Product Help Related Information

Throughout these release notes, references to specific documents and Knowledge Base articles maybe provided to help you locate more detailed information.
Product documentation is available on the Infor Xtreme portal.

You can find documentation posted to the product records on the Download Products page. Look here first for installation guides and release notes.

You can browse or search for product documentation on the Documentation page.

For questions or feedback, e-mail documentation@infor.com.

Documentation updates

The following documentation are included with this release.

- On-line help documentation
- Factory Track for LN Installation Guide
- Factory Track for LN Integration Guide

User Experience

Scope of this release

Infor Factory Track 6.01 for LN includes new features and corrections. The features are compatible with the backend version of LN 10.5 .

Upgrade paths

The release is a full installation and can be used to update any previous Factory Track version.

Restrictions

All features mentioned in this document are compatible with BE versions 15.1.3 or later versions, unless otherwise stated.

Language availability

Online help and documents are all in US English.

Technical Compatibility

QA Environment Servers:

- Windows Server 2012
- Windows Server 2012 R2

SQL Server:

- SQL2012
- SQL2014

Clients:

- Windows 8.1
- Windows 10

New Features

This topic briefly lists the new features in this release of the product.

We added these features to ERP LN:

- **Warehouse Mobility**:
  - Receipt Label Reprint transactions: The feature allows the user the ability to print or reprint barcode labels for an existing receipt, created in both LN or FT.

- **Time Track:**
  - California OT Method: Complies with California labor laws. Combines Daily and Weekly OT methods to categorize hours. The result is that the employee's hours are categorized by the method that provides the employee with the greatest amount of OT hours.
  - 7th Consecutive Day: You can configure daily OT thresholds for the 7th consecutive worked day that are different than the thresholds specified for a normal shift day.
  - 1st Day of Work Week and Generate work week: You can use this feature to set the 1st Day of Work Week to a day of your choosing.
  - Points Based Attendance System: This feature allows you to assign points values to attendance rule violation and unplanned or unexcused absences. You define the system thresholds and the actions that should be taken when a threshold is crossed. The system will accumulate points and notify you when points totals exceed system thresholds.
  - Reopen Payroll: You can revert the status of payroll records from Extracted or Processed to Submitted. The feature unlocks labor and attendance records and allows you to make corrections.
  - Signing Payroll: The signature process is enhanced for the employee and supervisor. This feature allows employees and supervisors to sign hours at any time prior to hours processing, after hours processing and even after payroll processing. An additional component of this feature is that signatures are cleared when an edit is saved on a signed record.
  - Real-time Transaction Entry Stop Start: This enhanced functionality reduces transaction entry time by reducing screen navigation time. You can use this functionality to automatically stop a running job by starting a new job or work set.
  - Time Track-Work Set Proration: This enhancement adds the ability to configure work sets to prorate time on the weighted average of run times or planned quantities of the jobs in the work set. You will also be able to configure labor and machine time to use separate proration methods. An additional enhancement for work set machine time is that proration will only occur on jobs using the same machine.
  - Quantity Reporting Configuration: You can now use parameters for Quantity Reporting and Operation Complete Status fields, so that sites that do not want to retrieve that data from the shop floor can disable the fields.
  - Reporting Dates: The new parameter Allow Attendance Transactions On Future Report Dates has been introduced that restricts Labor and Attendance transactions to current or past report dates.

- Time Sheet Detail: The enhanced functionality provides a convenient and efficient means for employees and supervisors to sign off and edit hours.
- Auto Clock Out Parameter: You can automatically clock an employee out at the scheduled shift end time if the employee has not done so themselves. The Auto Clock Out can be configured to occur at Midnight, Logical Midnight or a specified duration after the shift end time.
- Time Off Group Enhancements: You can now configure time off groups with Absence codes that accrue available hours and Absence codes that deduct usage from an annual allowed balance.

- **General Section:**
  - Menu Management: This feature allows a site to personalize the menus, including content, sequencing, and icons where appropriate. You can develop custom menus (from scratch or start from standard menus). You can group users into a “menu group” and set their starting menus. This functionality is available for M3, LN, and Infor Cloud Suite Industrial implementations. In this release it is currently limited to Warehouse mobility menus, both list and icon menu types are supported.
