"> <li>• Buyer Item Class: The buyer item class you are adding or maintaining.</li> <li>• Buyer Item Sub-class: The sub-class setup for the buyer item class.</li> </ul> <p>Display</p> |
| Description        | <p>If you are adding a buyer item class, this is the description of the buyer item class. If you are adding a buyer item subclass, this is the description of the buyer item subclass.</p> <p>Key the description of the buyer item class or buyer item subclass you are adding or maintaining.</p> <p>(A 30) Required</p>  |
| F12=Return         | <p>Press the <b>F12=RETURN</b> function key to return to the Buyer Item Class Maintenance Selection Screen (p. 58-2) without saving any additions or changes made to this screen.</p>   |

---

**Buyer Item Class Maintenance Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Enter              | Press the <b>ENTER</b> function key to update the description. The Buyer Item Class Maintenance Selection Screen (p. 58-2) will display. |

---

---

## Buyer Item Class/SubClass Listing

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                                  | Purpose   |
|--|---|
| Buyer Item Class/SubClass Code Listing | Prints the buyer item classes and buyer item subclasses that you defined in Buyer Item Class/Sub-class Maintenance (MENU POFIL2). |

---

## Buyer Item Class/SubClass Code Listing

|       |            |            |  |                    |           |      |   |
|-------|------------|------------|--|--------------------|-----------|------|---|
| PO966 | 09/06/10   | 19.56.57   | BUYER ITEM CLASS/SUBCLASS CODE LISTING |                    | AF/APDEMO | PAGE | 1 |
|       | BUYER      | BUYER ITEM |  |                    |           |      |   |
|       | ITEM CLASS | SUBCLASS   |  | DESCRIPTION        |           |      |   |
| ----- |            |            |  |                    |           |      |   |
|       | 41         |            |  | Cleaning Chemicals |           |      |   |
|       | 41         | 1          |  | Bleach             |           |      |   |
|       | 41         | 2          |  | Floor Cleaner      |           |      |   |

This listing prints after selecting option 14 - Buyer Item Class/SubClass Listing (MENU POFIL2) and pressing **ENTER** on the Report Options Screen. Refer to the Appendix section of the Cross Applications User Guide for details about the Report Options Screen.

The buyer item classes and buyer item subclasses that you defined in Buyer Item Class/Sub-class Maintenance (MENU POFIL2) are printed. If the **Buyer Item Subclass** column is blank, the description displayed is that of the item class. If the **Buyer Item Subclass** column contains a subclass, the description that displays is that of the buyer item subclass. This listing is sequenced by buyer item class and buyer item subclass.

For an explanation of the fields on this listing, refer to the Buyer Item Class Maintenance Screen (p. 58-4).

---

Use this option to set up, change, or delete buyer budgets for a specified buyer in a fiscal year. There are up to 13 monthly budget periods for a fiscal calendar as defined through SA/PO Fiscal Calendar Maintenance (MENU POFIL2 or MENU SAFILE).

---

## Buyer Budgets Maintenance

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                                     | Purpose   |
|---|---|
| Buyer Budget Maintenance Selection Screen | Use to select the company, buyer, and fiscal year for the buyer budget you wish to create, maintain, or delete. |
| Buyer Budget Maintenance Screen           | Use to enter buyer budget level information for the buyer budget you wish to add, maintain, or delete.          |
| Buyer Budget Maintenance Screen 2         | Use to define buyer budgets for the buyer/buyer budget levels you have defined for the selected buyer.          |

---

## Buyer Budget Maintenance Selection Screen

```

BUYER BUDGET MAINTENANCE

Company?      01      (01-99)
Buyer?       - ..
Fiscal Year: 2010  (CCYY)

F3=Exit
  
```

This screen displays after selecting option **5** - Buyer Budgets Maintenance (MENU POFIL2). Use this screen to select the company, buyer, and fiscal year for the buyer budget you wish to create, maintain, or delete.

| F3=Exit                   | <p>Press the <b>F3=EXIT</b> key to exit the option and return to MENU POFIL2.</p>   |
| Enter                     | <p>Press the <b>ENTER</b> function key to confirm your selections. The Buyer Budget Maintenance Screen (p. 59-4) will display.</p>  |

---

## Buyer Budget Maintenance Screen

```
BUYER BUDGET MAINTENANCE
Company:      2  B & B Office Supply
Buyer:       APT Application Plus Training User
Fiscal Year: 2010

Function:     -      (A,C,D)
Warehouse?   ...

Vendor Number: .....
Find: .....
City: .....

Buyer Item Class? ... Subclass? ...

F12=Return
```

This screen displays after pressing **ENTER** on the Buyer Budget Maintenance Selection Screen (p. 59-2). Use this screen to enter buyer budget level information for the buyer budget you wish to add, maintain, or delete.

**NOTE:** Different buyer budget level variations display on this screen according to the buyer budget level you assigned to the selected buyer through Buyers Maintenance (MENU PROFILE). These variations may be as follows:

- Warehouse
- Warehouse/Vendor
- Warehouse/Vendor/Buyer Item Class
- Warehouse/Vendor/Buyer Item Class/Subclass
- Warehouse/Buyer Item Class
- Warehouse/Buyer Item Class/Subclass
- Vendor
- Vendor/Buyer Item Class
- Vendor/Buyer Item Class/Subclass
- Buyer Item Class
- Buyer Item Class/Subclass

Refer to Buyers Maintenance (MENU PROFILE) for details about assigning buyer budget levels to a buyer.

---

**Budget Buyer Maintenance Screen Fields and Function Keys**

| Field/Function Key | Description   |

| F12=Return         | <p>Press the <b>F12=RETURN</b> function key to return to the previous screen without saving your changes.</p>  |

**Budget Buyer Maintenance Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Enter              | Press the <b>ENTER</b> key to confirm your selections. The Buyer Budget Maintenance Screen 2 (p. 59-8) displays. |

---

## Buyer Budget Maintenance Screen 2

```

BUYER BUDGET MAINTENANCE
Add
Company: 1 A & C Office Supply
Buyer: APD Application Plus Demo User
Fiscal Year: 2010

PURCHASES:
  Period  Amount
  1 Jan  - .....
  2 Feb  .....
  3 Mar  .....
  4 Apr  .....
  5 May  .....
  6 Jun  .....
  7 Jly  .....
  8 Aug  .....
  9 Sep  .....
  10 Oct .....
  11 Nov .....
  12 Dec .....

TOTALS: 0

F12=Return
    
```

This screen displays after pressing **ENTER** on the Buyer Budget Maintenance Screen (p. 59-4). Use this screen to define buyer budgets for the buyer/buyer budget levels you have defined for the selected buyer.

The Buyer Budgets/Actual File for the selected buyer will be updated with purchase order line values when a Purchase Order is printed and when a purchase order is maintained. The 12 or 13 periods will be updated based on the purchase order print date, capturing the lowest level of detail. This budget information will allow you to compare your actual buyer costs with the buyer budgets you defined on this screen through the use of the Buyer Budgets Analysis Report (MENU POREPT).

### Buyer Budget Maintenance Screen 2 Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Budget Heading     | The <b>Company</b> , <b>Buyer</b> , and <b>Fiscal Year</b> selected on the Buyer Budget Maintenance Selection Screen (p. 59-2) display for reference.<br>Display  |
| Period             | This field displays the sales/inventory period of the fiscal year for the buyer budget being maintained.<br>Display   |
| Amount             | Use the fields in this column to enter the desired purchase amounts for each period to be used as this buyer's budget.<br>Key the appropriate purchase amounts you wish to assign to each period for this buyer budget.<br>(13 @ N 11,0) Optional |

---

**Buyer Budget Maintenance Screen 2 Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| TOTALS             | The <b>Totals</b> field displays the total purchase amount of all periods entered for the selected buyer budget when you press <b>ENTER</b> once.<br>Display   |
| F12=Return         | Press the <b>F12=RETURN</b> function key to return to the Buyer Budget Maintenance Screen (p. 59-4) without saving your changes.   |
| Enter              | Press the <b>ENTER</b> function key to confirm your selections. This screen redisplay with the total purchase amount for this buyer budget displayed in the <b>Totals</b> field. Press the <b>ENTER</b> key again to add, change, or delete the selected buyer budget. |

---

## Buyer Budgets Listing

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                                 | Purpose  |
|---------------------------------------|--|
| Buyer Budget Listing Selection Screen | Use to select the range of the companies, buyers, and fiscal years to print on the Buyer Budget File Listing (p. 59-12). |
| Buyer Budget File Listing             | Prints the buyer budgets that you defined in Buyer Budget Maintenance (MENU POFIL2).                                     |

This listing prints after pressing **ENTER** on the Buyer Budget Listing Selection Screen (p. 59-10) and the Report Options Screen. Refer to the Appendix section of the Cross Applications User Guide for details about the Report Options Screen.

The buyer budgets that you defined in Buyer Budget Maintenance (MENU POFIL2) are printed.

---

NOTE: This listing prints in various buyer budget classifications according to the buyer budget level you assigned for the buyers in Buyers Maintenance (MENU POFIL2). Refer to the Buyer Budget Maintenance Screen (p. 59-4) for a list of the possible buyer level combinations.

---

For an explanation of the fields on this listing, refer to Buyer Budget Maintenance (MENU POFIL2).

---

When the **Use Approval Code Authorization for Req/PO** field is set to **Y** through Purchasing Company Options Maintenance (MENU XAFILE), the approval codes defined here are used to restrict authority to approve Requisitions and Purchase Orders based on user ID and a maximum approval amount.

You will also have the option to enter, if desired, an override password for an approval code. This password can be used to override approval codes when changes are being made to approved purchase orders by a user other than the original approver. Additionally, you can designate if the overriding of an approved purchase order will validate the purchase order amount against the maximum approval amount defined for the approval code.

---

## Approval Codes Maintenance

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                                      | Purpose   |
|--|---|
| Approval Code Maintenance Selection Screen | Use to add or change an approval code.  |
| Approval Code Maintenance Screen           | Use to assign a description, a maximum approval amount, and a user ID to the approval code. |

---

## Approval Code Maintenance Selection Screen

```

APPROVAL CODE MAINTENANCE SELECTION

Function:  -  (A,C)
Company?   01
Approval Code? ....

F3=Exit
  
```

This screen appears after you select option 6 - Approval Codes Maintenance (MENU POFIL2). Use this screen to add or change an approval code.

### Approval Code Maintenance Selection Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Function           | <p>Key <b>A</b> to add an approval code.</p> <p>Key <b>C</b> to change an approval code.</p> <p>(A 1) Required</p>  |
| Company            | <p>This field displays only if the <b>Multi Company</b> field is set to <b>Y</b> through System Options Maintenance (MENU XAFIL2).</p> <p>Key the company number for which you want to add or change an approval code.</p> <p><i>Default Value:</i> The default company defined in Authority Profile Maintenance (MENU XASCTY) if one has been defined; otherwise, this is the default company defined through System Options Maintenance (MENU XAFIL2)</p> <p><i>Valid Values:</i> A valid company number defined through Company Name Maintenance (MENU XAFIL2) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(N 2,0) Required</p> |

---

**Approval Code Maintenance Selection Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Approval Code      | Use this field to specify the approval code you want to add or change.<br>Key the approval code you want to add or change.<br>(A 3) Required |
| F3=Exit            | Press the <b>F3=EXIT</b> function key to return to MENU POFIL2 without adding or changing an approval code.                                  |
| Enter              | Press the <b>ENTER</b> key to confirm your entries. The Approval Code Maintenance Screen (p. 60-4) will appear.                              |

---

## Approval Code Maintenance Screen

```

                                APPROVAL CODE MAINTENANCE                                CHANGE
Company:                        01  A & C Office Supply
Approval Code:                  APD
Description:                     Application, Plus, Demo, User, ....
Maximum Approval Amount:       .....1000000.00, US$
Approval User ID:               APDEMO, ....
Override Password:              ..... Validate Approval Amount: ..

                                F9=Copy Approval Codes                                F12=Return
    
```

This screen appears after you press **ENTER** on the Approval Code Maintenance Selection Screen (p. 60-2).

Use this screen to assign a description, a maximum approval amount, and a user ID to the approval code. You also have the option to enter, if desired, an override password and determine if the overriding of an approved purchase order will validate the purchase order amount against the maximum approval amount defined for the approval code.

### Approval Code Maintenance Screen Fields and Function Keys

| Field/Function Key      | Description   |
|-------------------------|---|
| Description             | Key a description for the approval code.<br>(A 30) Required   |
| Maximum Approval Amount | Use this field to assign a maximum amount to the approval code. The user of this approval code will not be able to approve requisitions or Purchase Orders with a total value greater than the amount keyed here.<br><br>To give a user an unlimited approval amount, enter all 9's in this field.<br><br>When International Currency is installed, the value in this field is always in the selected company's local currency defined through International Currency Company Options Maintenance (MENU ICFILE).<br><br>Key a maximum approval amount.<br>(N 10,2) Required |

---

**Approval Code Maintenance Screen Fields and Function Keys**

---

| Field/Function Key | Description  |
|--------------------|--|
| Approval User ID   | <p>Use this field to assign a user ID to the approval code. The user ID assigned to the code will be the only user permitted to use the code to approve a Requisition or Purchase Order.</p> <p>An approval code cannot be assigned to multiple user IDs. However, a user ID can be assigned to 1 or more approval codes.</p> <p>Key a user ID.</p> <p><i>Valid Values:</i> Any user ID defined through Register A+ User IDs (MENU XACFIG).</p> <p>(A 10) Required</p>   |
| Override Password  | <p>Use this field to assign an override password for the approval code. This password can be used to override approval codes when changes are being made to approved purchase orders by a user other than the original approver. The password will apply to changes for an existing purchase order only, and you will be able to enter this override password for the approval code on the End Order Screen in Enter/Change Requisitions (MENU POMAIN).</p> <p>Key an override password. By defining an override password, you will be able to approve and exit an approved purchase order on the End Order Screen even though the approval code does not match the current user's user ID. You will be returned to the Purchasing Main Menu (MENU POMAIN).</p> <p>Additionally, if you define an override password for the approval code, <b>*Defined</b> will print on the Approval Code Listing (p. 60-9) in the <b>Override Password</b> column showing you that an override password has been defined for the corresponding approval code.</p> <hr/> <p>NOTE: The override password pertains to editing purchase orders only, when the Purchasing Option: <b>Use Approval Code Authorization for Req/PO</b> is in use. It will not be displayed when adding a new purchase order or at any time during requisition entry. The override password is valid for overriding the approval code during a particular edit session only and will not be stored.</p> <hr/> <p><i>Valid Values:</i> Any characters</p> <p>(A 10) Optional</p> |

---

## Approval Code Maintenance Screen Fields and Function Keys

| Field/Function Key       | Description   |
|--------------------------|---|
| Validate Approval Amount | <p>Use this field to determine if the overriding of an approved purchase order will validate (on the End Order Screen in Enter/Change Requisitions (MENU POMAIN)) the purchase order amount against the maximum approval amount defined for the approval code.</p> <p>Key <b>Y</b> to have the approved purchase order that is being overridden validate the purchase order amount against the maximum approval amount defined for the approval code. If <b>Y</b>, in Enter/Change Requisitions (MENU POMAIN), you will be able to override up to the defined maximum approval amount for this approval code. On the End Order Screen, the purchase order value will be compared against the maximum approval amount for this new approval code. If all edits are passed, the purchase order will be approved, using the new approval code and amount.</p> <p>Key <b>N</b> to not have the approved purchase order that is being overridden validate the purchase order amount against the maximum approval amount defined for the approval code. If <b>N</b>, in Enter/Change Requisitions (MENU POMAIN), you will be able to override any purchase order, regardless of the maximum approval amount for this approval code. On the End Order Screen, the purchase order will be approved, using the new approval code and amount, regardless of the purchase order value.</p> <hr/> <p>NOTE: If the <b>Override Password</b> field is blank, then this field will be cleared even if you key a value. It only applies when the <b>Override Password</b> field contains a value.</p> <hr/> <p><i>Valid Values:</i> Y, N, or Blank</p> <p>(A 1) Required only if 'Override Password' contains a value</p> |
| F9=Copy Approval Codes   | <p>Press <b>F9=COPY APPROVAL CODES</b> to copy the approval code, description, maximum approval amount, and user ID to all defined companies.</p> <p>When International Currency is installed, a currency conversion will not be performed for the value in the <b>Maximum Approval Amount</b> field. You must manually change the value for any companies with a different local currency to the proper value for that currency</p>  |
| F12=Return               | <p>Press the <b>F12=RETURN</b> function key to return to the Approval Code Maintenance Selection Screen (p. 60-2) without saving your entries.</p>  |
| Enter                    | <p>Press the <b>ENTER</b> function key to save your entries. The Approval Code Maintenance Selection Screen (p. 60-2) will appear.</p>  |

## Approval Codes Listing

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                        | Purpose  |
|------------------------------|--|
| Approval Code Listing Screen | Use to select a company or range of companies for which to print the Approval Code Listing (p. 60-9).                        |
| Approval Code Listing        | Prints a hard copy of existing approval codes and the associated description, maximum approval amount, and user ID for each. |

---

## Approval Code Listing Screen

APPROVAL CODE LISTING

Company? \_ . to? ...

F3=Cancel

This screen appears after you select option **16** - Approval Codes Listing (MENU POFIL2), only if the **Multi Company** field is set to **Y** through System Options Maintenance (MENU XAFILE). Use this screen to select a company or range of companies for which to print the Approval Code Listing (p. 60-9).

Refer to the Cross Applications User Guide for an explanation of the rules for entering From/To Ranges.

### Approval Code Listing Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Company            | Key the company number or range of company numbers for which to print the Approval Code Listing (p. 60-9).<br><i>Valid Values:</i> Any company number defined through Company Name Maintenance (MENU XAFILE)<br>(2 @ A 2) Optional |
| F3=Cancel          | Press F3=CANCEL to return to MENU POFIL2 without printing the listing.   |
| Enter              | Press ENTER to confirm your selections. The Report Options Screen will appear. Refer to the Appendix section of the Cross Applications User Guide for information about this screen.   |

## Approval Code Listing

| Approval Code | Description                | Maximum Approval Amount | Approval User ID | Override Password | Validate Approval Amt |
|---------------|----------------------------|-------------------------|------------------|-------------------|-----------------------|

| AP9           | Demo User 09               | 99,999,999,999.99 US\$  | APDEM009         |                   |                       |

This listing prints after you press enter on the Report Options Screen. Refer to the Appendix section of the Cross Applications User Guide for information about this screen.

This listing provides a hard copy of existing approval codes and associated information. For an explanation of these fields, refer to the Approval Code Maintenance Selection Screen (p. 60-2) and Approval Code Maintenance Screen (p. 60-4).

---

This option allows you to define FOB codes.

Refer to FOB Codes Maintenance (MENU OEFIL3) in the Order Entry User Guide for a detailed explanation of this option.

---

---

This option allows you to define transport mode codes.

Refer to Transport Mode Maintenance (MENU OEFIL3) in the Order Entry User Guide for a detailed explanation of this option.

---

---

Use this option to enter, modify, and/or delete tax bodies, their descriptions, and the current tax rate.

For each tax body, a new tax rate and an effective date may be entered. Furthermore, county and city tax fields may be optionally entered. County and city tax codes are not used by the system, but are included to reduce the modification effort when these fields are necessary.

Refer to Tax Body Maintenance (MENU OEFILE) in the Order Entry User Guide for a detailed explanation of this option.

---

---

A vendor group allows you to associate several related vendors together. Vendor groups are useful in rebate processing for streamlining the creation of rebates.

Vendor groups can be created through the Vendor Group Maintenance option on the Purchasing File Maintenance (2) Menu (MENU POFIL2). You can print a list of defined vendor groups using the Vendor Group Listing option on the same menu.

---

## Vendor Group Maintenance

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| <b>Title</b>                               | <b>Purpose</b>   |
|--|--|
| Vendor Group Maintenance Prompt Screen     | Use to maintain vendor groups.                                     |
| Vendor Group List Screen                   | Use to select a vendor group from a list of defined vendor groups. |
| Vendor Group Maintenance Screen            | Use to provide descriptive text for the vendor group.              |
| Vendor Group Maintenance Assignment Screen | Use to assign vendors to the vendor group.                         |

---

## Vendor Group Maintenance Prompt Screen

```

VENDOR GROUP MAINTENANCE PROMPT

Function:      -
Vendor Group? .....

F3=Exit
    
```

This screen appears after you select option [19](#) - Vendor Group Maintenance (MENU POFIL2). Use this screen to specify the name of the vendor group to maintain.

### Vendor Group Maintenance Prompt Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Function           | <p>Key <a href="#">A</a> to add a vendor group.</p> <p>Key <a href="#">C</a> to change a vendor group.</p> <p>Key <a href="#">D</a> to delete a vendor group. You must remove the group from any existing rebates before you can delete it.</p> <p>(A 1) Required</p>                           |
| Vendor Group       | <p>Use this field to specify the ID of vendor group that you want to maintain.</p> <p>Key the vendor group to be maintained.</p> <p><i>Valid Values:</i> A valid vendor group.</p> <p>(A 10) Required</p>   |
| F3=Exit            | <p>Press the <a href="#">F3=EXIT</a> function key to return to the menu without maintaining the vendor group.</p>   |
| Enter              | <p>Press the <a href="#">ENTER</a> function key to confirm your entries and continue. If you keyed <a href="#">?</a> in the <b>Vendor Group</b> field, the Vendor Group List Screen (p. 64-4) appears. If you provided a group name, the Vendor Group Maintenance Screen (p. 64-7) appears.</p> |

## Vendor Group List Screen

| VENDOR GROUP LIST |       |                                |        |
|-------------------|-------|--------------------------------|--------|
|                   | Group | Vendor Name                    | Vendor |
| 1                 | INT'L | LITTLE ITALY RESTAURANT SUPPLY | IC1000 |

---

Purchasing Line Maintenance (MENU POFIL2) is used to add, change, or delete Purchasing Lines for a vendor and optional warehouse. Purchasing Lines provide you with a way to group like items together, for purchasing purposes.

Purchasing Line usage includes the following:

- Purchasing Lines are updated through Item Balance Maintenance (MENU IAFILE) to allow the linking of items by Purchasing Lines.
- Variables have an added level of item grouping to include many item class/sub-class items used for forecasting (service level, order frequency, order level and lead time).
- The Suggested Orders Report (MENU POREPT) allows you to create a run of potential requisitions/purchase orders by Purchasing Line.
- Unique replenishment options can be set up by Purchasing Line through Replenishment Options Maintenance (MENU AIFILE).
- Product Restriction Codes Maintenance (MENU OEFIL2) allows you to restrict sales of products by certain criteria, including restriction by Purchasing Line.

---

## Purchasing Line Maintenance

The screens and/or reports in this option and a brief description are listed in the following table. A complete description of each screen/report is contained in this section.

| Title                                | Purpose  |
|--------------------------------------|--|
| Purchasing Line Maintenance Screen   | Use to add, change, or delete a Purchasing Line for a vendor and optional warehouse.   |

| Purchasing Line    | This field displays the Purchasing Line you are adding, changing or deleting, as entered on the Purchasing Line Maintenance Screen (p. 66-3).<br>Display     |
| Description        | Use this field to provide descriptive text to identify the Purchasing Line.<br>(A 30) Required   |
| F12=Return         | Press <b>F12=RETURN</b> to return to the Purchasing Line Maintenance Screen (p. 66-3), without updating this screen.   |

**Purchasing Line Maintenance Definition Screen Fields and Function Keys**

| <b>Field/Function Key</b> | <b>Description</b>   |
|---------------------------|--|
| F24=Delete                | The F24=DELETE function key displays only if you are in Delete mode.<br>Press F24=DELETE twice to confirm deletion of the Purchasing Line. You will be returned to the Purchasing Line Maintenance Screen (p. 66-3). |
| Enter                     | Press ENTER twice to confirm your selections and return to the Purchasing Line Maintenance Screen (p. 66-3).   |

---

## Purchasing Line Listing

This option is used to print the Purchasing Line Code Listing (p. 66-11). This listing shows the Purchasing Lines created and maintained through Purchasing Line Maintenance (MENU POFIL2).

The screens and/or reports in this option and a brief description are listed in the following table. A complete description of each screen/report is contained in this section.

| <b>Title</b>                   | <b>Purpose</b>  |
|--------------------------------|---|
| Purchasing Line Listing Screen | Use to select the range of criteria to limit the Purchasing Lines to print on the listing.                                |
| Purchasing Line Code Listing   | Prints a record of the defined Purchasing Lines and the vendors and optional warehouses assigned to each Purchasing Line. |

## Purchasing Line Listing Screen

PURCHASING LINE LISTING

Vendor?            - .....            To?            .....

Warehouse?        ...                    To?        ...

Purchasing Line? .....            To?            .....

F3=Cancel

This screen appears after you select option **32** - Purchasing Line Listing from MENU POFIL2. Use this screen to select the range of criteria to limit the Purchasing Lines to print on the listing.

Only those Purchasing Lines that match the criteria entered will print. Refer to the Cross Applications User Guide for an explanation of the rules for entering From/To Ranges.

### Purchasing Line Listing Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| Vendor             | <p>Key the vendor or range of vendors associated with the Purchase Lines to print on the listing. Vendors are assigned to Purchase Lines through Purchasing Line Maintenance (MENU POFIL2).</p> <p><i>Valid Values:</i> A vendor defined through Vendors Maintenance (MENU POFIL2/MENU APFILE).</p> <p>(2 @ A 6) Optional</p>  |
| Warehouse          | <p>Key the warehouse or range of warehouses associated with the Purchase Lines to print on the listing. Warehouses are optionally assigned to Purchase Lines through Purchasing Line Maintenance (MENU POFIL2).</p> <p><i>Valid Values:</i> A valid warehouse number defined through Warehouse Numbers Maintenance (MENU IAFIL2) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(2 @ A 2) Optional</p> |

**Purchasing Line Listing Screen Fields and Function Keys**

| <b>Field/Function Key</b> | <b>Description</b>  |
|---------------------------|---|
| Purchase Line             | Use this field to enter the purchasing line or range of purchasing lines to include in the listing.<br><i>Valid Values:</i> A valid purchasing line defined through Purchasing Line Maintenance (MENU POFIL2).<br>(2 @ A 10) Optional |
| F3=Cancel                 | Press the <b>F3=CANCEL</b> function key to cancel this option, and return to MENU POFIL2.   |
| Enter                     | Press <b>ENTER</b> to confirm your selections. The Report Options Screen will appear. Refer to the Cross Applications User Guide for details about this screen.   |

| BF                      | 01      | 100746                         | 100746     | IC1000 LITTLE ITALY RESTAURANT SUPPLY |    | 1                         |        |
|                         |         |                                |            |                                       |    | Number of PO's for BF     | : 1    |

This report prints following your selections on the Unposted Receipt Status Report Screen (p. 67-2), and the Report Options Screen.

If you selected to print workstations only, all workstations containing pending receipts are printed along with the total number of PO's per workstation.

If you selected to print workstations and purchase order information, the report above prints.

## Unposted Receipt Status Report

| Report/Listing Fields | Description   |
|-----------------------|---|
| Headings              | <p>Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.</p> <p>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings.</p> |
| Group ID              | The ID associated with the workstation that has unposted purchase order receipts.   |
| Company               | <p>This information displays only if you responded with a <b>Y</b> to <b>Include Unposted Purchase Order Information</b> on the Unposted Receipt Status Report Screen (p. 67-2).</p> <p>The company associated with the pending receipt.</p>  |

### Unposted Receipt Status Report

| Report/Listing Fields | Description  |
|-----------------------|--|
| PO Number             | <p>This information displays only if you responded with a <b>Y</b> to <b>Include Unposted Purchase Order Information</b> on the Unposted Receipt Status Report Screen (p. 67-2).</p> <p>The unique number assigned to this purchase order.</p>               |
| Req Number            | <p>This information displays only if you responded with a <b>Y</b> to <b>Include Unposted Purchase Order Information</b> on the Unposted Receipt Status Report Screen (p. 67-2).</p> <p>The unique number assigned to this requisition.</p>                  |
| Vendor Number/Name    | <p>This information displays only if you responded with a <b>Y</b> to <b>Include Unposted Purchase Order Information</b> on the Unposted Receipt Status Report Screen (p. 67-2).</p> <p>The vendor number and name associated with this pending receipt.</p> |
| WH                    | <p>This information displays only if you responded with a <b>Y</b> to <b>Include Unposted Purchase Order Information</b> on the Unposted Receipt Status Report Screen (p. 67-2).</p> <p>The warehouse in which the item will be received.</p>                |

---

This option resets the **On Order Quantities** in the Item Balance File (ITBAL) and the **Received to Date** field in the Purchase Order Detail File (PODET). This procedure is also run automatically as part of Day-end Processing.

---

NOTE: The reset process does not include planned work orders in the calculations.

---

Run this option if:

- The **On Order Quantities** are incorrect due to processing receipts through Inventory Transactions instead of through Purchasing.
- You are installing Purchasing and have previously entered **On Order Quantities** through Inventory Transactions.

---

## Reset On Order Quantity

The screens and/or reports in this option and a brief description are listed in the following table. A complete description of each screen/report is contained in this section.

| Title                          | Purpose  |
|--------------------------------|--|
| Reset On Order Quantity Screen | Used to select the job template to be used for the Reset On Order Quantity Transaction Processor Post job. |

---

## Reset On Order Quantity Screen

```
RESET ON ORDER QUANTITY

Job Template:  _.....  Modify Selections:  N

F3=Cancel    F4=Job Template List
```

This screen displays after selecting option 4 - Reset On Order Quantity (MENU POMAST). You have the option to select the job template to be used for the Reset On Order Quantity Transaction Processor Post job.

---

**Reset On Order Quantity Screen Fields and Function Keys**

| Field/Function Key | Description  |
|--------------------|--|
| Job Template       | <p>Job templates are defined through Job Template Maintenance (MENU XAFILE) to allow parameter selections to be pre-defined for a particular process (such as, GL Year End) ahead of time. Once defined, this template can be used repeatedly, eliminating the need to manually provide these parameters for every submission of this job process.</p> <p>For the current job submission, you can enter a pre-defined job template in this field to use the established parameters (with or without any modifications), or you can leave this field blank and the system will prompt you to provide your own parameters.</p> <p>If you enter a pre-defined job template in this field, and do not want to make any changes to the established parameter selections for this current job submission, key <b>N</b> in the <b>Modify Selections</b> field. You will then bypass all the output parameter screens.</p> <p>If you enter a pre-defined job template in this field, but want to review and/or make modifications to the established parameter selections for this current job submission, key <b>Y</b> in the <b>Modify Selections</b> field. You will be presented with the established parameters for that job template and can review/make changes as needed for this job.</p> <p>If you leave this field blank, you will be presented with a series of prompts for you to provide the desired parameters for this current job submission.</p> <hr/> <p>NOTE: To review a list of existing job templates that have been created for the Reset On Order Quantities job, press F4=JOB TEMPLATE LIST.</p> <hr/> <p><i>Valid Values:</i> A job template defined for Reset On Order Quantities jobs (that is, PO812P) through Job Template Maintenance (MENU XAFILE).<br/>(A 10) Optional</p> |

---

---

## Reset On Order Quantity Screen Fields and Function Keys

| Field/Function Key   | Description  |
|----------------------|--|
| Modify Selections    | <p>If using a job template (you keyed a job template name in the <b>Job Template</b> field on this screen or select one with F4=JOB TEMPLATE LIST), this field determines if you will be presented with that template's parameters for review and/or modification for this current job submission.</p> <p>Key <b>Y</b> if you want to be able to review and/or modify the selections of the indicated job template. Any changes you make to the template through this post run will not impact the actual predefined template. The changes apply for this run of the job only. If you key <b>Y</b>, a series of selection screens will display allowing you to review and/or make changes. For details about the screens that display, refer to Job Template Maintenance (MENU XAFILE) in the Cross Applications User Guide.</p> <p>Key <b>N</b> if you want to use the template as-is and you do not want to make any modifications. If you key <b>N</b>, a series of selections screens will not be displayed.</p> <p><i>Valid Values:</i> Y or N; cannot be <b>Y</b> if the <b>Job Template</b> field is blank.</p> <p>(A 1) Optional</p> |
| F3=Cancel            | <p>Press F3=CANCEL to exit from this option and return to the menu without processing the reset.</p>   |
| F4=Job Template List | <p>Press F4=JOB TEMPLATE LIST to display the Job Template List Screen, where you can review a list of existing job templates that have been created for Reset On Order Quantities jobs.</p> <p>Refer to Job Template Maintenance (MENU XAFILE) in the Cross Applications User Guide for further details.</p>   |
| Enter                | <p>Press ENTER to continue. The job is submitted immediately to the Transaction Processor.</p> <p>Additionally, depending on your selections in the <b>Job Template</b> and <b>Modify Selections</b> fields on this screen, various job template screens may or may not display once you press ENTER. For details about job template screens, refer to Job Template Maintenance (MENU XAFILE) in the Cross Applications User Guide.</p>  |

---

---

This option is used to zero out the year-to-date fields in the Vendor Performance File. The following year-to-date fields will be changed to zero for all items and all vendors contained in this file:

- YTD units received from this vendor for this item.
- YTD cost of units received from this vendor for this item.
- YTD number of receipts from this vendor for this item.
- YTD average number of days to receive this item from this vendor.
- YTD number of PO Due Date changes for this vendor for this item.
- YTD number of times sales orders were impacted by PO Due Date changes.
- YTD average number of days to receive early this item from this vendor.

---

**NOTE:** This option requires exclusive use of the Vendor Performance File. Therefore, prior to executing this option, you must stop Distribution A+ through MENU XAMAST. When completed, be sure to restart Distribution A+ through MENU XAMAST.

---

---

## When To Run This Option

Run this option prior to posting receipts for the new year. Posting of receipts is performed via:

- PO Receipts Register (MENU POMAIN), for receipts manually entered into a receipt group, and
  - Enter or Change Receivers or PO Receipts (MENU POMAIN), for receipts in a receiver or, if applicable,
  - Warehouse Management (MENU WMMAIN), for receipts in a receiver.
-

## Zero out YTD fields in Vendor Performance File

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title   | Purpose   |
|---|---|
| Zero Out YTD Fields In Vendor Performance File Start Screen | Use to execute the process by pressing <b>ENTER</b> to update the Vendor Performance File.                                |
| Zero Out YTD Fields In Vendor Performance File End Screen   | This screen displays when processing is complete. The year-to-date fields are now updated in the Vendor Performance File. |

## Zero Out YTD Fields In Vendor Performance File Start Screen

```
ZERO OUT YTD FIELDS IN VENDOR PERFORMANCE FILE

THIS OPTION SHOULD BE RUN AT YEAR END ONLY

This option is used to zero out the YTD fields in the Vendor Performance
file. The following Year-to-date fields will be changed to zero for all
items and all vendors contained in this file:

YTD units received from this vendor for this item.
YTD cost of units received from this vendor for this item.
YTD number of receipts from this vendor for this item.
YTD average number of days to receive late this item from this vendor.
YTD number of PO Due Date changes for this vendor for this item.
YTD number of times sales orders were impacted by PO Due Date changes.
YTD average number of days to receive early this item from this vendor.

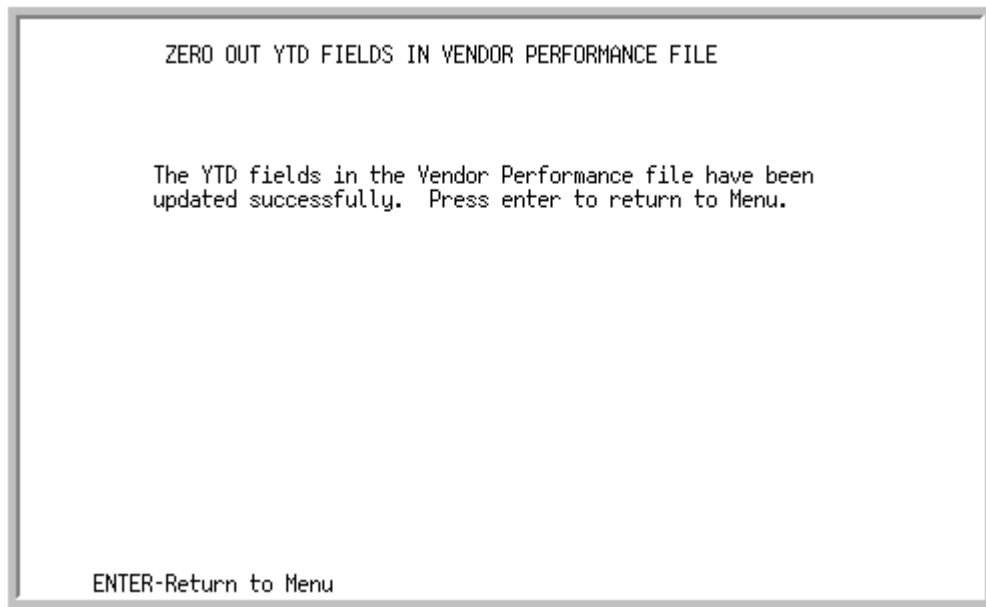

F3=Cancel                                F5=Continue
```

This screen displays when you select option **5** - Zero out YTD fields in Vendor Performance File (MENU POMAST).

Use this screen to execute the process by pressing **ENTER** to update the Vendor Performance File.

When processing is complete, the Zero Out YTD Fields In Vendor Performance File End Screen (p. 69-4) will display.

## Zero Out YTD Fields In Vendor Performance File End Screen

This screen displays when processing is complete. The year-to-date fields are now updated as zero-filled in the Vendor Performance File.

Press **ENTER** to return to **MENU POMAST**.

---

This option updates the Vendor Search File. It is not necessary to perform this option on a regular basis (or each time a vendor is added), as the file is automatically updated when adding or changing a vendor through Vendor Master Maintenance (MENU POFILE).

---

**NOTE:** This option requires exclusive use of the Vendor Search File (VENDX). Therefore, prior to executing this option, you must stop Distribution A+ through MENU XAMAST. When completed, be sure to restart Distribution A+ through MENU XAMAST.

---

---

## When To Run This Option

Run this option after restoring Purchasing Files, or upon initial installation.

---

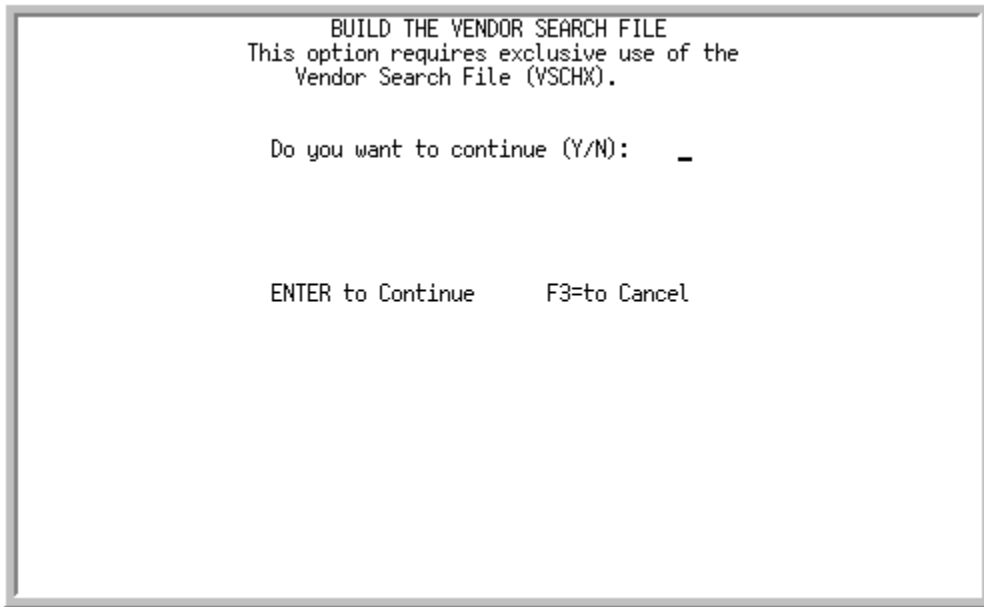

## Rebuild Vendor Search File

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                                 | Purpose                               |
|---------------------------------------|---------------------------------------|
| Rebuild The Vendor Search File Screen | Use to update the Vendor Search File. |

---

## Rebuild The Vendor Search File Screen

This screen displays when you select option 6 - Rebuild Vendor Search File (MENU POMAST).

Use this screen to update the Vendor Search File.

### Rebuild The Vendor Search File Screen Fields and Function Keys

| Field/Function Key            | Description  |
|-------------------------------|--|
| Do You Want To Continue (Y/N) | Key <b>Y</b> if you want to rebuild the Vendor Search File.<br>Key <b>N</b> to discontinue this process and return to MENU POMAST.<br>(A 1) Required |
| F3=To Cancel                  | Press <b>F3=TO CANCEL</b> to cancel this option and return to MENU POMAST.   |
| Enter                         | Press <b>ENTER</b> to confirm your selections. After processing, MENU POMAST will display.   |

---

Use this option to set up control and option records needed to perform warehouse transfers. You must provide the company number to be used as the warehouse transfer company and the miscellaneous code value to be used by the warehouse transfer system.

Through this option, warehouse transfer default order control/option records will automatically be created. The defaults for these records will be copied from the equivalent records based on the value specified in the **Default Company** determined through System Options (MENU XAFILE). The program will modify certain options where appropriate. It is recommended that the new warehouse transfer company options are carefully reviewed for accuracy based on the business practices for transferring inventory between warehouses.

Selection of this option will automatically perform the following:

- The transfer company option records will be created.
  - For the warehouse transfer company, the **Interface Order Entry to A/R** and **A/R to G/L** fields will be set to **N** because normally there are no receivable collections that occur within inter-company transfer of merchandise. The value of the moved inventory is handled through general ledger transactions. See Warehouse Transfer G/L Requirements (p. 3-7) for detailed information.
- The warehouse transfer company will be added to the default company control record.
- The warehouse transfer company Accounts Receivable option records will be created.
- The warehouse transfer company Order Entry option records will be created.
- The warehouse transfer company Inventory Accounting option records will be created.
- The warehouse transfer company Purchasing option records will be created.
- The warehouse transfer company Sales Analysis option records will be created.

The following records will be created and will be used when you create a customer for each warehouse:

- Age code = Misc Code Value
  - Customer class = Misc Code Value
  - Customer Master User Codes 1-3 = Misc Code Value
  - O/E hold code = Misc Code Value
  - O/E Order/Invoice Number Last Number Used
-

- Payment type = Misc Code Value
  - For the warehouse transfer company, the **Payment Type** created here will have the **Update A/R** field is set to **N** because normally there are no receivable collections that occur within inter-company transfer of merchandise so invoices will not be updated to Accounts Receivable during Day-End Processing.
- Purchasing hold code = Misc Code Value
- Purchasing/Requisition Last Number Used
- Sales representative = 00001
- Tax body = Misc Code Value
  - For the warehouse transfer company, the **Tax Body Code** created here will have zero value tax rates associated with it.
- Terms code = Misc Code Value
- Territory = Misc Code Value

---

NOTE: Be sure that all options are set up in your default company before selecting this option. If all options are not set up (on MENU XAFILE), then all options needed for warehouse transfers may not be created.

---

For additional information regarding setup and processing, refer to CHAPTER 3: *Warehouse Transfers Overview*.

---

## Setup Warehouse Transfer Options

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                                   | Purpose   |
|---|---|
| Warehouse Transfer Company Setup Screen | Use to define your transfer company and miscellaneous code value. |

---

## Warehouse Transfer Company Setup Screen

```

                WAREHOUSE TRANSFER COMPANY SETUP

Transfer Company? 99      (01-99)
Misc Code Value:  TR

Note: This option will create the following options records and
codes necessary for the operations of warehouse transfers.

Options: PO, IA, AR, OE, SA and Company name.

Codes: Age code, Terms code, User codes, Customer Class,
        Payment Type, Hold codes (OE/PO), Territory,
        Tax Body and Sales Rep.

Be sure that all options are setup in your default company
before pressing F5.  If they are not then all options needed
for warehouse transfers may not be created.

                                F3=Cancel    F5=Create

```

This screen displays after selecting option 7 - Setup Warehouse Transfer Options (MENU POMAST). Use this screen to define your transfer company and miscellaneous code value.

### Important

Since the default company is used to create the options records and codes necessary for the operations of warehouse transfers for the warehouse transfer company, be sure that all options are set up in the default company before selecting this option. If all module options are not set up (Cross Application - File Maintenance MENU XAFILE), then all module options needed for warehouse transfers may not be created.

---

**Warehouse Transfer Company Setup Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Transfer Company   | <p>Use this field to select the company number that will be used as the warehouse transfer company. All inter-warehouse inventory transactions will be processed through this company.</p> <p>Key the desired transfer company number. Once created, this transfer company number can never be deleted and should never be changed.</p> <p><i>Default Value:</i> The transfer company defined to Distribution A+, if one has been defined; otherwise, this field is blank.</p> <p><i>Valid Values:</i> Any company number. This company number does not have to be defined through Company Name Maintenance (MENU XAFILE); the options records will be created for you using the default company.</p> <p>(N 2,0) Required</p>   |
| Misc Code Value    | <p>This field represents the code that will be used to identify the codes generated for the warehouse transfer company. This value will become the name of your age code, terms code, customer user codes, customer class, hold codes, payment type, territory, and tax body.</p> <p>Key the desired miscellaneous code value. It is suggested that you key a code that will allow you to easily recognize the codes generated for the warehouse transfer company (i.e., WT, TR, etc.).</p> <p><i>Default Value:</i> The miscellaneous code value defined for the current transfer company displayed, if one is displayed. Otherwise, this field is blank.</p> <p><i>Valid Values:</i> Any characters</p> <p>(A 2) Required</p> |
| F3=Cancel          | Press F3=CANCEL to cancel this option and return to the menu.   |
| F5=Create          | <hr/> <p style="text-align: center;"><b>Important</b></p> <p>Before pressing this key, be sure all module options have been set up for the default company selected. Also, note that once the warehouse transfer company has been created, it can never be deleted and should never be changed.</p> <hr/> <p>Press F5=CREATE to create the warehouse transfer options, and return to the menu.</p> <hr/>  |

---

This option will remove any empty members in the PO receipt work files. It will also ensure that receipt work files and the PO Receipt Group Control File (PORCT) records are in sync.

---

NOTE: This option requires exclusive use of the PO Receipt Group Control File. Therefore, no receipt group activity can be in process, and Distribution A+ must be stopped through MENU XAMAST prior to executing this option. When completed, be sure to restart Distribution A+ through MENU XAMAST.

---

---

## When To Run This Option

Run this option after restoring Purchasing Files, or upon initial installation.

---

---

This option allows for the global assignment of a defined landing code to vendor items. The assignment to these items may be warehouse specific or may be “across the board.”

When PO vendor/item/price file records are updated and **Days to Keep Vendor/Item Audit Activity** is greater than 0 in Purchasing System Options Maintenance (MENU XAFILE), vendor/item activity will be tracked when this update is performed.

---

## Global Landing Code Update

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                                 | Purpose   |
|---------------------------------------|---|
| Global Landing Code Assignment Screen | Use to select items to which a landing code will be assigned. |

---

## Global Landing Code Assignment Screen

```

GLOBAL LANDING CODE ASSIGNMENT

Selection:
Warehouse?      - .      (Blank for All)
Vendor:         .....   to   .....
Item:           From:    .....
                to:      .....
Item Class?     ... / ...   to?  ... / ...
Item User Code 1?  ....   to?   ....
Item User Code 2?  ....   to?   ....
Item User Code 3?  ....   to?   ....

Change to:
                Landing Code?  .....

                                F3=Exit   F5=Submit
    
```

This screen displays after selection option 9 - Global Landing Code Update (MENU POMAST). Use this screen to select items to which a landing code will be assigned. The items may be limited by item number, item class (and optionally sub-class), item user code, vendor, or warehouse.

Refer to the Cross Applications User Guide for an explanation of the rules for entering From/To Ranges.

### Global Landing Code Assignment Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Warehouse          | <p>Key a valid Warehouse ID to include items from that warehouse in the global assignment.</p> <p>Leave this field blank to include items regardless of warehouse affiliation.</p> <p>(A 2) Required/Optional</p>   |
| Vendor             | <p>These fields are used to limit the items selected for inclusion in the landing code assignment.</p> <p>Key a range of valid vendors to limit the items to be included in the global assignment.</p> <p>Leave these fields blank to include items regardless of vendor.</p> <p>(2 @ A 6) Optional</p> |

---

**Global Landing Code Assignment Screen Fields and Function Keys**

| Field/Function Key | Description   |
|--------------------|---|
| Item               | <p>These fields are used to limit the items selected for inclusion in the landing code assignment.</p> <p>Key a range of valid item numbers to limit the items to be included in the global assignment.</p> <p>Leave these fields blank to include all items regardless of item number.</p> <p>(2 @ A 27) Optional</p>  |
| Item Class         | <p>These fields are used to limit the items selected for inclusion in the landing code assignment.</p> <p>Key a range of valid item classes/sub-classes to limit the items to be included in the global assignment (keying sub-classes is not required to use the class fields).</p> <p>Leave these fields blank to include items regardless of class or sub-class.</p> <p>(4 @ A 2) Optional</p> |
| Item User Codes    | <p>Key up to three ranges of valid item user codes to limit the items to be included in the global assignment.</p> <p>Leave these fields blank to include items regardless of item user codes.</p> <p>(6 @ A 3) Optional</p>  |
| Landing Code       | <p>Key the defined landing code which will be assigned to all items meeting the criteria selected on this screen. The assignment can occur interactively or through batch processing.</p> <p>(A 5) Required</p>   |
| F3=Exit            | <p>Press F3=EXIT to cancel this option and return to MENU POMAST.</p>   |
| F5=Submit          | <p>Press F5=SUBMIT to send a batch job to update all selected items with the identified landing code. You will immediately be returned to MENU POMAST.</p>  |
| Enter              | <p>Press ENTER to interactively update all selected items with the identified landing code. When all selected items have been assigned the landing code, you will be returned to MENU POMAST.</p>   |

---

Use this option to create warehouse transfer orders automatically from all of the special order warehouse transfers entered through Enter, Change & Ship Orders (MENU OEMAIN).

This option creates warehouse transfers by

- finding the special order warehouse transfer orders created with a warehouse transfer vendor assigned.

---

NOTE: When creating a special order warehouse transfer order through Order Entry, the inventory is allocated immediately in the transfer from warehouse.

---

- creating requisitions in the warehouse transfer company for the different warehouse transfer vendors. The first character in the requisition number assigned to a warehouse transfer requisition/purchase order will always be T to indicate that the number is associated with a warehouse transfer. The second and third characters in the six-digit requisition number can be 0-9 or A-Z, excluding I, O, and S. The last four characters can be 0-9. This format allows up to 290,000 letter/number combinations to be used before you must purge history files to be able to re-use numbers.
- printing the requisitions in the warehouse transfer company to create the purchase orders (optional). The purchase order warehouse will be the requesting warehouse; the purchase order vendor will be the warehouse from which inventory was requested. At the same time, sales orders will be created in the requested from warehouses, beginning the normal warehouse transfer process. Refer to the warehouse transfer process as described in the Appendix section.

---

NOTE: Through Purchasing Options Maintenance (MENU XAFILE) you have the option to indicate whether or not to automatically have incoming warehouse transfers received at Invoice print time. If the **Auto Receive Incoming WH Transfers at Invoice Print** setup option is Y, POs will be automatically received in the “to” warehouse when inventory is received for another “from” warehouse through the Warehouse Transfer process. Refer to Purchasing Options Maintenance (MENU XAFILE) for additional details.

---

## Automatic WH Transfer Options

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

---

| Title  | Purpose   |
|--|---|
| Automatic Warehouse Transfer Orders Selection Screen | Use to select the special order warehouse transfers from which automatic warehouse transfer orders are to be created. |

---

## Automatic Warehouse Transfer Orders Selection Screen

```
AUTOMATIC WAREHOUSE TRANSFER ORDERS

Selection
Job Template:  _.....      Modify Selections:  N
Company?      ...  (Blank for ALL)
Warehouse?    ...  (Blank for ALL)
Bypass Held Customer Orders: .. (Y,N)
Separate PO for each Special Order : .. (Y,N)
Requisition Approval:  ....

F3=Cancel      F4=Job Template List
```

This screen displays after selecting option 10 - Automatic WH Transfer Options (MENU POMAST). Use this screen to select the special order warehouse transfers from which automatic warehouse transfer orders are to be created.

You also have the option to select the job template to be used for Automatic Warehouse Transfer Creation jobs.

### Automatic Warehouse Transfer Orders Selection Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Job Template       | <p>Job templates are defined through Job Template Maintenance (MENU XAFILE) to allow parameter selections to be pre-defined for a particular process (such as, GL Year End) ahead of time. Once defined, this template can be used repeatedly, eliminating the need to manually provide these parameters for every submission of this job process.</p> <p>For the current job submission, you can enter a pre-defined job template in this field to use the established parameters (with or without any modifications), or you can leave this field blank and the system will prompt you to provide your own parameters.</p> <p>If you enter a pre-defined job template in this field, and do not want to make any changes to the established parameter selections for this current job submission, key <b>N</b> in the <b>Modify Selections</b> field. You will then bypass all the output parameter screens.</p> <p>If you enter a pre-defined job template in this field, but want to review and/or make modifications to the established parameter selections for this current job submission, key <b>Y</b> in the <b>Modify Selections</b> field. You will be presented with the established parameters for that job template and can review/make changes as needed for this job.</p> <p>If you leave this field blank, you will be presented with a series of prompts for you to provide the desired parameters for this current job submission.</p> <hr/> <p>NOTE: To review a list of existing job templates that have been created for the Automatic WH Transfer Creation job, press <b>F4=JOB TEMPLATE LIST</b>.</p> <hr/> <p><i>Valid Values:</i> A job template defined for Automatic Warehouse Transfer Creation jobs (that is, PO685P) through Job Template Maintenance (MENU XAFILE).</p> <p>(A 10) Optional</p> |

---

**Automatic Warehouse Transfer Orders Selection Screen Fields and Function Keys**

---

| Field/Function Key | Description   |
|--------------------|---|
| Modify Selections  | <p>If using a job template (you keyed a job template name in the <b>Job Template</b> field on this screen or select one via F4=JOB TEMPLATE LIST), this field determines if you will be presented with that template's parameters for review and/or modification for this current job submission.</p> <p>Key <b>Y</b> if you want to be able to review and/or modify the selections of the indicated job template. Any changes you make to the template through this post run will not impact the actual predefined template. The changes apply for this run of the job only. If you key <b>Y</b>, a series of selection screens will display allowing you to review and/or make changes. For details about the screens that display, refer to Job Template Maintenance (MENU XAFILE) in the Cross Applications User Guide.</p> <p>Key <b>N</b> if you want to use the template as-is and you do not want to make any modifications. If you key <b>N</b>, a series of selections screens will not be displayed.</p> <p><i>Valid Values:</i> Y or N; cannot be <b>Y</b> if the <b>Job Template</b> field is blank.</p> <p>(A 1) Optional</p> |
| Company            | <p>This field appears only if the <b>Multi Company</b> field is set to <b>Y</b> through System Options Maintenance (MENU XAFILE).</p> <p>An automatic warehouse transfer order will be created for those special orders indicating warehouse transfer vendors which were created for the company number that is keyed in this field.</p> <p>Key the valid company number for which an automatic warehouse transfer order will be created.</p> <p>Leave this field blank to create automatic warehouse transfer orders for all requesting companies.</p> <p><i>Default Value:</i> The default company defined in Authority Profile Maintenance (MENU XASCTY) if one has been defined; otherwise, this is the default company defined through System Options Maintenance (MENU XAFILE).</p> <p><i>Valid Values:</i> A valid company number defined through Company Name Maintenance (MENU XAFILE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(A 2) Required</p>   |

---

### Automatic Warehouse Transfer Orders Selection Screen Fields and Function Keys

| Field/Function Key          | Description  |
|-----------------------------|--|
| Warehouse                   | <p>An automatic warehouse transfer order will be created for those special orders indicating warehouse transfer vendors which were created for the requesting warehouse number that is keyed in this field.</p> <p>Key the valid warehouse number for which an automatic warehouse transfer order will be created.</p> <p>Leave this field blank to create automatic warehouse transfer orders for all requesting warehouses in the specified company.</p> <p><i>Default Value:</i> The default warehouse defined in Authority Profile Maintenance (MENU XASCTY) if one has been defined; otherwise, this is the <b>Default Warehouse</b> defined through Company Name Maintenance (MENU XAFILE).</p> <p><i>Valid Values:</i> A valid warehouse number defined through Warehouse Numbers Maintenance (MENU IAFILE) which you are authorized to access through Authority Profile Maintenance (MENU XASCTY).</p> <p>(A 2) Optional</p> |
| Bypass Held Customer Orders | <p>Use this field to determine whether or not warehouse transfer orders should be created for applicable special orders if those orders are on hold in order entry.</p> <p>Key <b>Y</b> to create warehouse transfer orders for only those applicable special orders that are not held.</p> <p>Key <b>N</b> to create warehouse transfer orders for all applicable special orders, even if they are on hold. Keying an <b>N</b> in this field alleviates the need for you to manually remove the hold on the applicable special orders through Release Held Orders, Quotes, Backorders &amp; Futures (MENU OEMAIN).</p> <p>(A 1) Required</p>  |

| Field/Function Key   | Description   |
|----------------------|---|
| F3=Cancel            | Press F3=CANCEL to cancel this option and return to MENU POMAST.  |
| F4=Job Template List | Press F4=JOB TEMPLATE LIST to display the Job Template List Screen, where you can review a list of existing job templates that have been created for Automatic Warehouse Transfer Creation jobs.<br><br>Refer to Job Template Maintenance (MENU XAFILE) in the Cross Applications User Guide for further details.   |
| Enter                | Press ENTER to confirm your selections. The job will be sent to the Transaction Processor.<br><br>Additionally, depending on your selections in the <b>Job Template</b> and <b>Modify Selections</b> fields on this screen, various job template screens may or may not display once you press ENTER. For details about job template screens, refer to Job Template Maintenance (MENU XAFILE) in the Cross Applications User Guide. |

---

---

This option reviews the special order items that have been extracted to the Special Order File (SPORD) but that have not yet been added to a requisition/purchase order, in order to determine if they can be placed on a requisition/purchase order at this time. If so, the items will be added automatically to a new or existing requisition/purchase order. If not, an edit report will be generated identifying the errors that exist. Once you correct the errors, you can attempt to add the items to requisitions/purchase orders through this option or manually through Enter or Change Requisitions (MENU POMAIN).

Depending on your selections, this option will print one or more of the following:

- An edit report
- An error report
- Purchase Orders

When you use this option, company-level special order options defined through Special Order Options Maintenance (MENU XAFILE), vendor-level special order options defined through Vendors Maintenance (MENU POFILE), and company-level order entry options defined through Order Entry Options Maintenance (MENU XAFILE) are considered, if they exist.

Based on special order company options, the system first looks at vendor-level options. If vendor-level options are not defined, the system looks at company-level options.

If you are using the auto creation process, as defined through Special Order Options Maintenance (MENU XAFILE), and a special order/drop-ship item was not successfully added to a requisition/purchase order at end order time, you can review those items and process them through this option.

If any special order items have been added (linked) to suggested orders, they will be omitted from this process. Special order items can be linked to suggested orders in the following ways:

- Through the Suggested Order Report by setting the **Add Special Order Items** field to **Y** to automatically add (link) all qualified special order items when a suggested order is created.
  - Through the Suggested Orders Window (in Buyers WorkBench) using the **Add Special Order Items** button to automatically add (link) all qualified special order items to a suggested order after it is already created.
  - Through the Special Order Items Window by using the **Link** button to manually add (link) qualified special order items to a suggested order after it is already created.
-

Also, during the special order automatic requisition process, line comment information for drop shipments will be checked for duplication in the following areas:

- Carrier
- Ship Via (non-case sensitive duplication check)
- FOB Code
- Customer PO Number (non-case sensitive duplication check)

If the line comment information is the same for all drop shipment lines on a requisition in any of these areas mentioned above, then that comment information is removed at the line level and converted into an order level comment (retaining the same print code). This eliminates redundancy of line comment information, and makes it easier for you should information need to be changed on the Requisition/PO. You would not need to pull down the line comments for each line, but instead would be able to simply address it once at the order level, when necessary. This functionality applies only when drop ship items are added to a new (not existing) requisition.

---

## Special Order Automatic Req Creation

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| Title                                     | Purpose  |
|---|--|
| Create Special Order POs Selection Screen | Use to enter the criteria for selecting special orders.                          |
| SO/RQ Edit Report                         | Prints all of the items for which a requisition or Purchase Order was created.   |
| SO/RQ Edit Report - Errors                | Prints each item for which an error was found, with a message stating the error. |

## Create Special Order POs Selection Screen

```

CREATE SPECIAL ORDER POS

Job Template:      - .....      Modify Selections:  N
Company?          01          A & C Office Supply
Warehouse?        1.          (** for all)

Create a separate PO for each Order: .. (S/D/B/ )

                                   F3=Exit          F4=Job Template List

```

This screen displays after selecting option 11 - Special Order Automatic Req Creation (MENU POMAST). Use this screen to enter the criteria for selecting special orders. A requisition or Purchase Order will be created/updated for each special order that meets the criteria you enter on this screen. Any special order items that meet the selection criteria entered on this screen but that cannot be added to existing requisitions or purchase orders (if special order options allow them to be), and that pass the edits, will be added to a new requisition, even if the special order options are set to prevent the creation of a new requisition.

You also have the option to select the job template to be used for the Special Order Automatic Requisition Creation job.

### Create Special Order POs Selection Screen Fields and Function Keys

| Field/Function Key            | Description   |
|-------------------------------|---|
| PO Output Queue               | <p>This field is used in conjunction with the <b>Approval Code</b> field. If you keyed a <b>Y</b> in the <b>Approval Code</b> field, this field is required. If you left the <b>Approval Code</b> field blank, the entry in this field is ignored.</p> <p>Use this field to identify the output queue for printing the Purchase Orders. Accept the default or key a valid output queue name.</p> <p><i>Default Value:</i> The default purchase order output queue defined for this warehouse or warehouse/display station ID in Output Queue Overrides Maintenance (MENU XAFILE/MENU OEFILE), or, if that is not available, the default output queue defined for the user through Register Distribution A+ User IDs (MENU XACFIG)</p> <p><i>Valid Values:</i> Any valid System i output queue.</p> <p>(A 10) Required</p> |
| Include OE Line Item Comments | <p>Use this field to indicate whether you want the line item order entry comments printed on the Purchase Order as line item messages.</p> <hr/> <p>NOTE: This field will only display if Special Order Options Maintenance (MENU XAFILE) has not been defined for the default company.</p> <hr/> <p>Key <b>Y</b> to print the order entry comments for each line item with that item on the Purchase Order. Only item level comments that are designated as printable will be printed. Order level comments and item level comments that are designated for internal use only will not appear.</p> <p>Key <b>N</b> if you do not want to print any of the order entry line item comments on the Purchase Order.</p> <p><i>Default Value:</i> N</p> <p>(A 1) Required</p>   |
| Bypass Held Orders            | <p>Use this field to indicate if you want to create requisitions or purchase orders for special orders when the sales order is on hold.</p> <p>Key <b>Y</b> to skip any special order with a hold code. No requisition or purchase order will be created until the sales order hold code is removed through Enter or Change Requisitions (MENU POMAIN).</p> <p>Key <b>N</b> to create a requisition or purchase order for the special order despite any hold code on the sales order.</p> <hr/> <p>NOTE: This field overrides the value keyed in the <b>Create Req/PO For Held Orders</b> field in Special Order Options Maintenance (MENU XAFILE).</p> <hr/> <p><i>Default Value:</i> Y</p> <p>(A 1) Required</p>  |

---

**Create Special Order POs Selection Screen Fields and Function Keys**

| Field/Function Key                   | Description   |
|--------------------------------------|---|
| Ignore Vendor Minimums               | <p>Use this field to specify whether or not to ignore the vendor minimums defined for a vendor through Vendor Master Maintenance (MENU POFIELD) when creating special order purchase orders through this option.</p> <hr/> <p>NOTE: If you are using approval codes, and a purchase order will exceed the maximum approval amount specified for your user ID through Approval Codes Maintenance (MENU POFIELD), an unapproved requisition will be created.</p> <hr/> <p>Key <b>Y</b> to ignore vendor minimums. If all requirements are met for purchase order creation, a purchase order will be created for the vendor regardless of the vendor minimum.</p> <p>Key <b>N</b> if you do not want to ignore vendor minimums. Unapproved requisitions will be created for special orders that do not meet vendor minimums.</p> <hr/> <p>NOTE: Unapproved requisitions must be accessed through Enter or Change Requisitions (MENU POMAIN) or Open Req/PO's Inquiry (MENU POMAIN) and given a valid approval code before Purchase Orders can be produced.</p> <hr/> <p><i>Default Value:</i> Y<br/>(A 1) Required</p> |
| Print PO if Buyer Review Item Exists | <p>Multiple special orders for the same vendor will be combined into a single requisition or purchase order. Use this field to indicate if you want to print a Purchase Order when one of the items for a vendor requires buyer review and approval [<b>Buyer Apr Req</b> is <b>Y</b> in Item Balance Maintenance (MENU IAFIELD)].</p> <p>Key <b>Y</b> to print a Purchase Order even though buyer approval is required for one or more items on the PO. Keying <b>Y</b> overrides the <b>Buyer Apr Req</b> field in Item Balance Maintenance. The Purchase Order will be printed without any further buyer review or approval of the item.</p> <p>Leave this field blank if you do not want a Purchase Order printed when one or more of the special order items requires buyer review and approval. A requisition will be created for all of the special order items for this vendor. The requisition must then be approved through Enter or Change Requisitions (MENU POMAIN) before a Purchase Order can be printed.</p> <p><i>Default Value:</i> Blank<br/>(A 1) Optional</p>                                  |

---

**Create Special Order POs Selection Screen Fields and Function Keys**

| Field/Function Key                  | Description   |
|-------------------------------------|---|
| Create a separate PO for each Order | <p>Use this field to specify whether or not a separate purchase order will be created for each order. The results of your selection vary, based on the specified special order type.</p> <p>If you key <b>S</b></p> <ul style="list-style-type: none"> <li>• and the <b>Special Order Type</b> is <b>S</b>, one PO will be created for each special order item's order/vendor/warehouse.</li> <li>• and the <b>Special Order Type</b> is <b>B</b>, one PO will be created for each special order item's order/vendor/warehouse and one PO will be created for each drop ship item's customer ship to/vendor.</li> </ul> <p>If you key <b>D</b></p> <ul style="list-style-type: none"> <li>• and the <b>Special Order Type</b> is <b>D</b>, one PO will be created for each drop ship item's order/vendor.</li> <li>and the <b>Special Order Type</b> is <b>B</b>, one PO will be created for each drop ship item's order/vendor and one PO will be created for each special order item's vendor/warehouse.</li> </ul> <p>If you key <b>B</b></p> <ul style="list-style-type: none"> <li>• and the <b>Special Order Type</b> is <b>B</b>, one PO will be created for each special order item's order/vendor/warehouse and one PO will be created for each drop ship item's order/vendor.</li> </ul> <p>If you leave this field blank</p> <ul style="list-style-type: none"> <li>• and the <b>Special Order Type</b> is <b>S</b>, one PO will be created for each special order item's vendor/warehouse.</li> <li>• and the <b>Special Order Type</b> is <b>D</b>, one PO will be created for each drop ship item's customer ship to/warehouse/vendor.</li> <li>• and the <b>Special Order Type</b> is <b>B</b>, one PO will be created for each special order item's vendor/warehouse and one PO will be created for each drop ship item's customer ship to/warehouse/vendor.</li> </ul> <p>(A 1) Optional</p> |

This report prints following your responses on the Create Special Order POs Selection Screen (p. 75-3), and the Report Options Screen. The report lists all of the items for which a requisition or Purchase Order was created. POs are designated by a buyer approval code in the last column of the report. If no approval code is shown, a requisition was created for the item.

This report is sequenced by vendor and then by item number. The information listed below is printed for each item.

### SO/RQ Edit Report

| Report/Listing Fields | Description   |
|-----------------------|---|
| Vendor                | This column prints the vendor number for the item.  |
| RQ/PO                 | This column prints the requisition number/PO number for the order for this item.<br>All numbers for requisitions and POs created through the Special Order Automatic Req Creation option begin with an "A." |
| Co/Customer           | This column prints the company number and customer number for the sales order of this item.   |
| Order                 | The sales order number for this item.   |
| SO Type               | This column prints the code for the type of special order: <ul style="list-style-type: none"> <li>• S - special order (non-drop shipment)</li> <li>• D - drop shipment</li> </ul>                           |

---

**SO/RQ Edit Report**

| <b>Report/Listing Fields</b> | <b>Description</b>  |
|------------------------------|---|
| Item Number                  | This column prints the item number of the item being ordered.   |
| Quantity                     | This column prints the number of units of the item being ordered, in the buying unit of measure. Because the order is converted to the buying unit of measure, the quantity shown here may differ from the sales order quantity of the item.  |
| U/M                          | This column prints the unit of measure in which the item is being ordered. This will be the buying unit of measure for the item.  |
| Message                      | If you selected to print Purchase Orders and a condition was detected that requires user review, a requisition will be created for the item and a warning message will appear in this column to identify the problem. No Purchase Order will be printed for this item.  |
| Aprvl                        | If you entered an <b>Approval Code</b> on the Create Special Order POs Selection Screen (p. 75-3), the approval code you entered appears here. A Purchase Order is printed for any item with an approval code, unless there is a message in the <b>Message</b> column. If a message appears on the line for the item, some condition exists that requires user review and approval. When there is an approval code and a message, a requisition was created for the item. To print the Purchase Order, you must then approve the requisition manually through Enter or Change Requisitions (MENU POMAIN). |

This report prints following your responses on the Create Special Order POs Selection Screen (p. 75-3), and the Report Options Screen if an error was encountered in creating a requisition for one or more items on the special orders you selected. The report lists each item for which an error was found, with a message stating the error. No requisition or Purchase Order was created for these items.

This report is sequenced by vendor and then by item number. The information printed is the same as that which appears on the SO/RQ Edit Report (p. 75-12), with the exception of the fields listed below.

### SO/RQ Report - Errors

| Report/Listing Fields | Description  |
|-----------------------|--|
| Headings              | <p>Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.</p> <p>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings.</p> <p>The company number and name are also printed.</p> |
| Vendor                | The vendor number for the item.  |
| RQ/PO                 | This column will always be blank since no requisition was created for this special order.  |
| Co/Customer           | The company number and customer number for the sales order of this item.   |
| Order                 | The sales order number for this item.  |
| SO Type               | <p>This column prints the code for the type of special order:</p> <ul style="list-style-type: none"> <li>• <b>S</b> - special order (non-drop shipment)</li> <li>• <b>D</b> - drop shipment</li> </ul>   |
| Item Number           | This column prints the item number of the item being ordered.  |

---

**SO/RQ Report - Errors**

| Report/Listing Fields | Description  |
|-----------------------|--|
| Quantity              | This column prints the number of units of the item being ordered, in the buying unit of measure. Because the order is converted to the buying unit of measure, the quantity shown here may differ from the sales order quantity of the item.   |
| U/M                   | The unit of measure in which the item is being ordered. This will be the buying unit of measure for the item.  |
| Message               | <p>This column prints the error message explaining why no requisition could be created for the item. The following conditions prevent a requisition from being created and cause an error message to appear:</p> <ul style="list-style-type: none"> <li>• The Vendor No field on the special order is blank</li> <li>• The vendor number on the special order does not exist</li> <li>• POs are not allowed for this vendor</li> <li>• The order quantity is zero</li> <li>• The customer/order number does not exist</li> <li>• The customer/order number is in use at another workstation</li> <li>• The customer/order number is not a special order</li> <li>• No vendor/item record exists for this item</li> <li>• The order unit of measure is invalid</li> <li>• The order standard pack is invalid</li> <li>• A manufacturer's item number is required for this item</li> <li>• The Buyer field on the order is blank</li> <li>• The country of origin is required for the item if the item tracks country of origin and a default country of origin could not be determined</li> <li>• Country of origin restrictions exist</li> </ul> |

---

---

If a user exits Purchase Orders (MENU POMAIN) incorrectly or if the user's terminal shuts down improperly, Distribution A+ recognizes the Purchase Order Header (POHED) records as in-use. These in-use records must be reset before they can be reprinted.

Use this option to update all reprinting purchase orders that are stuck in the in-use status. You can then use Purchase Orders (MENU POMAIN) to reprint the purchase orders.

---

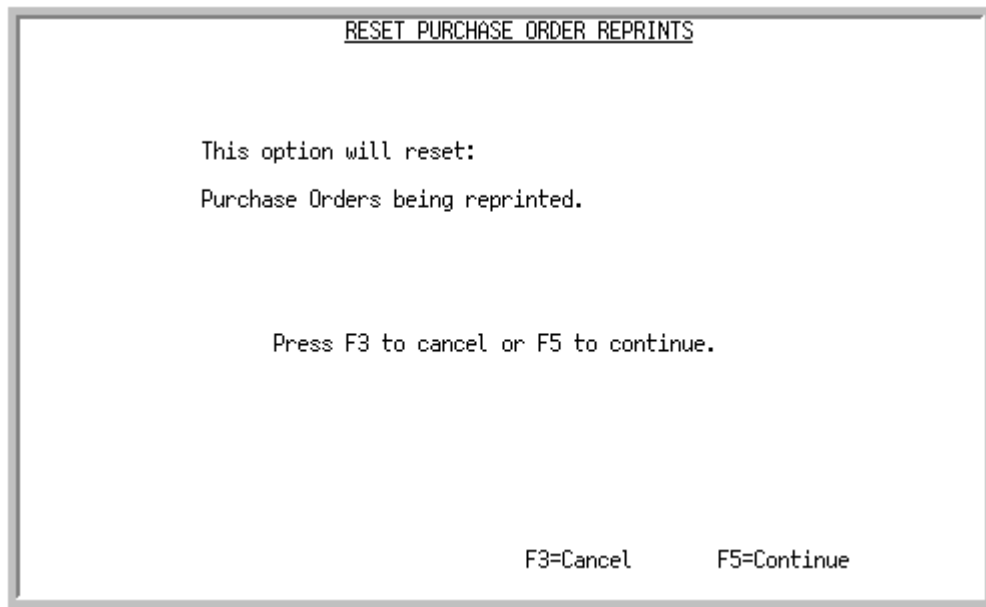

## Reset PO(s) Being Reprinted

The screens and/or reports in this option and a brief description of their purpose are listed in the following table. A complete description of each is provided in this section.

| <b>Title</b>                         | <b>Purpose</b>   |
|--------------------------------------|--|
| Reset Purchase Order Reprints Screen | Use to reset all reprinting purchase orders that are stuck in the in-use status. |

---

## Reset Purchase Order Reprints Screen

This screen displays after selecting option [12](#) - Reset PO(s) Being Reprinted (MENU POMAST). Use this screen to reset all reprinting purchase orders that are stuck in the in-use status.

### Reset Purchase Order Reprints Screen Fields and Function Keys

| Field/Function Key | Description  |
|--------------------|--|
| F3=Cancel          | Press the <a href="#">F3=CANCEL</a> function key to cancel this option and return to MENU POMAST.  |
| F5=Continue        | Press the <a href="#">F5=CONTINUE</a> function key to continue and update all reprinting purchase orders that are stuck in the in-use status. Once the purchase order records are reset, you can reprint them through Purchase Orders (MENU POMAIN). |

---

The Open PO Items Received Complete Report prints a list of open purchase order items where the quantity received is equal to or greater than the quantity ordered. These lines were left open when receipts were posted because open receivers existed for the line.

Use the Open PO Items Received Complete Report option on the Purchasing Master Menu (MENU POMAST) to print this report. This report can be run through this option and will also run automatically following Day-End Processing (MENU XAMAST).

---

## Open PO Items Received Complete Report

The screens and/or reports in this option and a brief description are listed in the following table. A complete description of each screen/report is contained in this section.

| Title   | Purpose   |
|---|---|
| Open PO Items Received Complete Report Selection Screen         | Use to specify the range of companies and warehouse for which to print the report.                                  |
| List of Completely Received PO Items With Open Receivers Report | Prints a list of open purchase order line items where the quantity received equals or exceeds the quantity ordered. |

---

## Open PO Items Received Complete Report Selection Screen

```

OPEN PO ITEMS RECEIVED COMPLETE REPORT

Company No?  - . To?  ...
Warehouse?   ... To?  ...

F3=Exit
  
```

This screen appears after you select option [13](#) - Open PO Items Received Complete Report (MENU POMAST). Use this screen to specify the range of companies and warehouses for which you want to run the report.

Refer to the Cross Applications User Guide for an explanation of the rules for entering From/To Ranges.

### Open PO Items Received Complete Report Selection Screen Fields and Function Keys

| Field/Function Key | Description   |
|--------------------|---|
| Company No         | Enter a range of companies to limit the report to open purchase order items for companies in the range specified.<br>(2 @ N 2,0) Optional |
| Warehouse          | Enter a range of warehouses to limit the report to open purchase order items for warehouses in the range specified.<br>(2 @ A 2) Optional |
| F3=Exit            | Press the F3=EXIT function key to return to the menu without running the report.  |
| Enter              | Press the ENTER function key to confirm your entry and run the report.  |

This report prints after you press **ENTER** on the Report Options Screen. This report also prints as part of Day-End Processing (MENU XAMAST).

Use this report to determine which line items still have open receivers where the quantity received equals or exceeds the quantity ordered. Deleting or completing these receivers will close the open lines.

### List of Completely Received PO Items With Open Receivers Report

| Report/Listing Fields | Description  |
|-----------------------|--|
| Headings              | Program names appear on the upper left corner of the report followed by run date and time, report title, workstation ID, User ID, and page number.<br><br>Summary of the selection criteria prints in the center of the headings area followed by the individual field headings. |
| Company               | The company the purchase order is assigned to.   |
| PO #                  | The purchase order number that contains the item that is on a receiver.  |
| Wh                    | The warehouse in which the item will be received.  |
| Item Number           | The item number that is on the open receiver.  |
| Qty Ordered           | The quantity ordered of the item.  |
| Qty Received          | The quantity received against the ordered quantity of the item.  |

---

This option also resides on MENU IAMAST in Inventory Accounting.

Refer to Offline Item Maintenance (MENU IAMAST) in the Inventory Accounting User Guide, where this option is explained.

Appendix A in the Inventory Accounting User Guide also contains Offline Item Maintenance Standards.

## Glossary

---

|                                 |  |
|---------------------------------|--|
| Bill of Lading                  | A Bill of Lading is a type of packing list for use by shipping companies. The bill of lading lists the number of boxes in a shipment, the type of freight, etc.  |
| Centralized Purchasing          | Centralized Purchasing is the process by which all goods are ordered through one warehouse. Upon receipt the ordering warehouse immediately transfers the goods to remote warehouses.  |
| Centralized Replenishment       | Centralized Replenishment is the process by which all goods are ordered and stocked by one warehouse. Goods are transferred to remote warehouses as needed.  |
| Debit Memo                      | A Debit Memo is a notice sent to a vendor to account for all or part of an invoice which is not being paid (due to damaged goods received, etc....).   |
| Drop Ship                       | A Drop Ship is a type of order that is shipped directly from the vendor to the distributor's customer.   |
| GS1                             | GS1 is an international not-for-profit association with member organizations in over 100 countries. GS1 is dedicated to the design and implementation of global standards and solutions to improve the efficiency and visibility of supply and demand chains globally and across sectors. The GS1 system of standards is the most widely used supply chain standards system in the world.  |
| GTIN (Global Trade Item Number) | Global Trade Item Number (GTIN), as defined in the document called "An Introduction to the Global Trade Item Number", is a unique identifier for trade items developed by the GS1, which include both products and services that are sold, delivered, and invoiced at any point in the supply chain. Such identifiers are used to look up product information in a database (often by inputting the number through a bar code scanner pointed at an actual product) which may belong to a retailer, manufacturer, collector, researcher, or other entity. The uniqueness and universality of the identifier is useful in establishing which product in one database corresponds to which product in another database, especially across organizational boundaries. |

---

|                            |  |
|----------------------------|--|
| Lead Time                  | The number of weeks required to receive a vendor shipment of an item from the time a purchase order is printed.  |
| Minimum Order Point        | Minimum Order Point is a quantity, weight, or value limit set by a vendor as the minimum that will be accepted for a given order.  |
| Outside Vendor Processing  | Outside Vendor Processing is the value added processing performed by a vendor rather than the distributor.   |
| Purchase Order             | A Purchase Order is an authorization to purchase goods from a vendor. The purchase order specifies the vendor, which goods are to be purchased, quantities, and price.   |
| Packing List               | A Packing List is a form shipped with goods to the customer which lists what is included in the shipment. Used as a cross reference for what is ordered by the customer, shipped by the vendor, and then received by the customer.   |
| Promotional Buys           | Promotional Buys are vendor offered discounts on specific items.   |
| Purchasing Agent (Buyer)   | A Purchasing Agent is a person who decides which goods to purchase, from which vendors, and a what price.  |
| Purchase Price Variance    | Purchase Price Variance is the difference between the value of a purchase order and the invoice for the same order. Also, a general ledger account used to balance the Inventory and Accounts Payable accounts for a given order.    |
| Requisition                | A Requisition is a request to purchase specific items. Once approved, the requisition becomes a purchase order.  |
| Suggested Order Processing | Suggested Order Processing is a feature which suggest quantities of items to be ordered based the minimum and maximum on hand quantities.  |
| Vendor/Supplier            | The Vendor/Supplier is the entity from which goods are purchased by the distributor.   |
| Vendor Managed Inventory   | Vendor Managed Inventory is a function of EDI which accepts suggestions of what goods are to be purchased based on the vendors sales and forecasting. These suggestions may be either accepted or rejected by the vendor's customer. |
| Warehouse Transfer         | Warehouse Transfer is the process of moving and accounting for the move of goods from one of a company's warehouses to another.  |
