## Glossary

## Index

### Chapter

1

## Introduction

The Transaction Gateway *Procedures Guide* explains the processing options and reports available within Infopoint Transaction Gateway.

## Organization of This Guide

The Procedures documentation is divided into 9 chapters, a glossary, and an index. The table below briefly describes each section.

Chapter	Title	Description
1	Introduction	Describes the guide.
2	Features	Describes the features of the Transaction Gateway application.
3	Application Processing	Describes procedures for online features that apply to all Infopoint products.
4	Screens	Describes the different types of screens and their access.
5	MICM Parameters	Describes how to set up MICM parameters that are specific to Transaction Gateway.
6	MICM Online Forms	Describes the online forms needed to enter and maintain Transaction Gateway parameters in MICM.
7	MICM Batch Forms	Describes the batch forms available to enter and maintain Transaction Gateway information in MICM.
8	Online Messages	Describes online messages specific to Transaction Gateway.
9	Reports	Describes the daily, monthly and request reports and provides report samples.

October 2005 Introduction 1-1

Chapter	Title	Description
	Glossary	Describes financial and data processing terms applicable to Transaction Gateway.
	Index	Provides a quick reference for locating information.

## How to Use This Guide

This guide is an instructional and reference guide that should be read in the following manner.

- 1. Briefly browse through each chapter to obtain an overview of its contents and become familiar with the general layout.
- Carefully read through each chapter to learn specific information and its location.
- After becoming familiar with the Transaction Gateway product, use this guide as a standard source of instructional and reference information.

## **Conventions Used in This Guide**

Feature	Explanation	
Boldface	Identifies the actual numeric and alphanumeric values of field names. These must be keyed in exactly as shown.	
UPPERCASE	<ol> <li>Identifies field names (such as TLBAL-ACCOUNT).</li> <li>Identifies file and record names (such as TLBNK-RECORD).</li> <li>Identifies program names (such as TLD100).</li> </ol>	
Italics	Used to emphasize or define a term or concept. Highlights field requirements.	
Bold Italics	Used when referring to another Infopoint application.	
b	Signifies a blank field value associated with a field name.	
n	Signifies any numeric field value associated with a field name or card column.	

## **Product Publications**

The guides listed below comprise the documentation set for Infopoint Transaction Gateway.

Infopoint Transaction Gateway Procedures Guide

Contains daily processing procedures for Transaction Gateway, online messages generated during processing, descriptions of the online panels (with samples) and reports (with samples). In addition, this guide describes the MICM online forms, batch forms, and records specific to Transaction Gateway.

Infopoint Transaction Gateway Reference Guide

Contains technical information about online and batch programs and layouts for files and records used by Transaction Gateway. In addition, this guide provides the application-specific MICM record layouts.

Infopoint Transaction Gateway Operations Guide

Contains technical information about batch operations (jobs). In addition, this guide details procedures for conversion and any other miscellaneous processing procedures.

Infopoint Transaction Gateway Interface Guide

Contains information on the three ways a controller interfaces with Transaction Gateway.

Infopoint Transaction Gateway *Installation Guide* 

Contains step-by-step instructions for installing the product.

## **Related Publications**

The guides listed below provide additional reference material relating to Infopoint Transaction Gateway.

Infopoint MICM Procedures Guide

Contains the panels and batch forms used to maintain MICM and provides form masters. Procedures and reports produced by MICM are also included.

Infopoint MICM Reference Guide

Describes the online programs, batch programs, and files used by MICM.

Infopoint MICM Operations Guide

Contains conversion and migration information.

October 2005 Introduction 1–3

Infopoint Runtime Components Installation Guide

Contains step-by-step instructions for installing the product.

Infopoint Runtime Components Reference Guide

Contains technical information on API and mapping features used by Infopoint systems running under the API architecture.

#### Chapter

2

## **Features**

Transaction Gateway is designed to provide current and accurate account information. It allows each institution to choose special processing options, and it allows each institution to default to Institution 000 processing. The application interfaces with a number of Infopoint products as well as many other vendor products.

This chapter defines the product features, listed under these categories:

- General
- Management
- Reporting

## **General Features**

Transaction Gateway creates a very important link between the teller's terminal and the permanent account files. Account inquiries reflect the exact status of an account, thereby enabling fast and efficient transaction processing.

Passbook Processing Passbook processing is fully supported within Transaction Gateway.

Transactions that have not been booked are maintained on a separate file, which

can be conveniently updated when a customer presents their passbook.

Botch Processing Transaction Gateway uses a batch feed process that starts with a load program

reading an ACH-formatted file. It then creates a batch feed file and a report of the transactions created. The Tables Build program allows the operator to enter the transactions to Transaction Gateway online. After a file is processed online, a transaction journal, an accepted transaction journal, and a rejected transaction

journal are created.

Current Processing Day/Next Processing Day Transaction Gateway distinguishes between the current day processing date and the next day processing date. Current day processing transactions are those that are posted with the current date of the application. Next day processing transaction are those transactions that are going to be posted on the next business date.

October 2005 Features 2-1

The institution's policy is all transactions that occur after 3 p.m. are posted the next day. If a transaction occurs at 10 a.m., it is considered a current processing day transaction because it will be posted today. A transaction that occurs at 3:30 p.m. is considered a next day processing transaction because it will be processed the next business day.

Physical and logical days are not a consideration in Transaction Gateway since current processing day transactions are written to the AM Log Record and next day transactions are written to the PM Log Record.

## **Management Features**

Complete accountability of transactions is possible with Transaction Gateway. All transactions are logged and then reported in a variety of ways. Transaction history is kept for each teller, enabling management to detect any trends in teller activity.

## **Reporting Features**

Institution Options

All reports produced by Infopoint Transaction Gateway contain the report name and number, an outline of the report's purpose, and a detailed explanation of the report's headings. All Transaction Gateway reports are printed on stock paper unless documented otherwise.

**Output Formats** 

The standard three-line title for reports is printed on stock paper. The first title line contains the report date, the institution number and name, and the page number. The second title line of the report contains the branch name and number, if applicable. The third line contains the application name, the report name, and the report number. The report number prefix is the application number assigned to this application in MICM. A report number of 05-nnn denotes a Transaction Gateway report.

Reporting Levels

Reports can be scheduled to print daily, monthly or upon request.

Transaction Gateway provides two sorting formats for transaction reports: by teller or by account. This allows you to view the contents of a particular transaction report in two different ways.

Report sorting is controlled through MICM Record 0307. All reports are sorted by institution. Optional sort methods include by holding company, region, branch, teller, type, officer, application, or account. In addition to report sorting through MICM, Transaction Gateway allows reports to page break by branch, teller, type, officer, or application, depending on the type of report. If no specification is made, a page break occurs at one of these headings: holding company, institution, or region.

System-generated Reports System-generated reports, printed as part of the batch system processing, are driven by MICM. You have the option of printing in detail or summary.

Report Options

In addition to reporting regular teller transactions, the application lists controltype transactions, exceptions, and teller maintenance. For specific transaction reporting, there are such reports as dormant account activity log, closed account activity log, cash journal, hold journal, and check journal. General transaction reporting includes such reports as transaction log, transaction journal, and account transaction journal.

## **Enhancements and Modifications for 9.0**

The following information describes the enhancements and modifications contained in this release of Infopoint Transaction Gateway.

- Support for DB2 has been added using Infopoint Runtime Components API/Scalability.
- The teller ID, teller password and cash drawer IDs are now 8-position alphanumeric fields.
- A security option is now available using external security which includes the ability for a teller to change their password.
- Performance improvement for Batch Feed processing facilitates the following:
  - Reduces the amount of dynamic store by 80% for ACH transactions.
  - Uses the PURGETHRESH parameter of TCLASS to control the maximum number of transactions that can be queued.
  - Uses the TLLOG queue show data for tuning the TCLASS parameters.
  - Updates, through program TLL200, the batch feed records instead of performing a start task back to feeder program TLL050. This reduces the number of transactions being queued.
  - Provides recovery capability when Transaction Gateway is down.
- Reduction in disk space for the AM and PM log records through:
  - Using Runtime API compression which reduces the average record from the full length of 1463 to 300 positions.
  - A MICM option which controls logging inquiry transactions (transaction code 1410).

October 2005 Features 2-3

- Not logging unnecessary records such as:
  - Teller record maintenance
  - Message waiting
  - Cash inquires
  - Cash balance counting
  - Log lookups
  - Stop payments
  - Booked passbook transactions
  - Settlement transactions
- Use of international date formats.
- Automatic start of host forward processing now allowed.
- Renewal information is printed on passbooks. (This requires the next release of Time Investment.)
- Special handling codes 7–12 have been added to support Infopoint Deposits 8.5.
- A new information byte code for pending close status has been provided.
- One step closeout transaction has been added to allow outstanding checks amount entry when performing a closing inquiry or closing withdrawal transaction.
- New non-monetary transaction code has been added that supports Infopoint Deposits transaction codes 0485, 0486, 0885 and 0886.
- MICM Record 0245 (General Ledger) is now used instead of the older MICM Record 0244.
- Ability to add a teller in batch is provided.
- MVS console operator is notified when Transaction Gateway is unavailable.

## **Application Processing**

This chapter helps you with the daily operation of Infopoint Transaction Gateway. It provides suggestions for efficient system use as well as answers to frequently asked questions concerning the application's capabilities. The procedures covered in this chapter provide information concerning:

- Accessing panels through the simulator
- Adding a teller
- Adding an institution
- Alert messages
- Multi-line displays
- Settlement option
- Signing on
- Standard message format matrixes
- Standard message and response considerations
- Correction process
- Passbook processing
- Using the Debug File
- Using the System Operations panel
- Working with the Log records

Refer to the Infopoint Transaction Gateway Installation Guide for specific installation procedures in accordance with the type of system (MVS or VSE) you are using. Refer to the Conversion chapter of the *Operations Guide* for specific conversion procedures.

## **Accessing Panels**

- 1. Sign on to Transaction Gateway using the instructions detailed in this chapter.
- After signon is complete, press [PF3] to display the Control Menu panel. This panel prompts you for a panel number and a mode selection from the various modes displayed on the bottom of the screen. The screen number directly correlates with the panel number assigned to the transactions by applications that were entered on MICM Form 0151.
- 3. Press [Enter]. The selected mode appears. To return to the Control Menu, press [PF3] and then press [Clear] to get to the Signon/Signoff panel.
- 4. The screens displayed provide instructions as to how to proceed from one set of transactions for that mode or application to another. Some modes have intervening selection menus. When changing applications or selections, press [PF3] to return to the intervening menu screen.

## Adding a Teller

The system control teller, a supervisor teller, or an officer can add a teller. Teller types are determined by a combination of three fields in the Teller Record: the Test Code field, the Security Code field, and the ATM field. A value of Y in the Test Code field indicates the teller is a trainee. At this time, the test code is for a future enhancement and you may want to enter a value of N. A Y in the ATM field indicates the teller is an ATM device.

To add a teller, do the following.

- Select TLTL Control Menu Operation Mode 1 to sign on as the System Control teller or as a Supervisor teller. The Signon/Signoff panel displays. Sign on and return to the Control Menu.
- Select TLTL Operation Mode 3 to perform teller maintenance. The Maintenance panel appears.
- If the System Control teller is adding a teller, type the institution number of the teller you wish to add. Then, whether you signed on as the System Control teller or the Supervisor teller, type in the following:
  - Teller ID of the teller you are adding
  - Password for that teller
  - Teller's name
  - Test code
  - Security code
  - ATM code
  - Minimum cash
  - Maximum cash
  - Transaction code for adding a teller
- Press [Enter]. The system responds with the message Teller Maintenance SUCCESSFUL if the transaction is successful.

## Adding an Institution

This procedure describes how to add a new institution to Transaction Gateway. The Institution Control Record is updated through control card input to program TLD020.

The Transaction Gateway tables need to be rebuilt in order to process transactions for the new institution. Therefore, add the institution at least one week prior to the conversion so that the Tables Build can be done at your convenience. Adding the institution early does not impact processing of existing institutions.

Note: Institutions cannot be added online; this procedure must be performed in batch mode.

- Prior to adding a new institution to Transaction Gateway, first add the institution to MICM. (For detailed information on adding an institution to MICM, refer to the Procedures chapter in the MICM Procedures Guide.) Be sure that MICM Records 1001 and 2021 have been created for TLD020. MICM Record 2021 needs to be done for the year '0000'.
- Include all Transaction Gateway MICM Records which ensures a successful Tables Build. Program MIR100 may be used to punch the MICM records of an existing institution, changing the institution number to the new value. These cards may then be input via MID090, MID100 and MID200.
- 3. Prepare control card input for program TLD020 (Institution Control Record Update) as outlined in the Batch Programs of the *Reference Guide*. The cards are necessary to execute this program. If you are adding the institution during the normal execution of TLD020, you will need to add Form 00 for the new institution.
- 4. Match the dates for the institutions being currently processed. The Current Date should be today's date, the Last Process Date should be yesterday's date, the Next Scheduled Process Date and the Next Actual Process Date should reflect tomorrow's date unless the next day is a non-business day for the institution.

**Note:** If you are doing file set processing, you must add the institution to the null file set and processing file set.

For example, assuming today's date is October 16, 2005, enter the dates as follows:

Current Date: October 16, 2005 Last Process Date: October 15, 2005 Next Scheduled Process Date: October 17, 2005 Nest Actual Process Date: October 17, 2005 The following is an example of the control card to be used in TLD020:

05018

0000101605101505101705101705C

CB6

**Note:** When you are running TLD020 during normal processing and add the institution, the program rolls the dates for all institutions. You need to be very careful with the dates you use to add the new institution.

## **Alert Messages**

Alert messages are messages that may be sent to selected tellers or to all tellers on the system. Each message can be up to 30 characters long and can be assigned a priority of 0 (low) to 9 (high). Old messages are purged in batch processing (based on the purge date entered).

#### **Entering Alert** Message Mode

To enter alert message mode (Mode 8), do the following.

- Sign on to Transaction Gateway and transfer to the Control Menu.
- Type the panel number associated with format 4 transactions and mode number 8.
- 3. Press [Enter]. The Alert Message Display/Entry panel displays.

#### Sending Alert Messages

- 1. To send alert messages, type the following information on the Alert Message Display/Entry panel.
  - Transaction code
  - Institution number (of the institution to receive the message)
  - Teller ID (of the teller to receive the message) If you leave this field blank, the message is sent to all tellers at the institution specified (except to the teller sending the message).
  - Priority code (0 is low, 9 is high)
  - Message (up to 30 characters)
  - Effective date (MMDDYY format)
  - Purge date (MMDDYY format)
- 2. Press [Enter]. The panel redisplays. To send another message, type over the display fields and press [Enter].

#### Displaying Alert Messages

- To display system alert messages you have received, type your institution number, teller ID, and transaction code. Press [Enter].
- Press [PF3] to return to the Control Menu.

## **CICS Online Setup**

This section provides two methods for setting up a teller in CICS.

#### Method 1

Function shipping is costly in terms of time and resources, which can affect performance. The following setup method is recommended to address these performance issues.

- Transaction Gateway AOR without MICM
  - The following programs should be defined.

```
TLL021
        TLL520
TLL025
        TLL530
TLL040
        TLL700
TLL050
        TLL701
TLL200
        TLL900
TLL510
```

In addition, the appropriate application interface programs (TLO6nnnn) should be defined.

The following should be defined:

All Transaction Gateway records

All teller queues

MIFMST, MIFCSR

MIMAST (READ only)

Any application files used by Transaction Gateway (e.g., Deposits Master files for DDA, Savings, and Credit Line).

- Application AOR with MICM
  - The following programs should be defined:

```
TLL020 TLL310
                TLL350
                        TLL370
                                TLL810
TLL021
       TLL320
                TLL360
                        TLL380
                                TLL820
TLL050
      TLL330
                TLL361
                        TLL390
TLL300
       TLL340
                TLL362
                        TLL700
```

The following programs should be defined as remote to the Transaction Gateway AOR:

```
TLL025
TLL040
TLL200
TLL530
TLL900
```

TLR030 is the batch counterpart to TLOP. The control card should point to the Transaction Gateway AOR.

#### Method 2

The following setup method allows you to spread Transaction Gateway over several regions at the expense of performance.

- Transaction Gateway AOR
  - The following programs should be defined:

```
TLL021
        TLL520
TLL050
       TLL530
TLL200 TLL700
TLL510
       TLL701
```

In addition, the appropriate application interface programs (TLO6nnnn) should be defined.

The following programs should be defined as remote to Transaction Gateway FOR:

```
TLL040
TLL900
```

- Application AOR with MICM:
  - The following programs should be defined:

```
TLL020 TLL310
              TLL350
                      TLL370
                              TLL800
TLL021 TLL320
               TLL360 TLL380
                              TLL810
TLL050 TLL330
               TLL361
                      TLL390
                              TLL820
TLL300 TLL340 TLL362 TLL700
```

The following programs should be defined as remote to the Transaction Gateway FOR:

```
TLL025
TLL040
TLL900
```

The following programs should be defined as remote to the Transaction Gateway AOR:

```
TLL200
TLL530
```

- Transaction Gateway FOR:
  - The following programs should be defined:

```
TLL025
TLL040
TLL900
```

- MICM should be defined to the region as READ ONLY.
- TLL040 should be included into the PLT.
- TLL900 should be included in this region. Then, you will only need to look for TLLOG.
- Any heavily used application files such as the Deposits master files for DDA, Savings, and Credit Line should be included in this region.

**Note:** TLR030 is the batch program starts all of the functions of TLL020. Based on this configuration, the control card can be modified to run Transaction Gateway AOR and Application AOR. The control card allows for two CICS regions. TLR030 attempts to process the first region and if it fails, it attempts to process the second region.

## **Late Startup**

### When the Central Processing Unit (CPU) is Down

Assuming the ATM and Transaction Gateway front-end hardware systems are capable of processing store and forward, forwarding should begin as soon as the Transaction Gateway system becomes available.

Consideration should be given to the AM processing status when forwarding begins by the ATM or front-end hardware to Transaction Gateway. You can forward the transactions under their actual processing time or begin to enter transactions as PM.

### Waiting for an Application Involved in Batch Posting

Sometimes posting to other applications delays Transaction Gateway from coming online when the institution must open the teller windows. The following steps are recommended to handle this situation.

- 1. The Institution Control Record (BNK) *cannot* be updated until the online system is brought down to run the batch processing cycle. This controls the processing date of the transactions.
- 2. The ATM network *must* continue to flag the transactions as PM until the BNK record is updated. Exception to this would be if the ATM stores the transactions for forwarding until after the PM forwarding is complete.
- 3. The teller should sign on in PM mode. The system should be in Next Processing Day mode.
- 4. Even though the dates shown on the online panels reflect yesterday's date, the processing date for all transactions properly reflects the institution's posting or logical date.
- 5. When all applications have completed posting, set Transaction Gateway to "Refresh".
- 6. Run TLD100 to refresh the Balance Record.
- 7. When you are ready to put Transaction Gateway into batch mode, have all tellers and ATMs sign off. They can re-sign on as AM and should be put into storing mode at the ATM system or teller front-end.
- 8. Run the batch process (programsTLD020 and TLD030 and back up.
- 9. Forward all PM transactions.
- 10. Bring the ATMs and tellers online.
- 11. Forward the transactions stored by the ATM system and the teller front-end.

## **Merge Maps**

Transaction Gateway allows you to display log records and cash drawer information using the TLLOG or TLCASH merge maps. See the Application Panels chapter in this guide for more information.

## **Settlement Option**

The Settlement option within Transaction Gateway uses a unique message and response format (Format 11) as well as a unique internal transaction code (930). Settlement is activated by MICM Records 0150, 0151, and 0244.

Once Settlement processing is activated, the accumulated information can be viewed online by allowing the front-end processor at the branch to create and receive Format 11 message and response. The Transaction Gateway simulator displays this information in Mode 9.

The first panel presented by Mode 9 is the Settlement Mode Function Entry panel where you can specify which institution, branch, and teller the Settlement information displays for either the AM or PM record. The default is AM.

The Settlement Mode Function Reply panel is displayed next, showing General Ledger information. This panel includes the General Ledger number and description, number of debit transactions, total amount of debit transactions, number of credit transactions, and total amount of credit transactions.

The following describes how MICM records are used in settlement processing. The records are presented in the sequence of how they should be set up.

## MICM Record 0150 - Transaction Gateway Institution Processing Parameters

MICM Record 0150 is used to specify institution-level parameters. Only one parameter is defined for each institution. The Settlement function in Transaction Gateway is optional and can be activated by setting the Settlement Processing Option to 'Y'. This requires modification of MICM Record 0151 and set up of MICM Record 0244. The information must be coordinated between the two records.

If the Settlement Processing Option is set to 'N', accumulators used by Settlement are not updated. The Accumulator fields on MICM Record 0151 must be set to '00' to indicate that they are not being used.

### MICM Record 0245 - General Ledger

MICM Record 0245 provides the information necessary to display, print, and extract General Ledger information. Transaction Gateway allows up to 63 accumulators. However, each institution can define up to 58. The first five accumulators are reserved for Transaction Gateway.

The accumulators are based at the institution level. All accumulators should be set to use zero for the branch number on this record.

The system is designed to allow cost centers to be assigned to branches. This can be accomplished by entering the branch number in the key for MICM Record 0245 and using accumulator zero. Enter the cost center for the amount and the offset amount.

The accumulators are kept on the Settlement Record keyed by institution, branch, and teller. The Settlement Record has 63 accumulators and keeps track of number of debit transactions, the amount of debit transactions, the number of credit transactions, and the amount of credit transactions for each accumulator. Transaction Gateway maintains two Settlement records, one for current day processing (AM) and one for next day processing (PM).

The following is the key information for setting up MICM Record 0245:

Processing Manager Always 05.

Application Always 0.

**Accumulator Number** This is user-defined for 58 of the accumulators. The

Transaction Gateway requirements for the first five

accumulators follow this section.

**Branch Number** Branch number for the general ledger account. The

default is branch zero.

**Type** Type is a 3-position field. The left position is for

extraction. The next two positions are for the printing

sequence on the report.

#### **Left Position:**

- **0** No entry created
- 1 Entry created by the teller
- 2 Entry created by the branch
- 3 Entry created by the institution

#### Middle and Right Position:

This position provides the sequence for printing the accumulator. Consider the accumulators you want to print and determine in the order in which you want to see them. All accumulators to be printed should be numbered first. Accumulators that are not printed should be numbered last. The printing sequence is 01 – 63. Copybook TLW022 is a table for the printing sequence. Modify this copybook before you compile program TLD325. This copybook has a print switch as part of the table. It is delivered with all the switches set to 'Y'. You will need to determine which switches to set to 'N'.

Accumulators 1 – 5 are reserved for Transaction Gateway and correspond to the Cash Status inquiries.

Accumulator	Description	Internal Transaction Codes
1	Starting Cash	0060, 0301, 0312, 0362
2	Cash In, Cash Out	0120, 170
3	Cash Shortage	0311
4	Cash Overage	0361
5	Ending Cash	0351, 0560

Although any of the remaining accumulators can be used, it is strongly suggested that they be used consecutively.

The following fields are used to either display or extract the accumulators.

•		D
Α	mı	Desc

Amount Description. This is the 40-position description that appears on the Settlement Report (05-325) and on the Simulator panel. The following sample descriptions can be used:

WD **DDA ACCTS** DEP IN DA ADJUSTMENTS **OUT** 

#### **Amt Acct**

Amount Account. This is the general ledger account number that is displayed on the report and panel. It is also the number used in creating the extract record for the General Ledger.

#### Amt DR/CR Amount Total Debit/Credit Code. This field is used by

Transaction Gateway to determine if the accumulator is to be extracted. Since Transaction Gateway keeps both debit and credit information for each accumulator, the D (debit) and the C (credit) are ignored except to indicate to extract this record. An **X** in this field does not generate a general ledger transaction regardless of the value in the debit and credit

fields.

**Cost Ctr** Cost Center. This field contains the cost center number to be

associated with this accumulator.

The Offset Amount total includes entries created for extract if this information is filled out. This does not appear on the display panel or the Settlement Report.

**Note:** The Number Total and Offset Number Total fields are currently not used.

If you want to set up a default cost center for a branch, use accumulator zero and enter the branch number in the Branch field and the cost center in the Cost Ctr field for Amount Total.

## MICM Record 0151 - Transaction Gateway Transaction Processing Table

MICM Record 0151 establishes the parameters that control the transaction processing of Transaction Gateway. Six accumulator fields are on this record and the last two, Fee and Offset, are not used currently. The Accumulator fields determine which accumulator is used for numeric data (e.g., cash back amount) in the respective transaction field. If the Accumulator number is '00', the accumulator is not used for that transaction. MICM Record 0245 must be set up for each accumulator used.

Accum Name	Accumulator for
Trans Accum	Transaction Amount Field
Cash Accum	Cash Amount Field
Cash B Accum	Cash Back Field
Check Accum	Check Amount Field
Fee Accum	Fee Amount Field
Offset Accum	Transaction Amount Field Offset

Internal transactions 0120 and 0170 require the Cash Accum number to be set to 02. The Cash Accum and Cash B Accum numbers should be set to 02 for all other transactions.

### MICM Record 0237 - Program Interface Parameters

If you are planning to extract General Ledger entries from the Settlement Records, you need to set up MICM Record 0237 for General Ledger.

Processing Manager Number: 05 Internal Application Number: 28

The following field must contain the name of the application extract program.

Batch Program Interface Name: Batch Extract (e.g., TLJ9FC50)

**Tip:** For Online: This information can be displayed by the teller if the frontend is programmed to do so. MICM Record 0245 information should be on the front-end. You may display information for an institution, branch, or teller. Setting the branch and/or teller to zero denotes the level to which the information is displayed. Verify if you want the AM or PM record displayed.

For Batch: Reprint can be controlled in two ways. First, the control card TLD325 allows you to select institutions to be processed. The other way is to modify TLW022. WS-STL-PRTSEQ-TBL is the table that can be modified so that individual accumulators do not print. The third character of each filler controls the printing. This table is provided with all 'Y's. For any accumulator that you do not want to print, change the 'Y' to 'N'.

TLD325 allows for a control card to regulate institutional reporting. You can process all institutions on the Settlement record by using 'ALL' on the control card. You can prevent an extract file from being created by entering 'Y' on the control card. For more information, refer to the Batch Programs chapter of the *Reference Guide*.

## Signing On

Use this procedure to sign on to Infopoint MICM and to sign on to Infopoint Transaction Gateway.

**Note:** For security reasons, the password does not appear on the screen.

- 1. Type the Infopoint MICM signon transaction code **sgon** and press [Enter]. The first panel displays, prompting you for the password and operator ID. This step requires a MICM operator ID and password that was previously established in MICM.
- 2. Type the required information for this panel and press [Enter]. The Transaction Gateway Transaction Menu displays. This menu was established at installation. Select the TLTL transaction to access the Control Menu and complete the signon.
- 3. The Transaction Gateway Signon/Signoff panel displays. You must supply the teller's institution, branch, teller ID, cash drawer ID, password, starting/ending cash amount, AM/PM code, and transaction code. Enter **TLOPER** for both the teller and the password.

**Note:** The supervisor's ID and password are required for a forced sign on/sign off. When they are used with a regular sign on/sign off, the beginning and ending cash positions are overridden by what is keyed in rather than by verifying them with the cash drawer.

4. Type the required information for this panel and press [Enter]. The signon/signoff panel returns with the message TELLER HAS SIGNED-ON. Press [PF3] to display the Control Menu.

## **Standard Message and Response Considerations**

### Standard Message – TLSSMSG and TLSSM02

If the passbook is present when the standard message is constructed by the terminal program, you must code information byte one (TLSM-INFBYTEM01) with a hex **02** and enter the passbook balance. Refer to the Application Files chapter of the *Reference Guide* for instructions on the information bytes.

#### Standard Response - TLSSRSP, TLSSR02, and TLSSR09

When Transaction Gateway receives a passbook transaction, it first establishes if any not-booked transactions exist on the record for this account. If not-booked transactions are present, the not-booked transaction response is returned to the terminal for posting in the passbook and the terminal program re-sends the original passbook transaction with the updated passbook balance. This procedure is repeated until all not-booked transactions on Transaction Gateway records are processed. Only then is the original passbook transaction processed and only if the passbook balance in the transaction log from the terminal matches the passbook balance on the Teller Record. Unbalanced records are rejected.

Standard Response Data The standard response data includes only the available balance for all transactions except inquiries and not-booked transactions.

For inquiries, the standard response data returns all fields.

The standard response data for not-booked transactions includes the transaction account number, date, and amount. The date and amount are designated by the type of not-booked transaction.

Transaction Gateway indicates the response type by a code in the information byte four (TLSR-INFBYTER04) field. If the bit for passbook update contains a zero, the response is normal and contains only the available balance except in the case of an inquiry. Inquiries are indicated by the internal transaction code 1410 and display all fields. If the bit for passbook update contains a '1', the response is for not-booked transactions.

## **Standard Message Format Matrixes**

This section is designed to help you identify the fields that are required for each transaction within a standard message format. This information is presented in matrix form. These matrixes provide useful coding information by transaction. They identify the requirements of the transaction and if the field is required, optional or not allowed.

Each matrix is divided in two main parts: Transaction Information and Field Information.

Before each table, there is a description of the transactions in that format. A list of the field abbreviations, in the order they appear within the matrix, follows the transaction descriptions.

**Note:** The transaction table member for these fields is copybook TLW010.

#### **Transaction Information**

The following provides a key to understanding the processing codes that appear at the beginning of each matrix.

#### Transaction Code

Transaction code used for a specific transaction. Transactions are listed in numerical order.

**Note:** For illustration purposes only, we list internal codes for the transaction codes in these matrixes. Refer to the Appendix in the *Interface Guide* for the external codes that apply to your system.

## Transaction Code Description

Transaction description for the transaction code number.

#### D/C Code

Debit/Credit code which indicates whether an account is processing a debit transaction, credit transaction, debit correction, credit correction, or no debit/credit transaction. Valid entries are:

- 0 Not a debit/credit transaction.
- 1 Credit transaction.
- 2 Debit correction.
- 3 Debit transaction.
- 4 Credit correction.

#### Correction Code

Correction code which indicates whether a correction can be made to an account. Valid entries are:

- N Correction is not allowed.
- Y Correction is allowed.

#### New Account Code

New account code used when the system denies a transaction because the account is not found. This code indicates whether force can be used to override the system to create an account. Valid entries are:

- **N** Force cannot be used to create an account.
- Y Force can be used to create a new account.

#### Field Requirements

Fields are listed across the top of each matrix. Each field corresponds with a transaction listed on the left side of the matrix. The individual field codes are used to describe the status of each field as it applies to a particular transaction. Valid entries are:

- Field is allowed, but not required.
- 1 Field is required.
- 2 Field is not allowed.

Note: The Data Field Edit Error Conditions for Standard Message Format Matrixes section of this chapter contains additional information about acceptable value for message fields.

## Format 01 Transaction and Field Descriptions

The following describes the headings used in the coding requirement matrixes appearing in this chapter.

#### Transaction **Descriptions**

The transaction amount field contains the starting or ending cash for signons and signoffs, the adjusting amount for buying and selling cash transactions, debit and credit correction transactions, cash overage transactions and cash shortage transactions.

0060 - Teller Sign On	Signs the teller on the system.
0070 - Teller Return Sign On	Signs the teller on after a temporary signoff.
0080 - Force Teller Sign On	Forces a teller signon.
0120 – Buy Cash	Credit transaction with a debit/credit amount of zero.
0170 – Sell Cash	Debit transaction with a debit/credit amount of zero.
0311 - Cash Shortage	Amount of cash difference (shortage) between the computed cash position and the teller's cash count.
0312 - Cash Correction Credit	Credits the computed cash position with a given amount.
0361 - Cash Overage	Amount of cash difference (overage) between the computed cash position and the teller's cash count.
0362 - Cash Correction Debit	Debits the computed cash position with a given amount.

**0560 - Teller Sign Off** Signs off the teller.

**0570 - Teller Temporary Sign Off** Temporarily signs off the teller.

**0580 - Force Teller Sign Off** Forces a teller sign-off.

Field Descriptions The abbreviations used for each field and their definitions follow in the order

they appear in the matrix:

Cash DrwrCash drawerTeller PswrdTeller passwordSupv IDSupervisor IDSupv PswrdSupervisor password

Alternate teller ID (teller ID 2)

**Flds 6-20** Fields 6 - 20

## Format 02 Transaction and Field Descriptions

These lists provide information about the Format 02 transactions. The transaction descriptions are useful when you need further detail about a transaction within this format. The field descriptions define the abbreviated field names used within the matrix.

Transaction Descriptions All format 02 transactions, with the exception of the Hold transaction (1100), Account Inquiry transaction (1410), Account Balance Inquiry transaction (1420), Stop Payment Inquiry transaction (1430), Post Not Booked transaction (1440) Reset Not Booked transaction (1441), Not Booked Inquiry transaction (1442), and Reset Passbook Balance transaction (1443), require the transaction amount field.

Cash-back amounts can never exceed the check amount or the transaction amount fields.

All transactions, with the exception of the Hold (1100), Transfer-in (1030), and Transfer-out (1530) transactions, will have to pass the cross foot check routing, which is:

Cash Amt + Check Amt + Fee Amt - Cash Back Amt = Transaction Amt

All transactions, with the exception of those transactions that specifically state the field is not allowed in the table 10 requirements, must have (in addition to the transaction amount) the cash amount or the check amount or both. However, there must be at least one of these present to cross foot to the transaction amount. Cash drawer buckets are only affected when the cash amount field is used. The one specific exception to this is the cash on-us/local/foreign check transactions (1730, 1740 and 1750). The cash back amount and cash amount fields cannot be used, and the check amount field is used as the cash amount for cash drawer purposes.

1010 - Deposit	Credit transaction amount that is the sum of the check and cash amounts.
1020 - New Account Deposit	Credit transaction that creates a new account on the balance file. The transaction amount is the sum of the check and cash amounts.
1030 – Transfer-in	Credit transaction used for the transaction amount.
1040 – Club Payment	Credit transaction that is the sum of the check and cash amounts.
1060 - Miscellaneous Credit 1	Credit transaction that is the sum of the cash

and check amounts.

1070 - Miscellaneous Credit 2	Credit transaction that is the sum of the cash and check amounts.
1075 - Credit Non-balance	Credit transaction that does not affect account balances.
1080 - Fee/Penalty	Credit transaction that is the cash amount entered.
1090 - Generated Float	Credit transaction that is the hold amount entered.
1100 - Hold	Transaction for teller holds the amount in the hold field.
1110 – Loan Payment	Credit transaction that is the sum of the check and cash amounts.
1111 - Loan Reversing Debit	Credit transaction that reverses a loan debit.
1120 – Loan Payoff	Credit transaction that is the sum of the check and cash amounts.
1150 – Safe Deposit Rental	Credit transaction that is the sum of the check and cash amounts.
1160 – Utility Payment	Credit transaction that is the sum of the check and cash amounts.
1170 – Withholding Tax Payment	Credit transaction that is the sum of the check and cash amounts.
1180 – Local Tax Payment	Credit transaction that is the sum of the check and cash amounts.
1190 – Miscellaneous Payment	Credit transaction that is the sum of the check and cash amounts.
1310 - Sell Cashier Check	Credit transaction that is the sum of the check and cash amounts.
1320 – Sell Trust Check	Credit transaction that is the sum of the check and cash amounts.
1330 - Sell Gift Check	Credit transaction that is the sum of the check and cash amounts.
1340 - Sell Travelers Check	Credit transaction that is the sum of the check and cash amounts.
1350 – Sell Money Order	Credit transaction that is the sum of the check and cash amounts.
1360 - Sell Savings Bond	Credit transaction that is the sum of the check and cash amounts.

1361 - Sell Savings Bond 2	Credit transaction that is the sum of the check and cash amounts. This is the specific transaction code to be used for sending magnetic data to the Federal Government for printing bonds.
1370 – Sell Food Stamps	Credit transaction that is the sum of the check and cash amounts.
1390 - Sell Merchandise	Credit transaction that is the sum of the check and cash amounts.
1410 - Account Inquiry	Transaction that accesses the records to retrieve account information.
1420 - Account Balance Inquiry	Transaction that accesses the records to retrieve account balances.
1430 – Stop Payment Inquiry	Transaction that accesses the records to retrieve account stop payments.
1440 – Post Not Booked Transactions	Notifies the system to route all not-booked transactions for an account to the terminal.
1441 – Reset Not Booked Transactions	Reflags all the booked transactions on the transaction file so that they are not booked. It also recalculates the passbook balance for the account.
1442 - Not Booked Transaction Inquiry	Returns all not-booked transactions on the transaction file for the account. The transaction rejects if the passbook is present.
	<b>Note:</b> This transaction is used only as an example.
1443 – Change Passbook Balance	Allows the supervisor to modify the passbook balance for this account.
1450 – Post Not Booked Transactions	The man of the other than the state of the s
	Transactions that were not booked prior to a 1440 transaction; receives notification to book all not-booked transactions.

## Format 03 Transaction and Field Descriptions

These lists provide information about the Format 03 Matrix. The transaction descriptions are useful when you need further detail about a transaction within this format. The field descriptions define the abbreviated field names used within the matrix.

Transaction Descriptions These are maintenance type transactions and the transaction amount field is zero.

0410 - Teller Inquiry	Displays pertinent teller information.
0420 – Reactivate Teller	Reactivates the teller. Transaction can be performed only by a supervisor.
0430 - Change Teller	Changes teller information. Transaction can be performed only by a supervisor.
0440 – Deactivate Teller	Deactivates the teller. Transaction can be performed only by a supervisor.
0450 - Delete Teller	Deletes the teller. Transaction can be performed only by a supervisor.
0460 - Add Teller	Adds a new teller. Transaction can be performed only by a supervisor.
0590 - Change Password	Changes the teller's password.

### Field Descriptions

The abbreviations used for each field and their definitions follow in the order they appear in the matrix:

Inst Nbr Tlr ID Sec Lvl	Institution number Teller ID Security level
Pswd	Password
Nme	Name
Min Csh	Minimum cash
Max Csh	Maximum cash
Tst Cd	Test code

ATM Cd ATM (Automated Teller Machine) code

## Format 04 Transaction and Field Descriptions

These lists provide information about the Format 04 Matrix. The transaction descriptions are useful when you need further detail about a transaction within this format. The field descriptions define the abbreviated field names used within the matrix.

Transaction Descriptions The transaction amount field must be zero.

**0950 - Request Messages** Enables the teller to request a message from the

host system. Up to five messages will be returned in one record from the host. If more than five messages are outstanding, the host will turn on the resend bit and this transaction should be resent.

**0960 - Enter Message** Enables the teller to send a message to a selected

terminal or a supervisor to broadcast to all

terminals. Up to five messages can be included in

one record.

Field Descriptions The abbreviations used for each field and their definitions follow in the order

they appear in the matrix:

Alt Inst Nbr Alternate institution number

Alt TIr ID Alternate teller ID

Msg Pri Message priority

Eff Date Effective date

Prge Date Purge date

Msg Text Message text

## Format 06 Transaction and Field Descriptions

These lists provide information about the Format 06 Matrix. The transaction descriptions are useful when you need further detail about a transaction within this format. The field descriptions define the abbreviated field names used within the matrix.

Transaction Descriptions The transaction amount field contains the starting or ending cash for signons and signoffs, the adjusting amount for buying and selling cash transactions, debit and credit correction transactions, cash overage transactions and cash shortage transactions.

> The balancing transactions are 0300 through 0399 and are used by the teller to maintain cash position.

> 0301 - Starting Cash Updates teller's cash drawer with amount of beginning

> > cash.

0351 - Ending Cash Cash amount in teller's cash drawer at the end of the

processing day (PM).

Field Descriptions

The abbreviations used for each field and their definitions follow in the order they appear in the matrix:

Wrp Bills Wrapped bills **Thsd Bills** Thousand-dollar bills **Hun Bills** Hundred-dollar bills Fifty-dollar bills Fifty Bills Twenty-dollar bills **Twnty Bills** Ten-dollar bills Ten Bills Five-dollar bills **Five Bills Two Bills** Two-dollar bills One Bills One-dollar bills Odd bills **Odd Bills** Rolled coins **Rolled Coins Dollar Coins** Dollar coins **Half-dollar Coins** Half-dollar coins **Quarter Coins** Ouarter coins **Dime Coins** Dime coins **Nickel Coins** Nickel coins **Penny Coins** Penny coins Odd Coins Odd coins Fields 19 - 20 Flds 19-20

### **Correction Processing**

Entries made online can be corrected. All corrections should be made during the same processing day. Terminology is important in this process. Corrections essentially fix the transaction. Transaction Gateway provides the final result to the application if the transaction is extracted. The application and customer only receive the corrected transaction.

Reversal is the process of correcting a transaction that occurred at a previous time. Both the customer and the application see the reversal.

Transaction Gateway can handle partial reversals. This occurs when the correcting entry is sent with a different amount than the original transaction. Tellers can correct a previous transaction by setting the correction bit to a '1' in TLSTM-INFBYTEM02 for standard message form or setting TLIM-MOCORRECT to a '1' for internal message format. For a full correction, the transaction amount, cash amount, check amount, and cash back fields need to be changed to zero. A partial correction would put an amount in the appropriate fields. Transaction Gateway matches the correcting transaction to the Log Record and reverses the transaction on both the application master and Balance Record. It then processes the new transaction. For example, if a teller sends in a cash deposit for \$10 and it was actually \$100, the teller could correct it in two ways. He can resend the transaction for \$100 with the correction bit set to '1'. This reverses the \$10 deposit and processes \$100 all in the same transaction. The second way is to resend the transaction with zero dollar amounts and process the \$100 deposit as a new transaction.

There are several limitations for which the institution should be aware. The first is that the teller is allowed to correct the same transaction nine times. The next limitation depends on the front-end vendor. MICM Record 0150 has a correction option called Correct Opt which determines how the program matches the transaction up to the Log Record. An 'N' in this field requires that the correcting transaction send the exact key from the original transaction to Transaction Gateway. This means that the exact time and date must be the same. Using this method also allows you to change the application and account number. This is because the program reads the Log Record for that application. If it does not find it, the transaction is rejected.

The alternate correction process is indicated by entering 'Y' in the Correct Opt field in MICM Record 0150. This method should be used by those institutions that cannot provide the original information. The program browses the Log Record until the transaction matches on institution, teller, external transaction code, reference number, application code, and account number. This method does not allow the application code and account number to be changed.

### **Passbook Processing**

Transaction Gateway supports passbook processing. Programs are supplied to interface with Infopoint Deposits and Infopoint Time Investment. User systems can be interfaced by using the supplied programs that contain only the files and records sections and procedure division entries that are common to all interface programs. The customer is responsible for modifying the user programs to properly handle the capture, access, and extraction of records from those systems.

The control for the passbook balance remains with Transaction Gateway, not with the application to which the account belongs, since the teller is the contact with the customer. Transaction Gateway must ultimately process any transactions that affect the passbook balance of an account. Hand posting to a customer's passbook updates neither Transaction Gateway records nor the application to which the account belongs. Any difference between Transaction Gateway and the application must be resolved, and transactions must be generated to correct the out-of-balance condition. Procedures for handling transactions that would be processed within an application other than Transaction Gateway must be in place and understood in order to protect the integrity of the customer's passbook.

Conversion of Not **Booked Transactions** 

At conversion time, all not-booked transactions must be loaded into Transaction Gateway through program TLC100, which interfaces to the appropriate interface module. Refer to the Batch Programs chapter of the Reference Guide for more information on how to capture these records.

Daily Processing of **Passbooks** 

During normal daily processing, you capture only the transactions that are new for the current processing day. Normal Transaction Gateway processing captures transactions that are originated by Transaction Gateway. All other transactions require passing the other application files with program TLD100, which invokes the appropriate interface modules. Refer to the Batch Programs chapter of the Reference Guide for more information on how to run program TLD100.

Transactions such as generated transactions, interest payments, and service charges can be selected if the record has an external transaction code of zero and the current processing date.

The remaining transactions require you to code the proper record in MICM with the external transaction codes that identify these transactions.

**Note:** Any monetary transaction that becomes a not-booked transaction within an application that was neither generated by the application nor originated by Transaction Gateway can only be captured if the external transaction code for that record matches one of the codes loaded into the MICM Master File and that record is for the current processing date.

In order to process corrections to passbook transactions and maintain the integrity of what is printed in the passbook, you should use reversal-type transactions instead of the normal monetary correction procedure. These transactions are not reversals in the application sense. Rather, they are opposing types of transactions, since in correcting a credit, you create a debit transaction using a unique external transaction code to identify it as a correction transaction.

#### Extracting Passbook Transactions

Extracting the Transaction Gateway-generated passbook transactions to the other applications for updating within their system is done by program TLD900. Extracted transactions that are not booked have zeros in the serial number field of the appropriate transaction record. Extracted transactions that are booked have the passbook balance in the serial number field of the appropriate transaction record.

Not-booked transactions that are booked through Transaction Gateway generate a special transaction used by the application to book all of the not-booked transactions on the files. The amount field of this transaction is zeros and the serial number contains the passbook balance from Transaction Gateway. Transaction Gateway logs the not-booked transactions with internal transaction code 1450, but it does not extract these records to the application.

#### Passbook Corrections

You can correct transactions with or without the passbook present. If you correct a transaction with the passbook present, you must book all not-booked transactions prior to processing the correction. If you do not update the passbook prior to a booked correction, the passbook entries might be entered out of date sequence.

### Using the Debug File

The Debug File is used to aid the customer when testing with the terminal controller. This file logs the messages received from the terminal and the responses sent to the terminal. This feature should be used during testing, then turned off.

#### MICM Panel 0153

Set the Debug option on MICM Panel 0153 for the Transaction Gateway application and Institution zero. This flag is stored in the System Manager Table in temporary storage. The option in use at the time of tables build is performed online. Valid entries are:

- **N** Do not use the debug option.
- Y Use the debug option.

**Note:** If you decide to turn the option on or off after the tables have been built, you must rebuild the tables to activate the option. Use the TLOP function to rebuild the online tables.

## Creating the Debug File

Run the IDCAMS utility to create the Debug File. Sample IDCAMS delete and define statements are provided. Modify them to meet your installation standards.

The file can be initialized by running program TLC040. Type  ${\bf D}$  in the control card and execute the program.

# Printing the Debug File

- 1. Use the IDCAMS utility to print the file. The Debug File is an entry sequenced file and cannot be accessed online. Use the dump option because some fields are not acceptably formatted for print. Close the file before submitting the print request.
- 2. Examine the debug records. Refer to the Debug File in the Application Files chapter of the *Reference Guide* and the Standard/Internal Message/Response chapters in the *Interface Guide*.

### **Using the Operator Panel**

The Transaction Gateway Operator panel is used to build and delete teller and simulator tables online, change the status of records to store-and-forward processing, start batch feed processing, and inquire on the status/suffix. In addition, you access the other TLOP (Transaction Gateway Status) panels.

#### **Building System Tables**

System parameters are maintained online by a supervisor teller. If the application systems files are online, the system parameters table must be updated. If the application system files for some reason are taken offline, the system parameters table must be updated. A user can be online to one or more systems and offline to the others.

- Type the security external transaction code, sign on, and press [Enter]. The first panel appears, requiring the password and operator ID.
- Type the required information for this panel and press [Enter]. The Control Menu appears.
- Type the teller tables build function **tlop** in the function area and press [Enter]. The System Parameters panel appears, showing the options available.
- Type the option desired and, in the case of the Application Files, the institution number and application number.
- Press [Enter]. The system parameters are rebuilt. After a cautionary message appears, press [PF1]. A function complete message appears. To return to the Control Menu, press [Clear].

### Working with the AM Log Record

The AM Log Record is the most versatile record in Transaction Gateway. Depending on how this record is defined to VSAM and how much information is processed through it, splits can occur and degrade your performance. The Device 3380 Chart that follows helps you determine the amount of free space required.

In order to get optimum performance from this procedure, you must have a Teller Record for each teller and for each ATM in your system. This is recommended even if you are using bypass teller editing for your ATMs.

- 1. The new job stream has an IDCAMS step that changes the AM Log Record name to the PM Log Record.
- 2. The next IDCAMS step defines a new AM Log Record. Refer to the free space parameter. You may need to change it to conform to your installation. If you are not using a Device 3380, you must create a chart for your device. Free space is defined as (100 92)) on the IDCAMS statements provided with Transaction Gateway.
- 3. A third IDCAMS step deletes and defines a new Cross-reference File. After this step, program TLD030 is executed. This program reads the Teller Record and loads the Format 0 AM Log Record.
- 4. The next IDCAMS step alters the free space of the AM Log Record to (100 100).

CI Size	CI Per Track		Records Per Cl	Records Per CA	Free Space	Teller Per CA	Trans Per Teller
22624	2	30	76	2280	85%	5	476
14336	3	45	41	2091	92%	4	522
10240	4	60	29	1740	94%	4	435
8192	5	75	23	1725	95%	4	431
8192	5	75	23	1725	90%	8	215

The values in this chart are calculated in the following manner:

Divide CI-SIZE by 350 to equal RECORDS-PER-CI.

Multiply 15 (for 3380) by CI-PER-TRACK to equal CI-PER-CA.

Multiply RECORDS-PER-CI by CI-PER-CA to equal RECORDS-PER-CA.

Multiply CI-PER-CA by FREE-SPACE then subtract the products whole number from CI-PER-CA to equal TELLER-PER-CA.

Divide RECORDS-PER-CA to equal TRANSACTION-PER-TELLER.

Note: CI size can be in increments between 512 and 8192 or between 2048 and 32768. Record size for the normal transaction is 350 bytes.

Chapter

4

# **Application Panels**

This chapter explains how to access online panels. It provides instructions for establishing and maintaining data for Infopoint Transaction Gateway.

Online functions are listed in logical order by external transaction code. Each online panel is described, and a panel sample is provided. A description of each field is included as well as the valid entries associated with each field.

This chapter also includes the following information:

- Access Methods
- Key Fields
- Function Keys
- Format for Panels
- Format for Field Descriptions
- Panel ID Table
- Panel Definitions

**Note:** Merge maps TLCASH and TLLOG are shown as a separate section at the end of this chapter.

### **Access Methods**

You can access Transaction Gateway panels from the Transaction Gateway Transactions Menu by entering one of these transaction codes: TLOP, TLTL, TLLOG, or TLCASH.

**Note:** If you have a teller terminal, you can access TLTL panels without going through MICM.

```
MENU
          TLOPER
                                                            0001 04-06-2005
                    Infopoint Institution One
Transaction Gateway Transactions
                Panel ID
                                       Panel Name
                            Transaction Gateway Operator
                TLOP
                            Teller Simulator
Teller Log Listing
                TLTL
                TLLOG
                            Cash Drawer Listing
Command====> TLOP
         F3=Exit
F1=Help
                     F5=Refresh
                                   F12=Cancel
```

Transaction Gateway Transactions Menu

If you access Transaction Gateway through transaction code TLOP, only the TLOP – Transaction Gateway System Operator panel displays. This panel allows you to build and delete Transaction Gateway tables.

When you access Transaction Gateway through the TLTL transaction code, the TLTL – Signon/Signoff panel first appears. This panel requires you to enter security information in order to proceed to the TLTL - Control Menu. You can exit and re-enter the control menu without signing on again, unless you sign off through the TLTL – Signon/Signoff panel.

You can access eight panels through the TLTL - Control Menu. Some are menu panels that allow you to access additional panels.

If you access the balancing mode panels through the TLTL transaction code, the TLTL – Balancing Menu displays first. The menu allows you to access two different types of balancing panels: Balancing - Count Cash and Balancing -Count Status.

#### **Panel Access**

Depending on the panel you want to access, you must enter the appropriate mode number on the TLTL – Control Menu. To access a TLTL panel from another TLTL panel, you must first return to the control menu by pressing [PF3]. In order to access the TLOP, TLLOG or TLCASH panels, you must return to the Transaction Gateway Transactions Menu.

#### **Transaction Code Access**

A formatted, blank panel appears when you enter the appropriate mode. To display data, create new information, or maintain existing data, enter the panel ID. You can find these IDs in this chapter on the Panel ID table.

### **Key Fields**

When an online panel appears, the information for the key fields is supplied. These key fields are protected, allowing you to establish or maintain data on the record you specified.

#### **Field Descriptions**

One or more of the following fields might appear across the top of an online

panel.

(Key) Key. Key returned from the last key field of the area response.

Alphanumeric, 35 positions.

(PF Key) PF Key. Used for accessing the current panel from the previous panel.

Numeric, 2 positions.

Message. Message from either MICM or the program. (Message)

Alphanumeric, 35 positions.

Inst Institution Number. Entered at the MICM Signon panel.

Numeric, 4 positions.

Branch Branch Number. Entered at the MICM Signon panel.

Numeric, 5 positions.

Teller Teller ID. Entered at the MICM Signon panel.

Alphanumeric, 8 positions.

AM/PM AM/PM Transaction. Indicates whether the transaction occurred during the AM

or PM. This information is supplied at the TLTL - Signon/Signoff panel. Valid

entries are:

AM transaction. PM transaction. Alphanumeric, 1 position.

(Time) Current Time. Information is supplied at the TLTL – Signon/Signoff panel.

> Format is HHMMSS. Numeric, 6 positions.

(Date) Current Date. Information is supplied at the TLTL – Signon/Signoff panel.

> Format is MMDDYYYY. Numeric, 8 positions.

Command Area. Allows you to scroll up and down the panel. Valid entries are:

BackwardReturns the previous set of transaction codes.BottomProvides the last set of transaction codes.ForwardContinues to the next set of transaction codes.TopProvides the first set of transaction codes.

Alphanumeric, 8 positions.

Abort Code Number. Originates at MICM Record 0404 and is returned from the

internal or standard response.

Numeric, 4 positions.

TR Trace Number. Four-digit tracing number assigned by the rejecting or aborting

program.

Numeric, 4 positions.

Pgr Program Identification.

Alphanumeric, 8 positions.

(Abort Line 1) Abort Line 1. First line of the abort message from MICM Record 0404.

Alphanumeric, 40 positions.

(Abort Line 2) Abort Line 2. Second line of the abort message from MICM Record 0404.

Alphanumeric, 40 positions.

(Abort Line 3) Abort Line 3. Third line of the abort message from MICM Record 0404.

Alphanumeric, 40 positions.

### **Function Keys**

Transaction Gateway allows you to use function keys (for keyboards containing them) to move from panel to panel within the system. If a function key cannot be used on a particular panel, the system displays an appropriate message. A function key can represent more than one option, depending on the panel. These keys can be customized to meet your needs. The standard function key abbreviations are defined below.

PF3 - Ctl Return to the Control Menu (Control Mode).

PF4 - Nxt Go to the next panel.

PF5 - Rfresh Refresh panel with information entered.

PF6 - Cnt Continue processing.

PF6 - Entry Go to the entry panel.

PF7- Bwd Continue processing.

PF8 - Fwd Continue processing.

PF13 - Bal Sel Return to the Balancing Menu.

PF13 - Menu Go to the Transaction Menu (Mode 5).

PF13 - Stlm Entry Go to or return to the Settlement Entry panel.

PF15 - FIt Go to the Float Entry/Display panel.

PF16 - Loan Go to the Loan Entry/Display panel.

PF17 - Reply Go to the Transaction Reply Display panel.

PF18 - Correct Insert correction data.

### **Format for Panels**

Most panels consist of three areas:

- The first area, which is the first line of the panel, contains the transaction code.
- The second area consists of the institution number, branch number, teller ID, AM/PM indicator, time, and date. The panel name may also appear here.
- The third area consists of the remaining field headings and descriptions. The area is unprotected, except on those panels used for inquiry. Some of the fields are required, while others are optional or calculated. When you enter numbers, you do not need to press the numeric key. Most optional numeric fields default to zeros; optional alphanumeric fields default to spaces.

When an error is found, the associated field is highlighted and the cursor is moved to the first field containing an error. For example, if you enter alphabetic characters in a field that is defined as numeric, that field would be highlighted. Likewise, if the input data does not correspond to the information in the table used for verification, an error would occur.

### **Format for Field Descriptions**

**Protected** 

The documentation associated with each panel shows field names, descriptions and values, and indicates whether the field is alphanumeric or numeric. Field requirement types indicate if the field is a required, optional, or protected field. Each field requirement type is defined below:

Required Describes a field in which you must make an entry to successfully process the transaction.Optional Describes a field in which an entry can be made at your discretion.

Describes a field for which an entry is supplied by the system.

### **Panel ID Table**

The table below lists the transaction codes that allow you to access the online panels for Transaction Gateway, either directly to the panel or indirectly through an intermediary panel. If your data center has changed the panel IDs, write them in the (user-defined) space provided

**Note:** The internal transaction code for all panels is TL00.

## **Panel Descriptions**

The following information is included for each panel.

**Purpose** Describes the purpose of the panel.

**Key Fields** Lists the key fields for accessing a specific panel.

Shows a panel sample.

Field Descriptions Describes each field, lists any valid entries with defaults, and

gives the field type (numeric or alphanumeric), length, and

requirements (required, optional, or protected).

#### **TLOP - System Operator**

Purpose This panel displays when you enter the TLOP transaction code from MICM. It

allows you to build teller and simulator tables while online. You can also change

the status of records to use store-and-forward processing.

From this panel, you can access TLOP - Transaction Gateway Status and

TLOP - Institution Status.

Key Fields Message

Choose a function:	Warm/Cold Start W (1) Build Simulator Tables (3) Build All Tables (5) Delete All Tables (6) Set to Storing Mode (7) Set to Forwarding Mode (9) Start Batch Feed (8) Inguiry on Status/Suffix (8) Inst Status (C) Suspend Auto Forwarding (D) Resume Auto Forwarding
Inst Number:	Enter Inst Number or ALL for all Insts. Required for functions 6, 7, 8, B, C and D.
Application Number:	Enter External Application Code or 99 for All Applications. Required for functions 6, 7 and 8.
Completion Notice:	Completion of Task Notification. Enter Y for Yes or N for No. Optional for 7, 9 and S only
File Selection:	Enter A thru Z for file selection for option 9.
Start Task Option:	Enter Y for Batch Feed to use Start Task.

#### **Field Descriptions**

Choose a Function Choose a Function. Function choice entry field, where you enter the number of

the desired function.

Alphanumeric, 1 position, required.

Required for functions 6, 7, 8, B, C, and D.

*Numeric*, 4 positions, optional.

Application Number Application Number. Enter external application code or 99 for all applications.

Required for functions 6, 7, and 8.

Numeric, 2 positions, optional.

Completion Notice Completion Notice. Completion of task notification. Optional for functions 7, 9,

and S. Valid entries are:

N Task is not completed.Y Task is completed.

Alphanumeric, 1 position, required.

File Selection File Selection. Entry field for any alphabetic character used for selecting the

batch feed file to be processed (option 9 only).

Alphanumeric, 1 position, optional.

Start Task Option Start Task Option. Field where you select the Start Task option. Enter Y for

Batch Feed to use the Start Task option.

Alphanumeric, 1 position, optional.

#### **TLOP - Transaction Gateway Status**

**Purpose** 

This panel is used to display the status of the various processing parameters listed. It reads Temporary Storage to show the selections made on MICM Form 0150.

Access this panel through the TLOP – System Operator panel.

TLOP - Transaction Gateway Status

#### **Field Descriptions**

Status

Transaction Gateway Status. Indicates the current status of Transaction Gateway as found in Temporary Storage. Valid entries are:

- A Available.
- U Unavailable.

Alphanumeric, 1 position, protected.

Inst Level Processing

Institution Level Processing. Indicates if institution level processing will occur as found in Temporary Storage, which is taken from MICM Record 0150. Valid entries are:

- N Institution level processing does not occur.
- Y Institution level processing occurs.

# Branch Level Processing

Branch Level Processing. Indicates if branch level processing occurs as found in Temporary Storage, which is taken from MICM Record 0150. Valid entries are:

- N Branch level processing does not occur.
- Y Branch level processing occurs.

Alphanumeric, 1 position, protected.

#### Interbank Processing

Interbank Processing. Indicates if interbank processing occurs as found in Temporary Storage, which is taken from MICM Record 0150. Valid entries are:

- N Interbank processing does not occur.
- Y Interbank processing occurs.

Alphanumeric, 1 position, protected.

#### Debug File Status

Debug File Status. Indicates if the debug option was selected as found in Temporary Storage, which is taken from MICM Record 0150. Valid entries are:

- N Debug option not selected.
- Y Debug option selected.

Alphanumeric, 1 position, protected.

# Auto Forwarding Option

Auto Forwarding Option. Indicates if the auto forwarding option was selected as found in Temporary Storage, which is taken from MICM Record 0150. Valid entries are:

- N Auto forwarding option not selected.
- Y Auto forwarding option selected.

Alphanumeric, 1 position, optional.

#### Regulation CC Processing

Regulation CC Processing. Indicates if Regulation CC processing occurs as found in Temporary Storage, which is taken from MICM Record 0150. Valid entries are:

- N Regulation CC processing does not occur.
- Y Regulation CC processing occurs.

Alphanumeric, 1 position, optional.

#### Settlement Processing

Settlement Processing. Indicates if settlement processing occurs as found in Temporary Storage, which is taken from MICM Record 0150. Valid entries are:

- N Settlement processing does not occur.
- Y Settlement processing occurs.

Alphanumeric, 1 position, optional.

#### Account Number Cross Reference

Account Number Cross Reference. Indicates if account number cross-reference for loans processing occurs as found in Temporary Storage, which is taken from MICM Record 0150. Valid entries are:

- N Cross-reference for loans processing does not occur.
- Y Cross-reference for loans processing occurs.

Alphanumeric, 1 position, optional.

#### Write Console Option

Write Console Option. Indicates if the write console option occurs as found in Temporary Storage, which is taken from MICM Record 0150. Valid entries are:

- N Write console option not selected.
- Y Write console option selected.

Alphanumeric, 1 position, optional.

#### File Suffix Status

ABC...Z123...90

ABC...Z123...90. Indicates the individual status of each file suffix. All suffixes are displayed. The lowercase b stands for file suffix blank. Changes can be entered in this field. Valid entries are:

- A Transaction Gateway is in normal AM and PM processing.
- **B** Batch processing.
- F PM forwarding.
- L PM forwarding is in process.
- N Next day only processing (see note below).
- **R** Refresh processing.

**Note:** If you enter **N**, Transaction Gateway does not balance at the end of the posting day.

Alphanumeric, 1 position, optional.

#### **TLOP - Institution Status**

Purpose This panel is used to display status information for a specific institution.

Access this panel through the TLOP – System Operator panel.

Key Fields Message

TLOP - Institution Status

#### **Field Descriptions**

Account Access
Option

Account Access Option.

Inst Level Processing

Institution Level Processing. Indicates if institution level processing occurs as found in Temporary Storage, which is taken from MICM Record 0150 for the specific institution. Valid entries are:

- N Institution level processing does not occur.
- Y Institution level processing does occur.

Alphanumeric, 1 position, protected.

Float Lookup Option

Float Lookup Option. Indicates if the Float Lookup option was selected as found in Temporary Storage, which is taken from MICM Record 0150 for the specific institution. Valid entries are:

- N Float Lookup option was not selected.
- Y Float Lookup option was selected.

Branch Level Processing Branch Level Processing. Indicates if branch level processing occurs as found in

Temporary Storage, which is taken from MICM Record 0150 for the specific

institution. Valid entries are:

N Branch level processing does not occur.

Y Branch level processing occurs.

Alphanumeric, 1 position, protected.

File Suffix

File Suffix. User-defined file suffix indicator for Transaction Gateway records. Alphanumeric, 1 position, protected.

#### Interbank From **Processing**

Interbank from Processing. Indicates if interbank from processing occurs as found in Temporary Storage, which is taken from MICM Record 0150 for the specific institution. Valid entries are:

N Interbank from processing does not occur.

Interbank from processing does occur.

Alphanumeric, 1 position, protected.

#### Stop Payment Lookup Option

Stop Payment Lookup Option. Indicates if the Stop Payment Lookup option was selected as found in Temporary Storage, which is taken from MICM Record 0150 for the specific institution. Valid entries are:

Stop Payment Lookup option was not selected.

Stop Payment Lookup option was selected.

Alphanumeric, 1 position, protected.

Interbank To Processing Interbank to Processing. Indicates if interbank to processing occurs as found in Temporary Storage, which is taken from MICM Record 0150 for the specific institution. Valid entries are:

N Interbank to processing does not occur.

Interbank to processing occurs.

Alphanumeric, 1 position, protected.

#### Reject Stop Payment Option

Reject Stop Payment Option. Indicates if the Reject Stop Payment option was selected as found in Temporary Storage, which is taken from MICM Record 0150 for the specific institution. Valid entries are:

Reject Stop Payment option was not selected.

Reject Stop Payment option was selected.

Alphanumeric, 1 position, protected.

Reject Cautions Option Reject Cautions Option. Indicates if the Reject Cautions option was selected as found in Temporary Storage, which is taken from MICM Record 0150 for the specific institution. Valid entries are:

N Reject Cautions option was not selected.

Reject Cautions option was selected.

#### Regulation CC Processing

Regulation CC Processing. Indicates if Regulation CC processing occurs as found in Temporary Storage, which is taken from MICM Record 0150 for the specific institution. Valid entries are:

- N Regulation CC processing does not occur.
- Y Regulation CC processing occurs.

Alphanumeric, 1 position, protected.

#### Reject Assignments Option

Reject Assignments Option. Indicates if the Reject Assignments option was selected as found in Temporary Storage, which is taken from MICM Record 0150 for the specific institution. Valid entries are:

- N Reject Assignments option was not selected.
- Y Reject Assignments option was selected.

Alphanumeric, 1 position, protected.

#### Correction Option

Correction Option. Indicates if the Correction option was selected as found in Temporary Storage, which is taken from MICM Record 0150 for the specific institution. Valid entries are:

- N Correction option was not selected.
- Y Correction option was selected.

Alphanumeric, 1 position, protected.

#### Number of Unbooked Items

Number of Unbooked Items. Field that displays the number of not-booked items to be sent in a single message.

*Numeric*, 2 positions, optional.

#### Settlement Processing

Settlement Processing. Indicates if Settlement processing occurs as found in Manager Temporary Storage, which is taken from MICM Record 0150 for the specific institution. Valid entries are:

- N Settlement processing does not occur.
- Y Settlement processing occurs.

Alphanumeric, 1 position, protected.

#### Current Processing Date Current Processing Date. Format is MMDDYYYY.

*Numeric*, 8 positions, optional.

#### Account Number Cross Reference

Account Number Cross Reference. Indicates if processing occurs as found in Manager Temporary Storage, which is taken from MICM Record 0150 for the specific institution. Valid entries are:

- N Processing does not occur.
- Y Processing occurs.

Next Processing Date Next Processing Date. Next scheduled processing date. Format is MMDDYYYY.

Numeric, 8 positions, optional.

Store and Forward Processing

Store and Forward Processing. Indicates if store-and-forward processing occurs as found in Manager Temporary Storage, which is taken from MICM Record

0150 for the specific institution. Valid entries are:N Store-and-forward processing does not occur.

Y Store-and-forward processing occurs.

Alphanumeric, 1 position, protected.

Stop Payment Variance Stop Payment Variance. Field that displays the variance used for determining if

a check falls within the amount range.

Numeric, 4 positions, optional.

Ea External Application Code.

Numeric, 2 positions, optional.

Internal Application Code.

Numeric, 2 positions, optional.

Online Availability Code. Valid entries are:

**M** Application's master record is available for online processing but the application does not exist on the Balance Record.

N Application's master record is not available for online processing.

**P** Application's master record is not available for online processing and the application does not exist on the Balance Record.

Y Application's master record is available for online processing.

Alphanumeric, 1 position, optional.

Pgr Name Program Name. Name of the interface program used for online processing.

Alphanumeric, 8 positions, optional.

#### TLTL - Signon/Signoff

Purpose This panel is used to sign on to Transaction Gateway. This panel displays after

you enter TLTL through MICM. You can also access this panel through the

TLTL – Control Menu.

Key, Message, Institution, Branch, Teller, AM/PM, Time, Date, Command, Abort

Code, Trace, Program, Abort Line 1, Abort Line 2, Abort Line 3

TLTL - Signon/Signoff

#### **Field Descriptions**

#### Operating Mode Is 1 (Signon/Signoff)

Transaction Code Transaction Code.

*Numeric*, 4 positions, required.

Processing Time Processing Time. Period of day for this signon. Valid entries are:

**A** AM.**P** PM.

**Note:** Once you have signed on, the TLTL – Control Menu displays. A highlighted message appears across the top half of the panel, indicating a successful signon. The available functions and the possible operating modes are shown.

From this point, the teller, branch, and period of the day (**A** or **P**) display across the top of subsequent panels. This is the third line of the standard heading. *Alphanumeric*, 1 position, required.

Inst Number Institution Number.

Numeric, 4 positions, required.

Branch Number Branch Number. Identifies the number of the teller's branch.

**Note:** This field is filled with zeros for the teller zero signon.

Numeric, 5 positions, required.

Teller ID.

Alphanumeric, 8 positions, required.

Teller Password Teller Password. Password assigned to the teller by teller zero or the supervisor.

For security reasons, entries made to this field are not displayed.

Alphanumeric, 8 positions, required.

Cash Drawer ID. Teller's cash drawer ID.

Alphanumeric, 8 positions, required.

**Note:** This field is forced with zeros for the teller zero signon.

Cash Drawer Amount Cash Drawer Amount. Beginning cash amount of cash drawer being used.

*Numeric*, 17 positions, required.

Supervisor ID. Used when forced signon is required.

Alphanumeric, 8 positions, optional.

New Password New Password. Used when forced signon is required.

Alphanumeric, 8 positions, optional.

Verify Password Verify Password. Used when forced signon is required.

Alphanumeric, 8 positions, optional.

#### TLTL - Control Menu

**Purpose** 

This panel is used to:

- Provide a choice of functions associated with this particular panel. Each function has a corresponding numeric code, which you enter in the Operating Mode field. Some functions invoke another panel and others respond on the same panel (in the standard heading area).
- Change modes, according to the choices offered on the panel. Each mode has a corresponding numeric code, which you can enter in the Operating Mode field

Access this panel either through the TLTL – Transaction Entry panel or through the TLTL – Signon/Signoff panel.

*Numeric*, 4 positions, required.

Teller ID.

**Note:** The following fields are protected for these maintenance functions: teller inquiry, reactivate teller, deactivate teller, and delete teller. These fields are required for the add teller and change teller maintenance functions (the name

field is optional).

Alphanumeric, 8 positions, required.

Teller Password Password assigned to this teller.

Alphanumeric, 8 positions, optional.

Teller Name Teller Name.

Alphanumeric, 40 positions, optional.

Teller Security Code Teller Security Code. Indicates the teller's security level. Valid entries are:

1-2 Teller.3 Supervisor.4-8 Officer.

Numeric, 1 position, optional.

Automated Teller Machine Automated Teller Machine. Indicates whether the teller is an ATM device.

Valid entries are:

N Teller is not an ATM device. Y Teller is an ATM device. Alphanumeric, 1 position, optional.

Minimum Cash Amount Minimum Cash Amount. Teller's minimum cash amount.

Numeric, 17 positions, optional.

Test Teller Code Teller Test Code. Indicates whether this teller is a trainee. Valid entries are:

N Teller is not a trainee.Y Teller is a trainee.

Alphanumeric, 1 position, optional.

Maximum Cash Amount Maximum Cash Amount. Teller's maximum cash amount.

Numeric, 17 positions, optional.

Teller Branch Number Teller Branch Number. Branch number of the teller.

Numeric, 5 positions, protected.

Teller Status Code Teller Status Code. Indicates the teller's status at the time of the inquiry.

Alphanumeric, 1 position, protected.

Message Code Message Code. Indicates whether this teller has any outstanding message(s).

**Note:** The optional fields are required when adding a new teller.

Alphanumeric, 1 position, protected.

Reference Number Reference Number. Reference number of the transaction.

*Numeric*, 5 positions, protected.

Terminal Identification Terminal Identification. Teller's terminal identification number.

Alphanumeric, 4 positions, protected.

Date Added Date this teller was added to the system.

*Numeric*, 8 positions, protected.

Date Deleted. Date this teller was deleted from the system. *Numeric*, 8 positions, protected. Date Deleted

Cash Drawer Id Cash Drawer ID. Teller's cash drawer ID.

#### **TLTL - Cash Maintenance**

**Purpose** 

This panel is used to maintain cash information for the institution as follows:

- Buy or sell cash to or between tellers (no supervisor override required)
- Correct overages and shortages (supervisor override required)

Access this panel from the TLTL – Control Menu. It is available only for tellers with a security code of 3 or above.

**Note**: [F18] retrieves the correction information of the last transaction. When you return to the TLTL – Control Menu, this information is deleted.

# **TLTL - Alert Messages Entry/Display**

**Purpose** 

This panel is used by tellers to perform the following:

- Enter a system alert message to other tellers
- Display system alert messages they have received

System alert messages can have up to nine lines, and each line can be displayed on the panel in either regular or highlighted intensity.

Access this panel through the TLTL – Control Menu.

Key Fields

### TLTL - Reject Reply Display

**Purpose** 

This panel is used to show either the reject reasons for transactions made on the TLTL – Transaction Entry panel or information on the account. If you want information on the account only, press [Enter] to display the first transaction reply panel.

**Note:** To force the transaction, type **FORCE** at the Command line. When you press [Enter], the effect of the transaction displays on the TLTL – Transaction Reply Display panel.

# **Merge Maps**

TLCASH and TLLOG are the merge maps for Transaction Gateway. The function keys for these panels are as follows.

F1 - Help	Display online help information for the current field or panel (determined by the cursor location).
F2 - Begin	Update and return to the originating transaction. If a work unit name is present, load the work unit name into the next key area and return.
F3 – Exit	Update and return to the MICM Menu. If the breakaway function is invoked, return to the original session.
F4 - Next	Update and invoke the transaction specified from the command line. A change must be made on the command line to invoke the transaction.
F5 – Refresh	Restore panel to original values prior to maintenance; retrieve previous command on the command line.
F7 - Backward	Update and move back to the previous panel.
F8 – Forward	Update and move ahead to the next panel.
F9 – Edit	Edit the panel without updating and redisplay the panel.
F10 - Actions	Display transactions authorized for operator.
F11 - Break	Invoke the breakaway function.
F12 - Cancel	Do not update; return to menu panel. From online help, return to the original panel.
F12 - Break-Rtrn	If the breakaway function is invoked, return to the original session.

## **TLCASH - Cash Drawer Listing**

**Purpose** 

This panel is a Transaction Gateway merge map that is used to display a selected cash status. From selections entered on the key panel, you can display cash status by:

- Cash drawers and totals for the institution.
- Cash drawers for a branch.
- Cash drawers for a teller.

Key Panel

TLCASHK	TLOPER	Cash Drawer	Listing	0001	04-06-2005
Enter the	e following key paran	meters:			
Institu	ution Number <sub>-</sub>				
Branch	Number				
Teller	Id

# **MICM Parameters**

This chapter is designed to help you set up system parameters required for Transaction Gateway. The chapter includes procedures that are instructions in either the form a brief helpful hint, or a detailed step-by-step explanation of an important system feature.

**Note:** Refer to the Transaction Gateway *Installation Guide* for installation procedures specific to the type of system (MVS or VSE) you use. Refer to the Transaction Gateway *Operations Guide* for specific conversion procedures.

October 2005 MICM Parameters 5-1

## Application System Report Flags - MICM Record 0307

MICM Record 0307 contains the Application System Report Flags that give your institution the print/fiche options required by program TLD340 (Daily Report Extract and Sort). The flags can also be used to further define the sort sequence for each report.

Use MICM Online/Batch Form 0307 to set up and maintain these options.

## Setting Up MICM Online/Batch Form 0307

The following information outlines setting up MICM Form 0307. Both online and batch requirements are described.

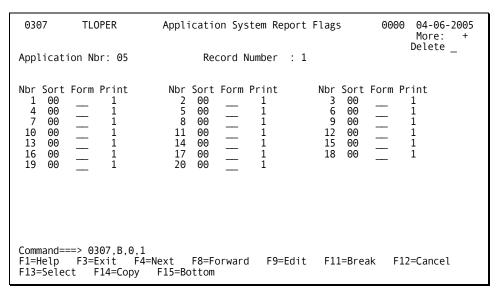

Online Requirements

- Access MICM Form 0307.
- If you are creating a new record, fill in the fields shown on the form sample below. If you are maintaining an existing record, change the applicable fields. (During maintenance, all information specific to the record you are updating has been filled in by the system.)

**Note:** The Delete code is used only for maintenance. Valid entries are:

- **b** Keep this record.
- **D** Delete this record.

Application is always 05.

Online Form 0307 - Application System Report Flags

- 3. Records. Each record stores data for a specific range of report numbers. The range of numbers correspond to a numeric ID given to the report. A maximum of nine records can be created. Valid entries are:
  - 1 Reports 01 20.
  - 2 Reports 21 40.
  - 3 Reports 41 60.
  - 4 Reports 61 80.
  - 5 Reports 81 100.
  - 6 Reports 101 120.
  - 7 Reports 121 140.
  - 8 Reports 141 160.
  - 9 Reports 161 163.
- 4. Report Flags 01 20. Each five-position report flag is a combination of three elements:
  - Sort Sequence (two positions)
  - Form Code (two positions)
  - Print/Fiche Code (one position)

## Sort Sequence (Positions 1 and 2)

The default sort sequence for Transaction Gateway is by institution and statement key sort (enter zeros). To further define the sort sequence, use the following valid entries. Multiple values can be selected for each position.

#### Position 1

Valid entries for position 1:

- 1 Holding company.
- 2 Page break after branch total.
- 4 Region.
- 8 Branch.
- 16 Teller.

### Position 2

Valid entries for position 2:

- 1 Type/group.
- 2 Officer/division.
- 4 Customer.
- 8 Page break after type totals, or after officer totals if type totals are not taken. Indicated group totals for activity recaps.
- 16 Teller.

When multiple values are selected, add the values per position. If the sum is greater than 9, use the following coding convention:

- 10 **A** 21 **L**
- 11 **B** 22 **M**
- 12 C 23 N
- 13 **D** 24 **O**
- 14 E 25 P

15 **F** 26 **Q** 16 **G** 27 R 17 H 28 **S** 18 **I** 29 T 19 J 30 U 20 K 31 **V** 

For example, the Sort Sequence Option for institution, region, and branch is calculated as follows:

Position 1: Region '4' plus branch '8' equals '12' or C. **Position 2:** Type '1' plus customer '4' equals 5.

The sort sequence is entered as **5**.

## Form Code (Positions 3 and 4)

This user-defined code specifies the form that is used for printed reports. You should consult your data center before adding or changing this code. A character other than A through K in the third position with any character in the fourth position directs the reports to be printed on the standard printer, PRINTR. The reports can be directed to alternate printers by placing any character in the fourth position with one of the following characters in the third position.

Reports are not printed on disk. (Default) b

A - JReports are sent to printers A through J.

Note: VSE users should use SYS030 – SYS039. MVS users should use Print A – Print J.

Reports are printed on disk. A header precedes each report.

Note: VSE users should use SYS001. MVS users should use PRINTK.

## **Print/Fiche Code (Position 5)**

This code indicates whether a report should be printed and/or placed on microfiche. Valid entries are:

- Do not print or fiche. No report is created. (Default)
- Print only, no fiche. 1
- 2 Print and fiche.
- 3 Fiche only.

## Setting up Expedited Funds Availability Scheduler (EFAS)

EFAS interfaces with Transaction Gateway to allow institutions to adjust the float on certain accounts, as allowed by Regulation CC. This regulation defines exception categories, such as new or high-risk accounts, that can have float adjustments.

Float values are set on MICM Record 0134. Transaction Gateway uses these values unless the EFAS option is selected on MICM Form 0301 (Application System Option Flags). If the EFAS option is selected, Transaction Gateway invokes the EFAS modules. Then, based on EFAS criteria (set on MICM forms 0390 through 0394), float adjustments are made.

## **Using EFAS**

To use this feature, enter a deposit transaction with:

- Amount of the check(s)
- Amount of the float and the routing and transit number (up to five float areas are available for mixed deposits)

To override this feature:

- Enter the amount of the check.
- Enter the amount of the float.
- Enter the number days to float.
- Enter the transit and routing number.
- Set the float override bit in the constant area of the message to 1 to override EFAS decisions.

October 2005 MICM Parameters 5-5

## Setting Up the EFAS / Transaction Gateway Interface

1. Access MICM Form 0150.

```

```

Online Form 0150 - Transaction Gateway Institution Processing Parameters

- 2. Type **Y** in the Regulation CC processing field.
- 3. Set the Interbank Institution MICR Type (this example uses 1) to identify the type of MICR document processor used. This field retrieves the corresponding MICM Record 0124 to build a routing table to direct the holds. Valid entries are:
  - 1419 document processor.
  - 3890 document processor. 2
  - 3694 document processor.
- 4. Press [Enter]. Online form 0150 redisplays.

Online Form 0150 - Transaction Gateway Institution Processing Parameters

- 5. Access MICM Form 0134.
- 6. Enter values in the following fields.

Kill Pass Kill Pass. Specifies the pass on which items for this routing-transit are killed. Valid entry is 1.

Item Type Item

Item Type. Specifies the item type for the transit item. Valid entries are:

- 10 Limited liability.
- 20 Local item.
- 30 Non-local item.
- 40 Noncontiguous item.
- 50 On-us item.
- 60 Cash item.
- 70 Any non-check item.

**Note:** The MICR Type, referred to in the next fields, is selected in the Interbank MICR Type field on MICM Online Form 0150 (discussed earlier in this EFAS procedure).

### **Kill Pocket**

Kill Pocket. Identifies the kill pocket where items for this routing-transit are selected. If the MICR Type is '1' indicating the 1419 document processor, the valid entry is 1. If the MICR Type is '2', indicating the 3890-document processor, or '3', indicating the 3694-document processor, the valid entry is X.

October 2005 MICM Parameters 5-7

**Rehandle Pkt** Rehandle Pocket. Identifies the pocket where items to be

rehandled for this routing-transit are selected. If the MICR Type is '1', indicating the 1419 document processor, the valid entry is 1. If the MICR Type is '2', indicating the 3890-document processor, or '3', indicating the 3694-document processor, the valid entry is **X**.

Bank Float

Bank Float. Specifies the number of days before the item is considered available to the institution. Valid entries are 00-30. A value of 00 indicates immediate availability.

**Customer Float** 

Customer Float. Specifies the number of days before the item is considered available to the customer. Valid entries are 00 - 30. A value of 00 indicates immediate availability.

**Note:** If you are not using Proof of Deposits Plus or SuperMICR II, use the default values for all other fields on this form.

Online Form 0134 - SuperMICR II Transit Sort Table

## **Settlement Processing**

As a part of Transaction Gateway, the Settlement system uses a unique message and response format (Format 11) as well as a unique internal transaction code (930). Settlement processing is activated by MICM forms 0150, 0151, and 0245.

Once Settlement processing is activated, the accumulated information can be viewed online through the Transaction Gateway simulator. After the TLTL Control Menu is accessed, Operating Mode 9 is used to display the Settlement Mode Function Entry panel. Here, you can specify for which institution, branch, and teller the settlement information is displayed. You can also select which type of accumulators (1-9) or which Settlement record (AM, PM) from which to display the accumulated data.

The Settlement Mode Function Reply panel is displayed next and shows the general ledger information accumulated to the AM or PM record. The display includes the general ledger number and the amount and item count of both debits and credits. Backward and forward paging is provided for this panel.

## **Specifying Institution-level Parameters**

You must access MICM Form 0150 to specify institution-level parameters. Only one form is defined per institution. Use the Settlement Processing Option to activate settlement processing in Transaction Gateway. Valid entries are:

- N Do not accumulate settlement information.
- Y Use the settlement processing option.

An entry of **Y** requires that you set up MICM Forms 0151 and 0245. An entry of **N** requires that you set the accumulator fields to '00' on MICM Form 0151.

## **Establishing Transaction Processing Parameters**

You must access MICM Form 0151 to establish the parameters that control transaction processing within Transaction Gateway. Of the six new accumulator fields that have been added to this form, the last two (fee, offset) are not currently used. The accumulator fields determine which accumulator is used to accumulate the numeric data (e.g., cash back amount) from the respective transaction field. If the accumulator number is set to '00', the accumulator is not used for that transaction field.

October 2005 MICM Parameters 5-9

Accumulator Name	Accumulator For
TRANS	Transaction amount field
CASH	Cash amount field
CASHB	Cash back field
CHECK	Check amount field
FEE	Fee amount field
OFFSET	Transaction amount field offset

**Note:** Internal transactions 120 and 170 require the Cash Accumulator number to be set to '02'

The Cash Accumulator and Cash B Accumulator numbers should be set to '02' for all other transactions.

Remember that the accumulators correspond by number to those specified in MICM Record 0245.

## **Processing General Ledger Transactions**

You must access MICM Form 0245 to process general ledger transactions. Form 0245 is defined for application 05 (Transaction Gateway) with each form defining one of 58 possible accumulators (although 63 is the maximum number of accumulators allowed, the first five are reserved for Transaction Gateway).

**Note:** Each accumulator is composed of four accumulation areas: two for debit and credit amounts and two for debit and credit item counts. In addition, there are 63 accumulators available in each of the two Settlement records (AM and PM).

The Accumulator Number field must specify a user-assigned accumulator number. The accumulator number is displayed on the Settlement panel in the Transaction Gateway simulator.

Accumulators 1 – 5 are reserved for Transaction Gateway and correspond to the Cash Status inquiries:

GL Accum	Description	Internal Transaction Code
1	Starting Cash	60, 301, 312, 362
2	Cash	120, 170
3	Cash Shortage	311
4	Cash Overage	361
5	Ending Cash	351, 560

Although any of the remainder of the accumulators can be used, it is suggested that they be used consecutively (e.g., 6, 7, 8).

The type of account field is currently limited to the values 1-9. It is used as an optional selection category when viewing settlement information.

Since the general ledger number description is also displayed on the Settlement Mode Function Reply panel, the Number Description field should also be specified on MICM Form 0245.

### Special Considerations

When the Type Switch field is 'N' on the Settlement Mode Function Entry panel, all panels are shown. The first is the Type 1 panel and contains cash information. Continue to press [Enter] until you see totals. At this point, you can page forward or backward. You can return to the entry panel at any time by pressing [PF3].

**Caution:** *Do not use* PF keys before the totals are displayed since this affects the totals.

October 2005 MICM Parameters 5-11

### Chapter

# 6

# **MICM Panels**

This chapter describes the MICM panels for Transaction Gateway in numerical sequence according to panel number and provides information such as:

- Entering data and accessing panels.
- Format standards for panel layout and fields.
- Key fields (shown in the Panel ID Table)

**Entering Data** 

MICM panels allow you to enter data into the Transaction Gateway application. This data includes key information as well as new and maintenance information. Through this data, information can be added, changed, or deleted. MICM panels are designed to allow data entry to be easily understood. The grouping of data fields and their locations make them more functional. Panels create new information and maintain existing information using the same panel. Numeric data can be left or right justified, depending on the specific field layout. The cursor is automatically placed where data is to be entered. If the panel is for inquiry only, all of the fields are protected.

A field is highlighted as an error if data is entered in the field beyond the applicable number of positions. For a new transaction, slashes are used by MICM to note which fields on the panel are required whenever you press [F1]. Slashes are displayed and highlighted. Since question marks and slashes are used by MICM, these characters can never be entered as data.

With new transactions, you can enter data in both the key fields and the data fields. With maintenance transactions, you can only enter data in the key fields initially. Once the record is read from MICM, the panel is loaded with data from the file and the key is protected. Any data field can be changed at this point. To delete a record (only under maintenance), enter **D** in the Delete field.

The only records not unique for individual institutions are the records for Institution 0000. These records are system records and are used for processing by all institutions. These system records must be created and maintained by the Institution 0000 operator.

You must enter information on several menus during online access. These menus use external transaction codes SGON, MENU, CHNG, and SGOF. For more information on these menus, refer to your Infopoint MICM *Procedures Guide*.

October 2005 MICM Panels 6-1

Accessing a Primary Panel

At the Transaction Gateway Menu, there are three ways to access MICM panels.

- Enter **TLMICM** or **2** on the Command line.
- Enter the applicable primary panel name (e.g., 0150) on the Command line.
- Enter the applicable primary panel name and key information on the Command line.

## **Format for Panels**

Most panels consist of four areas:

- 1. The first area of the panel contains the panel ID, operator ID, panel title, institution number, and current date. The second line may contain the indicator **MORE** - + at the right side of the panel. When there are additional panels of information to view, a plus (+) appears after the word MORE. Use either [Enter] or [F8] to page forward. Likewise, a minus (-) next to the MORE indicates there are no further panels to view. Use [F7] to page backward.
- 2. The second area consists of key information required by the application.
- The third area consists of the remaining field headings and associated data. The area is unprotected, except on inquiry panels. Some fields are required, while others are optional. Most optional numeric fields default to zeros; optional alphanumeric fields default to spaces.
- The fourth area consists of the message line, command line, and function keys generated by the application.

When the application finds an error, it highlights the associated field, the cursor moves to the first field containing an error, and an error message appears on the message line. For example, a field is incorrect if it is defined as numeric but was entered as a nonnumeric character, or if the input data does not correspond to the information in the table used for verification. A key field returns an error if you attempt to create a transaction for an existing record or if you try to update a transaction for a record that does not exist. Refer to the individual key field descriptions for other error possibilities.

## **Format for Field Descriptions**

The documentation associated with each panel shows field names in panel order along with descriptions and valid entries. Field requirements, shown in italics after each field description, indicate:

- Whether the field is alphanumeric or numeric.
- The maximum number of positions of the field.

**Note:** The default values can be changed through the Application Management Table (AMT). If you would like a list of the default values supplied with the application, refer to the AMT for the record.

The field level security (FLS) identification. The information following the FLS on the field requirements line is part of the key necessary to adjust security. For more information about field level security, see the section Field Security in the MICM Parameters chapter of this guide. The FLS identification is made up of the following two areas:

**Record ID** The first 3 characters indicate the source or destination

record of the data in that field.

**Token Name** The following characters are the token name for that field.

This is the name used by the data management system that

controls the record.

October 2005 MICM Panels 6-3

## **Function Keys**

Transaction Gateway allows you to use function keys (PF keys, if present) to assist you in moving from panel to panel. Function keys can be used from most panels within the application. The function keys available for a panel display at the bottom of each panel.

You can enter either a function key or an alphanumeric value (word listed next to the key). Because the function keys that are standard for MICM could already be designated for some other purpose in your system, they can be customized to meet your needs.

The following alphanumeric values are defined for MICM. A standard MICM COBOL copybook (SRW710) is provided for you to change these values.

F1 - Help	Display online help information for the current field or panel (determined by the cursor location).	
F2 - Begin	Update and return to the originating transaction. If a work unit name is present, load the work unit name into the next key area and return.	
F3 – Exit	Update and return to the MICM Menu. If the breakaway function is invoked, return to the original session.	
F4 – Next	Update and invoke the transaction specified from the command line. A change must be made on the command line to invoke the transaction.	
F5 - Refresh	Restore panel to original values prior to maintenance; retrieve previous command on the command line.	
F7 - Backward	Update and move back to the previous panel.	
F8 – Forward	Update and move ahead to the next panel.	
F9 – Edit	Edit the panel without updating and redisplay the panel.	
F10 - Actions	Display transactions authorized for operator.	
F11 – Break	Invoke breakaway function.	
F12 - Cancel	Do not update; return to menu panel. From online help, return to the original panel.	
F12 – Break-Rtrn	If the breakaway function is invoked, return to the original session.	

F13 - Select	Return to selection panel or select a specific item based on cursor position.	
F14 - Copy	Update and copy current record. Use that record to create a new record. Can only use this function in the Browse mode or in a maintenance function on the key panel.	
F15 – Bottom	Do not update; display the last panel of the last record.	
F16 - Sp	AMT field display is based on MICM Record 2014 option.	
F17 – F24 – Transaction-defined	Function determined by the application. Refer to specific transaction for usage.	
PA1 - PA2	Function determined by user.	
Enter – Enter	Update and go to the next panel.	
Clear – Exit	Do not update; return to the menu panel, or if at the menu panel, clear to a blank screen.	

## **Panel ID Table**

The table below lists the numbers, names, and key fields of the MICM panels used by Transaction Gateway. The panels are listed in numerical order.

Panel ID	Description	Key Fields
0150	Transaction Gateway Institution Processing Parameters	Function Code
0151	Transaction Gateway Transaction Processing Table	Function Code, Branch Number, Application Code, External Transaction Code
0152	Transaction Gateway Passbook/Non-book Transactions	Function Code, Application Number, External/Internal Transaction Code, Transaction Code
0153	Transaction Gateway System Options	Function Code

October 2005 MICM Panels 6-5

## **Panel Descriptions**

The following information is given for each panel:

**Purpose** Provides a description of the panel.

Sample Shows a panel sample.

Contains a listing of all data fields on the panel that **Field Descriptions** 

includes descriptions, values, and field requirements.

## 0150 - Transaction Gateway Institution Processing Parameters

**Purpose** 

This panel is used to enter and maintain Transaction Gateway institution processing parameters information. Only one record per institution is created. This information controls the handling of the institution's ATM (Automatic Teller Machine) transactions and establishes certain system-wide parameters used by Transaction Gateway. Every institution must have MICM Record 0150 and can be Institution 0000.

Key Panel

0150 - Transaction Gateway Institution Processing Parameters (Key Panel)

### **Field Descriptions**

Function

Function. Action to perform on the panel. Valid entries are:

- **b** Inquiry only.
- **B** Browse a record.
- **D** Delete a record.
- M Maintain a record.
- N Create a new record.

Alphanumeric, 1 position.

0150 - Transaction Gateway Institution Processing Parameters (Primary Panel)

## **Field Descriptions**

Delete

Delete Flag. Valid entries are:

- **b** Keep this record.
- **D** Delete this record.

Alphanumeric, 1 position.

Interbank From

Interbank From Hold Option. Indicates whether the sending institution allows a hold to be placed on an account. Not used at this time. Valid entries are:

- N Institution does not allow a hold on an account.
- Y Institution allows a hold on an account.

Alphanumeric, 1 position, FLS M50 I\_BANKFR\_HOLD.

Interbank To

Interbank To Hold Option. Indicates whether the receiving institution allows a hold to be placed on an account. Not used at this time. Valid entries are:

- N Institution does not allow a hold on an account.
- Y Institution allows a hold on an account.

Alphanumeric, 1 position, FLS M50 I\_BANKTO\_HOLD.

Interbank MICR

Interbank Institution MICR Type. Identifies the type of MICR Document Processor used by the institution. This field is used to retrieve corresponding MICM Record 0124 for building a routing table to direct the holds. This is used for the interface to MICM. Valid entries are:

- 1 1419 Document Processor.
- 2 3890 Document Processor.
- 3 3694 Document Processor.

Numeric, 1 position, FLS M50 I\_BANK\_MICR.

#### Interbk Number

Interbank Institution Number. Identifies the institution number for which holds are processed. This field is used to retrieve corresponding MICM Record 0124 for building a routing table to direct the holds. Zeros indicate no institution. Leading blanks are permitted. Not used at this time.

Numeric, 4 positions, FLS M50 I\_BANK\_NUMBER.

#### **Branch Option**

Processing Parameters Branch Option. Indicates whether the processing parameters are used by branch. Valid entries are:

- N Processing parameters are not used by branch.
- Y Processing parameters are used by branch.

**Note:** If Branch Option is used on MICM Record 0150, valid entry is **Y**.

Alphanumeric, 1 position, FLS M50 BRANCH\_OPT.

### Stop Lookup Opt

Stop Payment Automatic Lookup Option. Indicates whether to perform stop payment lookup of items being processed. Valid entries are:

- N Do not perform stop payment lookup.
- Y Perform stop payment lookup.

Alphanumeric, 1 position, FLS M50 STOP\_PAYM\_OPT.

### Stop Variance

Stop Payment Variance. Amount that the item can vary and still be considered a 'stop hit'. The amount is expressed in dollars and cents. Two decimal positions are assumed. Zeros indicate no variance. Leading blanks are permitted. *Numeric*, *5 positions*, *FLS M50 STOP\_PAYM\_VARI*.

### Reject Stops

Reject Stops Option. Indicates whether to reject and deny processing of items that have 'stop payment' associated with the account. Valid entries are:

- N Do not reject stop payment items.
- Y Reject stop payment items.

**Note:** A Y causes a force to be used.

Alphanumeric, 1 position, FLS M50 REJECT\_STOP\_OPT.

### Reject Cautions

Reject Cautions Option. Indicates whether to reject and deny processing of items that have 'caution' associated with the account. Valid entries are:

- N Do not reject caution items.
- Y Reject caution items.

**Note:** A Y causes a force to be used.

Alphanumeric, 1 position, FLS M50 REJECT\_CAUT\_OPT.

October 2005 MICM Panels 6-9

#### Reject Assigns

Reject Assignments Option. Indicates whether to reject and deny processing of items that have 'assignments' associated with the account. Valid entries are:

- N Do not reject assignment items.
- Y Reject assignment items.

**Note:** A Y causes a force to be used.

Alphanumeric, 1 position, FLS M50 REJECT\_ASGN\_OPT.

### Store/Forward

Store/Forward Option. Indicates store/forward processing of applications by the institution. Valid entries are:

- N Do not do application store/forward processing.
- Y Do application store/forward processing.

Alphanumeric, 1 position, FLS M50 STORE\_FWD\_OPT.

### **Unbooked Occur**

Unbooked Occurrences. Number of transactions to print at one time in the book. This user-defined field is determined with the terminal vendor's help. It must be greater than zero, with the maximum being 35.

Numeric, 2 positions, FLS M50 NOBOOK\_OCCUR.

### Inst Option

Institution Option. Enter **Y** if MICM Record 0150 exists for other institutions. Otherwise, the temporary storage queues are not built. Valid entries are:

- N Do not use MICM Record 0151 at the institution level.
- Y Use MICM Record 0151 at the institution level.

Alphanumeric, 1 position, FLS M50 BANK\_OPTION.

#### File Suffix

File Suffix. File name suffix for accessing online files by this application in application interface programs. This suffix is appended to the data set names before any online command is executed. Valid entries are:

- **b** Normal system files.
- A Z Alternate file sets.
- 1 9 Alternate file sets.

Alphanumeric, 1 position, FLS M50 FILESET\_CODE.

### Float MICR

Float MICR Option. Valid entries are:

- N No float assignment.
- 1 Use MICM Record 0134 for 1419.
- 2 Use MICM Record 0134 for 3890.
- 3 Use MICM Record 0134 for 3694.

Alphanumeric, 1 position, FLS M50 FLOAT\_OPT.

### Acct Xref

Account Cross-reference Option. Reads the installment loan interface in order to determine the correct account number. Valid entries are:

- **N** Do not use account cross-reference.
- Y Use account cross-reference.

Alphanumeric, 1 position, FLS M50 LOAN\_XREF\_OPT.

### Acct Log Option

Account Log Option. Allows transactions to be written and read in account order for log lookup purposes. Valid entries are:

- N Log lookup by account is not allowed.
- Y Log lookup by account is allowed.

Alphanumeric, 1 position, FLS M50 ACCT\_LOG\_OPT.

#### Reg Cc Proc

Regulation CC Option. Applies to expedited funds availability and is the interface option to EFAS. Valid entries are:

- **N** No Regulation CC processing. Do not interface.
- **Y** Regulation CC processing. Interface. *Alphanumeric*, 1 position, FLS M50 REGCC\_OPT.

### Settlement Opt

Settlement Processing Option. Valid entries are:

- N No settlement processing.
- Y Settlement processing.

Alphanumeric, 1 position, FLS M50 SETTLE\_OPT.

#### Correct Opt

Correction Process Option. Indicates whether the primary or alternate correction process is used. The primary correction process browses the Log Record until the transaction matches on institution, teller, external transaction code, reference number, application code, and account number. Under this method, the application and account number cannot be changed. The alternate correction process requires the exact key to be passed to Transaction Gateway, which means the date and time must be the same as the original transaction. Under this method, the application and account number can be changed. Valid entries are:

- N Use the primary correction process
- Y Use the alternate correction process.

Alphanumeric, 1 position, FLS M50 CORRCTN\_OPT.

### Acct Access

Account Access Code. Controls access between cross banking accounts. If the teller institution number is different than the account institution number, this option will be checked. These institutions do not need to be on the same file set. Valid entries are:

- **b** Not used.
- I Inquiry only.
- N Not used.
- Y Inquiry and update.

Alphanumeric, 1 position, FLS M50 ACCT\_ACCESS\_CD.

### Cash Drawer

Cash Drawer Option. Keeps track of the cash drawer on the host and verifies the starting and ending cash. Valid entries are:

- N Do not keep track of the cash drawer totals and do not verify starting and ending cash.
- T Keep track of the cash drawer totals but do not verify starting and ending cash.
- **Y** Keep track of the cash drawer totals and verify starting and ending cash. *Alphanumeric*, 1 *position*, *FLS M50 CASH\_D\_OPT*.

October 2005 MICM Panels 6-11

DDA Backdate Demand Deposits Account Backdate Option. Allows Demand Deposit (DDA) to

have its own backdating parameter up to 12 months. *Numeric*, 2 *positions*, *FLS M50 D\_BACK\_DATE\_OPT*.

Crl Backdate Credit Line Backdate Option. Allows Credit Line (CRL) to have its own

backdating parameter up to 12 months.

Numeric, 2 positions, FLS M50 C\_BACK\_DATE\_OPT.

Savings Backdate Option. Allows Savings (SAV) to have its own backdating

parameter up to 12 months.

Numeric, 2 positions, FLS M50 S\_BACK\_DATE\_OPT.

Time Backdate Time Investment Backdate Option. Allows Time Investment to have its own

backdating parameter up to 12 months.

Numeric, 2 positions, FLS M50 T\_BACK\_DATE\_OPT.

|| Backdate | Installment Loans Backdate Option. Allows Installment Loans to have its own

backdating parameter up to 12 months.

Numeric, 2 positions, FLS M50 I\_BACK\_DATE\_OPT.

CI Backdate Commercial Loans Backdate Option. Allows Commercial Loans to have its own

backdating parameter up to 12 months.

Numeric, 2 positions, FLS M50 L\_BACK\_DATE\_OPT.

Mtg Backdate Option. Allows Mortgage Loans to have its own

backdating parameter up to 12 months.

Numeric, 2 positions, FLS M50 M\_BACK\_DATE\_OPT.

Open Deposit Open Account Deposit Option. Allows verification that an account exists when

processing an opening account deposit. If Y is selected and the account number

is not found, the transaction will be rejected. Valid entries are:

N Process the open account deposit transaction against the Balance Record.

Y Process the open account deposit transaction against the application's master record.

Alphanumeric, 1 position, FLS M50 NEW\_ACCOUNT\_OPT.

Neg Balance Option. Allows the institution the opportunity to replace a

negative available balance with zeros for ATM balance inquiries. Valid entries

are:

**N** Do not replace a negative available balance with zeros.

Y Replace a negative available balance with zeros.

Alphanumeric, 1 position, FLS M50 NEG\_AVAIL\_BAL.

## Crl Option

Credit Line Option. Allows the use of the credit line balance from the master record for authorization of records. Valid entries are:

- N Do not add the Credit Line Balance field to the available balance for withdrawal authorization.
- Y Add the Credit Line Balance field to the available balance for withdrawal authorization.

Alphanumeric, 1 position, FLS M50 CRL\_BALANCE\_OPT.

## II Rej Stops

Installment Loans Reject Stop Option. Automatically allows rejects of advances if a stop is present. Valid entries are:

- **N** Does not allow the automatic reject of an advance transaction if a stop is present.
- Y Allows the automatic rejection of an advance transaction if a stop is present.

Alphanumeric, 1 position, FLS M50 LOAN\_REJ\_STOP.

#### Pb Renew Ex

Passbook Renewal Option. Indicates whether renewal information should be extracted from Time Investment and printed in the passbook. Valid entries are:

- N Do not extract renewal information from Time Investment.
- **Y** Extract renewal information from Time Investment to be printed in the passbook.

Alphanumeric, 1 position, FLS M50 PSBK\_RNEW\_OPT.

#### Pb Int Ext

Passbook Interest Option. Indicates whether interest by check and transferred to another account transactions should be extracted from Time Investment as normal withdrawal transactions or whether they should be extracted to the Not Booked Transaction Record as a special no book transaction type that may be used for printing additional information in the passbooks. Valid entries are:

- N Process interest by check and interest transferred to another account transaction as normal withdrawals.
- Y Extract interest by check and interest transferred to another account transaction as a special no book transaction type on the Not Booked Transaction Record (NOB).

Alphanumeric, 1 position, FLS M50 PSBK\_INT\_OPT.

## Pb Format

Passbook Format Option. Indicates whether the standard response format 09, which is used to return not booked items to the terminal for printing, should be in the short format or the long format. The long format should be chosen if the Passbook Interest Option or the Passbook Renewal Option is selected or if the branch or teller is to be printed in the passbook. Valid entries are:

- L Return the long format for standard response 09.
- **S** Return the short format (type, effective date, amount) for standard response 09.

Alphanumeric, 1 position, FLS M50 PSBK\_FORMAT\_OPT.

October 2005 MICM Panels 6-13

Purge-Days

Purge Days. Number of days to be used to calculate a purge date to delete records from the Teller Record. The number of days is subtracted from the current processing date to provide a purge date. Zeros in this field indicate that you are not running program TLR020 (Teller Purge). It is recommended that you use a minimum of 16 days which allows for 2 weeks plus weekends. *Numeric*, 3 positions, FLS M50 PURGE\_DAYS.

## 0151 - Transaction Gateway Transaction Processing Table

**Purpose** 

This panel is used to establish the necessary parameters that control transaction processing.

Key Panel

0151 - Transaction Gateway Transaction Processing Table (Primary Panel)

## **Field Descriptions**

Delete

Delete Flag. Valid entries are:

**b** Keep this record.

**D** Delete this record.

Alphanumeric, 1 position.

Description

Description. Description of this processing transaction used by the 3270

simulator. Left justified.

Alphanumeric, 40 positions, FLS M51 DESC.

Internal Tc

Internal Transaction Code. Translated transaction code used to process the external transaction code. Refer to the Application Panels chapter of this guide for a list of the transaction codes. Leading blanks are permitted.

Total 15t of the transaction codes. Ecading blanks are pe

Numeric, 4 positions, FLS M51 INTL\_TRANS\_CODE.

Security Level

Security Level. Security level that is required to process this transaction. Transaction Gateway's security level is compared to the transaction's security level and must be equal to or greater than the transaction's in order to process. User-defined. Valid entries are:

- 0-2 All tellers.
- 3 Supervisors only.
- 4-8 Officers only.

Numeric, 1 position, FLS M51 SECURITY\_LEVEL.

#### Screen Number

Panel Number. Panel number that is used to display the external transaction code on the 3270 simulator terminal. It must be greater than zero. Valid entries are:

- **01** Signon/Signoff transactions.
- 03 Maintenance transactions.
- 04 Cash maintenance transactions.
- 05 Monetary transaction.
- **06** Balancing transactions.
- 07 Log lookup transactions.
- 08 Alert message transactions.
- **09** Settlement transactions.

For all other applications, the value starts with **01**. This number represents the panel on which the transaction appears. The maximum transactions per panel is 21. The next 21 appear on panel 02. If application 05 has mode 05 transactions, they appear on panel 05.

Numeric, 2 positions, FLS M51 SCREEN\_NUMBER.

#### Estimated Time

Estimated Time. Percentage of efficiency as measured by Transaction Gateway. Applies to reports 05-014, 05-015, 05-161, and 05-162. Ideal for tracking peak hours. Format is MMSS. It must be greater than zero. *Numeric*, 4 positions, FLS M51 ESTIMAT\_TIME.

## Appl Ext Tc

Application External Transaction Code. External transaction code (MICM Records 0326/2013) used by the application being processed. This field must be entered when extracting directly to another application. Leading blanks are permitted.

Numeric, 4 positions, FLS M51 APPL\_EXTL\_TRANS.

## Appl Int Tc

Application Internal Transaction Code. Internal transaction code (MICM Records 0326/2013) used by the application being processed. This field must be entered when extracting to Deposits and Time Investment. Leading blanks are permitted.

Numeric, 4 positions, FLS M51 APPL\_INTL\_CODE.

## Appl Extract

Application Extract Code. The ACH process can be run against the teller memo balance; however, the transactions are not extracted to the application. The actual ACH process can be processed later against the application, posting the transactions to the current balance of each account. Valid entries are:

- N Do not extract this transaction.
- Y Extract this transaction.

Alphanumeric, 1 position, FLS M51 APPL\_EXTRACT\_CD.

October 2005 MICM Panels 6-17

## Appl Db/Cr

Application Debit/Credit Code. Identifies this transaction as a debit or a credit for the application. This field must be entered when extracting to Time Investment and Deposits. Valid entries are:

- 0-1 Credit.
- 2 Debit reversal.
- 3 4 Credit for which float items are generated.
- 5 Debit reversal for which float items are generated.
- 6-7 Debit.
- 8 Credit reversal.

Numeric, 1 position, FLS M51 APPL DR CR CD.

#### Appl R - T

Application Routing/Transit Number. This field must be entered when extracting to SuperMICR II. Zeros indicate not applicable. MICM Record 0237 must have SuperMICR II as an extract release.

Numeric, 8 positions, FLS M51 ROUTE NUMBER.

#### Offset R - T

Application Offsetting Routing/Transit Number. This field must be entered when extracting to SuperMICR II. Zeros indicate not applicable. *Numeric*, 8 positions, FLS M51 OFFS\_ROUTE\_NBR.

#### Db Offset Tc

Application Offsetting Debit Transaction Code. This field must be entered when extracting to SuperMICR II. Zeros indicate not applicable. *Numeric*, *4 positions*, *FLS M51 OFFS\_DR\_TRAN\_CD*.

## Cr Offset Tc

Application Offsetting Credit Transaction Code. This field must be entered when extracting to SuperMICR II. Zeros indicate not applicable. *Numeric*, 4 positions, FLS M51 OFFS\_CR\_TRAN\_CD.

## User Data

User Data. User-defined.

Alphanumeric, 2 positions, FLS M51 USER\_DATA.

#### Trans Accum

Transaction Settlement Accumulator Code. Accumulator code for the transaction settlement amount. Valid entries are:

- **00** Accumulator not used.
- O1 Starting cash. Transactions 60, 301, 312, and 362.
- O2 Cash. Transactions 120 and 170.
- **03** Shortage. Transaction 311.
- **04** Overage. Transaction 361.
- **05** Ending cash. Transactions 351 and 560.
- 06 63 Accumulator number.

Numeric, 2 positions, FLS M51 TRANS\_ACCUM.

#### Cash Accum

Cash Settlement Accumulator Code. Accumulator code for the cash settlement amount. Valid entries are:

- **00** Accumulator not used.
- **02** Accumulator number.

Numeric, 2 positions, FLS M51 CASH\_ACCUM.

#### Cash B Accum

Cash Back Settlement Accumulator Code. Accumulator code for the cash back settlement amount. Valid entries are:

- **00** Accumulator not used.
- **02** Accumulator number.

Numeric, 2 positions, FLS M51 CASH\_BACK\_ACCUM.

#### Check Accum

Check Settlement Accumulator Code. Accumulator code for the check settlement amount. Valid entries are:

- **00** Accumulator not used.
- O1 Starting cash. Transactions 60, 301, 312, and 362.
- **02** Cash. Transactions 120 and 170.
- **03** Shortage. Transaction 311.
- **04** Overage. Transaction 361.
- **05** Ending cash. Transactions 351 and 560.
- 06 63 Accumulator number.

Numeric, 2 positions, FLS M51 CHECK\_ACCUM.

#### Fee Accum

Fee Settlement Accumulator Code. Accumulator code for the fee settlement amount. Valid entries are:

- **00** Accumulator not used.
- O1 Starting cash. Transactions 60, 301, 312, and 362.
- **02** Cash. Transactions 120 and 170.
- **03** Shortage. Transaction 311.
- **04** Overage. Transaction 361.
- **05** Ending cash. Transactions 351 and 560.
- 06 63 Accumulator number.

Numeric, 2 positions, FLS M51 FEE\_ACCUM.

## Offset Accum

Offset Settlement Accumulator Code. Accumulator code for the offset settlement amount. Valid entries are:

- **00** Accumulator not used.
- O1 Starting cash. Transactions 60, 301, 312, and 362.
- **02** Cash. Transactions 120 and 170.
- O3 Shortage. Transaction 311.
- **04** Overage. Transaction 361.
- **05** Ending cash. Transactions 351 and 560.
- 06 63 Accumulator number.

Numeric, 2 positions, FLS M51 OFFSET ACCUM.

October 2005 MICM Panels 6-19

## 0152 - Transaction Gateway Passbook/Non-book Transactions

**Purpose** 

This panel is used for refreshing the Balance and Transaction records during extraction of transactions from an application to the teller's transaction records for passbook updating.

Key Panel

```
0152K
          TLOPER7
                    Trans Gateway Passbook/Non-booked Trans
                                                               0001 04-06-2005
Enter the following key parameters:

0152 - Transaction Gateway Passbook/Non-book Transactions (Key Panel)

## **Field Descriptions**

**Function** 

Function. Action to perform on the panel. Valid entries are:

- **b** Inquiry only.
- **B** Browse a record.
- C Copy a record.
- **D** Delete a record.
- M Maintain a record.
- N Create a new record.

Alphanumeric, 1 position.

**Application** 

Application Code. Valid entries are **00 – 99**. *Alphanumeric*, 2 *positions*, *FLS M52 APPL\_CODE*.

Ext/Int Tc

External/Internal Transaction Code. Indicates whether this transaction code is external or internal. Valid entries are:

- E External transaction code.
- I Internal transaction code.

Alphanumeric, 1 position, FLS M52 EXTL\_INTL\_CODE.

Tran Code

Transaction Code. Transaction code for which this transaction has been assigned. *Numeric*, *4 positions*, *FLS M52 TRANS\_CODE*.

0153 - Transaction Gateway System Options (Primary Panel)

## **Field Descriptions**

Delete

Delete Flag. Valid entries are:

- **b** Keep this record.
- **D** Delete this record.

Alphanumeric, 1 position.

**Debug Option** 

Debug Option. The Debug File is used when testing with the terminal controller. The file logs the messages received from and the responses sent to the terminal. This feature should be turned off after testing is complete. This flag is stored in the System Manager Table in temporary storage. The option in use at the time of the table build is performed online. Valid entries are:

- N Do not use the Debug option.
- Y Use the Debug option.

**Note**: If you decide to turn the option on or off after the tables have been built, you must rebuild the tables to activate the option. Use the TLOP function to rebuild the online tables.

Alphanumeric, 1 position, FLS M53 D\_OPT.

RegCC Option

EFAS Option. Used to inform Transaction Gateway whether it should interface with the Expedited Funds Availability Scheduler. Valid entries are:

- **N** Do not interface with EFAS.
- Y Interface with EFAS.

Alphanumeric, 1 position, FLS M53 REGCC\_OPT.

October 2005 MICM Panels 6-23

## **Auto Forwarding**

Auto Forwarding. Sets the auto-start feature on or off when forwarding stored transactions from the Store-and-forward Processing Record as the application files become available. Valid entries are:

- N Do not use the auto-start feature.
- Y Use the auto-start feature.

Alphanumeric, 1 position, FLS M53 AUTO\_FWD.

#### Write Console

Write Console Option. Sets the feature on or off that writes critical messages to the computer operator console. Valid entries are:

- N Do not use the Write Console feature.
- Y Use the Write Console feature.

**Note**: If you decide to turn the option on or off after the tables have been built, you must rebuild the tables to activate the option. Use the TLOP function to rebuild the online tables.

Alphanumeric, 1 position, FLS M53 MESSAGE\_OPER.

Chapter

7

# **MICM Batch Forms**

This chapter describes the MICM forms for Transaction Gateway in numerical sequence according to form number and provides information such as:

- Types of forms used (input and maintenance).
- Key fields (shown under the Header Portion of each card).
- Format standards for form layout and field descriptions.
- A master set of forms (see the last section).

The MICM forms allow you to enter data into the Transaction Gateway application. This data includes key information as well as new and maintenance information. Through this data, information can be added, changed, or deleted.

October 2005 MICM Batch Forms 7-1

## **Format for Form Masters**

The Form Masters section lists two types of forms: input and maintenance. When there is a lot of information to enter, input and maintenance forms are separate. However, some forms have input and maintenance information on the same page.

Input These forms describe the format used to enter key and new information. It could

take one or more cards to enter all of the necessary information for an input form.

These cards are numbered consecutively and are used according to the

information entered.

Maintenance These forms describe the format used to change or delete existing information.

> Card number '99', which is the maintenance card for Transaction Gateway, has several different formats, depending on the field to change. The check-mark box

should be checked for each field to maintain.

**Key Information** Key information, used both for input and maintenance cards, is entered on the

> top line of the form. The type of application appears in the upper left portion of each form. For some forms, several applications apply. The check-mark box

should be checked for each application added.

The application and form numbers are preprinted on the form and appear in the top left corner. A blank Form Number field indicates the form is used for multiple applications. In this case, the applicable form numbers are listed on the

bottom right or top left corner of the form.

In addition, heavy vertical lines within a field can indicate breaks between dates,

a decimal position, or a break between grouped fields.

# **Format for Field Descriptions**

The documentation associated with each form shows:

- Field names with descriptions and valid entries
- Field requirements.
- A reference line that correlates input and maintenance fields.

Field Requirements

Field requirements, shown in italics after each field description, define the field as either alphanumeric or numeric and list the allowable number of positions.

Reference Line

This line of information, which follows the field requirements, provides a cross-reference that associates similar input and maintenance fields. It correlates the card and field numbers used in maintenance with the card and column numbers used in setup.

# **Form Descriptions**

The following information is given for each batch form:

**Purpose** Provides a description of the batch form.

**Cards Required** Lists any cards that you are required to enter.

**Header Portion** Contains the positions and fields used on the top (header)

portion of each form and describes the fields.

**Card Number** Contains, within card number, the positions and fields used

on the main portion of each form and describes the fields.

October 2005 MICM Batch Forms 7-3

## Form 0150 - Transaction Gateway Institution Processing Parameters

Purpose This form is used to enter and maintain Transaction Gateway institution

processing parameters information. Only one record per institution is created. This information controls the handling of the institution's ATM (Automatic Teller Machine) transactions and establishes certain system-wide parameters used by Transaction Gateway. Every institution must have MICM Record 0150 and can

be Institution 0000.

Cards Required 00 - 01

## **Header Portion of Each Card**

1 – 2 System Number. Valid entry is **00**.

*Numeric*, 2 positions.

3 – 6 Form Number. Valid entry is **0150**.

Numeric, 4 positions.

7 – 8 Card Number.

Numeric, 2 positions.

#### Card 00

9 - 12 Institution Number. Number that designates the financial institution being

entered. Valid entries are 0000 - 9999.

Numeric, 4 positions.

13 - 80 Not used.

## Card 01

9 Interbank From Hold Option. Indicates whether the sending institution allows a

hold to be placed on an account. Not used at this time. Valid entries are: N Institution does not allow a hold on an account.

Y Institution allows a hold on an account.

Alphanumeric, 1 position. Reference: Card 99, field 050.

10 Interbank To Hold Option. Indicates whether the receiving institution allows a

hold to be placed on an account. Not used at this time. Valid entries are:

N Institution does not allow a hold on an account.

Y Institution allows a hold on an account.

Alphanumeric, 1 position. Reference: Card 99, field 051. 11

Interbank Institution MICR Type. Identifies the type of MICR Document Processor used by the institution. This field is used to retrieve corresponding MICM Record 0124 for building a routing table to direct the holds. This is used for the interface to MICM. Valid entries are:

- 1 1419 document processor.
- 2 3890 document processor.
- 3 3694 document processor.

Numeric, 1 position.

Reference: Card 99, field 052.

12 - 15

Interbank Institution Number. Identifies the institution number for which holds are processed. This field is used to retrieve corresponding MICM Record 0124 for building a routing table to direct the holds. Zeros indicate no institution. Leading blanks are permitted. Not used at this time.

Numeric, 4 positions.

Reference: Card 99, field 053.

16

Processing Parameters Branch Option. Indicates whether the processing parameters are used by branch. Valid entries are:

- N Processing parameters are not used by branch.
- Y Processing parameters are used by branch.

Note: If Branch Option is used on the MICM Record 0150, valid entry is Y.

Alphanumeric, 1 position.

Reference: Card 99, field 054.

17

Stop Payment Automatic Lookup Option. Indicates whether to perform stop payment lookup of items being processed. Valid entries are:

- N Do not perform stop payment lookup.
- Y Perform stop payment lookup.

Alphanumeric, 1 position.

Reference: Card 99, field 055.

18 - 21

Stop Payment Variance. The amount that the item may vary and still be considered a 'stop hit'. The amount is expressed in dollars and cents. Two decimal positions are assumed. Zeros indicate no variance. Leading blanks are permitted.

*Numeric*, 5 positions.

Reference: Card 99, field 056.

October 2005 MICM Batch Forms 7-5

22

Reject Stops Option. Indicates whether to reject and deny processing of items that have 'stop payment' associated with the account. Valid entries are:

- N Do not reject stop payment items.
- Y Reject stop payment items.

**Note:** A **Y** causes a force to be used.

Alphanumeric, 1 position. Reference: Card 99, field 057.

23

Reject Cautions Option. Indicates whether to reject and deny processing of items that have 'caution' associated with the account. Valid entries are:

- N Do not reject caution items.
- Y Reject caution items.

**Note:** A Y causes a force to be used.

Alphanumeric, 1 position. Reference: Card 99, field 058.

24

Reject Assignments Option. Indicates whether to reject and deny processing of items that have 'assignments' associated with the account. Valid entries are:

- N Do not reject assignment items.
- Y Reject assignment items.

**Note:** A Y causes a force to be used.

Alphanumeric, 1 position. Reference: Card 99, field 059.

25

Store/Forward Option. Indicates store/forward processing of applications by the institution. Valid entries are:

- N Do not do application store/forward processing.
- Y Do application store/forward processing.

Alphanumeric, 1 position.

Reference: Card 99, field 060.

26 - 27

Unbooked Occurrences. Number of transactions to print at one time in the book. This user-defined field is determined with the terminal vendor's help. It must be greater than zero, with the maximum being 35.

Numeric, 2 positions.

Reference: Card 99, field 061.

28

Institution Option. Valid entries are:

- N Do not use MICM Record 0151 at the institution level.
- Y Use MICM Record 0151 at the institution level.

Alphanumeric, 1 position. Reference: Card 99, field 062.

29	File Suffix. The file name suffix for accessing online files by this application in application interface programs. This suffix is appended to the data set names before any online command is executed. Valid entries are:  • Normal system files.  • A - Z Alternate file sets.  • 1 - 9 Alternate file sets.  *Alphanumeric, 1 position.  Reference: Card 99, field 063.
30	Float MICR Option. Valid entries are:  N No float assignment.  1 Use MICM Record 0134 for 1419.  2 Use MICM Record 0134 for 3890.  3 Use MICM Record 0134 for 3694.  Alphanumeric, 1 position.  Reference: Card 99, field 064.
31	Account Cross-reference Option. Reads the installment loan interface in order to determine the correct account number. Valid entries are:  N Do not use account cross-reference. Y Use account cross-reference.  Alphanumeric, 1 position. Reference: Card 99, field 065.
32	Account Log Option. Allows transactions to be written and read in account order for log lookup purposes. Valid entries are:  N Log lookup by account is not allowed. Y Log lookup by account is allowed.  Alphanumeric, 1 position. Reference: Card 99, field 066.
33	Regulation CC Option. Applies to expedited funds availability and is the interface option to EFAS. Valid entries are:  N No Regulation CC processing. Do not interface.  Y Regulation CC processing. Interface.  Alphanumeric, 1 position.  Reference: Card 99, field 067.
34	Settlement Processing Option. Valid entries are:  N No settlement processing. Y Settlement processing.  Alphanumeric, 1 position. Reference: Card 99, field 068.

October 2005 MICM Batch Forms 7-7

35

Correction Process Option. Indicates whether the primary or alternate correction process is used. The primary correction process browses the Log Record until the transaction matches on institution, teller, external transaction code, reference number, application code, and account number. Under this method, the application and account number cannot be changed. The alternate correction process requires the exact key to be passed to Transaction Gateway, which means the date and time must be the same as the original transaction. Under this method, the application and account number can be changed. Valid entries are:

- **N** Use the primary correction process
- Y Use the alternate correction process.

Alphanumeric, 1 position.

Reference: Card 99, field 069.

36

Account Access Code. Controls access between cross banking accounts. If the teller institution number is different than the account institution number, this option will be checked. These institutions do not need to be on the same file set. Valid entries are:

- **b** Not used.
- I Inquiry only.
- N Not used.
- Y Inquiry and update.

Alphanumeric, 1 position.

Reference: Card 99, field 070.

37

Cash Drawer Option. Keeps track of the cash drawer on the host and verifies the starting and ending cash. Valid entries are:

- **N** Do not keep track of the cash drawer totals and do not verify starting and ending cash.
- T Keep track of the cash drawer totals but do not verify starting and ending cash.
- **Y** Keep track of the cash drawer totals and verify starting and ending cash. *Alphanumeric*, 1 *position*.

Reference: Card 99, field 071.

38 - 39

Demand Deposits Account Backdate Option. Determines if the effective date on a transaction exceeds the backdating parameter specified by the DDA application. Verifies up to 12 months.

Numeric, 2 positions.

Reference: Card 99, field 072.

40 - 41

Credit Line Backdate Option. Allows CRL to have its own backdating parameter up to 12 months.

*Numeric*, 2 positions.

Reference: Card 99, field 073.

42 - 43

Savings Backdate Option. Allows SAV to have its own backdating parameter up to 12 months.

*Numeric*, 2 positions.

Reference: Card 99, field 074.

44 - 45 Time Investment Backdate Option. Allows Time Investment to have its own backdating parameter up to 12 months. Numeric, 2 positions. Reference: Card 99, field 075. 46 - 47 Installment Loans Backdate Option. Allows Installment Loans to have its own backdating parameter up to 12 months. Numeric, 2 positions. Reference: Card 99, field 076. 48 - 49Commercial Loans Backdate Option. Allows Commercial Loans to have its own backdating parameter up to 12 months. *Numeric*, 2 positions. Reference: Card 99, field 077. 50 - 51Mortgage Loans Backdate Option. Allows Mortgage Loans to have its own backdating parameter up to 12 months. Numeric, 2 positions. Reference: Card 99, field 078. 52 Open Account Deposit Option. Allows verification that an account exists when processing an opening account deposit. If Y is selected and the account number is not found, the transaction will be rejected. Valid entries are: N Process the open account deposit transaction against the Balance Record. Process the open account deposit transaction against the application's master record. Alphanumeric, 1 position. Reference: Card 99, field 079. 53 Negative Balance Option. Allows the institution the opportunity to replace a negative available with zeros. Valid entries are: N Do not replace negative available balance. Replace a negative available balance with zeros. Alphanumeric, 1 position. Reference: Card 99, field 080. 54 Credit Line Option. Allows the use of the credit line balance from the master record for authorization of records. Valid entries are: Do not add the credit line balance field to the available balance for withdrawal authorization. Add the credit line balance field to the available balance for withdrawal authorization. Alphanumeric, 1 position.

October 2005 MICM Batch Forms 7-9

Reference: Card 99, field 081.

55

Installment Loans Reject Stop Option. Automatically allows rejects of advances if a stop is present. Valid entries are:

- **N** Does not allow the automatic reject of an advance transaction if a stop is present.
- Y Allows the automatic rejection of an advance transaction if a stop is present.

Alphanumeric, 1 position.

Reference: Card 99, field 082.

56

Passbook Renewal Option. Indicates whether renewal information should be extracted from Time Investment and printed in the passbook. Valid entries are:

- N Do not extract renewal information from Time Investment.
- **Y** Extract renewal information from Time Investment to be printed in the passbook.

Alphanumeric, 1 position.

Reference: Card 99, field 083.

57

Passbook Interest Option. Indicates whether interest by check and transferred to another account transactions should be extracted from Time Investment as normal withdrawal transactions or whether they should be extracted to the Not Booked Transaction Record as a special no book transaction type that may be used for printing additional information in the passbooks. Valid entries are:

- N Process interest by check and interest transferred to another account transaction as normal withdrawals.
- Y Extract interest by check and interest transferred to another account transaction as a special no book transaction type on the Not Booked Transaction Record (NOB).

Alphanumeric, 1 position.

Reference: Card 99, field 084.

58

Passbook Format Option. Indicates whether the standard response format 09, which is used to return not-booked items to the terminal for printing, should be in the short format or the long format. The long format should be chosen if the Passbook Interest Option or the Passbook Renewal Option is selected or if the branch or teller is to be printed in the passbook. Valid entries are:

- L Return the long format for standard response 09.
- **S** Return the short format (type, effective date, amount) for standard response 09.

Alphanumeric, 1 position.

Reference: Card 99, field 085.

59 - 61

Purge Days. Number of days to be used to calculate a purge date to delete records from the Teller Record. The number of days is subtracted from the current processing date to provide a purge date. Zeros in this field indicate that you are not running program TLR020 (Teller Purge). It is recommended that you use a minimum of 16 days which allows for 2 weeks plus weekends.

*Numeric*, 3 positions.

Reference: Card 99, field 086.

62 - 80

Not used.

## Card 99

048	Delete Flag. Valid entries are:  • Keep this record.  • Delete this record.  Alphanumeric, 1 position.
049	Not used.
050	Interbank From Hold Option. Reference: Card 01, column 9.
051	Interbank To Hold Option. Reference: Card 01, column 10.

October 2005 MICM Batch Forms 7–13

## Form 0151 - Transaction Gateway Transaction Processing Table

Purpose This form is used to enter and maintain transaction processing table information.

This information establishes the necessary parameters used for controlling

transaction processing.

Cards Required 00 - 02

## **Header Portion of Each Card**

1 – 2	System Number. Valid entry is <b>00</b> . <i>Numeric</i> , 2 <i>positions</i> .
3 - 6	Form Number. Valid entry is <b>0151</b> . <i>Numeric</i> , <i>4 positions</i> .
7 – 8	Card Number. <i>Numeric, 2 positions</i> .

Card 00	
9 – 12	Institution Number. Number that designates the financial institution being entered. Valid entries are 0000 – 9999. <i>Numeric, 4 positions</i> .
13 – 17	Branch Number. Number of the branch to which this information applies. Valid entries are <b>00000 – 99999</b> . Must have MICM Record 0150 option on if greater than <b>00000</b> . <i>Numeric</i> , <i>5 positions</i> .
18 – 19	Application Code. Number of the application to which this information applies. <i>Numeric</i> , 2 <i>positions</i> .
20 - 23	External Transaction Code. Number entered by the teller that is translated to an internal number for processing. This is based on vendor input. Computer Associates recommends our internal transaction codes be used as external. User-defined.  Numeric, 4 positions.
24 - 80	Not used.

## Card 01

9 - 12

Internal Transaction Code. Translated transaction code used to process the external transaction code. Refer to the Screens chapter of this guide for a list of the transaction codes. Leading blanks are permitted.

Numeric, 4 positions.

Reference: Card 99, field 050.

13

Security Level. Security level that is required to process this transaction. Teller's security level is compared to the transaction's security level and must be equal to or greater than the transaction's in order to process. User-defined. Valid entries are:

- 0-2 All tellers.
- 3 Supervisors only.
- 4-8 Officers only.

Numeric, 1 position.

Reference: Card 99, field 051.

14 - 15

Panel Number. Panel number that is used to display the external transaction code on the 3270 simulator terminal. It must be greater than zero. Valid entries are:

- **01** Signon/Signoff transactions.
- **03** Maintenance transactions.
- 04 Cash maintenance transactions.
- **06** Balancing transactions.
- 07 Log lookup transactions.
- 08 Alert message transactions.
- **09** Settlement transactions.

For all other applications, the value starts with **01**. This number represents which panel the transaction appears on. The maximum transactions per panel is 21. The next 21 appear on panel 02. If application 05 has mode 05 transactions, they appear on panel 05.

Numeric, 2 positions.

Reference: Card 99, field 052.

16 - 19

Estimated Time. Percentage of efficiency is measured by Transaction Gateway. Applies to reports 05-014, 05-015, 05-161, and 05-162. Ideal for tracking peak hours. Format is MMSS. It must be greater than zero.

Numeric, 4 positions.

Reference: Card 99, field 053.

20 - 23

Application External Transaction Code. External transaction code (MICM Records 0326/2013) used by the application being processed. This field must be entered when extracting directly to another application. Leading blanks are permitted.

*Numeric*, 4 positions.

Reference: Card 99, field 054.

October 2005

24 - 27

Application Internal Transaction Code. Internal transaction code (MICM Records 0326/2013) used by the application being processed. This field must be entered when extracting to Deposits and Time Investment. Leading blanks are permitted.

Numeric, 4 positions.

Reference: Card 99, field 055.

28

Application Extract Code. Indicates whether this transaction is to be extracted. Code can be used to post ACH against the teller memo balance, not extract and then post ACH against DDA at night. Valid entries are:

- N Do not extract this transaction.
- Y Extract this transaction.

Alphanumeric, 1 position.

Reference: Card 99, field 056.

29

Application Debit/Credit Code. Identifies this transaction as a debit or a credit for the application. This field must be entered when extracting to Teller and Deposits. Valid entries are:

- 0-1 Credit.
- 2 Debit reversal.
- 3 4 Credit for which float items are generated.
- 5 Debit reversal for which float items are generated.
- 6-7 Debit.
- 8 Credit reversal.

Numeric, 1 position.

Reference: Card 99, field 057.

30 - 37

Application Routing/Transit Number. This field must be entered when extracting to SuperMICR II. Zeros indicate not applicable. MICM Record 0237 must have SuperMICR II as extract release.

Numeric, 8 positions.

Reference: Card 99, field 058.

38 - 45

Application Offsetting Routing/Transit Number. This field must be entered when extracting to SuperMICR II. Zeros indicate not applicable.

Numeric, 8 positions.

Reference: Card 99, field 059.

46 - 49

Application Offsetting Debit Transaction Code. This field must be entered when extracting to SuperMICR II. Zeros indicate not applicable.

Numeric, 4 positions.

Reference: Card 99, field 060.

50 - 53Application Offsetting Credit Transaction Code. This field must be entered when extracting to SuperMICR II. Zeros indicate not applicable. Numeric, 4 positions. Reference: Card 99, field 061. 54 - 55User Data. User-defined. Alphanumeric, 2 positions. Reference: Card 99, field 062. 56 - 57 Transaction Settlement Accumulator Code. Accumulator code for the transaction settlement amount. Valid entries are: 00 Accumulator not used. 01 Starting cash. Transactions 60, 301, 312, and 362. 02 Cash. Transactions 120 and 170. 03 Shortage. Transaction 311. 04 Overage. Transaction 361. 05 Ending cash. Transactions 351 and 560. Accumulator number. 06 - 63Numeric, 2 positions. Reference: Card 99, field 064. 58 - 59Cash Settlement Accumulator Code. Accumulator code for the cash settlement amount. Valid entries are: 00 Accumulator not used. 02 Accumulator number. Numeric, 2 positions. Reference: Card 99, field 065. 60 - 61Cash Back Settlement Accumulator Code. Accumulator code for the cash back settlement amount. Valid entries are: 00 Accumulator not used. 02 Accumulator number. Numeric, 2 positions. Reference: Card 99, field 066. Check Settlement Accumulator Code. Accumulator code for the check settlement 62 - 63amount. Valid entries are: Accumulator not used. 00 Starting cash. Transactions 60, 301, 312, and 362. 01 Cash. Transactions 120 and 170. 02 03 Shortage. Transaction 311. Overage. Transaction 361. 04 Ending cash. Transactions 351 and 560. 05 06 - 63Accumulator number. Numeric, 2 positions. Reference: Card 99, field 067.

October 2005 MICM Batch Forms 7-17

Fee Settlement Accumulator Code. Accumulator code for the fee settlement 64 - 65amount. Valid entries are: Accumulator not used. 00 01 Starting cash. Transactions 60, 301, 312, and 362. 02 Cash. Transactions 120 and 170. Shortage. Transaction 311. 03 Overage. Transaction 361. 04 05 Ending cash. Transactions 351 and 560. Accumulator number. 06 - 63Numeric, 2 positions. Reference: Card 99, field 068. 66 - 67Offset Settlement Accumulator Code. Accumulator code for the offset settlement amount. Valid entries are: 00 Accumulator not used. Starting cash. Transactions 60, 301, 312, and 362. 01 02 Cash. Transactions 120 and 170. Shortage. Transaction 311. 03 04 Overage. Transaction 361. Ending cash. Transactions 351 and 560. 05 Accumulator number. 06 - 63Numeric, 2 positions. Reference: Card 99, field 069. 68 - 80 Not used. Card 02 9 - 48Description. Description of this processing transaction used by the 3270 simulator. Left justified. Only 20 positions are used. Alphanumeric, 40 positions. Reference: Card 99, field 063. 49 - 80Not used. Card 99 048 Delete Flag. Valid entries are: **b** Keep this record. **D** Delete this record. Alphanumeric, 1 position. 050 Internal Transaction Code. Reference: Card 01, columns 9 – 12. 051 Security Level. Reference: Card 01, column 13.

052	Panel Number. Reference: Card 01, columns 14 – 15.
053	Estimated Time. Reference: Card 01, columns 16 – 19.
054	Application External Transaction Code. Reference: Card 01, columns 20 – 23.
055	Application Internal Transaction Code. Reference: Card 01, columns 24 – 27.
056	Application Extract Code. Reference: Card 01, column 28.
057	Application Debit/Credit Code. Reference: Card 01, column 29.
058	Routing/Transit Number. Reference: Card 01, columns 30 – 37.
059	Offsetting Routing/Transit Number. Reference: Card 01, columns 38 – 45.
060	Offsetting Debit Transaction Code. Reference: Card 01, columns 46 – 49.
061	Offsetting Credit Transaction Code. Reference: Card 01, columns 50 – 53.
062	User Data. Reference: Card 01, columns 54 – 55.
063	Description. Reference: Card 02, columns 9 – 48.
064	Transaction Settlement Accumulator Code. Reference: Card 01, columns 56 – 57.
065	Cash Settlement Accumulator Code. Reference: Card 01, columns 58 – 59.
066	Cash Back Settlement Accumulator Code. Reference: Card 01, columns 60 – 61.
067	Check Settlement Accumulator Code. Reference: Card 01, columns 62 – 63.

October 2005 MICM Batch Forms 7–19

068	Fee Settlement Accumulator Code. Reference: Card 01, columns 64 – 65.
069	Offset Settlement Accumulator Code. Reference: Card 01, columns 66 – 67.

## Form 0152 - Transaction Gateway Passbook/Non-book Transactions

Purpose This form is used for refreshing the Balance and Transaction records during

extraction of transactions from an application to the teller's transaction records

for passbook updating.

Cards Required 00 - 01

## **Header Portion of Each Card**

1 – 2 System Number. Valid entry is **00**.

Numeric, 2 positions.

3 – 6 Form Number. Valid entry is **0152**.

Numeric, 4 positions.

7 – 8 Card Number.

Numeric, 2 positions.

## Card 00

9 – 12 Institution Number. Number that designates the financial institution being

entered. Valid entries are 0000 - 9999.

Numeric, 4 positions.

13 – 14 Application Code. Valid entries are **00 – 99**.

*Numeric*, 2 positions.

15 External/Internal Transaction Code. Indicates whether this transaction code is

external or internal. Valid entries are:

E External transaction code.

I Internal transaction code.

Alphanumeric, 1 position.

16 – 19 Transaction Code. Transaction code for which this transaction has been assigned.

Numeric, 4 positions.

20 - 80 Not used.

## Card 01

9 – 48 Description. Description of this passbook/non-book transaction.

Alphanumeric, 40 positions. Reference: Card 99, field 050.

October 2005 MICM Batch Forms 7–21

49 – 50 Type Code. Identifies the type of transaction. Valid entries are:

01 Credit.

02 Debit reversal.

03 Debit.

**04** Credit reversal.

05 Interest.

**06** Federal withholding tax.

07 Service charge.

**08** Credit (non-balance).

09 Debit (non-balance).

Numeric, 2 positions.

Reference: Card 99, field 051.

51 – 80 Not used.

## Card 99

048 Delete Flag. Valid entries are:

**b** Keep this record.

**D** Delete this record.

Alphanumeric, 1 position.

050 Description.

Reference: Card 01, columns 9 – 48.

051 Type Code.

Reference: Card 01, columns 49 – 50.

## Form 0153 - Transaction Gateway System Options

Purpose This form is used to establish system-wide parameters for Transaction Gateway.

Cards Required 00 - 01

## **Header Portion of Each Card**

1 – 2 System Number. Valid entry is **00**.

Numeric, 2 positions.

3 – 6 Form Number. Valid entry is **0153**.

Numeric, 4 positions.

7 – 8 Card Number.

Numeric, 2 positions.

## Card 00

9 – 12 Institution Number. Number that designates the financial institution being

entered. Valid entries are 0000 - 9999.

Numeric, 4 positions.

13 – 80 Not used.

## Card 01

9 Debug Option. The Debug File is used when testing with the terminal controller.

The file logs the messages received from and the responses sent to the terminal. This feature should be turned off after testing is complete. This flag is stored in the System Manager Table in temporary storage. The option in use at the time of the table build is performed online. Valid entries are:

the table build is performed online. Valid entries are: N Do not use the Debug option.

Y Use the Debug option.

**Note**: If you decide to turn the option on or off after the tables have been built, you must rebuild the tables to activate the option. Use the TLOP function to rebuild the online tables.

Alphanumeric, 1 position. Reference: Card 99, field 011.

October 2005 MICM Batch Forms 7-23

10 EFAS Option. Used to inform Transaction Gateway whether it should interface with the Expedited Funds Availability Scheduler (EFAS). Valid entries are: N Do not interface with EFAS. Y Interface with EFAS. Alphanumeric, 1 position. Reference: Card 99, field 012. 11 Auto Forwarding. Sets the auto-start feature on or off when forwarding stored transactions from the Store-and-forward Processing Record as the application files become available. Valid entries are: **N** Do not use the auto-start feature. Use the auto-start feature. Alphanumeric, 1 position. Reference: Card 99, field 013. 12 Write Console Option. Sets the feature that writes critical messages to the computer operator console on or off. Valid entries are: N Do not use the Write Console feature. Y Use the Write Console feature. **Note**: If you decide to turn the option on or off after the tables have been built, you must rebuild the tables to activate the option. Use the TLOP function to rebuild the online tables. Alphanumeric, 1 position. Reference: Card 99, field 014. Card 99

011	Debug Option. Reference: Card 01, column 9.
012	EFAS Option. Reference: Card 01, column 10.
013	Auto Forwarding. Reference: Card 01, column 11.
014	Write Console Option. Reference: Card 01, column 12.
048	Delete Flag. Valid entries are: <b>b</b> Keep this record. <b>D</b> Delete this record. <i>Alphanumeric</i> , 1 position.

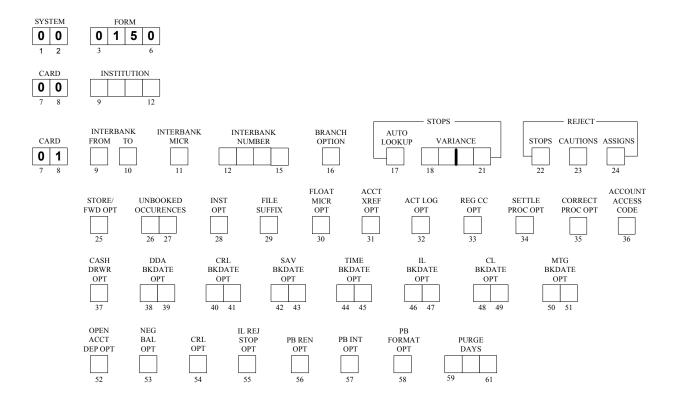

# **Form Masters**

This section provides a master for the MICM batch forms (input and maintenance) used exclusively by Transaction Gateway. The forms are:

- 0150 Transaction Gateway Institution Processing Parameters
- 0151 Transaction Gateway Transaction Processing Table
- 0152 Transaction Gateway Passbook/Non-book Transactions
- 0153 Transaction Gateway System Options

# **Online Messages**

During online inquiry or maintenance of Transaction Gateway, conditions can arise which prompt an informational or error message associated with an entry to appear. Online messages are set up on MICM Record 2011 (Online Messages). Refer to the Infopoint MICM *Procedures Guide* for more information.

**Informational Messages** The online informational messages confirm a

transaction is completed successfully.

Error Messages Transaction Gateway online error messages provide a

brief description of the cause of the error. Generally, the errors are a result of an improper entry. However, some errors indicate the inability to perform a

function due to the status of the record or because the programs do not allow certain functions to violate the integrity of the record. This section lists, by code, the

online error messages that may be displayed.

# Online Message Format

Online messages are presented in numerical order with the following information:

- nnnnnn Message name
- Reason A brief description of the cause of the message
- Action A brief summary of recommended action or advice

# Online Message Descriptions

These online messages are listed below in numerical order.

# 7001 Invalid supervisor id

The number sent in the supervisor field cannot be found on the record or the Reason:

current status is deactivated or purged.

Action: Verify the supervisor ID. If it is wrong, correct number and resend message. If it

> is correct, contact the system liaison. They will need to add the supervisor ID if it does not exist. If the supervisor's status is deactivated, they will need to activate the supervisor ID. You will need to assign a new supervisor ID if the current one

is set to purge.

# 7002 Invalid supervisor password

Reason: The password sent in the message does not match the password found on the

Transaction Gateway record.

Action: Verify the supervisor password. If it is wrong, correct the password and resend

the message.

# 7003 Invalid supervisor security level

Reason: The security level found in the Transaction Gateway record for the supervisor is

not a level 3 or higher, or the security level is less than that required for the

transaction.

Action: Use another supervisor with a higher security level or maintenance the current

security level for the supervisor.

# 7004 Invalid internal transaction code

Internal transaction code on MICM Record 0151 cannot be found on Table 10 Reason:

(copybook TLW010). Message format does not match format on Table 10.

Action: Correct the internal transaction code on MICM Record 0151 and rebuild

Transaction Gateway tables. If you are on the simulator, verify that you are in

the correct mode for the function you are performing.

# 7006 Transaction input data is invalid

Reason: The transaction is either missing data required to process the transaction or has

extra data not required to process the transaction.

Action: Contact your Operations Department. It will be necessary to look at the message

sent to TLL200. Determine the fields sent and refer to the Interface Guide for the

field matrixes to determine the fields in error.

If you are using the simulator, refer to the *Interface Guide* for the field matrixes to determine the fields in error. Determine which field(s) is required and enter or

delete the data in the fields that are not required.

#### 7008 Invalid teller id

Reason: The teller ID being sent on the transaction or being inquired upon cannot be

found on the Teller Record.

Action: Verify the teller ID. If it is wrong, correct the teller ID and resend the message. If

it is correct, contact the system liaison. They will need to add the teller if it does not exist. If the teller's status is deactivated, then they will need to activate the teller ID. You will need to assign a new teller ID if the current one is set to purge.

#### 7009 Invalid teller password

Reason: Teller password sent in sign return signon transaction does not match the

password on the Teller Record.

Action: Correct the password being sent and resend the message.

#### 7010 Invalid teller security level

Reason: In TLL200:

This message is displayed for one of the following reasons:

- Trace number 0033 deals with the security level of the teller. The security level of the teller is less than the security level of the transaction.
- Trace number 0034 deals with cash status inquiries (internal transaction code 920) on a branch or institution. The teller does not have the supervisor security level of the transaction.
- Trace number 0035 deals with Transaction Gateway maintenance transactions. You need a supervisor security level to perform teller maintenance.

■ Trace number 0036 deals with alert messages. A supervisor security level is required to add alert messages with a priority greater than 6.

Action:

Perform one of the following:

- Correct the teller's security or correct the security level on MICM Record 0151 for the transaction. If you correct MICM, you must rebuild the tables.
- The second, third, and fourth reasons listed above require a supervisor to submit the transaction.

#### 7011 Teller status error

Reason:

The teller status is not the appropriate status to perform the transaction.

#### In TLL200:

- Trace number 0030 occurs when the teller is performing transactions and is not signed on.
- Trace number 0041 occurs when the teller is signing on and the status indicates that the teller is already signed on or temporarily signed off.
- Trace number 0047 occurs on a return signon and the teller's status does not indicate that the teller is temporarily signed off.
- Trace number 0081 occurs when the teller is attempting to sign off and the status does not indicate that the teller is signed on.
- Trace number 0089 occurs when the teller is trying to sign off temporarily and the status indicates the teller is not signed on.
- Trace number 0103 occurs when the password for the teller is being changed but the teller is not signed on.

# In TLL510:

Trace number 0003 indicates that the teller's Cash Record cannot be updated or that the teller cannot balance any cash denominations because the status does not indicate the teller is signed on.

#### In TLL530:

Trace number 0008 indicates that a cash inquiry of a single teller transaction cannot be performed because the teller is not signed on.

Action:

Have the teller sign on or ignore the transaction.

# 7012 Invalid change teller Id

Reason: The teller ID is not found on the Teller Record.

Action: Add the teller.

# 7013 Invalid change teller status

Reason:

In TLL200, trace number 0067 indicates that a re-activated teller transaction is occurring, and that the teller status does not indicate the teller is deactivated.

- Trace number 0070 indicates that the teller's status is purged and the transaction is to purge the teller.
- Trace number 0073 indicates that the transaction is to deactivate the teller and the teller is in a state other than signed off.
- Trace number 0076 is for a delete teller and the status is not signed off or deactivated.

Action:

Research the teller status. If the teller is signed on and you are trying to deactivate for purge, then run TLR120.

### 7014 Duplicate teller id

Reason: An add teller transaction was being performed and the teller ID already exists.

Action: Research the teller IDs. You may want to perform maintenance to change the

name and security level if reusing the teller IDs.

#### 7015 Invalid cashdrawer id

Reason: In TLL200, trace number 0050 indicates that the cash drawer ID in the message

does not match the cash drawer ID on the Teller Record.

All other occurrences indicate that the cash drawer ID cannot be found on the

Cash Record.

Action: Correct the cash drawer ID in the message.

#### 7016 Cashdrawer status error

Reason: In TLL200, the status field on the cash drawer record does not permit the

transaction to be processed. Trace number 0043 (signon transaction) status indicates that it is already assigned to a teller. Trace Number 45 (return signon) indicates that the status is not temporarily signed off. Trace numbers 66 (signoff) and 73 (temporarily signoff) indicate the cash drawer is not assigned to a teller.

Action: Correct the cash drawer ID and resubmit.

#### 7018 Cashdrawer teller id does not match

Reason: In TLL200, trace number 0031 indicates that the cash drawer ID in the message

> does not match the one on the Teller Record. Trace numbers 0054, 0060, 0085, 0093, and 0098 indicate that the teller record and cash drawer records do not

match (signon/signoff transaction set).

Action: Correct the cash drawer ID and resubmit.

#### 7027 Teller record I-O error

Reason: Indicates that an I/O error has occurred on the record such as a failed attempt to

OPEN, READ, WRITE, CLOSE, etc.

Action: Verify that the record is open for use or that it is good by opening the record.

#### 7028 Cash record I-O error

Reason: Indicates that an I/O error has occurred on the record such as a failed attempt to

OPEN, READ, WRITE, CLOSE, etc.

Action: Verify that the record is open for use or that it is good by opening the record.

#### 7029 AM record I-O error

Reason: Indicates that an I/O error has occurred on the record such as a failed attempt to

OPEN, READ, WRITE, CLOSE, etc.

Action: Verify that the record is open for use or that it is good by opening the record.

#### 7031 Transaction record I-O error

Indicates that an I/O error has occurred on the record such as a failed attempt to Reason:

OPEN, READ, WRITE, CLOSE, etc.

Action: Verify that the record is open for use or that it is good by opening the record.

# 7032 Institution record I-O error

Indicates that an I/O error has occurred on the record such as a failed attempt to Reason:

OPEN, READ, WRITE, CLOSE, etc.

Action: Verify that the record is open for use or that it is good by opening the record.

#### 7033 Balance record I-O error

Reason: Indicates that an I/O error has occurred on the record such as a failed attempt to

OPEN, READ, WRITE, CLOSE, etc.

Action: Verify that the record is open for use or that it is good by opening the record.

# 7034 Message record I-O error

Reason: Indicates that an I/O error has occurred on the record such as a failed attempt to

OPEN, READ, WRITE, CLOSE, etc.

Action: Verify that the record is open for use or that it is good by opening the record.

#### 7035 Store Then Forward record I-O error

Reason: Indicates that an I/O error has occurred on the record such as a failed attempt to

OPEN, READ, WRITE, CLOSE, etc.

Action: Verify that the record is open for use or open the record is good by opening the

record.

# 7036 Log alternate key record I-O error

Reason: Indicates that an I/O error has occurred on the record such as a failed attempt to

OPEN, READ, WRITE, CLOSE, etc.

Action: Verify that the record is open for use or that the record is good by opening the

record.

### 7037 Batch feed BTCx file I-O error

Reason: Indicates that an I/O error has occurred on the record such as a failed attempt to

OPEN, READ, WRITE, CLOSE, etc.

Action: Verify that the record is open for use or that it is good by opening the record.

# 7038 Debug file I-O error

Reason: Indicates that an I/O error has occurred on the record such as a failed attempt to

OPEN, READ, WRITE, CLOSE, etc.

Action: Verify that the record is open for use or that it is good by opening the record.

# 7054 Account closed to debit posting

Debit transactions may not be processed for this account; the transaction is Reason:

denied.

Action: If the institution allows, a teller force will process the transaction.

#### 7055 Account closed

Reason: This account has been flagged as closed; the transaction is denied.

Action: If the institution allows, a teller force will process the transaction.

# 7056 Account closed to posting

This account is flagged not to process all debit and credit transactions; the Reason:

transaction is denied.

Action: If the institution allows, a teller force will process the transaction.

#### 7057 Account dormant

This account is dormant; the transaction is denied. Reason:

Action: If the institution allows, a teller force will process the transaction.

# 7058 Employee account

Reason: This account is an employee account; the transaction is denied.

Action: If the institution allows, a teller force will process the transaction.

# 7059 New account transaction is invalid - account already exists

Reason: Account already exists; the new account transaction is denied.

Action: If the institution allows, a teller force will process the transaction.

#### 7060 Invalid branch number

Reason: One of the following has occurred in TLL200:

■ Trace 0048, a temporary signon cannot be performed; the branch number does not match the teller's assigned branch.

■ Trace 0057, a force signon cannot be performed; the branch number does not match the teller's assigned branch.

Action: Correct the branch number and resubmit the transaction.

#### 7062 Funds not available

Reason: Account does not contain sufficient funds to process transaction(s), commonly

known as NSF.

Action: Change the transaction amount so that it is either equal or less than the available

balance, or use teller force to accept the transaction.

#### 7063 Passbook balance does not match

Reason: The balance from the passbook sent in the message does not match the passbook

balance on the Balance Record.

Action: Verify the passbook balance and change the passbook balance in the transaction.

# 7064 Communications area not present

Reason: Linkage between programs is not functioning properly.

Action: Verify if the calling program is sending the data area and contact your

Transaction Gateway programmer for assistance.

# 7065 Invalid comm return for program

Reason: Usually indicates an invalid PF key was used.

Action: Use the correct PF key.

### 7066 Invalid function for file processing

Reason: The type of transaction being performed does not match the format being used,

e.g., a 1410 internal transaction code cannot be processed from a Transaction Gateway Signon/Signoff panel; only Format 01 internal transaction codes are

accepted.

Action: Verify what transaction is being performed and make sure it matches the Format

being used.

#### 7076 Incorrect data on overflow file

Reason: The Not-booked Transaction Type Code is incorrect.

Action: Check MICM Record 0152 to make sure the type code for the transaction is valid.

If it is valid, contact your Transaction Gateway programmer.

# 7079 Signon cash amount not in balance with cash drawer starting cash

Reason: At signon, the starting cash value that the teller entered does not match the value

on the Cash Record.

Action: Correct the starting cash amount or have a supervisor override the signon

transaction.

# 7080 Sign-off cash amount not in balance with cash drawer ending cash

Reason: At signoff, the ending cash value that the teller entered does not match the value

on the Cash Record.

Action: Correct the ending cash amount or get a supervisor to override the signoff

transaction.

# 7081 Transaction amount missing in format 02 record - customer monetary transaction

Reason: The transaction is rejected because the transaction amount is missing in the

message.

Action: Enter the transaction amount and resend message. Refer to the Standard

Messages chapter of the *Procedures Guide* for the Format 02 Transaction Codes.

#### 7084 Transaction amount is not allowed

Reason: The transaction amount is not allowed for the type of processing being

performed, i.e., a 1410 internal transaction code does not allow a transaction

amount to be entered when performing an inquiry on an account.

Action: Remove the transaction amount and resend message. Refer to the Standard

Messages chapter of the *Procedures Guide* for the Format 02 Transaction Codes.

# 7085 Account closed to credit posting

Reason: Deposits application has closed the account to all credit posting; the transaction is

denied.

Action: If the institution allows, a teller force will process the transaction.

# 7087 Invalid pay-by code

Reason: The pay-by code is invalid for the Installment Loans application.

Action: Correct pay-by code and resend message.

# 7088 Invalid payoff code

Reason: The payoff code is invalid for the Installment Loans application.

Action: Correct payoff code and resend message.

#### 7089 Invalid effective date

Reason: The effective date of the transaction is invalid for closing withdrawals.

Action: If backdating is required, use teller force.

#### 7093 Unbooked transactions do not exist

Reason: A not-booked inquiry transaction cannot be processed because of no unbooked

items for the account.

Action: None.

# 7094 This is not a passbook account

Cannot update the passbook balance because the account is not a passbook. Reason:

Action: None.

# 7095 A passbook is invalid for this transaction.

Reason: A passbook cannot be present for the type of transaction being performed.

Action: When submitting the message, do not indicate that the passbook is present for

the transaction.

# 7097 Branch number in message does not agree with the branch number in the teller

During the authorization of transactions when the host is not available, this abort Reason:

occurs if the branch number does not match the teller's assigned branch.

Action: None.

# 7098 Account is blocked from any posting. Overrides or forces are not permitted

Reason: Deposits application has blocked the account from all posting activities.

Action: None.

# 7099 The link to the next program has failed

Reason: Linkage has failed between programs.

Action: Contact your programmer. Either the link module in program is missing or the

program is missing from the Program Processing Table (PPT).

# 7101 Correction branch disagrees with log

Reason: While performing the alternate correction routine, the correction branch differs

from the branch number on the log.

Action: Correct the branch number and resend the message.

# 7102 Correction transaction code disagrees with log

Reason: While performing the alternate correction routine, the correction transaction code

differs from the transaction code on the log.

Action: Correct the transaction code and resend the message.

# 7105 Correction application & account disagrees with log

Reason: While performing the alternate correction routine, the correction application code

and account number differs from the application code and account number on

the log.

Action: Correct the application code and account number and resend message.

#### 7112 Error on ENQ

Reason: The CICS ENQ command failed.

Action: Contact your Transaction Gateway programmer for assistance.

# 7140 Data fields are missing or in error

Reason: The transaction is either missing data required to process the transaction or has

extra data that is not required to process the transaction.

Action: Contact your Operations Department. It will be necessary to look at the message

sent to TLL200. Determine the fields sent and refer to the Interface Guide. Look

for field matrixes to determine the fields in error.

If you are using the simulator, consult the *Interface Guide* for the field matrixes to determine the fields in error. Determine which fields are required and enter or

delete the data in the fields that are not required.

# 7141 Format error in internal message

Reason: In TLL200:

■ Trace 0003 occurs when the message being sent is not a valid internal

message.

■ Trace 0003 occurs when the format of the message being sent is not a valid

internal message format.

Action: Correct message being sent and resubmit transaction.

# 7142 Invalid external application code

Reason: While performing the cross-banking routine, the transaction is denied because

the external application code is not found on institution zero.

Action: Correct the external application code and resubmit transaction.

# 7145 Account not on file. Please copy the program name

Reason: The account is not found on the Balance Record and there is no indication that it

is a new account.

Action: Verify the account number. A teller force or supervisor override is not allowed.

# 7146 Program can not find any simulator table records in temp storage

Reason: This error occurs when attempting to read the simulator temporary storage for

institution zero. It has received a not found condition.

Action: Use TLOP and build the simulator temporary storage table.

# 7147 Read error on simulator table in temporary storage

Reason: This error occurs when attempting to read the simulator temporary storage

record for institution zero. It has received a condition other than not found.

Action: Use TLOP and build simulator temporary storage table. If it fails again, contact

your system software programmer to help determine the error. Check the tables

build procedure.

# 7148 No log record found with options specified

Reason: When performing a log lookup, one of the fields in the key is incorrect.

Action: Correct the fields and resubmit transaction.

### 7149 Invalid institution number

Reason: When adding a teller, this abort occurs if the institution number that the teller is

being assigned to is invalid.

Action: Correct institution number and resubmit transaction.

# 7150 Rewrite error on simulator table in temporary storage

Reason: This error occurs when attempting to update the simulator temporary storage

record; an exceptional condition has occurred.

Action: Turn on CEDF in CICS to determine which exceptional condition has occurred

and act accordingly on the problem resolution.

# 7151 Institution and/or appl not found on simulator table

Reason: Error occurs when performing store-and-forward processing for all institutions

and an invalid institution number is incurred

Action: Check MICM Record 0150 for the institution and use TLOP to rebuild tables.

# 7156 Read error on the institution temporary storage table

Reason: This error occurs when attempting to read the institution temporary storage

record and a condition other than not found is incurred; the institution

processing options are missing in the temporary storage queue.

Action: Use TLOP and build the institution temporary storage table.

#### 7157 Rewrite error on the institution table in temporary storage

Reason: This error occurs when attempting to update the institution temporary storage

record; an exceptional condition has occurred.

Action: Turn on CEDF in CICS to determine which exceptional condition has occurred

and act accordingly on the problem resolution.

# 7159 Get equal error

Reason: A file I/O error has occurred.

Action: Check the file status to aid in determining the error. If the problem is still

undetermined, then contact your Transaction Gateway programmer.

### 7160 Get next error

Reason: A file I/O error has occurred.

Action: Check the file status to aid in determining the error. If problem is still

undetermined, then contact your Transaction Gateway programmer.

# 7161 Forward has begun for this application

Reason: Indicates that the store-and-forward processing has begun for a specific

application.

Action: None.

# 7162 Forward complete for this application

Reason: Indicates that the store-and-forward processing is completed for a specific

application.

Action: None.

# 7164 Forward completed. No records were process for this institution

Reason: Indicates that the store-and-forward processing has completed a certain number

of records for the specified institution and application.

Action: None.

#### 7165 MICM 124 entries exceeded

Reason: The number of entries has exceeded the table size.

Action: Check the actual number of MICM 0124 records needed. You may have to

modify the program.

#### 7166 TSQ table maximum exceeded

Reason: When building tables, the maximum number of entries has exceeded the table

size.

Action: Verify the number of records actually needed. If necessary, the program may

need some modifications.

# 7167 Stop payment on file. Teller force is required

Reason: Deposits application has entered a stop payment item on the account. All debit

transactions will be flagged.

Action: Verify that the number of the check does not match the item for stop pay. If the

institution allows, a teller force will process the transaction.

# 7168 Caution on file. Teller force is required

Reason: Deposits application has issued a caution against the account. All transactions

will be flagged.

Action: If the institution allows, a teller force will process the transaction.

# 7169 The application file is closed. Forwarding can not continue

Reason: An application became unavailable during the forwarding process.

Action: If you are able to, open the file or leave in storing mode.

# 7170 Temporary storage record missing

Reason: Institution control record is missing.

Action: Verify MICM Record 0150, rebuild tables using the TLOP transaction, and verify

the record for the institution exists on TLBNK.

# 7171 Passbook missing

Reason: Occurs when updating a passbook account and the passbook is missing.

Action: Ignore the transaction; can only be completed while the passbook is present.

# 7172 Batch feed completed

Reason: Indicates that batch feed processing has been completed.

Action: None.

# 7173 Storing mode is not active for this application

Reason: Occurs when forwarding all institution-specific application and the application

selected is not in the storing mode.

Action: Correct the application number and resubmit transaction.

# 7174 Forward processing complete for this institution

Reason: Indicates that the store-and-forward processing is complete for the specified

institution.

Action: None.

#### 7175 MICM 0245 accumulator error

Region: Invalid accumulator used.

Action: Check MICM Record 0245. If it is valid on this record, contact your Transaction

Gateway programmer.

# 7176 New account not found on application master

Reason: A 'Y' in the MICM Record 0150 Open Deposit field requires the new account to

be found on the application's master record. Transactions will be rejected if not

found.

Action: Open the account on the Deposits record and backdate the opening deposit

transaction if necessary.

# 7177 MICM 0245 entries exceeded

Reason: The number of entries has exceeded the table size.

Action: Check the actual number of MICM Record 0245 needed. If necessary, you may

have to modify the program.

# 7178 MICM 0245 record missing for settlement option

Reason: The Settlement Option is selected, but a MICM Record 0245 is not found.

Action: Either change the settlement option or add another MICM Record 0245. In either

case, rebuild tables afterwards using TLOP.

# 7179 Settlement record I-O error

Reason: Indicates that an I/O error has occurred on the record such as a failed attempt to

OPEN, READ, WRITE, CLOSE, etc.

Action: Verify that the record is open for use or that it is good by opening the record.

# 7180 PM log record I-O error

Reason: Indicates that an I/O error has occurred on the record such as a failed attempt to

OPEN, READ, WRITE, CLOSE, etc.

Action: Verify that the record is open for use or that it is good by opening the record.

#### 7181 PM settlement record I-O error

Reason: Indicates that an I/O error has occurred on the record such as a failed attempt to

OPEN, READ, WRITE, CLOSE, etc.

Action: Verify that the record is open for use or that it is good by opening the record.

# 7182 PM log alternate key record I-O error

Reason: Indicates that an I/O error has occurred on the record such as a failed attempt to

OPEN, READ, WRITE, CLOSE, etc.

Action: Verify that the record is open for use or that it is good by opening the record.

# 7183 Next day transaction record I-O error

Reason: Indicates that an I/O error has occurred on the record such as a failed attempt to

OPEN, READ, WRITE, CLOSE, etc.

Action: Verify that the record is open for use or that it is good by opening the record.

# 7184 MICM 0245 type code error

Reason: The type code is invalid; it is greater than nine.

Action: Check MICM Record 0245. If the type code is valid on this record, then contact

your Transaction Gateway programmer.

# 7185 An error occurred in the application module for closing balance

Reason: The application module has rejected the transaction.

Action: From the error message displayed, get the application module name and the

trace number (last four digits of the message) and edit the program to determine

what condition caused the abort.

# 7186 Closing withdrawal transaction failed because of backdated transaction

Reason: A closing withdrawal transaction cannot be processed when there are backdated

transactions tied to the account.

Action: None. Closing withdrawal transactions cannot be processed until all transactions

attached to the account have cleared.

### 7187 Closing balance inquiry failed -- application master file unavailable.

Reason: An attempt to access the closing balance on an account cannot be performed

unless the application's master record is available.

Action: None.

#### 7188 The effective date is invalid -- the item is backdated

Reason: Occurs when the effective date of the transaction is less than the institution's

current processing date.

Action: Change the effective date to fall within the valid range or modify the parameters

on MICM Record 0150 and rebuild tables.

#### 7189 Passbook transactions are not allowed during refresh processing

Reason: An attempt to process passbook transactions occurred during refresh processing.

Action: None.

#### 7190 Get error

Reason: A file I/O error has occurred.

Action: Check the file status to aid in determining the error. If the problem is still

undetermined, then contact your Transaction Gateway programmer.

### 7191 CICS retrieve error

Reason: The CICS RETRIEVE command failed.

Action: Contact our Transaction Gateway programmer for assistance.

# 7192 Invalid function key entered

Reason: The PF key entered is not valid.

Action: Enter a valid PF key.

# 7193 Program not properly started. Start command must 'start with data' (SD)

Reason: The CICS START command failed because the WS-START-CODE is not equal to

'SD'.

Action: Contact our Transaction Gateway programmer for assistance.

# 7195 TLL050 is currently feeding transactions from this file.

Reason: TLL050 is currently feeding transactions from the Batch Feed File.

Action: None.

# 7196 Entry 'TEL' not found in CGSIALST table.

Reason: The entry 'TEL' not found in CGSIALST table.

Action: Contact our Transaction Gateway programmer for assistance.

# 7197 A new password is required.

Reason: A new password must be entered.

Action: Enter a new password.

# 7198 The Teller ID was revoked.

Regson: The teller ID was revoked.

Action: Enter a valid teller ID.

# 7199 The Teller ID is not known to the external security manager.

Reason: The teller ID is not valid.

Action: Enter a valid teller ID.

# 7201 The new password is not acceptable

The new password is invalid. Reason:

Action: Enter a valid new password.

# 7202 External security manager error. Look at TLLOG for information

Reason: The external security manager detected an error.

Look at the TLLOG transaction for more information. Action:

# 7203 File Open/Close/Set/Inquire I/O error

Reason: An error occurred while opening, closing, setting or inquiring on a file for read

only or update.

Action: Verify the file is available for online processing.

#### 7500 I-O error on settlement record

Reason: Indicates that an I/O error has occurred on the record such as a failed attempt to

OPEN, READ, WRITE, CLOSE, etc.

Action: Verify that the record is open for use or that it is good by opening the record.

# 7511 invalid tran amt accumulator for settlement processing

Reason: Occurs when an internal transaction code is entered that requires a transaction

amount but the transaction amount accumulator specified on MICM Record 0151

is missing.

Enter the accumulator number on the MICM Record 0151 and rebuild the tables Action:

using TLOP.

# 7512 Invalid cash amt accumulator for settlement processing

Reason: Occurs when either buying or selling cash and the cash amount accumulator

specified on MICM Record 0151 is missing.

Action: Enter the accumulator number on MICM Record 0151 and rebuild tables using

TLOP.

## 7999 Master file is unavailable for process because it is in the storing mode

Reason: Informs the transient dataset of a change in status on the master file. Master file

is unavailable for processing because it is in the storing mode.

Action: Look in the log under the JCL to determine the problem.

October 2005 Online Messages 8-23

#### Chapter

# 9

# Reports

This chapter contains descriptions for all reports produced by Transaction Gateway. The types of reports generated during Transaction Gateway processing are:

- Daily scheduled and by programs run during daily processing
- Monthly scheduled and produced by programs run during monthly processing
- Request generated as needed

# **Report Format**

The reports printed on stock paper have a standard two-line title for report identification. The first line of this title contains the date on which the report was produced, the institution number and name, and the page number. The second line contains the system name, the report title, and the report number. This standard title is followed by the report headings, detail information and, when printed, report totals.

**Note:** All reports for the system can be produced depending on the option(s) selected in MICM. The report number prefix is the application number assigned to this application in MICM. **05-nnn** denotes a Transaction Gateway report.

# **Report Descriptions**

The following information is included in each report description.

**Purpose** Describes the information included on the report.

**Program** Names the program that produces the report.

**Sample** Shows a report sample.

**Heading Descriptions** Provides a detailed explanation of each report heading.

# **Daily Reports**

Daily reports are scheduled and produced by the programs run during daily processing.

## 05-001 - System Transaction Log

Purpose This two-up report prints all transactions that occurred in the system during the

current processing day. The system transaction log is sorted by date and time.

80	-05-26	104			000	90 INF	OPOINT	Institu	ution I	Zero						PAGE	1

05-001 - System Transaction Log

Time Transaction Time. Format is HHMM (24-hour clock).

Institution Number.

Teller ID.

Refno Transaction Reference Number.

Term Terminal Identification.

Etc External Transaction Code.

Rv Transaction Reversal

RtCd Transaction Return Code.

Supvr Supervisor ID.

Ovr Supervisor Transaction Override.

Force Code. Identifies whether this transaction was forced.

O Offline Code. Identifies whether this transaction occurred while in an offline

mode.

Proc Date of Transaction.

**Totals** 

Nbr Transactions Number of Transactions. Total number of transactions that occurred in the

system.

## 05-002/05-003/05-004 - Transaction Logs

Purpose These reports are identical in content; they can differ only in how they are sorted

(according to the options specified in MICM). All reports are sorted by institution, and institution totals are kept. Optional sorts are by holding

company, region, branch, and teller.

05-005 - Control Report

Time Transaction Time. Format is HHMM (24-hour clock).

Brn Branch Number.

Teller ID.

Refno Transaction Reference Number.

Term Terminal Identification.

ETC External Transaction Code.

Rev Transaction Reversal.

RtCd Transaction Return Code.

Suprv Supervisor ID.

Ovr Supervisor Transaction Override.

Force Code. Identifies whether this transaction was forced.

O Offline code, which identifies whether this transaction occurred while in an

offline mode.

Proc Transaction Date.

Reason Reason a transaction is on this report.

Error Message Error message corresponding to responding to this transaction, if

applicable. This message can be up to three lines long and is taken from MICM.

## 05-007 - Transaction Recap Report

Purpose This report is sorted by institution, branch, and external transaction code.

External transaction level totals are kept.

Program TLD350 – Daily Report Print

05-007 - Transaction Recap Report

#### **Heading Descriptions**

ETC External Transaction Code.

ITC Internal Transaction Code.

Trns Total Number of External Transactions.

Transaction Amount. Total dollar amount per external transaction.

Revs Reversals. Total number of reversals per external transaction.

Rev Amount Reversal Amount. Total dollar amount of reversals per external transaction

Net Amount Net Amount. Transaction amount minus reversal amount.

#### **Totals**

Totals

Totals. Totals print at the end of the report for the following:

- Number of transactions
- Transaction amounts
- Number of reversals
- Reversal amounts
- Net amounts

## 05-011/05-012/05-013 - Account Activity Logs

**Purpose** 

These reports log activity in dormant accounts, closed accounts, and employee accounts, respectively. They have the same content as the transaction logs; they can be sorted differently from each other according to the options specified in MICM. All reports are sorted by institution, and institution level totals are kept. Optional sorts are by holding company, region, branch, and teller.

05-013 - Employee Account Activity Log

Time Transaction Time. Format is HHMM (24-hour clock).

Brn Branch Number.

Teller ID.

Refno Transaction Reference Number.

Terminal Identification.

ETC External Transaction Code.

Rev Transaction Reversal.

RtCd Transaction Return Code.

Supvr Supervisor ID.

Ovr Supervisor Transaction Override.

Force Code. Identifies whether this transaction was forced.

O Offline Code. Identifies whether this transaction occurred while in an offline

mode.

Proc Transaction Date.

Cash Amount Cash Amount.

Check Amount Check Amount.

Check Nbr Check's Serial Number.

Other Amount Other Amount.

AP Application Number.

Account Number Account Number.

Available Balance Available Balance.

**Totals** 

Nbr Transactions Number of Transactions. Total number of transactions that occurred, sorted by

holding company, institution, region, branch, and/or teller.

## 05-014 - Teller Daily Activity Recap

Purpose This report gives an accounting of the teller activity for a given day, showing

signon and signoff time, transactions processed, standard time to process the transactions, and totals. It is sorted by institution and teller, with totals for each.

05-014 - Teller Daily Activity Recap

(Teller Name) Teller's Name. Name from the Teller Record. If the teller's name is not available,

NO TELLER NAME AVAILABLE prints.

Teller ID.

Signon Time for Teller. Format is HHMM.

Signoff Time Signoff Time for Teller. Format is HHMM.

Number of Temp

Signoffs

Number of Temporary Signoffs. Number of times a teller temporarily signs off

during the day.

Gross Teller Time Gross time the teller was signed on. Format is HHMMSS.

Net Teller Time Net time the teller was signed on. Format is HHMMSS.

Total Standard Tran

Time

Total Standard Transaction Time. Total amount of standard time it took to

process transactions for the day.

Percent Efficiency Percentage of efficiency in processing transactions. (Total

standard time divided by net teller time).

Hour of Day Hour of Day. Hour reported, using a 24-hour clock.

Nbr Tran Number of Transactions. Number of transactions handled in the reported hour.

Std Time Standard Amount of Time. Standard amount of time to process transactions in

the reported hour. Format is HHMM.

Brn Branch Teller. Branch teller was signed on to during the reported hour.

#### **Total Cash Amount**

Cash In Cash In. Total amount of cash taken in by the teller/branch for the day

Cash Out. Total amount of cash given out by the teller/branch for the day

#### **Total Nbr of Transactions**

Tot Deposits Total Deposits. Total number of deposits handled by the teller/branch for the

day.

Total Withdrawals. Total number of withdrawals handled by the teller/branch

for the day.

Total Inquiries. Total number of inquiries handled by the teller/branch for the

day.

Tot Booked Nobooks Total Booked Nobooks. Total number of not-booked transactions handled by the

teller/branch for the day.

Off Lines Off Lines. Total number of offline transactions handled by the teller/branch for

the day.

Forced Transactions. Total number of forced transactions handled by the

teller/branch for the day.

Overrides Override Transactions. Total number of override transactions handled by the

teller/branch for the day.

## 05-015 - Branch Daily Activity Recap

Purpose This report is an accounting of the branch activity for a given day, showing

sign-on and sign-off time, transactions processed, standard time to process the transactions, and totals. The report is printed by institution and branch, with

totals for each.

05-015 - Branch Daily Activity Recap

Branch Number. Branch number for this report.

Totals Branch Totals.

Number of Tellers

Included

Number of Tellers Included. Number of tellers included in the report.

Gross Teller Time Gross amount of time the teller was signed on. Format is

HHMMSS.

Net Teller Time Net amount of time the teller was signed on. Format is

HHMMSS.

Total Standard Tran

Time

Total Standard Transaction Time. Total amount of standard time it took to

process transactions for the day.

Percent Efficiency Percent of Efficiency. Percentage of efficiency in processing transactions. (Total

standard time divided by net teller time.)

Hour of Day Hour of Day. Hour reported, using a 24-hour clock.

Nbr Tran Number of Transactions. Number of transactions handled in the reported hour.

Std Time Standard Time. Standard time to process transactions in the reported hour.

Format is HHMM.

#### **Total Cash Amount**

Cash In. Total amount of cash taken in by the teller/branch for the day

Cash Out Cash Out. Total amount of cash given out by the teller/branch for the day

#### **Total Nbr of Transactions**

Tot Deposits Total Deposits. Total number of deposits handled by the teller/branch for the

day.

Total Withdrawals. Total number of withdrawals handled by the teller/branch

for the day.

Total Inquiries Total number of inquiries handled by the teller/branch for the

day.

Tot Booked Nobooks Total Booked Nobooks. Total number of not-booked transactions handled by the

teller/branch for the day.

Off Lines Off Lines. Total number of offline transactions handled by the teller/branch for

the day.

Forced Transactions. Total number of forced transactions handled by the

teller/branch for the day.

Overrides Override Transactions. Total number of override transactions handled by the

teller/branch for the day.

## 05-021/05-022/05-023 -Transaction Journals

Purpose These reports are identical in content and differ only in how they are sorted

(according to the options specified in MICM). All reports are sorted by institution, and institution level totals are kept. Optional sorts are by holding

company, region, branch, and teller.

05-023 - Transaction Journal Three

Date Date of this transaction.

Time Transaction Time. Format is HHMM (24-hour clock).

Brn Branch Number.

Teller ID.

Refno Transaction Reference Number.

Term Terminal Identification.

ETC External Transaction Code.

Rev Transaction Reversal.

RtCd Transaction Return Code.

Supervisor ID.

Ovr Supervisor Transaction Override.

F Force Code. Identifies whether this transaction was forced.

O Offline Code. Identifies whether this transaction occurred while in an offline

mode.

Cash Amount Cash Amount.

Check Amount Check Amount.

Check Nbr Check's Serial Number.

Other Amount Other Amount.

AP Application Number.

Account Number Account Number.

Available Balance Available Balance.

(Error Message) Error Message. If applicable, an error message corresponding to the transaction

prints on the line following the transaction data. This message can be up to three

lines long; it is taken from MICM.

#### **Totals**

Nbr Transactions

Number of Transactions. Total number of transactions that occurred, sorted by holding company, institution, region, branch, and/or teller.

## 05-024/05-025/05-026 - Cash Journals

Purpose

These reports are identical in content and differ only in how they are sorted (according to the options specified in MICM). All reports are sorted by institution, and institution level totals are kept. Optional sorts are by holding company, region, branch, and teller.

05-029 - Hold Journal Three

Date. Date of this transaction.

Time Transaction Time. Format is HHMM (24-hour clock).

Brn Branch Number.

Teller ID.

Refno Transaction Reference Number.

ETC External Transaction Code.

Rev Transaction Reversal.

Supvr Supervisor ID.

Ovr Supervisor Transaction Override.

Force Code. Identifies whether this transaction was forced.

O Offline Code. Identifies whether this transaction occurred while in an offline

mode.

Cash Amount Cash Amount.

Check Amount Check Amount.

Hold Amount Hold Amount.

Days Number of Hold Days.

AP Application Number.

Account Number Account Number.

Available Balance Available Balance.

**Totals** 

Holds. Total Number of Holds.

Hold Reversals. Total number of hold reversals.

### 05-030/05-031/05-032 - Check Journals

Purpose These reports print check transactions. They are identical in content and differ

only in how they are sorted (according to the options specified in MICM). All reports are sorted by institution, and institution level totals are kept. Optional sorts are by holding company, region, branch, and teller.

### 05-033/05-034/05-035 - Exception Reports

Purpose These reports are identical in content and differ only in how they are sorted

(according to the options specified in MICM). All reports are sorted by institution, and institution level totals are kept. Optional sorts are by holding

company, region, branch, and teller.

05-041 - Trust Check Journal Three

Date. Date of this transaction.

Brn Branch Number.

Teller ID.

Refno Transaction Reference Number.

ETC External Transaction Code.

Rev Transaction Reversal.

RtCd Transaction Return Code.

Supvr Supervisor ID.

Ovr Supervisor Transaction Override.

Force Code. Identifies whether this transaction was forced.

O Offline Code. Identifies whether this transaction occurred while in an offline

mode.

Cash Amount Cash Amount.

Check Amount Check Amount.

Check's Serial Number.

Other Amount Other Amount.

AP Application Number.

Account Number Account Number.

Available Balance Available Balance.

**Totals** 

Trust Check Transactions. Total number of trust check transactions that occurred,

Transactions sorted by holding company, institution, region, branch, and/or teller.

## 05-042/05-043/05-044 - Gift Check Journals

Purpose These reports are identical in content and differ only in how they are sorted

(according to the options specified in MICM). All reports are sorted by institution with institution level totals. Optional sorts are by holding company,

region, branch, and teller.

05-050 - Money Order Journal Three

Date Date of this transaction.

Brn Branch Number.

Teller ID.

Refno Transaction Reference Number.

ETC External Transaction Code.

Rev Transaction Reversal.

RtCd Transaction Return Code.

Supervisor ID.

Ovr Supervisor Transaction Override.

Force Code. Identifies whether this transaction was forced.

O Offline Code. Identifies whether this transaction occurred while in an offline

mode.

Cash Amount Cash Amount.

Check Amount Check Amount.

Check Nbr Check's Serial Number.

Other Amount Other Amount.

AP Application Number.

Account Number Account Number.

Available Balance Available Balance.

**Totals** 

Money Order Total number of money order transactions that occurred, sorted by holding

Transactions company, institution, region, branch, and/or teller.

### 05-051/05-052/05-053 - Savings Bonds Journals

Purpose These reports are identical in content and differ only in how they are sorted

(according to the options specified in MICM). All reports are sorted by institution, and institution level totals are kept. Optional sorts are by holding

company, region, branch, and teller.

#### **Totals**

Savings Bonds Transactions Savings Bonds Transactions. Total number of savings bonds transactions that occurred, sorted by holding company, institution, region, branch, and/or teller.

### 05-054/05-055/05-056 - Food Stamps Journals

Purpose These reports are identical in content and differ only in how they are sorted

(according to the options specified in MICM). All reports are sorted by institution, and institution level totals are kept. Optional sorts are by holding

company, region, branch, and teller.

### 05-159 - Application Extract Summary

Purpose The application extract summary lists the total amount, by application, for the

transactions extracted and the number of records written to the output files by institution. A final total prints giving the total amount and record count for extracted transactions. If corrections/reversals are encountered, they are printed

but not extracted.

Program TLD900 – Log Record Extract

Totals for Institution. Total transaction amounts for this institution.

### 05-370 - Due To Detailed Report

Purpose This report shows all the transactions that have occurred at the institution for

accounts on other institutions. A subtotal by transaction code is produced as well as the total debits and credits for each institution. This report is used with report 05-369 (Due From Detailed Report). On each detail line, the institution, branch, and teller ID where the transaction took place is printed. The institution, application code, and account number is printed. The reference number and transaction code is printed along with the transaction amount under the

appropriate debit-credit column.

Transaction Information.

Debit Amount Dollar Amount of the Transaction.

Credit Amount Dollar Amount of the Transaction.

Totals for External Transaction Code. Total transaction amounts for this

transaction.

Totals for Institution. Total transaction amounts for this institution.

### 05-800 - File Backup

Purpose This report lists the number of Transaction Gateway records from the permanent

and sequential files that were backed up from disk to tape by the institution. The totals column shows the total number of records in each file that were backed up

for all institutions.

Program TLD800 – File Backup

05-902 - Institution Control Record Update

### **Heading Descriptions**

Institution Number.

Institution Name.

Last Date Processed Last Processing Date.

Next Sched Proc Date Next Scheduled Processing Date.

Next Actual Proc Date Next Actual Processing Date.

WF Week Process Flag. Identifies the first or last processing day of the week. Valid

entries are:

**F** First processing day of the week.

L Last processing day of the week.

**B** Both the first and last processing day of the week.

MF Month Process Flag. Identifies the first or last processing day of the month.

Valid entries are:

**F** First processing day of the month.

L Last processing day of the month.

**B** Both the first and last processing day of the month.

Process 1234567

Processing Day of Week. Days of the week, Sunday (1) through Saturday (7), on which processing does or does not occur, depending on the codes entered in these seven positions. Valid entries are:

- **b** Open and processing.
- C Closed, no processing.
- N Open, no processing.

Dow

Current Day of Week. Valid entries are:

- 1 Sunday.
- 2 Monday.
- 3 Tuesday.
- 4 Wednesday.
- 5 Thursday.
- 6 Friday.
- 7 Saturday.

PO

Process Option Code. Valid entry is **B**. This system processes before, never after, a holiday.

SO

Institution Selected Code. Indicates whether to process an institution. Valid entries are:

- **E** Institution not selected for processing.
- **P** Process institution this run.
- **S** Institution waiting to be processed.

# **Monthly Reports**

Monthly reports are scheduled and produced by programs that are run during monthly processing.

### 05-161/05-162 - Monthly Activity Recaps

**Purpose** 

These reports are an accounting of teller/branch activity for a month. They are printed by institution and teller/branch with totals for each.

05-162 - Branch Monthly Activity Recap

# **Heading Descriptions**

Teller/Branch Totals Institution's Teller/Branch Number. Teller/Branch number for this report.

Hour of Day Hour reported (using a 24-hour clock).

Nbr Tran Transaction Number. Number of transactions handled in the reported hour.

Std Time Standard Time. Standard time to process transactions in the reported hour.

Format is HHMM.

Number of Tellers

Included

Number of Tellers. Number of tellers included for this branch. (Shows on branch

recap only.)

Gross Teller Time Gross time the teller was signed on. Format is HHMMSS.

Net Teller Time Net time the teller was signed on. Format is HHMMSS. (Gross

minus temporary sign-off equals net).

Total Standard Tran

Time

Total Standard Transaction Time. Total amount of standard time it took to

process transactions for the day.

Percent Efficiency Percent Efficiency Percentage of efficiency in processing transactions. (Total

standard time divided by net teller time).

#### **Total Cash Amount**

Cash In Cash In. Total cash taken in by the teller/branch for the day.

Cash Out Cash Out. Total cash given out by the teller/branch for the day.

#### **Total Nbr of Transactions**

Total Deposits. Total deposits handled by the teller/branch for the day.

Total Withdrawals. Total withdrawals handled by the teller/branch for the day.

Total Inquiries. Total number of account and balance inquiry transactions for the

day.

Tot Booked Nobooks Total Booked Nobooks. Total number of passbook updating transactions for the

day.

Off Lines Off Lines. Total offline transactions handled by the teller/branch for the day.

Forced Forced Transactions. Total forced transactions handled by the teller/branch for

the day.

Overrides Override Transactions. Total override transactions handled by the teller/branch

for the day.

# **Request Reports**

Request reports contain information that is needed on an infrequent or irregular basis; they are scheduled and produced as required.

### 05-200 - Automated Clearing House Transactions

Purpose This report shows items from the ACH File that were used to create the Batch

Feed File (TLBTCH). Rejected transactions show DROPPED on the detail line. The total records on the ACH File are printed and are identified by the Batch Total heading. The program also accumulates totals, which are printed at the

same time and are identified by the Accum Total heading.

05-200 - Automated Clearing House Transactions

# **Heading Descriptions**

The following headings print at the top of each run.

Immediate

**Destination Number** 

Immediate Destination Number. Routing and transit number of the Depository

Financial Institution (DFI) receiving the transaction file.

Immediate Origin

Number

Immediate Origin Number. Routing and transit number of the Depository

Financial Institution (DFI) originating the transaction file.

Immediate Destination Name Immediate Destination Name. Name of the Depository Financial Institution

(DFI) receiving the file.

Immediate Origin

Name

Immediate Origin Name. Name of the Automated Clearing House (ACH)

originating the transaction file.

Transmission Date Transmission Date. Date the transaction file was transmitted.

File ID Modifier File Identification Modifier. Modifier used for identifying multiple files created

on the same date.

Transmission Time Transmission Time. Time the transaction file was transmitted.

Reference Code Reference Code. Information reserved for the originator.

The following headings print for each batch. Dashed lines print between batches.

SCC Company Name Originating Company's Name.

Discretionary Data Discretionary Data. Data significant only to the originator.

Identification Number. Identification number assigned to the originator.

Entry Class Code. Code used to further identify the transaction file involved in

the batch.

Description Description of the entry's purpose.

E-Date Effective Date.

D-Date Descriptive Date.

Status Code Status Code. Identifies the originating Depository Financial Institution (DFI).

See the ACH rules for values.

Transit Routing Transit Routing. Transit and routing number of the batch of transaction files.

Batch Sequence Number.

Transaction Code.

Receiving DFI T/R Receiving Depository Financial Institution's (DFI) Routing and Transit Number.

DFI Account Number Depository Financial Institution's Account Number.

Amount Transaction Amount.

Individual ID Individual Identification. Identification of the individual to whom the entry was

directed.

Individual Name Individual Name. Name of the individual to whom the entry was directed.

DD Discretionary Data.

Trace Number Trace Number. Trace number that identifies the entry.

Sequence Record's Sequence Number.

**Note:** If DROPPED appears on the detail line, the record was not written to the

batch feed file.

Batch Totals Entry

Count

Batch Totals Entry Count. Totals from the ACH file. Includes Debit Amount and

Credit Amount.

Accum Totals Entry

Count

Accumulated Totals Entry Count. Totals accumulated by the program. Includes

Debit Amount and Credit Amount.

# 05-210 - Batch Feed Report

Purpose This report summarizes the transactions that were fed to Transaction Gateway.

Both accepted and rejected transactions are included in the totals.

05-900 - Teller Record Purge

# **Heading Descriptions**

Sign-on

Date Of Teller Last Sign-on. Date the teller lasted signed on to Transaction Gateway.

Name Teller Name.

Branch Branch Last branch the teller signed on with.

Status Status Current status of the teller at the time the record was deleted.

ATM Code for the Teller.

Add Date. Date the teller was added to the system.

Delete Date Delete Date. Date the teller was flagged to be deleted.

Last Sign-on Date. Date the teller last signed on.

Institution Totals.

# 05-910 - Balance Record Refresh

**Purpose** 

This report prints information extracted from the following records:

- Deposits Demand Deposit Master Record
- Savings Master Record
- Credit Line Master Record
- Time Investment Master Record
- Time Investment Reports Record
- User files that are subsequently used in Transaction Gateway

Passbook transactions print on the second line of the detail for that transaction.

You can print this report for all institutions and applications or for a specific institution and/or application.

**Note:** This report can be produced by both programs TLC100 and TLD100.

Program

TLC100 - Balance and Not Booked Transaction Records Conversion

TLD100 - Balance Record Refresh

С	Caution Code. Valid entries are:  • No caution.  • Account has cautions.

F

O Overdraft Credit Code. Defines the source of funds for automatic transfers when

overdrafts occur. Valid entries are:

• Not used by Time Investment.

**B** Transfer from Credit Line first, then savings.

**C** Transfer from Credit Card.

**D** Deposit account.

L Loan account.

M Transfer from Master Card.

N No overdraft credit.

**S** Transfer from savings.

V Transfer from Visa.

**X** Deposit account first, then loan account.

Y Loan account first, then deposit account.

NSF Option Code. Valid entries are:

**b** Not used.

**B** Use customer's collected balance, with bank float.

C Use customer's collected balance, with customer float.

L Use ledger balance.

1-9 Use customer's collected balance, with customer float. Add this

number of days to incoming float.

Internal Penalty Code for Deposit Accounts. Valid entries are:

**G** Penalty for early withdrawal.

N No penalty.

Online Balance. Online balance after batch posting. Available balance is

calculated using this field as a base.

Passbook Balance Passbook Balance.

Interest Earned Not Paid. Accrued interest earned but not paid.

Pen/Reb Penalty/Interest Rebate. Interest rebate amount for early payoff on loan

accounts.

Limit. Credit limit for loan accounts.

Fwt Est Federal Withholding Tax Estimate.

# 05-922 - Record Dump

Purpose This report displays the data names and field values of a selected record within

Transaction Gateway. The Balance Record (BAL), Teller Record (TEL), Cash Record (CSH), Not-booked Transaction Record (NOB), or Settlement Record

(STL) can display.

See the API Records chapter in the *Reference Guide* for associated field

descriptions.

05-923 – List Tellers

# **Heading Descriptions**

Teller ID.

Name Teller Name. Teller's name or the error message associated with the teller

maintenance.

(Password) Password. Teller's password (if that option is selected) or zeros.

S Teller's Security Code.

S Teller's Status.

Teller's Test Code.

A Automatic Teller Machine Code.

M Teller's Message Code.

Brnch Branch. Teller's branch last signed on to.

Cash. Teller's cash drawer last signed on to.

A-Date Add Date. Date the teller was added to the system.

D-Date Delete Date. Date the teller was deleted from the system.

Terminal Identification Number Last Used.

Min Minimum. Minimum cash amount in whole dollars.

Maximum. Maximum cash amount in whole dollars.

Ref Reference Number. Last reference number used by the teller on the simulator.

### accumulator

Bucket for maintaining running totals to be used for settlement.

#### **AMT**

Application Management Table. The AMT is a data dictionary that houses field data information from files and records defined on the table.

#### AP

Application program residing in the terminal controller.

# API

Application Programming Interface.

### alert message

Message entered by a teller and sent to one or more other tellers to alert them to a given condition.

### alternate teller

Secondary teller involved in a transaction.

# application

Software product that performs a group of related activities for a business. Products of this kind include Infopoint Deposits and Infopoint Time Investment.

# assignments

Act of pledging funds maintained at the institution as collateral to cover a loan advanced by the institution.

### **ATM**

Automatic Teller Machine. Used to dispense money to customers by use of a plastic card and special number.

### available balance

Funds available for the customer to use.

#### batch

Processing jobs in an offline environment.

# **Batch Feed File**

Feed file created from the ACH File or external used for creating online transactions.

### billed, not paid

Customer has been billed, but payment has not yet been received.

# binary synchronous

Communications protocol.

#### book balance

Account balance printed in the customers' passbook. This balance might not agree with the customer's current balance maintained in the computer, depending on whether there are not-booked transactions outstanding.

# booked transactions

Processed passbook transactions that are printed in the customer's passbook.

### byte

Data processing term referring to one alphanumeric character.

# cash

Cash in hand.

### cash back

Money returned to the customer in a transaction.

# cash drawer position

Starting cash amount, number of cash transactions in/out and their amount, and the net or ending cash amount.

October 2005 Glossary-1

#### cash status

Starting cash amount, number of cash transactions in/out and their amount, and the net or ending cash amount

# Cashtran

Infopoint Cashtran is a product that tracks cash transactions for government compliance.

# cautions

Warning flags that inform tellers of a special condition that must be taken into consideration before processing a transaction.

# **CICS**

Customer Information Control System. Teleprocessing monitor that allows interaction between a database and a terminal.

#### closed account

Account that is no longer open and active.

#### collected balance

Current balance of an account, less holds and float.

#### control card

Card inserted when executing a job that is used for setting up parameters or for processing information.

# conversion

Act of changing or updating one system, file, or procedure with another.

# correction

Adjustment made to a transaction online. A correction cannot be made after the transaction has been extracted for posting.

### cost center

Department number used by accounting to associate cost and revenue.

## count cash

Count of the cash in the teller's drawer.

#### CP

Control Program. Program, residing in the terminal controller, that controls the terminal devices.

#### credit date

Date of the last credit transaction.

#### current balance

Total balance of an account, including the amount available for immediate cash, holds, and float.

### customer key

Key created from the customer's name. It is used for keeping address information.

#### DDA

Demand Deposit Account. Checking account.

### debit date

Date of the last debit transaction.

### **Deposits**

The Infopoint Deposits product processes savings and credit line accounts and DDAs.

# document processor

Processor used for paper item processing.

#### **EFAS**

The Infopoint Expedited Funds Availability Scheduler product handles all expedited funds requirements of the federal government.

# external transaction code

Four-digit transaction code assigned by the institution for processing.

#### extract

Selecting available files from records for processing within other applications.

#### file status

Information telling whether a file is opened, closed, etc.

### flagged

Files designated to be purged when an account meets certain conditions.

#### float

Amount of time (in days) that the funds for a check can be withheld pending clearance through the Federal Reserve.

#### force

Way a teller can override the system.

#### hit

When a Stop Pay Record matches the stop payment criteria.

#### hold

Amount of funds placed in restricted status by the institution to ensure another transaction.

#### host

Main computer that supports the terminal system.

# inquiry

Act of checking files for current status or past history.

#### Institution Control Record

Institution Control Record. Record where you define the institution's processing days, holidays, and other information necessary to properly process the institution's work.

# interbank

Processing between two financial institutions. The customer might not be a customer of both institutions.

#### interest date

Date that interest was last paid.

## interface

Means by which the Transaction Gateway application links to other applications.

# interfacing

When one or more systems communicates information to one or more systems.

# internal transaction code

Four-digit numeric code, assigned by Infopoint to each processing method in an application.

# journal

Listing or device that ensures all transactions are processed.

#### ledger balance

Balance of the account after posting. This balance does not include online activity after posting.

#### **Level One**

Support within Infopoint's Central Support operation. Level One is when a call analyst refers the call to a technician to discuss and resolve the problem.

#### **Level Two**

Support within Infopoint's Central Support operation. Level Two is when a senior technician researches the problem and returns a "fix" to the system.

# Log Record

Log record used for storing transactions online.

#### **MICM**

The Infopoint Master Information and Control Manager product. This application warehouses processing parameters.

#### memo post

To temporarily post or update an account online.

#### mode

Mode is used with simulation to describe a point of processing.

#### module

Subprogram or a called program.

#### not-booked transactions

Passbook transactions that were processed without the customer's passbook.

## offline

Computer interaction not connected to the Central Processing Unit (CPU).

# online

Computer interaction while connected to the CPU.

#### online date

Date of last transaction processed online.

### open

Account that is either new or active.

### operator

ID number used by the system to identify the operator or teller.

### panel

Area of a terminal where the information is displayed.

## parameter

Field that controls or determines how the system will process.

October 2005 Glossary-3

#### passbook

Small book, given to the customer for some savings accounts, where activity is printed in lieu of providing the customer with periodic statements.

#### PIN

Personal Identification Number. Customer's secret password. PINs are also used with the sign-on transaction for the cash drawer number and password.

# posting

Procedure of updating records on files.

# **Program Option Table**

Table that defines the relationship between the CICS transaction code and the primary program to be accessed to perform the transaction.

#### **PTF**

Program Temporary Fix. Coding change to fix a problem.

# purged

When information is removed from a file.

# record key

Informational fields used to access a record.

# recovery

Procedure used for rebuilding a system or set of files after they have been destroyed.

# reference number

Number assigned by the device.

#### refresh

Process of taking the latest information from one system and updating information on another system.

# **Regulation CC**

Government regulation that ensures funds availability.

## release number

Number assigned by Infopoint to identify the current release level of a particular product.

# routing and transit number

Number assigned to the financial institution by the Federal Reserve to facilitate the clearing of checks among institutions.

# savings

Type of account used for maintaining and increasing funds.

#### settlement Information

Transaction Gateway uses this information to create entries for the general ledger.

#### simulator

The 3270 screens supplied by Transaction Gateway to test the application.

#### simulator tables

Temporary storage area that has the external transaction codes and descriptions.

### system alert

Messages about exception conditions or problems that display on teller terminals.

# system status

Availability of the Transaction Gateway application.

### stop payment

When a check is placed in a nonpayment status by the customer. A stop payment is usually the result of a check being misplaced or stolen.

# store-and-forward processing

Saving transactions in a record (storing) when the connection to the processing environment cannot be established and routing them to the processing environment (forwarding) when the session can be established.

# system application option flags

Processing options or switches that are maintained in MICM Record 0301.

# system application report flags

Sort processing and print control options maintained in MICM Record 0307.

# teller

Financial institution's employee who processes transactions for customers.

#### teller tables

Temporary storage area that contains the parameters for online processing of teller information.

#### teller terminal

Terminal (usually unique within the institution) used by tellers.

## terminal ID

Terminal identification used by the system.

## tie breaker

Customer information system used with the customer key when two customers have the same name.

# **Time Investment**

The Infopoint Time Investment product processes time investment transactions.

#### TIN

Tax Identification Number. It is passed to other applications.

#### transaction

Any monetary exchange, physical (cash) or otherwise (e.g., check), between a customer and the financial institution.

#### transaction code

Four-digit numeric code assigned to each processing method within a system.

# transaction processor

Program TLL200, which performs all online host transaction processing.

#### transfer

Moving money from one account to another account.

# transfer-in

Funds moved to an account.

#### transfer-out

Funds moved out of an account.

# tran time

Actual time the transaction was processed.

#### unbooked transactions

Passbook transactions that were processed without the customer's passbook.

### variance

Check amount spread (plus or minus) that will result in a suspected stop payment hit. For example, if a stop payment is for \$10 and the variance is for 50, a check for either \$9.50 or \$10.50 results in a hit against the stop payment file.

#### **VSAM**

Virtual Storage Access Method. A file-access procedure developed and supported by IBM for the use of disk devices.

#### work unit

A series of transactions logically grouped together to perform an online function.

October 2005 Glossary-5
