About this guide

This document provides information about the standard Internet protocols and the platform specifications followed by Infor PLM Accelerate.

Intended audience

This guide is intended for system administrators. This document assumes that you have at least some knowledge in:

- System architecture and function for your Infor system
- SQL Server database

For the most up-to-date list of software and hardware requirements for Infor products, see the documentation for your system.

Related documents

You can find the documents in the product documentation section of the Infor Xtreme Support portal, as described in the "Contacting Infor" section below.

Contacting Infor

If you have questions about Infor products, go to the Infor Xtreme Support portal at www.infor.com/inforxtreme.

If we update this document after the product release, we will post the new version on this Web site. We recommend that you check this Web site periodically for updated documentation.

If you have comments about Infor documentation, contact documentation@infor.com.

Chapter 1. Platforms & Standards

Infor PLM Accelerate® is committed to standard Internet protocols and common platforms. Infor PLM Accelerate® provides businesses with flexible configuration options to manage based on tomorrow’s market requirements not yesterday’s decisions.

Client Specifications

Operating System	Supported Browser
Windows 10	Edge Internet Explorer 11
	Firefox 45 ESR Firefox 38 ESR
	Chrome 55 (Minimum)
Windows 8.1	Internet Explorer 11
	Firefox 45 ESR Firefox 38 ESR
	Chrome 55 (Minimum)
Windows 7	Internet Explorer 11
	Firefox 45 ESR Firefox 38 ESR
	Chrome 52 (Minimum)
OS X 10.12 (Sierra)	Firefox 45 ESR Firefox 38 ESR
	Chrome 55 (Minimum)

Innovator Server Specifications

Operating System	Web Services	Framework
Microsoft Windows Server 2016	IIS 10	Microsoft .NET 4.5.2
Microsoft Windows Server 2012 R2	IIS 8	Microsoft .NET 4.5.2
Microsoft Windows Server 2012	IIS 8	Microsoft .NET 4.5.2
Microsoft Windows Server 2008 R2	IIS 7.5	Microsoft .NET 4..5.2

Vault Server Specifications

Operating System	Web Services	Framework
Microsoft Windows Server 2016	IIS 10	Microsoft .NET 4.5.2
Microsoft Windows Server 2012 R2	IIS 8	Microsoft .NET 4.5.2
Microsoft Windows Server 2012	IIS 8	Microsoft .NET 4..5.2
Microsoft Windows Server 2008 R2	IIS 7.5	Microsoft .NET 4..5.2

Database Specifications

Operating System	Database
Microsoft Windows Server 2016	<ul style="list-style-type: none"> • Microsoft SQL Server 2016 • Microsoft SQL Server 2014 • Microsoft SQL Server 2012 • Microsoft SQL Server 2008 R2
Microsoft Windows Server 2012 R2	<ul style="list-style-type: none"> • Microsoft SQL Server 2016 • Microsoft SQL Server 2014 • Microsoft SQL Server 2012 • Microsoft SQL Server 2008 R2

Microsoft Windows Server 2012	<ul style="list-style-type: none"> • Microsoft SQL Server 2016 • Microsoft SQL Server 2014 • Microsoft SQL Server 2012 • Microsoft SQL Server 2008 R2
Microsoft Windows Server 2008 R2	<ul style="list-style-type: none"> • Microsoft SQL Server 2016 • Microsoft SQL Server 2014 • Microsoft SQL Server 2012 • Microsoft SQL Server 2008 R2

Recommendations and Requirements

To optimize Infor PLM Accelerate® performance, we recommend the following software and hardware components. Please keep in mind that the minimum requirements are listed as a baseline and following recommendations ensures system performance. Recommendations also assume that Infor PLM Accelerate will be running with minimum additional network activity. Other active applications on the network or on the PCs will affect performance and must be taken into account when selecting hardware.

Database Server

Database Engine	Microsoft SQL Server 2008 R2, Microsoft SQL Server 2012, Microsoft SQL Server 2014, or Microsoft SQL Server 2016
Network OS	Any supported O/S platform for the selected database
CPU	Recommend for up to 1000 users 32 logical cores Minimum for up to 250 users 16 logical cores
Memory	Recommend for up to 1000 users 64 GB RAM Minimum for up to 250 users 32 GB RAM
HDD	Recommend RAID using 4 to 6 physically separate disks (RAID 0/1) – Striping data across disks improves performance NOTE: NEVER use OS based mirroring of the database – The OS should be on a separate disk from the Database It is recommended that the Operating system and virtual memory file be separated from the SQL server data and log files. Optimal SQL server performance is achieved when SQL server log files also reside on a separate physical disk. The following recommended guideline is a good price/performance compromise: <ul style="list-style-type: none"> • Operating System disk(s) – could be RAID 1 • SQL Server data files (RAID 5 array, minimum of 3 drives) • SQL Server log files (RAID 1 array, 2 drives) • There should be 1 temp database per physical core up to but not more than 8 temp databases • Disks for data and log files should be higher than 1000 IOPS. Disk speed impacts performance of concurrent users.

Application Server

Network OS	Windows Server 2008 R2, Windows Server 2012, Windows Server 2012 R2, or Windows Server 2016
Web Server	IIS version 7 or higher
.NET	Microsoft .NET Framework 4.5.2
CPU	Recommend for up to 1000 users 8 physical cores and 16 logical cores Minimum for up to 250 users 4 physical cores and 8 logical cores
Memory	Recommend for up to 1000 users 32 GB RAM Minimum for up to 250 users 16 GB RAM
HDD	Recommend 2.0 GB free disk space – Infor PLM Accelerate will use approximately 400 MB for the production instance
Connectivity	Internet connection suggested for online support and update downloading – recommend VPN to support remote access
Server Clustering	Recommend introducing additional app servers in high availability cluster if more than 1000 users

Vault Server

Network OS	Windows Server 2008 R2, Windows Server 2012, Windows Server 2012 R2, or Windows Server 2016
Web Server	IIS version 7.5 or higher
.NET	Microsoft .NET Framework 4.5.2
CPU	Recommend for up to 1000 users 4 physical cores and 8 logical cores Minimum for up to 250 users 2 physical cores and 4 logical cores
Memory	Recommend for up to 1000 users 16 GB RAM Minimum for up to 250 users 8 GB RAM
HDD	Recommend RAID array – Vault disk capacity planning should consider 2-year growth of total file space consumption. NOTE: End-user predictions of Vault Server data volume are typically under estimated and quickly surpassed Recommend 1.0 GB free disk space for the OS and software – Infor PLM Accelerate will use 50MB Disks for storing vaulted files should be higher than 500 IOPS – Disk speed impacts performance of concurrent users

Conversion Server

Network OS	Windows Server 2008 R2, or Windows Server 2012, or Windows Server 2012 R2 – Recommend Enterprise Edition
Web Server	IIS version 7 or higher
.NET	Microsoft .NET Framework 4.5.2
CPU	Recommend 8 physical cores and 16 logical cores Minimum 4 physical cores and 8 logical cores
Memory	Recommend 32 GB RAM Minimum 16 GB RAM

HDD	Disks for checking out files to be converted should be higher than 500 IOPS – Disk speed impacts conversion throughput
Application	The Conversion Server recommendations are subject to change based on the converter application requirements being executed on the server

Clients

Client OS	Windows 7, Windows 8.1, Windows 10, or Mac OS X 10.12 (Sierra)
Browser	Firefox 38 ESR, Firefox 45 ESR, Internet Explorer 11, or Google Chrome (Minimum version 55)
CPU	Minimum requirement CPU 2.0 GHz or higher
Memory	Recommend 8 GB RAM Minimum requirement 4 GB RAM
HDD	Minimum requirement 80 MB free disk space for Internet temporary folders
Monitor	Recommend 1280 x1024 monitor and adapter – Minimum requirement 1024 X 768

Network

Recommend 100 mbps network between Application Server and Clients

Recommend dedicated sub-LAN of minimum 1.0 GB between the Application Servers and Database Server

Backup Equipment

Infor recommends investment in a reliable backup system

Chapter 2. Hardware Configuration

Infor PLM Accelerate® offers numerous configuration options designed to meet your business requirements and technology environment with the ability to scale to meet future needs. Migrating from one configuration to the next is designed to be straightforward.

Option 1: Single Server

250 Users
Combined Database, File Vault,
and Web / App Servers

	CPU	RAM	HDD ^{1,2}
Single Combined Server	16 Logical Cores	32 GB	1000 IOPS

¹ HDD capacity requirements depend directly on the CAD, EDA and document formats employed in conjunction with the aggregate file count and total size.

Option 2: Separate Servers

1000 Users
Separate Database, File Vault,
and Web / App Servers

	CPU	RAM	HDD
Database Server ²	32 Logical Cores	64 GB	1000 IOPS
Web / App Server	4 Physical Cores with 8 Logical Cores	32 GB	
Vault Server ¹	4 Physical Cores with 8 Logical Cores	16 GB	500 IOPS
Conversion Server	8 Physical Cores with 16 Logical Cores	32 GB	500 IOPS

¹ HDD capacity requirements depend directly on the CAD, EDA and document formats employed in conjunction with the aggregate file count and total size.

Option 3: Distributed Servers

1000 Multi-site Users
 Multiple Vault and Conversion,
 Single App and Database
 Server

	CPU	RAM	HDD
Database Server ²	32 Logical Cores	64 GB	1000 IOPS
Web / App Server	4 Physical Cores with 8 Logical Cores	32 GB	
Vault Server ¹	4 Physical Cores with 8 Logical Cores	16 GB	500 IOPS
Conversion Server	8 Physical Cores with 16 Logical Cores	32 GB	500 IOPS

¹ HDD capacity requirements depend directly on the CAD, EDA and document formats employed in conjunction with the aggregate file count and total size.

Option 4: Development Server

Used for Customization,
 Testing, or Training
 Environments

	CPU	RAM	HDD
Single Development Server ¹	4 Logical Cores	8.0 GB	4 GB

¹ A development server is not meant to be an environment for a large number of concurrent users, but rather is meant to be an all-in-one, self-contained
