About this guide

This document provides information about the enhancements and changes for *Infor Global Financial Controller*.

Contacting Infor

If you have questions about Infor products, go to Infor Concierge at https://concierge.infor.com/ and create a support incident.

If we update this document after the product release, we will post the new version on the Infor Support Portal. To access documentation, select **Search > Browse Documentation**. We recommend that you check this portal periodically for updated documentation.

If you have comments about Infor documentation, contact documentation@infor.com.

Chapter 1: Release Notes

About this release

For more information about this release, refer to Knowledge Base #2096242.

Solution enhancements

Infor Global Financial Controller 11.0.0.0 contains these features and improvements:

Rule mapping feature

GFC now includes a new user interface for automating the creation of rule scripts. The attributes of the output document are displayed on the screen and the user can easily select and assign a value through a drop down menu. Assigning of conditions is also provided through this user interface.

Multiple rules activation

Select multiple rules to be activated simultaneously.

Logical ID pattern support for applications using Infor Messaging Service (IMS)

Applications sending BODs via IMS has a logical ID pattern that is different from applications that are sending BODs via ION I/O box. This enhancement allows registering entities with the logical ID pattern of IMS. GFC still supports entity registration of applications sending BODs via ION I/O box.

System requirements

GFC is now running in Java 8 and Tomcat 9 in compliance with Infor Technology requirements.

Compatibility information

11.0.0.0 applies to IGFC cloud and on-premise deployments. New features may vary between the two versions.

Language availability

This release is only available in English.

Previous updates

This section describes the enhancements and changes for previous updates.

April 2019

- Quick BOD split feature with user-defined splitting field
- Support for input document with -Process verb and output document with Sync verb
