## Contacting Infor

If you have questions about Infor products, go to the Infor Xtreme Support portal.

If we update this document after the product release, we will post the new version on this website. We recommend that you check this website periodically for updated documentation.

If you have comments about Infor documentation, contact [documentation@infor.com](mailto:documentation@infor.com).

## Chapter 1: Bug fixes

These are the bug fixes that were made in the Staffing Optimizer 4.1.0.1 patch release.

### Unable to copy Caregivers from another shift

Incident 11599677 / ICW-2913

A defect was discovered in the Peace Health test server where a user was unable to copy caregivers from a previous shift into the current shift to make assignments. This has been fixed and the copy Caregiver function is now working.

### Error when multiple windows are open

Incident 11536266 / ICW-2891

User received a generic error after performing an action when multiple windows of Staffing Optimizer were open. Best practice is to not have multiple Staffing Optimizer windows open. Because this error was not reproducible, error logging has been improved to capture the error.

### Units that ended were still visible

Incident 11515648 / ICW-2873

Units that ended in January were still being displayed in the Assignments module. These Units were deleted from the database, and this issue is now corrected.

## ADT/Documentation interface not processing messages

Incident 11536101 / ICW-2878

The ADT/Documentation interface was backed up and not processing messages. A new staging table and processing service were built to handle the heavier load from the Peace Health hospital network. Performance and validation testing were performed and a health check service was created to monitor the HL7 interface more closely. Messages are processing more quickly and efficiently.
